# MULTIPLE SURFACE USES OF THE PUBLIC DOMAIN

WEDNESDAY, MAY 18, 1955

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The committee met at 10 a. m., pursuant to call, in room 224, Senate Office Building, Hon. Clinton P. Anderson presiding.

Present: Senators Anderson, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, and Barrett.

Present also: Stewart French, chief counsel, and N. D. McSherry, assistant chief clerk.

Senator ANDERSON. The distinguished chairman of the committee, Senator James E. Murray, of Montana, has asked me to preside at these hearings. We are considering S. 1713, a bill I had the honor of sponsoring along with Senators Aiken, Bennett, Watkins, and Barrett, to prevent abuses of the mining laws and to provide for increased development of the surface resources of the public lands.

At the executive session of the full committee yesterday it was agreed that we would also consider three bills to provide for mining location on public lands withdrawn for power site purposes. These bills are Congressman Engle's H. R. 100, Senator Watkins' S. 1149 and Senator Barrett's S. 1502.

May I say there that inadvertently the impression was left that we would have a hearing on all of those bills at the same time this morning. That was not the intention. The intention was to call the bills back for the consideration of the subcommittee, so that if any of the testimony on S. 1713 had a bearing on any of the other bills, we could take such testimony into consideration. Also we could then decide whether H. R. 100 should be reported, or one of the Senate bills should be reported, or a combination of them.

Senator BARRETT. Mr. Chairman, I talked to a number of the members of the subcommittee, and I am sure they are all agreeable to the statement you just made. They would like to have an opportunity to make a study of these three bills in the subcommittee before the full committee again takes up the matter.

Senator ANDERSON. Yes. Well, frankly, Senator Barrett, I would like a chance to examine those two bills, even though I think they are very much like H. R. 100, and find out whether there are some changes that perhaps should be made in H. R. 100.

Since the power site measures do have some general bearing in this field, I think it would be a good thing if in the hearing at this point we put not only the text of S. 1713, but the text of these other three bills. Particularly, there should be set forth the text of H. R. 100, as it was reported by the subcommittee to the full committee, and the comments of the executive agencies on them.

## (The bills and reports referred to are as follows:)

[S. 1713, 84th Cong., 1st sess.]

**A BILL** To amend the Act of July 31, 1947 (61 Stat. 681), and the mining laws to provide for multiple use of the surface of the same tracts of the public lands, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That section 1 of the Act of July 31, 1947 (61 Stat. 681), is amended to read as follows:

"SECTION 1. The Secretary, under such rules and regulations as he may prescribe, may dispose of mineral materials (including but not limited to, sand, stone, gravel, pumice, pumicite, cinders, and clay) and vegetative materials (including but not limited to yucca, manzanita, mesquite, cactus, and timber or other forest products) on public lands of the United States, if the disposal of such mineral or vegetative materials (1) is not otherwise expressly authorized by law, including the United States mining laws, and (2) is not expressly prohibited by laws of the United States, and (3) would not be detrimental to the public interest. Such materials may be disposed of only in accordance with the provisions of this Act and upon the payment of adequate compensation therefor, to be determined by the Secretary: *Provided, however*, That, to the extent not otherwise authorized by law, the Secretary is authorized in his discretion to permit any Federal, State, or Territorial agency, unit or subdivision, including municipalities, or any person, or any association or corporation not organized for profit, to take and remove, without charge, materials and resources subject to this Act, for use other than for commercial or industrial purposes or resale. Where the lands have been withdrawn in aid of a function of a Federal department or agency other than the department headed by the Secretary or of a State, Territory, county, municipality, water district, or other local governmental subdivision or agency, the Secretary may make disposals under this Act only with the consent of such other Federal department or agency or of such State, Territory, or local governmental unit. Nothing in this Act shall be construed to apply to lands in any national park, or national monument or to any Indian lands, or lands set aside or held for the use or benefit of Indians, including lands over which jurisdiction has been transferred to the Department of the Interior by Executive order for the use of Indians. As used in this Act, the word 'Secretary' means the Secretary of the Interior except that it means the Secretary of Agriculture where the lands involved are administered by him for national forest purposes or for the purposes of title III of the Bankhead-Jones Farm Tenant Act or where withdrawn for the purpose of any other function of the Department of Agriculture."

SEC. 2. That section 3 of the Act of July 31, 1947 (61 Stat. 681), as amended by the Act of August 31, 1950 (64 Stat. 571), is amended to read as follows:

"All moneys received from the disposal of materials under this Act shall be disposed of in the same manner as moneys received from the sale of public lands, except that moneys received from the disposal of materials by the Secretary of Agriculture shall be disposed of in the same manner as other moneys received by the Department of Agriculture from the administration of the lands from which the disposal of materials is made, and except that moneys received from the disposal of materials from school section lands in Alaska, reserved under section 1 of the Act of March 4, 1915 (38 Stat. 1214), shall be set apart as separate and permanent funds in the Territorial Treasury, as provided for income derived from said school section lands pursuant to said Act."

SEC. 3. A deposit of common varieties of sand, stone, gravel, pumice, pumicite, or cinders shall not be deemed a valuable mineral deposit within the meaning of the mining laws of the United States so as to give effective validity to any mining claim hereafter located under such mining laws: *Provided, however*, That nothing herein shall affect the validity of any mining location based upon discovery of some other mineral occurring in or in association with such a deposit. "Common varieties" as used in this Act does not include deposits of such materials which are valuable because the deposit has some property giving it distinct and special value and does not include so-called "block pumice" which occurs in nature in pieces having one dimension of two inches or more.

SEC. 4. (a) Any mining claim hereafter located under the mining laws of the United States shall not be used, prior to issuance of patent therefor, for any purposes other than prospecting, mining or processing operations and uses reasonably incident thereto.

(b) Rights under any mining claim hereafter located under the mining laws of the United States shall be subject, prior to issuance of patent therefor, to the right of the United States to manage and dispose of the vegetative surface resources thereof and to manage other surface resources thereof (except mineral deposits subject to location under the mining laws of the United States). Any such mining claim shall also be subject, prior to issuance of patent therefor, to the right of the United States, its permittees and licensees, to use so much of the surface thereof as may be necessary for such purposes or for access to adjacent land: *Provided, however,* That any use of the surface of any such mining claim by the United States, its permittees or licensees, shall be such as not to endanger or materially interfere with prospecting, mining or processing operations or uses reasonably incident thereto.

(c) Except to the extent required for the mining claimant's prospecting, mining or processing operations and uses reasonably incident thereto, or for the construction of buildings or structures in connection therewith, or to provide clearance for such operations or uses, or to the extent authorized by the United States, no claimant of any mining claim hereafter located under the mining laws of the United States shall, prior to issuance of patent therefor, sever, remove, or use any vegetative or other surface resources thereof which are subject to management or disposition by the United States under the preceding subsection (b). Any severance or removal of timber which is permitted under the exceptions of the preceding sentence, other than severance or removal to provide clearance, shall be in accordance with sound principles of forest management.

SEC. 5. (a) The Secretary of the Federal Department which has the responsibility for administering surface resources of any lands belonging to the United States may file as to such lands in the office of the Secretary of the Interior, or in such office as the Secretary of the Interior may designate, a request for publication of notice to mining claimants, for determination of surface rights, which request shall contain a description of the lands covered thereby, showing the section or sections of the public land surveys which embrace the lands covered by such request, or if such lands are unsurveyed, either the section or sections which would probably embrace such lands when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument.

The filing of such request for publication shall be accompanied by an affidavit or affidavits of a person or persons over twenty-one years of age setting forth that the affiant or affiants have examined the lands involved in a reasonable effort to ascertain whether any person or persons were in actual possession of or engaged in the working of such lands or any part thereof, and, if no person or persons were found to be in actual possession of or engaged in the working of said lands or any part thereof on the date of such examination, setting forth such fact, or, if any person or persons were so found to be in actual possession or engaged in such working on the date of such examination, setting forth the name and address of each such person, unless affiant shall have been unable through reasonable inquiry to obtain information as to the name and address of any such person, in which event the affidavit shall set forth fully the nature and results of such inquiry.

The filing of such request for publication shall also be accompanied by the certificate of a title or abstract company, or of a title abstractor, or of an attorney, based upon such company's, abstractor's, or attorney's examination of those instruments which are shown by the tract indexes in the county office of record as affecting the lands described in said request, setting forth the name of any person disclosed by said instruments to have an interest in said lands under any unpatented mining claim heretofore located, together with the address of such person if such address is disclosed by such instruments of record. "Tract indexes" as used herein shall mean those indexes, if any, as to surveyed lands identifying instruments as affecting a particular legal subdivision of the public land surveys, and as to unsurveyed lands identifying instruments as affecting a particular probable legal subdivision according to a projected extension of the public land surveys.

Thereupon the Secretary of the Interior, at the expense of the requesting department or agency, shall cause notice to mining claimants to be published in a newspaper having general circulation in the county in which the lands involved are situate.

Such notice shall describe the lands covered by such request, as provided heretofore, and shall notify whomever it may concern that if any person claiming or

asserting under, or by virtue of, any unpatented mining claim heretofore located, rights as to such lands or any part thereof, shall fail to file in the office where such request for publication was filed (which office shall be specified in such notice) and within one hundred and fifty days from the date of the first publication of such notice (which date shall be specified in such notice), a verified statement which shall set forth, as to such unpatented mining claim—

(1) the date of location;

(2) the book and page of recordation of the notice or certificate of location;

(3) the section or sections of the public land surveys which embrace such mining claim; or if such lands are unsurveyed, either the section or sections which would probably embrace such mining claim when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument;

(4) whether such claimant is a locator or purchaser under such location; and

(5) the name and address of such claimant and names and addresses so far as known to the claimant of any other person or persons claiming any interest or interests in or under such unpatented mining claim;

such failure shall be conclusively deemed (i) to constitute a waiver and relinquishment by such mining claimant of any right, title, or interest under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims, and (ii) to constitute a consent by such mining claimant that such mining claim, prior to issuance of patent therefor, shall be subject to the limitations and restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims, and (iii) to preclude thereafter, prior to issuance of patent, any assertion by such mining claimant of any right or title to or interest in or under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims.

If such notice is published in a daily paper, it shall be published in the Wednesday issue for nine consecutive weeks, or, if in a weekly paper, in nine consecutive issues, or if in a semiweekly or triweekly paper, in the issue of the same day of each week for nine consecutive weeks.

Within fifteen days after the date of first publication of such notice, the department or agency requesting such publication (1) shall cause a copy of such notice to be personally delivered to or to be mailed by registered mail addressed to each person in possession or engaged in the working of the land whose name and address is shown by an affidavit filed as aforesaid, and to each person who may have filed, as to any lands described in said notice, a request for notices, as provided in subsection (d) of this section 5, and shall cause a copy of such notice to be mailed by registered mail to each person whose name and address is set forth in the title or abstract company's or title abstractor's or attorney's certificate filed as aforesaid, as having an interest in the lands described in said notice under any unpatented mining claim heretofore located, such notice to be directed to such person's address as set forth in such certificate; and (2) shall file in the office where said request for publication was filed an affidavit showing that copies have been so delivered or mailed.

(b) If any claimant under any unpatented mining claim heretofore located which embraces any of the lands described in any notice published in accordance with the provisions of subsection (a) of this section 5, shall fail to file a verified statement, as above provided, within one hundred and fifty days from the date of the first publication of such notice, such failure shall be conclusively deemed, except as otherwise provided in subsection (e) of this section 5, (i) to constitute a waiver and relinquishment by such mining claimant of any right, title, or interest under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims, and (ii) to constitute a consent by such mining claimant that such mining claim, prior to issuance of patent therefor, shall be subject to the limitations and restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims, and (iii) to preclude thereafter, prior to issuance of patent, any assertion by such mining claimant of any right or title to or interest in or under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims.

(c) If any verified statement shall be filed by a mining claimant as provided in subsection (a) of this section 5, then the Secretary of the Interior shall fix

a time and place for a hearing to determine the validity and effectiveness of any right or title to, or interest in or under such mining claim, which the mining claimant may assert contrary to or in conflict with the limitations and restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims, which place of hearing shall be in the county where the lands in question or parts thereof are located, unless the mining claimant agrees otherwise. Where verified statements are filed asserting rights to an aggregate of more than twenty mining claims, any single hearing shall be limited to a maximum of twenty mining claims unless the parties affected shall otherwise stipulate and as many separate hearings shall be set as shall be necessary to comply with this provision. The procedures with respect to notice of such a hearing and the conduct thereof, and in respect to appeals shall follow the then established general procedures and rules of practice of the Department of the Interior in respect to contests or protests affecting public lands of the United States. If, pursuant to such a hearing the final decision rendered in the matter shall affirm the validity and effectiveness of any mining claimant's so asserted right or interest under the mining claim, then no subsequent proceedings under this section 5 of this Act shall have any force or effect upon the so-affirmed right or interest of such mining claimant under such mining claim. If at any time prior to a hearing the department or agency requesting publication of notice and any person filing a verified statement pursuant to such notice shall so stipulate, then to the extent so stipulated, but only to such extent, no hearing shall be held with respect to rights asserted under that verified statement, and to the extent defined by the stipulation the rights asserted under that verified statement shall be deemed to be unaffected by that particular published notice.

(d) Any person claiming any right under or by virtue of any unpatented mining claim heretofore located and desiring to receive a copy of any notice to mining claimants which may be published as above provided in subsection (a) of this section 5, and which may affect lands embraced in such mining claim, may cause to be filed for record in the county office of record where the notice or certificate of location of such mining claim shall have been recorded, a duly acknowledged request for a copy of any such notice. Such request for copies shall set forth the name and address of the person requesting copies and shall also set forth, as to each heretofore located unpatented mining claim under which such person asserts rights—

- (1) the date of location;
- (2) the book and page of the recordation of the notice or certificate of location; and
- (3) the section or sections of the public land surveys which embrace such mining claim; or if such lands are unsurveyed, either the section or sections which would probably embrace such mining claim when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument.

Other than in respect to the requirements of subsection (a) of this section 5 as to personal delivery or mailing of copies of notices and in respect to the provisions of subsection (e) of this section 5, no such request for copies of published notices and no statement or allegation in such request and no recordation thereof shall affect title to any mining claim or to any land or be deemed to constitute constructive notice to any person that the person requesting copies has, or claims, any right, title, or interest in or under any mining claim referred to in such request.

(e) If any department or agency requesting publication shall fail to comply with the requirements of subsection (a) of this section 5 as to the personal delivery or mailing of a copy of notice to any person, the publication of such notice shall be deemed wholly ineffectual as to that person or as to the rights asserted by that person and the failure of that person to file a verified statement, as provided in such notice, shall in no manner affect, diminish, prejudice or bar any rights of that person.

SEC. 6. The owner or owners of any unpatented mining claim heretofore located may waive and relinquish all rights thereunder which are contrary to or in conflict with the limitations or restrictions specified in section 4 of this Act as to hereafter located unpatented mining claims. The execution and acknowledgment of such a waiver and relinquishment by such owner or owners and the recordation thereof in the office where the notice or certificate of location of such mining claim is of record shall render such mining claim thereafter and prior to issuance of patent subject to the limitations and restrictions in section 4 of this

Act in all respects as if said mining claim had been located after enactment of this Act, but no such waiver or relinquishment shall be deemed in any manner to constitute any concession as to the date of priority of rights under said mining claim or as to the validity thereof.

SEC. 7. Nothing in this Act shall be construed in any manner to limit or restrict or to authorize the limitation or restriction of any existing rights of any claimant under any valid mining claim heretofore located, except as such rights may be limited or restricted as a result of a proceeding pursuant to section 5 of this Act, or as a result of a waiver and relinquishment pursuant to section 6 of this Act; and nothing in this Act shall be construed in any manner to authorize inclusion in any patent hereafter issued under the mining laws of the United States for any mining claim heretofore or hereafter located, of any limitation or restriction not otherwise authorized by law.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C., May 17, 1955.

HON. JAMES E. MURRAY,

*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington 25, D. C.*

MY DEAR SENATOR MURRAY: This is in reply to your request for the views of this Department on S. 1713, a bill to amend the act of July 31, 1947 (61 Stat. 681), and the mining laws to provide for the multiple use of the surface of the same tracts of the public lands and for other purposes.

We recommend that S. 1713 be enacted, and suggest that it be amended as indicated hereinafter.

S. 1713, if enacted, would make a number of significant changes in existing laws governing mining and the disposal of materials on the public lands particularly insofar as surface uses and rights are concerned. Briefly summarized, the bill may be said to provide as follows: (1) The first three sections would exclude certain minerals from among those on which claims under the mining laws may be based, and would provide a means for the disposal of the materials so excluded; (2) section 4 would limit the rights of a holder of an unpatented mining claim hereafter located to the use of the surface and surface resources; and (3) sections 5 and 6 would provide a procedure for the clarification of surface rights appurtenant to mining claims existing at the time of the bill's enactment. Existing rights would be protected by section 7.

Section 1 of the bill would amend section 1 of the act of July 31, 1947 (61 Stat. 681; 43 U. S. C., sec. 1185), to add certain common minerals to the materials subject to disposition under that act. Also, the Secretary of Agriculture would be given the same authority with respect to mineral materials, including, but not limited to, sand, stone, gravel, pumice, pumicite, cinders, and clay, and vegetative materials, including, but not limited to, yucca, manzanita, mesquite, cactus, and timber or other forest products, located on lands under his jurisdiction as that which the Secretary of the Interior has with respect to lands under his jurisdiction. The provisions of that section would remain inapplicable to national parks and monuments and to Indian lands, but would in future be applicable to national forests.

Section 2 would amend section 3 of that act, as amended (43 U. S. C., sec. 1187), to provide that moneys received from the disposal of materials thereunder would be subject to disposition under the same provisions as moneys received from the sale of public lands, except that moneys received from the disposal of materials by the Secretary of Agriculture would be disposed of in the same manner as are other receipts from the lands from which the materials are removed. Moneys received from the disposal of materials from school section lands in Alaska would be treated as income from such school section lands is ordinarily treated.

Section 3 specifically states that a deposit of common varieties of sand, stone, gravel, pumice (except block pumice), pumicite, or cinders shall not be deemed a valuable mineral deposit within the meaning of the mining laws so as to give effective validity to any claim located thereunder.

Section 4 provides that, prior to the issuance of patent, no mining claim located subsequent to the enactment of S. 1713 could be used for any purpose other than prospecting, mining, or processing operations, and uses reasonably incident thereto, and all rights under the claim would be subject to the right of the United States to manage and use the surface; moreover, prior to the issuance of patent, no claimant could sever, remove, or use vegetative or other surface resources, except to the extent required by mining operations or uses reasonably incident thereto.

At the present time, agencies administering federally owned lands encounter many difficulties in administering the lands under their jurisdiction because of the presence of unpatented mining claims of the existence of which they may not even be aware. This undesirable situation would be alleviated by the procedure which section 5 of S. 1713 would provide for determining expeditiously title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims, located prior to the enactment of the bill. Not only is it necessary that some means be established for the expeditious determination of these uncertainties resulting from the existence of such claims, but, if section 4 of this bill is to have the desired effect upon the management and use of surface resources of unpatented mining claims, a procedure to identify which unpatented claims will be subject to its provisions is necessary. In our opinion, the procedure to be established by section 5 would answer this need for it would permit a determination of those valid claims existing prior to the enactment of the bill with respect to which claimants are asserting surface rights adverse to the United States. We do not interpret the provisions of section 5 as impairing authority under existing law to declare mining claims null and void for failure to comply with provisions of law governing such claims. We have also assumed that nothing in the bill would prevent the taking by the United States of any mining claims under the right of eminent domain.

The procedure which section 5 would establish would commence with the Secretary of any Federal department, responsible for administering the surface resources of any lands belonging to the United States, filing with the Secretary of the Interior a request for publication of notice to mining claimants for the determination of surface rights. The filing of a request of that nature would be accompanied by affidavits of persons who had examined the lands involved in an effort to ascertain whether or not any persons were in possession of or engaged in working the lands; the affidavits would state the names and addresses of all persons so found or, if none were found, would state that fact.

The request would also be accompanied by the certificate of an attorney, a title abstractor, or a title or abstract company, based upon an examination of tract indexes in the county office of record, setting forth the name of any person appearing in those records as having an interest in the lands involved under an unpatented mining claim. The Secretary of the Interior would, upon the receipt of such a request, publish notice to mining claimants in a newspaper having general circulation in the county wherein the lands involved are situated. Any person asserting an unpatented mining claim in those lands would be required to submit, within 150 days, a statement setting forth pertinent information as to his claim, and any claimant failing to submit such a statement would be conclusively deemed to have waived any rights to his claim which would be contrary to the limitations set forth in section 4 of the bill with respect to the use of the surface and to have consented to the subjection of his claim to the provisions of that section. Upon publication of notice in a newspaper, a copy of that notice would be delivered, either in person or by registered mail, to each person whose name and address appear in the affidavits and certificates submitted with the request for publication.

The bill also would provide a method by which any person desirous of receiving notice with respect to any particular lands might file a request for such notice in the appropriate county office of record. If any statement should be filed by a claimant in response to the publication or delivery of notice, the Secretary of the Interior would hold hearings to determine the validity and effectiveness of any right or title to that mining claim, or interest in or under that claim, which is contrary to or in conflict with the provisions relating to the use and management of surface resources, set forth in section 4 of the bill. Such hearings would follow the established general procedures and rules of practice of the Department of the Interior with respect to contests or protests affecting public lands. If, with respect to any person, the requirements as to personal delivery or mailing of notice should not be complied with, that person's rights would be affected in no way by the publication of notice.

Section 6 provides that, while any owner of an unpatented mining claim may waive or relinquish all rights thereunder contrary to or in conflict with the restrictions of section 4, such a waiver or relinquishment will not constitute any concession as to the validity of his claim or as to the date of priority of rights under that claim.

Section 7 provides that the bill will in no way limit or restrict existing rights under any valid mining claim except insofar as those rights are limited or restricted in actions taken pursuant to sections 5 and 6, nor will the bill authorize

the inclusion in patents thereafter issued for mining claims of any limitations or restrictions not otherwise authorized by law.

S. 1713 is designed to meet a situation which has arisen because of more intensive Federal use of the public lands in recent years. Under the existing mining laws various abuses have been possible. For example, it has been possible for persons who have unpatented claims under the mining laws to prevent orderly management and disposition of valuable timber and other surface resources, and also to block access to such resources on unlocated Federal land while paying little or no attention to mining. Moreover, many claims have been based on deposits of the mineral material listed in section 1 which, although technically of sufficient value to justify a location, are actually of minor worth as compared to other natural resources of the land. Another example of these abuses may be seen in the fact that it has been possible to acquire a color of right, through a mining location, for nonmining purposes, such as summer homesites.

This bill is designed to strike at these abuses, which violate the spirit of the mining laws. The bill provides that deposits of common minerals such as ordinary varieties of sand, stone, gravel, pumice, pumkite, and cinders shall not be deemed valuable mineral deposits within the meaning of the mining laws. Secondly, it prohibits the use of a claim for any nonmining purpose prior to the issuance of patent.

The type of practice against which this bill is directed has drawn the disapproval of the mining industry generally, conservation groups, and other public land users. The national interest in encouraging the discovery of minerals dictates that the mining industry should have a continued opportunity to locate mining claims, to mine minerals found there, to discover and develop commercial deposits, and, if fortunate, to make a profit, but the national interest is not served by preventing the use of the surface of unpatented claims for other desirable uses which do not substantially interfere with mining operations and related activities. This legislation is based upon this sound premise, in our view.

At the same time as the proposed legislation would meet the wishes of the mining industry, it would also give full recognition to the vital importance of the forest and range resources of the public lands and the national forests, for the bill provides for the multiple use of the surface of mining claims and thus permits the conservation and wise use of all surface resources in the public interest.

We have discussed above the need for a procedure for establishing the existence of unpatented mining claims and for determining the respective rights of the United States and holders of unpatented mining claims. Certainly, the procedure which section 5 would establish would eliminate many of the problems relating to ownership and management of surface resources which arise in the case of Government timber sales, grazing permits, and watershed and recreational development. Under the procedure which would be provided by this bill, it is hoped that an area in which a timber sale, for example, was contemplated could be subjected to a conclusive determination of surface rights within a reasonably short time.

We believe that the bill should be amended so that the provisions of sections 1 and 2 would be specifically applicable to the revested Oregon & California Railroad grant lands and the reconveyed Coos Bay Wagon Road grant lands. The other sections of S. 1713 are already applicable to these lands, and there is no reason why these lands should not be subject to the same provisions of law as other public lands in these respects. We suggest, therefore, that there be inserted immediately after "United States," at page 2, line 2, the following: "including for the purposes of this act land described in the acts of August 28, 1937 (50 Stat. 874), and of June 24, 1954 (68 Stat. 270).". For the same reason, we also suggest that there be inserted, immediately after "except" at page 3, line 22, the following: "that revenues from the lands described in the act of August 28, 1937 (50 Stat. 874), and the act of June 24, 1954 (68 Stat. 270), shall be disposed of in accordance with said acts and except."

It is also suggested that the language used at the beginning of section 5 requires clarification. Though the later language of section 5 clearly indicates that its provisions apply to all departments and agencies, the phraseology in the first sentence of the section could well be interpreted as limiting the section's scope to the executive departments only. We suggest, therefore, that all of line 3, page 6, be deleted and the following substituted in its place "The head of a Federal department or agency."

Certain existing statutes limit or restrict mining activities upon lands owned by the United States, as, for example, the act of April 8, 1948 (62 Stat. 162),

which opened the revested Oregon & California Railroad grant lands and the reconveyed Coos Bay Wagon Road grant lands to exploration, location, entry, and disposition under the general mining laws, but which limited, with respect to the timber on those lands, the rights of persons making entry on those lands. We believe it essential that nothing in S. 1713 be interpreted as repealing or amending any of those laws imposing such special limitations or restrictions. Though the existing language of the bill may afford such a guarantee, we suggest that the period at the end of section 7 be replaced by a comma and the following added: "or to limit or repeal any existing authority to include any limitation or restriction in any such patent."

The Bureau of the Budget has advised that there is no objection to the presentation of this report to your committee.

Sincerely yours,

FRED G. AANDAHL,  
*Assistant Secretary of the Interior.*

DEPARTMENT OF AGRICULTURE,  
*Washington 25, D. C., May 17, 1955.*

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate.*

DEAR SENATOR MURRAY: Reference is made to your request of April 20 for a report on S. 1713, a bill to amend the act of July 31, 1947 (61 Stat. 681), and the mining laws to provide for multiple use of the surface of the same tracts of the public lands and for other purposes.

We strongly recommend early enactment of S. 1713 with one clarifying amendment as subsequently described.

S. 1713 is identical to H. R. 5561, 5563, 5572, 5595, 5742, and almost identical to H. R. 5577.

This bill would apply to all lands of the United States subject to the general mining laws. Its major provisions are:

(1) Common varieties of sand, stone, gravel, pumice, pumicite, and cinders would be removed from the purview of the United States mining laws and made subject to disposal only under the provisions of the Materials Act of July 31, 1947 (61 Stat. 681), by the Secretary of Agriculture for lands under his jurisdiction and by the Secretary of the Interior for other public lands of the United States.

(2) Mining claims located after enactment of the bill could not, prior to patent, be used for other than mining purposes without authorization from the United States, and such locations would be subject to the right of the United States to manage and dispose of the vegetative surface resources, to manage other surface resources thereof (except minerals subject to the mining laws) and to use so much of the surface as necessary for such purposes or for access to adjacent land; provided that any use of the surface by the United States, its permittees or licensees, could not endanger or materially interfere with mining uses. Mining claimants could not use surface resources subject to management and disposal by the United States except to the extent required for mining purposes, and any timber cut for such purposes, except for clearance, must be in accordance with sound principles of forest management.

(3) Under a procedure similar to that provided in Public Law 585 of the 83d Congress, the Secretary of the Interior shall, at the request of the Federal department having the responsibility for administering the surface of lands of the United States, initiate action for a determination of surface rights as to a given area. Under this procedure, a holder of a claim located prior to enactment of this bill could assert and establish his rights in the lands covered by his claim, and such claim would be unaffected by the proceedings. If such a claimant fails to establish his rights, or fails to assert his rights, or if he voluntarily waives his rights to the surface, he will be in the same position as a holder of a claim located after enactment of this bill. The procedure does not affect the right of a claimant to apply for patent, and if patent is granted he would acquire the same title as he would under the existing law.

We believe S. 1713, if enacted, would go far toward correcting some of the very difficult problems confronting this department in its administration of those national forests and Title III Bankhead-Jones lands subject to the general mining laws of the United States. We also believe that for the first time an area of agreement has been reached on this problem between the administrators of pub-

lic lands under the jurisdiction of both the Departments of Interior and Agriculture, representatives of the mining industry, and conservation groups.

The Department of Agriculture desires to encourage legitimate prospecting and effective utilization and development of mineral resources of the national forests and Title III lands. We would not favor legislation which would interfere with such development of minerals nor work hardship on the bona fide prospector or miner. We also recognize that the mining industry does not condone the use of mining claims on the public lands for other than mining purposes.

However, on the national forests the mining laws are sometimes used to obtain claim or title to valuable timber, summer home sites, or lands blocking access to Government timber and to water needed in the grazing use of the national forests.

As of January 1, 1952, there were 36,000 mining patents on the national forests, covering 918,500 acres. Only about 15 percent of these mining patents have been or are commercially successful mines. As of the same date, there were approximately 84,000 claims, covering 2.2 million acres. Only 2 percent of these claims were producing minerals in commercial quantities and probably not more than 40 percent could be considered valid under the requirements of the mining laws. Yet, on these national-forest claims, there was tied up over 8 billion feet of commercial sawtimber, valued at about \$100 million which the Government could not sell without consent of the claimant. In other words, national-forest timber exceeding in quantity and value that cut from all national forests in any one year is tied up on mining claims and cannot be sold by the Government. The two tables attached to this report supply these basic statistics by States.

The effect of this situation is increased costs of administration, obstruction of orderly management and competitive sale of timber, and obtaining high-value, publicly owned surface resources by a few individuals at nominal cost.

In the last 3 years there has been a tremendous increase in the number of mining claims on the national forests, principally as the result of prospecting for uranium and other fissionable materials. For example, as of January 1, 1955, it is estimated that there were 166,000 claims on the national forests, covering nearly 4 million acres or about a 100-percent increase in the past 3 years. At the rate claims are currently being filed, we estimate that by the end of this calendar year there will be about 225,000 mining claims on the national forests. It is also estimated conservatively that there are now over 10 billion board feet of timber tied up on national-forest mining claims, having a current stumpage value of \$112 million.

Following is an estimate of the number of claims and included acreage by States in the national forests as of January 1, 1955 :

State	Thousand claims	1955 claims as multiple of 1952 claims	Thousand acres	1955 acreage as multiple of 1952 acreage
Arizona.....	34.3	6.9	684	6.2
California.....	21.0	1.1	602	1.0
Colorado.....	16.7	1.8	375	1.5
Idaho.....	18.4	1.2	408	1.2
Montana.....	14.6	2.1	282	2.1
Nevada.....	5.2	1.8	108	2.3
New Mexico.....	8.7	3.7	223	2.8
Oregon.....	6.7	.9	215	.8
South Dakota.....	4.8	1.9	103	2.0
Utah.....	28.4	3.6	583	3.2
Washington.....	5.3	1.8	94	1.3
Wyoming.....	2.1	2.5	78	2.4
Totals.....	166.2	2.0	3,755	1.7

The number of claims is "snowballing" so fast that the situation on the national forests is rapidly getting out of hand. The above summary, for example, shows that there are nearly 7 times as many mining claims in Arizona as 3 years ago, and nearly 4 times as many in New Mexico and Utah. The increase has been large in other States, too. Equitable corrective action as would be provided by S. 1713 is urgently needed. It is needed quickly because new claims are being filed at the rate of about 5,000 per month.

We suggest the following be added after the word "except" in line 22, page 3: "that revenues from the lands described in the act of August 28, 1937 (50 Stat. 874), and the act of June 24, 1954 (68 Stat. 270), shall be disposed of in accordance with the provisions of such acts, and except."

The purpose of this amendment is to make it clear that revenues from O. & C. lands under the administration of the Department of the Interior and lands administered by the Department of Agriculture under the 1954 act will be placed in the O. & C. fund.

To effectively implement the provisions of S. 1713, particularly those of section 5, it is estimated that about \$750,000 to \$1 million would be needed annually by this Department for roughly a 10-year period, after which costs would drop to a relatively small amount. After claims located prior to enactment of the bill had been processed in accord with section 5, costs relating to this bill would be limited primarily to costs of issuing permits for disposal of materials under the Materials Act. Such costs would be offset in whole or in part by revenues from such permits.

In summary, this Department recommends enactment of S. 1713 since it will do much to solve the serious problems presented by mining claims in the management of public lands and resources. It will correct deficiencies in the mining laws and prevent many of the abuses by other than bona fide miners, but it will not obstruct or interfere with bona fide mineral prospecting, mining, and development. The Department is anxious to see these measures taken and strongly endorses the bill. However, S. 1713 does not include all of the changes in the mining laws which would be desirable from a good public land management standpoint and some problems would remain with respect to mining on the national forests and title III lands that this bill would not correct.

The Bureau of the Budget advises that, from the standpoint of the program of the President, there is no objection to the submission of this report.

Sincerely yours,

TRUE D. MORSE, *Undersecretary.*

[H. R. 100, 84th Cong., 1st sess.]

AN ACT To permit the mining, development, and utilization of the mineral resources of all public lands withdrawn or reserved for power development, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mining Claims Rights Restoration Act of 1955."*

SEC. 2. All public lands belonging to the United States now or hereafter withdrawn or reserved for power development or power sites by statutory rights shall be open to entry for location and patent of mining claims and for mining, development, beneficiation, removal, and utilization of the mineral resources of such lands under applicable Federal statutes: *Provided, That all power rights to such lands shall be retained by the United States: Provided further, That locations made under this Act within the revested Oregon and California Railroad and reconveyed Coos Bay Wagon grant lands shall also be subject to the provisions of the Act of April 8, 1948, Public Law 477 (Eightieth Congress, second session): And provided further, That nothing contained herein shall be construed to open for the purposes described in this section any lands (1) which are included in any project operating or being constructed under a license or permit issued under the Federal Power Act or other Act of Congress, or (2) which are under examination and survey by a prospective licensee of the Federal Power Commission, if such prospective licensee holds an uncanceled preliminary permit issued under the Federal Power Act authorizing him to conduct such examination and survey with respect to such lands and such permit has not been renewed in the case of such prospective licensee more than once.*

SEC. 3. Prospecting and exploration for and the development and utilization of mineral resources authorized in this Act shall be entered into or continued at the financial risk of the individual party or parties undertaking such work: *Provided, That the United States, its permittees and licensees shall not be responsible or held liable or incur any liability for the damage, destruction, or loss of any mining claim, mill site, facility installed or erected, income, or other property or investments resulting from the actual use of such lands or portions thereof for power development at any time where such power development is made by or under the authority of the United States, except where such damage, destruction, or loss results from the negligence of the United States, its permittees and licensees.*

SEC. 4. The owner of any unpatented mining claim located on land described in section 2 of this Act shall file for record in the United States district land office of the land district in which the claim is situated (1) within one year after the effective date of this Act, as to any or all locations heretofore made, or within sixty days of location as to locations hereafter made, a copy of the notice of location of the claim; (2) within sixty days after the expiration of any annual assessment year, a statement as to the assessment work done or improvements made during the previous assessment year.

SEC. 5. Nothing in this Act contained shall be construed to limit or restrict the rights of the owner or owners of any valid mining claim located prior to the date of withdrawal or reservation.

SEC. 6. Notwithstanding any other provisions of this Act, all mining claims and mill sites or mineral rights located under the terms of this Act or otherwise contained on the public lands as described in section 2 shall be used only for the purposes specified in section 2 and no facility or activity shall be erected or conducted thereon for other purposes.

SEC. 7. No mining claim located pursuant to this Act upon surveyed or unsurveyed lands, title to which, except for such location, would following the termination of the withdrawal or reservation, vest in a State for the support of the common or public schools shall create any rights as against the State, and the existence of the claim shall not prevent the vesting of the title in the State.

[S. 1149, 84th Cong., 1st sess.]

A BILL To permit the mining, development, and utilization of the mineral resources of all public lands withdrawn or reserved for power development, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mining Claims Rights Restoration Act of 1955".*

SEC. 2. All public lands belonging to the United States now or hereafter withdrawn or reserved for power development or power sites by statutory rights shall be open to entry for location and patent of mining claims and for mining, development, beneficiation, removal, and utilization of the mineral resources of such lands under applicable Federal statutes: *Provided*, That all power rights to such lands shall be retained by the United States: *Provided further*, That locations made under this Act within the revested Oregon and California Railroad and reconveyed Coos Bay Wagon grant lands shall also be subject to the provisions of the Act of April 8, 1948, Public Law 477 (Eightieth Congress, second session.)

SEC. 3. Prospecting and exploration for and the development and utilization of mineral resources authorized in this Act shall be entered into or continued at the financial risk of the individual party or parties undertaking such work: *Provided*, That the United States, its permittees and licensees shall not be responsible or held liable or incur any liability for the damage, destruction, or loss of any mining claim, mill site, facility installed or erected, income, or other property or investments resulting from the actual use of such lands or portions thereof for power development at any time where such power development is made by or under the authority of the United States, except where such damage, destruction, or loss results from the negligence of the United States, its permittees and licensees.

SEC. 4. The owner of any unpatented mining claim located on land described in section 2 of this Act shall file for record in the United States district land office of the land district in which the claim is situated (1) within one year after the effective date of this Act, as to any or all locations heretofore made, or within sixty days of location as to locations hereafter made, a copy of the notice of location of the claim: (2) within sixty days after the expiration of any annual assessment year, a statement as to the assessment work done or improvements made during the previous assessment year.

SEC. 5. Nothing in this Act contained shall be construed to limit or restrict the rights of the owner or owners of any valid mining claim located prior to the date of withdrawal or reservation.

SEC. 6. Notwithstanding any other provisions of this Act, all mining claims and mill sites or mineral rights located under the terms of this Act or otherwise contained on the public lands as described in section 2 shall be used only for the purposes specified in section 2 and no facility or activity shall be erected or conducted thereon for other purposes.

[S. 1502, 84th Cong., 1st sess.]

A BILL To permit the mining, development, and utilization of the mineral resources of all public lands withdrawn or reserved for power development, to require public hearings prior to withdrawals of all public lands, to limit temporary withdrawals to five years, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That all public lands belonging to the United States heretofore, now, or hereafter withdrawn or reserved for power development or power sites by statutory rights shall be open to entry for location and patent of mining claims and for mining, development, beneficiation, removal, and utilization of the mineral resources of such lands under applicable Federal statutes: *Provided*, That all power rights to such lands shall be retained by the United States.

SEC. 2. Prospecting and exploration for and the development and utilization of mineral resources authorized in this Act shall be entered into or continued at the financial risk of the individual party or parties undertaking such work: *Provided*, That the United States, its permittees, and licensees shall not be responsible or held liable or incur any liability for the damage, destruction, or loss of any mining claim, mill site, facility installed or erected, income, or other property or investments resulting from the actual use of such lands or portions thereof for power development at any time where such power development is made by or under the authority of the United States, except where such damage, destruction, or loss results from the negligence of the United States, its permittees, and licensees.

SEC. 3. The owner of any unpatented mining claim located on land described in section 1 of this Act shall file for record in the United States district land office of the land district in which the claim is situated (1) within one year after the effective date of this Act, as to any or all locations heretofore made, or within

sixty days of location as to locations hereafter made, a copy of the notice of location of the claim, or (2) within sixty days after the expiration of any annual assessment year, a statement as to the assessment work done or improvements made during the previous assessment year.

SEC. 4. (a) Nothing in this Act contained shall be construed to limit or restrict the rights of the owner or owners of any valid mining claim located prior to the date of withdrawal or reservation.

(b) Nothing in this Act shall affect the validity of withdrawals or reservations for purposes other than power development: *Provided*, That any withdrawal or reservation for purposes other than power development made after the original location of a mining claim affecting land covered by such mining claim is hereby modified and amended so that the effect thereof upon such mining claim shall be the same as if such mining claim had been located upon lands of the United States which, prior to the date of such withdrawal, were subject to location under the mining laws of the United States: *Provided further*, That the owner of such claim shall duly comply with the filing provisions of section 3 of this Act.

SEC. 5. Notwithstanding any other provisions of this Act, all mining claims and mill sites or mineral rights located under the terms of this Act or otherwise contained on the public lands as described in section 1 shall be used only for the purposes specified in section 1 and no facility or activity shall be erected or conducted thereon for other purposes.

SEC. 6. (a) No public lands of the United States, including Alaska, shall hereafter be withdrawn from settlement, entry, location, or sale, except after full public hearings, held within the State or States in which the lands proposed to be withdrawn are situated, upon adequate notice and opportunity for hearing by all interested parties. The publication of notice of any such hearings shall have the effect of segregating for a period of one hundred and eighty days the lands proposed to be withdrawn from settlement, entry, location, sale, or other forms of disposal under the public land laws, including the mining and mineral leasing laws, to the extent that the withdrawal applied for, if effected, would prevent such forms of disposal.

(b) Any lands which are hereafter temporarily withdrawn shall, unless sooner released, be released from withdrawal five years from the effective date of the withdrawal, except that nothing contained herein shall be construed to prohibit further withdrawals of such lands upon compliance with the provisions of this section relating to notice and hearings.

SEC. 7. (a) The Secretary of the Interior shall periodically review the need for the continued withdrawal of any public lands of the United States which upon the date of enactment of this Act are withdrawn from settlement, entry, location, or sale and which he is authorized by law to release from withdrawal, and shall hold public hearings within any State in which any of such lands are situated upon the request of such State for the purpose of determining whether or not such lands should be released from withdrawal. The Secretary shall promptly cause any of such lands to be released from withdrawal whenever he shall determine, upon the basis of his own review or as a result of any such hearing, that the interests of the United States will not thereby be prejudiced.

(b) Any hearings authorized under subsection (a) of this section shall be held upon adequate notice. An opportunity to be heard in such hearings shall be accorded to all interested parties. A request for any such hearings may be made in writing by the Governor of any State in which the withdrawn lands are situated, or by resolution of the legislature of any such State.

SEC. 8. The provisions of sections 6 and 7 of this Act shall not be applicable with respect to any lands the withdrawal of which has been specifically authorized by Act of Congress.

Senator ANDERSON. Every member of this committee is keenly interested in bringing about the broadest possible use of the resources of our public domain, national forests, and mineral deposits for the general benefit of the people of this country. The rapidly expanding economies of our Western States have been accompanied by a growing need for more intensive use of our public domain.

The high tempo of our housing industry has brought about heavy demands for timber; stock growers need more grazing area to meet

the increasing consumption of meat; our mining industry is constantly hunting for new sources of mineral supplies to replace those consumed during the last war and to meet the ever-increasing requirements of our industrial economy; and the public generally is seeking out new recreational areas. These demands for more general use of the public domain have resulted in the development of conflicts over the use of the surface of mining claims located on the public lands and in the national forests.

As a Member of the House of Representatives, as Secretary of Agriculture, and as a Senator, I have always been a staunch supporter of mineral development on our public domain as well as the broader use of the surface resources thereon. Over the past several years the need for legislation to solve the problems that have arisen as a result of the abuses of the mining laws by individuals seeking surface resources under the guise of locating mining claims has become more and more apparent. The Federal agencies have been impeded in their administration of the public lands and the national forests by the actions of these individuals, relatively few in number, happily, and our great domestic mining industry has suffered much unfortunate adverse publicity because of these persons who are not real miners.

Proposed legislation has been introduced at a number of previous sessions of Congress with the intent of preventing these abuses while still not interfering with our legitimate mining industry, or changing the basic theories of the mining law of 1872. Such proposed legislation has not been enacted because of the conflicting and opposing views of users of the public lands and the executive agencies concerned.

At this session we hope to enact a law which will both overcome the problem of mining law abuse without disturbing the basic principles of the mining laws, and provide for multiple development of surface resources in the broad public interest. The purpose of my bill, S. 1713, is to accomplish that goal.

At this time I should like to pay sincere tribute to the Departments of Agriculture and Interior, to the members of our great mining industry, and to those interested in the conservation of our natural resources for their cooperation and assistance in helping me and my colleagues work out what we believe to be a sound and constructive solution of this problem which has been before us for such a long time.

I and the other sponsors of this measure believe that it will go a long way toward eliminating many of the abuses of the mining laws. It will provide for multiple use of the surface of mining claims located in the future. It will enable the Government departments to clear up title uncertainties, both in the National Forest and on other public lands, resulting from the existence of abandoned, invalid, dormant or unidentifiable mining claims. It will guarantee the miner a full title to his claim when it goes to patent and will likewise guarantee his full rights for prospecting, mining and related activities before it goes to patent.

It is our plan to hear all witnesses, for we desire to obtain the views of everyone who wishes to express them on this problem. But in order not to prolong these hearings and to permit as many as possible to be heard, we request that witnesses eliminate as much repetitive testimony as possible. Full statements may be filed with the committee

and they will be printed in the record of these hearings. The committee will give careful consideration to all testimony submitted, but it does ask that you keep your remarks brief.

It is my hope that as a result of these hearings we shall be able to sit down and write a bill which will prevent future abuse of the mining laws and bring about broad use of the public domain in the national interest.

The committee already has received a number of letters and telegrams in support of this proposed legislation, and I will direct that they appear in the record at the conclusion of the oral testimony. I might add, parenthetically, that so far the committee has not received any word of opposition.

We have a number of witnesses from the executive agencies, from the mining, lumbering, and stock-raising industries, and from persons interested in conservation. Since this bill amends the mining laws and affects the mining industry perhaps more directly than any other group, it seems logical that we should hear from a spokesman from the American Mining Congress first. Therefore, I will ask Mr. Ray Holbrook, of Salt Lake City, Utah, to take the stand. Mr. Holbrook, we are glad to have you with us here today.

**STATEMENT OF RAYMOND B. HOLBROOK, ATTORNEY, UNITED STATES SMELTING, REFINING & MINING CO., AND CHAIRMAN OF THE PUBLIC LANDS COMMITTEE OF THE AMERICAN MINING CONGRESS**

Mr. HOLBROOK. Thank you, Mr. Chairman. I would like to say, Senator Anderson, that I think your preliminary statement is a very fine presentation of the problem we have and a comprehensive résumé of your measure. I shall comment on the bill in somewhat more detail.

My name is Raymond B. Holbrook and I reside in Salt Lake City, Utah. I am an attorney and am employed by United States Smelting Refining & Mining Co. as counsel of western operations. My work during the past 17 years has required detailed study of mining laws. I am chairman of the Public Lands Committee of the American Mining Congress and appear before you as its representative. The American Mining Congress is the national organization of the mining industry and is composed of both large and small producers of all metals and minerals mined in the United States.

That organization and its membership have been very much concerned about the problem of mining locations which have been attempted for a purpose other than the recovery of minerals. The purpose may be an attempt to control the timber on the land, or a choice site for a summer cabin, or an area which may have nuisance value. Such locations fall into two categories:

(1) Clearly invalid mining locations, unsupported by any semblance of discovery, and

(2) Mining locations having mineral disclosures which might satisfy the basic requirement of discovery, but which were in fact made for a purpose other than mining.

I think it is generally known that the mining industry has never condoned the making of such locations and, on the contrary, has urged the use of available procedure to defeat them.

The following statement appears in the declaration of public land policy adopted by the American Mining Congress at its annual meeting in San Francisco in September 1954:

We believe \* \* \* that suitable amendments can be made in the general mining laws which, with proper use of available procedures, will simplify enforcement and minimize bad faith attempts through pretended mining locations to serve objectives other than the discovery and development of minerals. We believe that this can be accomplished in a manner which will protect the incentive and reward now inherent in the mining laws.

We have had the pleasure of working with the Forest Service and the Bureau of Land Management and understand their position is that these problems could not be entirely met by effective administration of existing laws for the following reasons:

1. The available remedies are slow, expensive and not conclusive, and
2. There is great difficulty in establishing the invalidity of a location, supported by discovery, on the basis that the location was made for a purpose other than mining.

Both the Agriculture and the Interior Departments have strongly emphasized that there should be no roadblocks placed in the way of mineral discovery and development and that they wish to encourage bona fide prospecting and utilization of mineral resources in the national forests and on other public lands.

The mining industry has been disturbed by proposals which would establish one set of rules for mining locations in national forests and another set for those outside; or which would result in forfeiture of a mining claim for failure to perform certain acts; or which would require application for patent within a certain time; or which would restrict the rights granted by a patent for a mining claim. We believe that the unprecedented development of the mineral resources of this Nation and its ability to produce the basic raw materials so essential to our economy and so vital to our national defense is largely due to the basic concepts and principles of our mining laws. They are based on the premises that minerals in public lands should be developed by private enterprise and that, as an incentive and reward for discovery and development of them, title to the lands may be acquired in private ownership.

It is becoming increasingly more important that all of the resources of the public domain be discovered and utilized. The dawn of the atomic age started the greatest mining rush in American history and alerted us to the importance of continuing to develop and discover our mineral resources. The demand for timber, forage and recreational facilities also requires maximum utilization of these resources of the public domain.

Last year Congress enacted Public Law 585 "to amend the mineral leasing laws and the mining laws to provide for multiple mineral development of the same tracts of the public lands, \* \* \*." The bill before this committee proposes to provide for multiple use of the surface "of the same tracts of the public lands \* \* \*." Its particular objectives are:

- (a) To eliminate attempts to make mining locations for purposes other than mining;

(b) To provide for conservation and proper use of timber, forage and other surface resources on mining claims and on adjacent lands; and

(c) To accomplish these ends without materially altering the basic concepts and principles of the general mining laws.

The method of accomplishing these objectives would, under the bill, be:

1. To prohibit the use of any hereafter located unpatented mining claim for any purpose other than prospecting, mining, processing and related activities.

2. To ban future locations under the mining laws for common varieties of sand, stone, gravel, pumice, pumicite and cinders, and provide for the disposition of these materials under the Materials Disposal Act.

3. To authorize the United States to manage and dispose of the timber and forage, to manage the other surface sources, and to use the surface of hereafter located mining claims for these purposes and for access to adjacent land, so long as these activities do not endanger or materially interfere with established mining operations or related activities.

4. To provide an in rem procedure similar to a "quiet title" action, under which the United States could expeditiously resolve title uncertainties, resulting from the existence (frequently unknown and otherwise not determinable) of invalid, abandoned or dormant mining claims, located prior to enactment of the bill, in any given area; and in connection with such a proceeding, to provide safeguards for the proper protection of established rights under heretofore located mining claims.

I would like to comment briefly on each section of the bill.

Sections 1, 2, 3, and 4 apply only to mining locations made after enactment of the bill. They do not affect rights under existing valid mining locations.

I should like to discuss section 3 first. It would close the door to mining locations based on discovery of a deposit of common varieties of sand, stone, gravel, pumice, pumicite or cinders. It would not preclude mining locations based on discovery of some other mineral occurring in or in association with such a deposit: for example, a mining location based on a discovery of gold in sand or gravel could be made. By definition of the term "common varieties," deposits of such materials which are valuable because the deposit has some property giving it distinct and special value could continue to be located under the mining laws, as could also "block pumice" which occurs in nature in pieces having one dimension of 2 inches or more. The provisions of this section are similar to those of the Regan bill, which the House passed at the last session of Congress and to the Young bill which is before this committee this year. Probably the greatest area of conflict has been mining locations where the discoveries asserted were common varieties of sand, stone, gravel, pumice, pumicite or cinders, which occur in so many places and over such wide areas. We believe that enactment of this bill would eliminate this broad area of conflict without creating any problem of consequence in the mining industry.

Sections 1 and 2 of the bill would amend sections 1 and 3 of the Materials Disposal Act to extend its applicability to the deposits

which, as mentioned previously, could no longer be located under the mining law.

Section 1 of the bill would effect two major changes in section 1 of the Materials Disposal Act.

(a) By the express terms of section 1 of the present Materials Disposal Act, it does not apply to lands in national forests. Section 1 of the bill would remove that restriction in addition to broadening the act, as above mentioned, to include the widely occurring surface minerals as noted. There should be provision whereby mineral or vegetative materials may be disposed of under circumstances when such disposal (1) is not otherwise expressly authorized by law, (2) is not expressly prohibited by law, and (3) would not be detrimental to the public interest. The proposed amendment so provides.

(b) The present Materials Disposal Act provides that dispositions under it shall be made by the Secretary of the Interior. The proposed amendment provides for dispositions by the Secretary of Agriculture where the materials are on lands administered by him. This would avoid interference with national forest administration as a result of the removal of the present national forest restriction.

In these changes you will recognize the broad objective of full utilization of national resources in the public interest.

Section 2 would amend section 3 of the Materials Disposal Act by adding a provision for disposition of moneys received from the disposal of materials by the Secretary of Agriculture. The purpose of and need for this change has clear relation to the proposed changes in section 1 of the present Materials Disposal Act.

Section 4 of the bill specifies the rights, limitations, and restrictions under an unpatented mining claim hereafter located.

It recognizes essential rights—mining claims could be used for prospecting, mining, processing and related activities, though not for unrelated activities. Timber thereon could be cut by the mining claimant to provide clearance. Timber and other surface resources thereof required for mining and related activities could be used by the mining claimant.

It imposes limitations and restrictions upon other uses—mining claims could not be used for any purpose other than prospecting, mining, processing and related activities. The United States would be authorized to manage and dispose of the timber and forage thereon, and to manage the other surface resources thereof, and to use so much of the surface of the mining claim as may be necessary for such purposes, or for access to adjacent land, so long as and to the extent that these activities do not endanger or materially interfere with mining operations or related activities on the mining claim. The mining claimant could not remove or use timber or other surface resources thus subject to management and disposition by the United States, except to the extent required in his mining operations or related activities. Any timber cutting by the mining claimant, other than that to provide clearance, would have to be done in accordance with sound principles of forest management.

After patent, the patentee, as in the past, would acquire full title to the mining claim and its resources. Acquisition of patent, as the members of this committee know, requires compliance with the mining laws as to location, mining expenditures and payment of the Government purchase price, and a determination by the Department of

Interior as to the validity of the claim and full compliance with law.

Section 5 involves only mining locations made before enactment of the bill. It provides an in rem procedure similar to that contained in Public Law 585 which resolved the conflict between the mining laws and the Mineral Leasing Act. The in rem proceeding under Public Law 585 was one available to those holding application, permit or lease under the Mineral Leasing Act. The in rem proceeding under section 5 of the proposed bill is available to the secretary of any Federal department having responsibility for administering surface resources of land belonging to the United States. This should simplify administration and facilitate understanding by those concerned. This procedure would enable a Government department to resolve title uncertainties resulting from the possible existence of invalid, abandoned, dormant or unidentifiable mining claims located on the public domain, including lands in the national forests. The procedure follows generally the long established procedure applicable to securing mineral patents, whereby those who claim rights adverse to those of the patent applicant, are required to come forward and assert them.

Careful provision is made for notice of the pendency of such a proceeding.

Subsection (a) of section 5 requires a preexamination of the lands, to ascertain, if possible, any parties in possession. A notice of the proceeding must be published in a newspaper having general circulation in the county in which the lands involved are situated. A copy of the notice must be personally delivered or be sent by registered mail:

1. To each person found to be in possession or engaged in working the lands involved in the proceeding, and

2. To each person who has filed in the county office of record a request for such notice as contemplated under subsection (d); and a copy of the notice must be mailed by registered mail to each person who is shown by a title search to have an interest in the lands.

Senator WATKINS. Just a moment, there. Would you say "have an interest" or "claims an interest" in the lands?

Mr. HOLBROOK. It would be shown as an interest of record, Senator.

Senator WATKINS. The person could be someone claiming an interest. The interest might not be an actual interest.

Mr. HOLBROOK. If they claimed an interest, such a claim would entitle them, I think, personal notice, or mailing to each person found in possession. They would be the ones that would claim it, I think, Senator. If they claim an interest, as they are entitled to notice, and I think it so provides. But it also provides for searching the record to see if there is any record interest. And that is what is intended by the last line. Does that answer the question, Senator?

Senator WATKINS. What I had in mind was this. There might be only a claimed interest, under any of these sections. You see what I have in mind?

Mr. HOLBROOK. Oh, yes. I quite agree with you.

Subsection (b) specifies the consequence of failure of a mining claimant (within the allowed 150 days after first publication of the notice) to make an appearance in the proceeding and assert his rights. If he does not do so, he cannot thereafter assert any rights under his mining claim which are contrary to, or in conflict with, the limitations or restrictions specified in section 4, but he would not lose any other

rights under his claim. In other words, the claim would thereafter have the same status as a claim located in the future.

Subsection (c) provides that when a mining claimant asserts rights which conflict with the limitations and restrictions specified in section 4—in other words, rights to the surface resources generally—there shall be a local hearing to determine the validity of such rights. Any single hearing is limited to a maximum of 20 mining claims, unless the parties otherwise stipulate. This would limit the length of the hearing and the cost of a transcript so that they would not be an unreasonable burden. The procedure with respect to notice of and conduct of the hearing and appeals would follow the then-established Interior Department procedures and rules of practice.

Subsection (d) permits a mining claimant to avoid the danger of oversight of a published notice and to be assured of notice of an in rem proceeding affecting his claim by recording in the county office of record a request for a copy of any such notice, giving his name, address, and certain data as to each unpatented mining claim under which he asserts rights.

I think that provision will be generally used to avoid the necessity of constantly watching newspapers for published notice.

Subsection (e) provides that the publication of notice shall be wholly ineffectual as to any person entitled to be served with or to be mailed a copy of the published notice, if the notice is not so served upon or mailed to him. That, in brief, is a prerequisite for jurisdiction.

Section 6 permits the owner of an unpatented mining claim, located before the effective date of the act, if he so desires, to waive and relinquish all rights thereunder which are contrary to or in conflict with the limitations and restrictions specified in section 4; in other words, to agree to the surface rights status applicable to a mining claim located after enactment of the bill. Such a waiver or relinquishment would not constitute any concession as to the date of priority of his rights under the mining claim or as to the claim's validity. This section should permit and encourage cooperation and avoidance of much controversy.

Section 7 is a general construction provision designed to make it clear that the act does not purport to destroy existing rights or to restrict the postpatent title of a patentee.

Senator WATKINS. May I ask you a question at that point? Would that be in conflict with section 4, which imposes the restrictions, and the proceeding in rem, to take away from any locator rights which he thinks he now has under the law to use timber and to use the land surface for any other purpose?

Mr. HOLBROOK. Senator, that is a very good question, but from your wide experience as a judge, I know you are familiar with the consequence of a "quiet-title" proceeding.

Senator WATKINS. Yes, I understand that. But you say section 7 is a general construction provision designed to make it clear that the act does not purport to destroy existing rights or to restrict the postpatent title of a patentee.

Mr. HOLBROOK. Yes.

Senator WATKINS. Well, whether he does or does not have any rights under his location now, before this law is passed, there may be a question of fact and of law.

Mr. HOLBROOK. The act itself, as I would construe it, would not destroy his rights, but he may lose them if he does not come in and assert them, as any defendant would have to in a "quiet-title" proceeding, or in a proceeding for an application for patent.

Senator WATKINS. In other words, what you are saying here is that the law does not take away any rights that he actually has.

Mr. HOLBROOK. That is right. That is our intent.

Senator WATKINS. And if he claims those rights, he would have to come in and defend them, but it would permit the court to find in his favor if he established that he had those rights under existing law.

Mr. HOLBROOK. That is very well stated.

Senator WATKINS. Prior to the enactment of this bill.

Mr. HOLBROOK. That is right. That is correct.

In conclusion, I would like to state that it is the considered opinion of the American Mining Congress, and of myself, that enactment of the legislation before you would be in the public interest. In our opinion, it will not impede mineral discovery or development on the public domain. We believe that it will protect mining claimants in their use of unpatented mining claims for prospecting, mining and processing operations, and uses reasonably incident thereto. The bill will impose upon the holders of future unpatented mining claims limitations and restrictions which have not applied in the past; but we recognize that the improper actions of a minority of those who have located mining claims have created problems; and we feel that the legislation will serve to remove the bases of those problems without destroying the vital principles under which the mineral resources of this Nation have been developed. We also believe that it will contribute to the best utilization of our Nation's natural resources.

We appreciate the opportunity to present our views to this committee and we wish to commend the sponsors of the bill for their fine efforts to arrive at a constructive solution of this problem of mining law abuses which has been before Congress for so many years.

Thank you, Mr. Chairman.

Senator ANDERSON. Thank you, Mr. Holbrook, for a very careful and clear statement. It will be very useful to the Senate in considering S.1713 to have a statement of the facts, such as you have just made.

While you are here, I would like to ask your opinion on three proposed amendments, which have been presented to the committee as desirable.

One of these is proposed by Senator Watkins, and it has been proposed in exactly the same language by Senator Kuchel. I hope you are familiar with that. It is a suggested amendment in the form of a new section to be added to the bill as a section 8:

Notwithstanding any other provision of law, any mining claim located upon unsurveyed public lands, which, when surveyed, is on a section granted to any State for the support of its common schools by the enabling act of such State, shall not create any right, title or interest as against such State, but such State shall acquire title to such section or sections of land the same as though no mining claim had been located thereon: *Provided*, The locator, his heirs or assigns, of any mining claim on public lands which, upon survey, are granted to a State by its enabling act for support of the common schools shall have priority to lease such land from the State upon such terms as the State may determine to be fair and equitable.

(COMMITTEE NOTE.—The same proposed amendment subsequently was submitted to the committee by Senator Carl Hayden, of Arizona.)

Now, would you tell us whether, first of all, the American Mining Congress, if you are in a position to speak for it, would be opposed to the addition of this amendment, and whether you personally, being familiar with mining practice and law, think it would help or hurt the bill.

Mr. HOLBROOK. Mr. Chairman, I shall be very glad to discuss this in a rather impromptu fashion.

Senator ANDERSON. I apologize. I have no other way of giving you notice of the amendments that have been proposed. As a matter of fact, the amendments from the Interior Department and Agriculture Department did not reach the committee until a half hour ago, so we had no chance to submit them to you in advance.

If, upon later study, you desire to file some additional statement, we will be glad to receive it. You are not foreclosed by the action this morning. You may study it and say, "I do not like what I said in an impromptu fashion, and on closer study I think it is bad," or "I think it is good," or something else. With such an understanding, then, we will be glad to have an informal expression of opinion from you.

Mr. HOLBROOK. I should say that I am not entirely unaware of the proposal, Senator, and I will be glad to try and discuss it. Now, in brief, as I understand this proposal, it would in effect provide that if a mining claim were located on any so-called school section, as designated in the Enabling Act of the State, that mining claimant would have no rights as against the State, except that there would be a preference right to a lease.

I can speak best, Senator Anderson, with respect to my own State, because I am somewhat familiar with the law there.

Senator WATKINS. As a matter of fact, Mr. Holbrook, Utah is a State in which very little work has been done on the surveying of public lands. I mean the lands that would go to the schools under the Enabling Act.

Mr. HOLBROOK. That is quite right. And I think it would be germane to ask:

Could you tell me, Mr. Hoffman, or could you tell me, Mr. Woozley, approximately what percent of the State of Utah is unsurveyed?

Mr. WOOLEY. I know in acres, Mr. Holbrook, there are approximately 10 million acres in the whole State still unsurveyed, of which about 5 million acres is in the unsurveyed public domain. We have surveyed 50 townships, approximately, in the last year, which would give the State about 200 more sections. But there still remains  $4\frac{1}{2}$  to 5 million acres in the unreserved public domain.

Senator WATKINS. Where have those 200,000 acres been surveyed? In what section of the State?

Mr. WOOLEY. It has been where the State Land Board has requested. I couldn't tell you.

Senator WATKINS. Is it down in the uranium area, where they are prospecting for uranium?

Mr. WOOLEY. It is where the interest is highest. So the State would get the sections first where the most interest would be shown.

Mr. HOLBROOK. In the State of Utah, the Enabling Act provides that four sections in each township may be school sections. These are sections 2, 16, 32, and 36, which gives a spread over the township.

Now, if we get the picture, that until survey we do not know where those sections are, it is impossible to locate them. Under the law as it now exists, they do not become school sections until the surveys are completed.

Senator WATKINS. Still, the State has an equitable interest in them, does it not, under the Enabling Act? There remains something yet to be done. They had to be surveyed, and all that sort of thing, to get them over, so that the State would have those sections? They must have some sort of an equitable interest in them.

Mr. HOLBROOK. I think that is a proper statement, Senator.

However, under the law, as the Enabling Act has been construed, there is no interest to any lands that have been entered before the survey has been completed; and the State has the right to select lieu lands in place of those that have been located or entered.

Now, the great problem that I see with respect to such a proposal is that a locator on any one of those areas would have no rights against the State of Utah except a preference right to a lease. In the State of Utah as of now the typical hard-minerals lease carries a flat royalty of  $12\frac{1}{2}$  percent. So when a man located his claim, his problem would be: "Have I got a location which may be perfected into a valid fee title or have I merely a so-called preference right to a lease, without any knowledge as to what that preference may be?"

As of this moment, the royalty may be  $12\frac{1}{2}$  percent. It may be more. It could be less. But I ask you to consider the consequence of such a situation if a man is contemplating making a substantial investment in a mineral operation.

Now, if this were just limited to the particular school sections, there would be some confining of the problem. But it isn't. Since you cannot locate these areas definitely, if you would shift in any one direction the lines of survey, you would involve additional tracts in the uncertainty.

I have just had sketched out here, Mr. Chairman, what would be involved in four townships, coloring in red the school sections and in yellow the area affected by a shift one one-half mile. I think such an amendment would very effectively withdrawn from entry under the mining laws a very important part of our public domain, with very serious complications.

Senator WATKINS. Well, if the equitable title happens to be in the people of the State, should not the State get all the benefits from those lands? It is not the State's fault that these surveys have not been made. It has been going on for years, ever since Utah was admitted to statehood. Now, from the standpoint of the equity, just dealing with the people of the State, it would seem to me that the Federal Government has been rather lax in getting these surveys undertaken.

Years ago, when I first came here, I introduced a bill to bring about the survey of these school lands in Utah. But after the departments had reported, they each one recommended an amendment, loaded the bill up with them, and made it about \$150 million, and of course, I did not have the slightest chance of getting it through the Congress loaded with all those amendments, and I could not get it through without them.

But the State is now in a position where immense values are found in some of these areas. The lieu-land provision does not help the State if they are given a piece of desert ground that is not worth any-

thing. For instance, if they have to give up the equitable title to a piece of land that is worth many millions of dollars for uranium, or whatever they find on it. We have those problems in these public land States. And I know you know, Mr. Holbrook, that our schools in Utah are our pride and our joy, and we are constantly arguing out there with different people who have ideas as to how we are to finance them, as to how that is to be done. And here is a resource that has been lying there idle for many, many years. I think the State probably should have been a little more active in urging the Department of the Interior of the United States to get busy with these surveys.

Recently we have undertaken some more activities than have been carried on in the past, and we probably should have more. But I can see that the State could lose some very valuable rights there, some very valuable lands.

I can understand that the mining locator could go out and make his mining location, and he could get the land for practically nothing, and if he had to lease from the State of Utah, he would have to pay a pretty good rental for it.

Senator ANDERSON. But he also has to pay a property tax when he gets it outright, where he does not have to pay it when he gets it under a State lease. There is some offsetting advantage.

Senator WATKINS. A State lease? I think we have a way of getting at that, too, for taxes. At least, if we have not, we had better find one. We have a difficult time to maintain our schools. That is one thing that is of primary interest to every one of us, including the mining people there, too. We have to maintain those schools somehow. And it cannot all be placed just on the ordinary business and agricultural interests of the State to develop. The mines have carried a fair share of the load, we know. And they are carrying more of it since we have the equalization program adopted.

Senator ANDERSON. Did I hear you say they had surveyed 200 townships, Mr. Woosley?

Mr. WOOSLEY. Two hundred sections, 50 townships, and the State gets 4 sections in each township.

Senator WATKINS. Four sections. But that is just a small start.

Mr. WOOSLEY. Yes, I have not figured it up, but it would be somewhere near a half million acres.

Senator ANDERSON. I had a somewhat similar experience to yours. I tried, when I was in the House of Representatives, to put through an appropriation setting up a certain sum of money each year to complete the surveys in our Western States. My bills ran into all kinds of opposition, because it was not felt that the amount of money was justified. The sums required did run into a lot of money. A hundred million dollars, or more, would have been required to finish the surveys at that time. But I do not see how the Federal Government can fail to undertake a program to finish these surveys.

Senator WATKINS. The program is now under way. But in the meantime, this land was intended to go to the State with whatever it had in it.

Senator ANDERSON. Was it the intent of the enabling act to deed to Utah just nonmineral sections?

Mr. HOLBROOK. May I make an observation on that, Senator Anderson? It was definitely determined by the Supreme Court that

no minerals were to pass under these enabling act grants. They did not carry any minerals at all, Senator.

By an act in 1927 and an amendment in 1932, Congress provided that there be an additional grant to the States of minerals in the school sections.

I think the primary purpose of that amendment was to clear up title problems that had resulted because of uncertainty as to whether lands were mineral or nonmineral at the time of the completion of the survey. It was called an additional grant. But those amendments expressly provided that it would not affect any entries or any mining locations which had been made up to that time.

Senator WATKINS. Up to the time the amendment was adopted. But it had the effect, also, of putting the State in the position where it should get the mineral rights as well as the surface rights.

Mr. HOLBROOK. Not until the surveys had been completed, as you, I think, well appreciate, Senator.

Now, to develop that just a little more, if I may, on the merits of it, last year Congress provided that upon survey, if there were an oil and gas lease on lands in which the State acquired title, the State would succeed to the lessor's interest. In other words, the State would then be entitled to the royalties. Now, do you see the difference in the problem that we have to that situation? Here is a case where the only rights that could be acquired by the person developing the resources were lease rights. You can only develop oil and gas under the Mineral Leasing Act. So the party developing those rights had no problems. It was merely a question: "Do I have to pay royalties to the United States, or do I have to pay royalties to the State of Utah?" He is still operating under a lease and under the same terms.

Now, the situation here is wholly different. Here is a case where a mining claimant is faced with the problem of: Have I got a tract of land which, upon showing of an adequate discovery, the performance of work requisite for patent, and completion of patent, will entitle me to a fee-simple title? Or have I got merely some kind of a preference to a lease, the terms of which are unknown?

Senator WATKINS. I can understand the difference, all right, but I can also understand the interest of the State in protecting whatever rights it has, or should have, as a matter of equity, in these lands that are unsurveyed.

Mr. HOLBROOK. Well, may I make one other observation, Senator?

Senator WATKINS. Of course, they at least know where the township is or whether the survey has been finished or not. It may be inconvenient. I don't know. This amendment was a suggestion that was sent in for study. I had not made up my mind whether it was a good amendment or a bad one.

Senator ANDERSON. Senator Watkins, Senator Kuchel had a similar suggestion. And that is why I thought we ought to get expressions on this now.

Senator WATKINS. I am glad you are asking these questions. I intended to bring up the proposed amendment this afternoon after a little further study of it, but I am glad it was brought up now.

Senator ANDERSON. If we do not ask questions about it in the hearing, when we go into committee to take executive action on the bill we will not know how the industry representatives felt on these proposals.

Could I get you to comment on a second one, also?

Mr. HOLBROOK. Could I make one more observation on that, Senator?

Senator ANDERSON. Surely.

Mr. HOLBROOK. I think the really germane problem that we must consider here is the effect and consequence of such an amendment on the development of the mineral resources of the State. After all, if it is going to impede the development of the mineral resources, I think the overall result will be a loss to the State, not a gain, Senator. Actually, the amounts that have been paid into the Treasury of the State of Utah in these royalties are very small as of now.

Senator WATKINS. You mean on the one we are getting from the development through the leasing of oil-coal lands?

Mr. HOLBROOK. No, there has been a substantial sum payable on oil and gas, I think.

Senator WATKINS. Of course, the State gets the benefit of that 52½ percent that is paid in to the reclamation fund. That is, if we get any reclamation projects out of the authorizing bill.

Mr. HOLBROOK. No, I am talking about royalties on hard minerals. It is very small as compared with the revenues that come from the mining operations in the State; tax revenues.

Senator ANDERSON. Do you think that situation is going to continue? I am unable to comment on this fully, because I do not remember whether it had a classified tag on it or not, but I saw just the other day an estimate made by the Atomic Energy Commission of the amount of uranium there might be in Colorado, Utah, and New Mexico. I do not know how much of those estimated uranium reserves are on public lands, but a very sizable amount is, I know.

Mr. HOLBROOK. What I am thinking of, Senator, is this: Will not the overall be a loss to the State if we are creating clouds and uncertainties in the titles, that throttle investment, as compared to what the take of the State will be if industry knows what its titles are and makes its investments, and great industries result?

You see, you have to bear in mind that we have a corporate tax in the State of Utah, and we have a proceeds tax and an occupation tax. There are very substantial sources of income, as the Senator has pointed out, from mines in Utah.

Senator WATKINS. You could probably get a separation tax.

Mr. HOLBROOK. We have one now, Senator. Yes, the occupation tax is a severance tax in the State of Utah.

And my personal feeling is that actually the State would suffer as a result of the uncertainty that would result from the proposed amendment.

Senator WATKINS. Well, I am glad to get your opinion on it.

Mr. HOLBROOK. I think it poses some particular problems in relation to an amendment such as a bill like this, which was not designed to meet this situation. I am in complete agreement with you as to the importance of completing the surveys as quickly as possible. That would not result in any uncertainty.

Senator WATKINS. I may say now, if I may be permitted, that if we do not get an amendment, something of that kind, to protect the State, I intend to offer an amendment to an appropriation bill coming along to step that survey program up. And I hope that it will be adopted, either in this committee, by an amendment such as we have here,

or something like it, or in the Appropriations Committee, to take care of the State. We have some valuable interests there. And while you may be right on what we actually will get out of it, under the development, and the taxing of any developments, any industry that comes in under those circumstances, at any rate not only Utah, but Arizona and California have large problems in that same field, and I think probably New Mexico and other States have in the public land States.

Senator ANDERSON. You think it would be detrimental to this bill if we attempted to attach that amendment to it?

Mr. HOLBROOK. I definitely do, Senator.

Senator ANDERSON. Senator Kuchel.

Senator KUCHEL. First of all, I want to say that I have received a letter including the same amendment from my State Lands Commission. I have not yet formed an opinion as to the merit of the proposal. I asked the committee to consider it today so that we might have a little guidance in determining whether it ought to be adopted.

But let me ask you from a strictly legal point of view: It is correct to say that public lands which are unsurveyed, nevertheless, to the extent that they may be school lands or sections, are owned by the State subject to the Federal survey?

Mr. HOLBROOK. Well, I think that has been construed, and I think probably Mr. Hoffman could answer that better than I could, that the State does not own them until the surveys have been completed, Senator.

Senator KUCHEL. So that it lies within the Congress to determine whether in the future, for example, it might not desire to give school lands to the States. Is that correct?

Mr. HOLBROOK. Are you directing that to me?

Senator KUCHEL. Yes.

Mr. HOLBROOK. Oh, I think it would be within the purview of Congress to enact such a law. But I think there has been much wisdom in the way it has been handled in the past, because of the great uncertainty in land titles that would result. I think that has been fully anticipated.

Senator ANDERSON. You think the Congress can go back now and change the Enabling Act?

Senator WATKINS. Not to the detriment of the State, but you could amend it in favor of the State.

Senator KUCHEL. That is very important in connection with this proposed amendment, I think.

Mr. HOLBROOK. I do not know whether Mr. Hoffman has an observation, Senator, that he would care to make, or whether you would care to hear it at this time, or later.

Senator WATKINS. Where is Mr. Hoffman?

Mr. HOLBROOK. Mr. Hoffman, from the Bureau of Land Management, is over there [indicating].

Mr. HOFFMAN (Lewis E. Hoffman, Chief, Mineral Division, Bureau of Land Management, Department of Interior). I just want to call attention to the fact that where a school section, such as the 4 sections in Utah and the 2 sections in California, is unsurveyed, and consequently the State cannot obtain title to it, they have a right to take lieu lands anywhere, unappropriated vacant lands, in lieu of what they would lose by not maintaining title to the school sections. Such an amendment as the Senator has proposed, in my opinion, would

properly be an amendment of another law, of a new law, rather than this act.

Senator ANDERSON. But if the problem is what Mr. Holbrook has outlined on this chart, and the shifting of the survey a half mile one way or the other is going to change the pattern, you cannot take the lieu land either, can you? You can get lands someplace else in the State—if you can find them—but suppose the only land open for selection is the unsurveyed areas?

Mr. HOFFMAN. That is a problem, Senator.

Senator ANDERSON. It is not only a problem, it is an impossibility.

Senator KUCHEL. If the State were to exercise such a right and determine that it wanted lieu lands, would the patent, or the fee, or the grant, from the Federal Government to the State, include minerals?

Mr. HOFFMAN. No, I'd suggested that an amendment of that kind would partially solve the problem; except for the remark of Senator Anderson.

Senator ANDERSON. You get the difficult point that all the land is in this one place and it waits for the survey, and until the survey is completed, the State cannot do much.

Mr. HOLBROOK. I think the amendment is like locking the barn after the horse is out. I am very reliably informed that in the county of San Juan in Utah, which is one of the major areas of uranium activity on unsurveyed lands, that there have been enough mining locations filed already to cover more than twice the unappropriated area in that county. And in my opinion Congress could not pass a law that would affect a vested right under a valid mining location.

Senator ANDERSON. I only want to suggest here that we have nine more witnesses coming along. I hoped we might get just a fairly quick statement from you, and we will be glad to have you amplify for inclusion in the record a further opinion on this amendment. Now I will ask about a second amendment, and then a third, so that other witnesses may have a chance.

The Department of Agriculture has suggested some language on line 22, page 3, of the bill. As an exception therein, it says, after the word "except":

that revenues from the lands described in the act of August 28, 1937 (50 Stat. 874) and the act of June 24, 1954 (68 Stat. 270) shall be disposed of in accordance with the provisions of such acts, and except—

and so forth. This refers to the O. & C. lands, does it not?

Mr. HOLBROOK. Senator, I am not familiar with the details in respect to that, but I do not see how the mining industry would be affected adversely by any particular provision relating to the disposition of moneys.

Senator ANDERSON. Well, our former chairman, ex-Senator Guy Cordon, discussed this amendment with me. He is always very interested in the O. & C. lands.

Senator MALONE. What is the amendment?

Senator ANDERSON. Well, it would except from this provision the O. & C. lands, exactly as it excepts other areas:

The purpose of this amendment is to make it clear that revenues from O. & C. lands under the administration of the Department of the Interior and lands administered by the Department of Agriculture under the 1954 act will be placed in the O. & C. fund.

Senator MALONE. What is that O. & C.?

Senator ANDERSON. It is a fund from revenues from the former Oregon and California railroad grant lands. Those revested in the Federal Government. There has been a long running fight between the Department of Agriculture and the Department of the Interior as to which agency should administer them. The amendment says that its purpose is to make clear that the revenues from the O. & C. lands under the administration of the Department of the Interior and lands administered by the Department of Agriculture under the 1954 act will be placed in the O. & C. fund.

Mr. HOLBROOK. I think that is all right.

Senator ANDERSON. There is not an objection to that?

Mr. HOLBROOK. We have no objection.

Senator ANDERSON. And the last amendment is one suggested by the Western Oil & Gas Association, setting forth that nothing in the bill will change Public Law 585, the Multiple Purpose Act, passed by the last Congress.

Here it is:

And nothing in this Act shall be construed in any manner to modify, amend, supersede, or repeal any of the provisions of the Act of August 12, 1953 (67 Stat. 539), or the Act of August 13, 1954 (68 Stat. 708).

The first act was a stopgap measure and we subsequently took final action under the Multiple Purpose Act, Public Law 585, 83d Congress. Do you think the Multiple Purpose Acts are involved in S. 1713 in any way?

Mr. HOLBROOK. Senator, I am familiar with both of those acts, and I don't see any way that this proposed legislation could possibly affect the multiple-purpose acts.

Senator ANDERSON. Do you feel that adding this language would confuse S. 1713?

Mr. HOLBROOK. No, I can't say that I think the language would be particularly harmful.

Senator ANDERSON. Would you mind studying it and giving us the advice of the American Mining Congress on it?

Mr. HOLBROOK. Yes, I will.

Senator ANDERSON. Now, I do not want to shut off other questions. I want to get those things started for the record.

Senator Malone?

Senator MALONE. You are Mr. Holbrook, and you represent the American Mining Congress?

Mr. HOLBROOK. Yes, sir.

Senator MALONE. What position do you hold with the American Mining Congress?

Mr. HOLBROOK. I am chairman of the Public Lands Committee of the Congress.

Senator MALONE. You have studied this bill and you are in favor of it?

Mr. HOLBROOK. Yes, I am.

Senator MALONE. I notice a very interesting table here of the Department of Agriculture, noting the number of mining claims that are filed on unpatented lands on national forests, together with their acreage, and the estimated percent which produce minerals in commercial quantities is 2 percent of this whole area. This is Nevada.

The estimated percent considered valid under the mining laws is 60 percent. Now, what do you do when they are not valid under the mining laws? What is done.

Mr. HOLBROOK. Well, I think there may be two possible remedies. I think the department could initiate a contest, Senator, or it may initiate a preceeding in court. But I know there has been a feeling on the part of both Agriculture and Interior that those remedies are not as effective as they would like them to be.

Senator MALONE. Well, why do they want them more effective? If they have a remedy in the court, is that not a customary remedy for a property right?

Mr. HOLBROOK. That is a remedy that is often pursued, yes, sir.

Senator MALONE. Is there any other remedy when land is owned by anybody?

Mr. HOLBROOK. Well, in this case you would have available departmental contest proceedings.

Senator MALONE. Could that not be initiated, or can it be? That is what I am asking you.

Mr. HOLBROOK. Yes, it can be. It would not be as expeditious as the proceeding proposed here.

Senator MALONE. No, but that is what some of us are afraid of, that it would be a little too expeditious.

What is your background? Have you had experience in mining?

Mr. HOLBROOK. I spent about 17 years devoting most of my time to mining law, Senator.

Senator MALONE. Private mining law?

Mr. HOLBROOK. Most of the time during that time I was spending full time with the United States Smelting & Refining Co. Prior to that I was engaged for 7 years in general law practice.

Senator MALONE. Now, we have been very jealous of this mining act for a long time, because it was about the only thing left where a man without money or background or anything else except a little endurance and the will to do it could get out there and locate something that he thought might either contain mineral or lead to it; so that he could put a stick down and go to work. The law says he has to do a certain amount of work per year, called assessment work, does it not?

Mr. HOLBROOK. That is right.

Senator MALONE. Do you think that assessment work is sufficient, or that it should be more, or less, or how would you consider the setup there?

Mr. HOLBROOK. I think the assessment requirement is a fair requirement.

Senator MALONE. A hundred dollars a year, is it not?

Mr. HOLBROOK. Yes, sir.

Senator MALONE. Of course, that is not as much work as it used to be, either.

Mr. HOLBROOK. No; it is not.

Senator MALONE. Now they do it with bulldozers and other equipment.

Mr. HOLBROOK. Yes. Of course, I think assessment work has generally been an evidence of the good faith of the locator more than requiring any specific amount of work.

Senator MALONE. Well, now, if that work is not done, naturally, if he does not file the work with the county clerk, he does not own the claim any more, does he?

Mr. HOLBROOK. That is not my understanding of the law, Senator.

Senator MALONE. What is it?

Mr. HOLBROOK. In the case that I do not do the assessment work on my claim, I have a perfectly valid claim as against all the world, including Government departments, except an adverse locator. Failure to do assessment work does not affect the status of my title, except that it opens the land to relocation. In other words, you could come and relocate my land if you do it before I have resumed work on the claim.

Senator MALONE. And before you have filed it?

Mr. HOLBROOK. If I have not done the work, or have not started to do it, before you make the location. I may be in default, but if I get started, even though I have not done a hundred dollars' worth of work, I can keep you off.

Senator MALONE. All right. Now, if that is sufficient work, and you feel that it is, and the man is entirely protected, who is doing his work and filing with the county clerk—that is what it requires, is it not?

Mr. HOLBROOK. Well, it isn't required that he file his proof. That is just proof of the work. The thing is that he must do the work. That is the test.

Senator MALONE. Now, if he has not filed with the county recorder, and another locator comes in, does he have an opportunity to prove that he did do the work and just neglected to file, and can make it a legal setup and keep the new locator off?

Mr. HOLBROOK. That is right.

Senator MALONE. In other words, he is pretty well protected, if he does any work.

Mr. HOLBROOK. That is right.

Senator MALONE. Now, he can patent this claim after he has done \$500 worth of work toward the development of his land, can he not?

Mr. HOLBROOK. Yes, sir. If he meets the other requirements.

Senator MALONE. What are the other requirements?

Mr. HOLBROOK. Well, the primary one is that he has to have a valid discovery, and he has to have the claim surveyed and meet all the requisite or procedure requirements for patent, which I am sure you are very familiar with, Senator.

Senator MALONE. Yes. I held a patent surveyor's license for 30 years, I guess.

Now, what is a valid discovery?

Mr. HOLBROOK. The definition, Senator, that usually appears in the cases, is that it is a showing which would induce a reasonably prudent man to invest his money in the further exploration of the property. There is no rigid, fast rule on that. It is what the ordinary prudent man would invest his money in, in further searching.

Senator MALONE. All right. Suppose he has a ledge that does not carry minerals, or minerals a very minor amount. What would not be called a commercial venture, but he has made a decision if he drops down and tunnels in lower down, he may open up a paying vein. What would that mean? Would that be a valid discovery? If he has his post up on the ledge and is tunneling into this vein or ledge at a lower level?

Mr. HOLBROOK. I assume, Senator, that he opened up the vein, or ledge, on the surface, did he?

Senator MALONE. And he might have a trace. Maybe it is not commercial.

Mr. HOLBROOK. Specifically, I think your question is answered by this: I don't think it has to be commercial to be a good discovery. Does that answer your question?

Senator MALONE. I think that is close to it. He has to be in a geologically correct area in his judgment, that he has decided to spend his money to go in and do this \$500 worth of work, and therefore he wants to patent the claim.

Mr. HOLBROOK. I think that is substantially correct. It cannot be just an odd judgment that he has individually, but if he is expressing the judgment of the ordinary prudent man, yes.

Senator MALONE. Well, the prudent men, unfortunately, are not the ones that make the discoveries.

Mr. HOLBROOK. That is quite true sometimes.

Senator MALONE. It is generally true.

Mr. HOLBROOK. But I think you appreciate that you cannot put this on an individual basis; that is, the requirement for discovery.

Senator MALONE. Well, how would you put it?

Mr. HOLBROOK. Well, I think it is the standard of what the ordinary man would do who was familiar with mining problems. Not what I would do individually. I may be very foolish in my effort.

Senator MALONE. And not what an engineer would do. Because engineers do not discover mines. They turn them down.

Mr. HOLBROOK. That is right.

Senator MALONE. And the men that discover them first are the men that have that optimism and that will go out there and live alone lots of times and do a little work until they can interest someone that will come in for greater exploration. Is that not about right?

Mr. HOLBROOK. I know that has been often the case.

Senator MALONE. Has it not been mostly the case?

Mr. HOLBROOK. I think most mines have been discovered by prospectors.

Senator MALONE. Your company does not discover mines. They are discovered by prospectors, and there are maybe a hundred or two hundred prospects before they are showing enough to bring your company in at all.

Mr. HOLBROOK. I can't take exception to that statement.

Senator MALONE. I know what I am talking about, from 30 years of hanging around this business.

Mr. HOLBROOK. That is probably true.

Senator MALONE. Now, the reason that I am very much interested in the conclusion of the Forest Service—and I have never seen anybody in the Forest Service who knew anything about mining—is that only about 2 percent of the amount located in my State of Nevada is producing minerals in commercial quantities. They seem to think that has a bearing on this bill. And only 60 percent have a valid entry.

Then, what are the other 40 percent doing there? Why do they not initiate proceedings, if they want the land?

Mr. HOLBROOK. I have not seen this report, Senator, and I scarcely feel that I am in a position to comment on it.

Senator MALONE. In Oregon there is 55 percent that they claim are not valid; an average of, say, 40 percent.

Now, there is a remedy. That is what I want you to tell me. They have a remedy now. If there is an invalid mining location, and they are doing any damage, or there is any reason to do anything about it, they have the remedy to do it. They can initiate proceedings in the Department.

Senator BIBLE. You are referring to the national forests, Senator Malone?

Senator MALONE. Yes.

Senator BIBLE. Or all public domain.

Mr. HOLBROOK. Yes; I think there is a remedy.

Senator MALONE. What is it? How do you do it? You are a lawyer.

Mr. HOLBROOK. I think the more common one is the initiation of a contest, and an administrative proceeding in the Department of the Interior.

Senator MALONE. How would that be done? You say there is a mining claim located. It is described, tied to a section corner, or filed in a county clerk's office, and you want to initiate proceedings. What do you do?

Mr. HOLBROOK. Actually, Senator, I have never handled one of those administrative proceedings, and I am not too familiar with it.

Senator MALONE. But they could initiate proceedings in the Department, itself, the Department of the Interior.

Mr. HOLBROOK. I think that is true. I have been informed that it is a slow proceeding and involved considerable expense and delay.

Senator MALONE. Well, is that not a good thing? If a man has had the initiative to go out there and locate a mining claim, and he is doing all this work yearly, and he has his plans, would you want somebody to just go out and cut him off?

Mr. HOLBROOK. I think the great bulk of cases, Senator, are those where they are not doing a hundred dollars' worth of work a year, and the Department cannot initiate any proceeding, because he is not doing a hundred dollars' worth of work. In other words, that is not a ground to contest the claim.

Senator MALONE. What is the ground?

Mr. HOLBROOK. The ground would be because there had either been abandonment or there had not been a sufficient discovery.

Senator MALONE. Well, now, you would not want to throw a man off who had a sufficient discovery, and still wanted to hold his claim, because he had been late with his work, would you, or for some other reason that you might imagine?

Mr. HOLBROOK. No; I don't believe in forfeiting a claim for any such failure. I think that would create a lot of problems, Senator. I agree with you.

Senator MALONE. All right, then. Now, you say that any American 21 years old, a citizen of the United States, can go out there and stick his stick up in the absence of work and claim the claim?

Mr. HOLBROOK. Yes, sir. You mean, he can relocate? Yes.

Senator MALONE. And the original locator is out?

Mr. HOLBROOK. Yes.

Senator MALONE. Then he has to do the work within 30 days and put up his corners; is that not right?

Mr. HOLBROOK. That is right; yes.

Senator MALONE. Now, what are you trying to get at in this bill, so that you can handle this man in a different way? What are you going to do with him?

Mr. HOLBROOK. Well, this is an in rem proceeding, Senator. It is not designed to affect the validity of the claim, but only the surface rights, other than those which may be involved in mining.

Senator MALONE. Now, are you familiar with how a miner handles his claim, when it is the only property that he has? How do you think he goes about this thing? Are you familiar with it?

Mr. HOLBROOK. I think so.

Senator MALONE. Well, what is it? How does he do it? Will he go out and live on the claim if there is water or firewood, or something?

Mr. HOLBROOK. He does many times. I think that is more the exception than the rule.

Senator MALONE. Do you think it is the exception where he has the firewood and the water?

Mr. HOLBROOK. Well, certainly there are lots of miners who reside on their claims, but I think many more do not. Often it just is not desirable living.

Senator MALONE. Is it not more the larger locator, the man who has a little money, who maybe has 30 or 40 claims, who does not do that?

Mr. HOLBROOK. Well, I think that is true. I don't think there are many problems incident to the prospector that is actually interested enough and is living right out there, if mining is his vocation.

Senator MALONE. Well, now, you have been in Nevada, have you not?

Mr. HOLBROOK. Yes, sir.

Senator MALONE. Have you ever been at Yerington, Nev.?

Mr. HOLBROOK. That is where Anaconda has this new operation.

Senator MALONE. Well, there were a lot of people there before Anaconda. I was familiar with that copper area almost 50 years before they came in, and I made a survey on three of those claims in 1920. You only hear of an area when your company or Anaconda goes in. But there are little people all over this country working this out before you come in.

It was owned by three different people. They had a Thompson smelter out there, built before the First World War. Sam Bofford, one of the best attorneys in the area, dead now, handled the suit. They had a freight rate figured out, so that it was cheaper to send the Feather River copper ore to Salt Lake City to smelt it, maybe in your smelter, than it was to send it half the distance to the Thompson smelter. That is one of the tricks of the trade. You are probably familiar with that way of doing business, are you not?

Mr. HOLBROOK. No.

Senator MALONE. Well, I am. And we were employed as engineers to work out the case. And we finally worked it out and had charts all over the office building, but in one case the outfit was broke and gone, and your outfit got the smelting after all. That broke them for a while. They went into bankruptcy.

Governor Boyle, who was governor along about the time of the First World War, took it over and tried to handle it and could not.

He was prevented by these very methods. There are a lot of ways of killing a minor off besides shooting him.

Now, finally, Judge Gill, who was a district judge for many years out there, and his crowd, took it over, and turned it over to Anaconda, and the Anaconda spent the money. They guaranteed a price for copper out there, and they are doing pretty well, I think. I hope they are.

But that is only one deposit in Lyon County around Yerington, when there are probably 400 showings, and maybe a thousand of different claims of minerals throughout Lyon County. And they are the same kind of prospectors. One fellow I knew was "Three-Finger Jack." I never knew him by any other name. He had a lot of prospects throughout the county. Now, it is the "Three-Finger Jacks" that I am interested in protecting, people that you rarely meet.

Mr. HOLBROOK. Well, Senator, I am the last person—and I am sure that is true of the American Mining Congress—to urge anything that would interfere with the development of our mineral resources. I do not think this will interfere with the development of our mineral resources.

Senator MALONE. Have you ever favored a leasing system instead of a location system? Have you ever supported the Department here in its recommendation for a leasing system?

Mr. HOLBROOK. I most vigorously opposed the leasing system. And that is one thing that bothers me about this amendment that we are talking about, that lifts certain lands out from under the mining laws.

Senator MALONE. You are talking about the thing that Senator Watkins figures would protect the State?

Mr. HOLBROOK. Well, I do not think the Senator has committed himself on it in any way.

Senator WATKINS. The record will show that I sent in the matter for study. It was an amendment that had been suggested, and I sent it in for study. And that is why Senator Anderson, the chairman, called attention to it to Mr. Holbrook. I had intended to examine Mr. Holbrook on it later in the day.

Senator MALONE. I have just looked at it, Senator, and as I get it, it would protect the State where there is no survey, and naturally, when you stick up a stake you are not familiar with how the subdivision will later work out. If it were later allocated to the State under the school land system, or any other method, the State could take it over, but the man who had done the work there on the claim would have the first option to lease it.

Senator WATKINS. That would operate to give him a preference.

Senator MALONE. Now, that is a little new as an approach to a leasing system, and if the States are for it, I do not know why they oppose it for the Government. I do not think my State is for it.

Senator WATKINS. Does your State have the same problem we have? We have many millions of acres of unsurveyed lands in Utah, and the State has not been able to get it started as to the sections given it under the enabling act.

Senator MALONE. We have a lot of unsurveyed lands. But I was going to outline the situation on unsurveyed lands. I have patented lands on unsurveyed areas. You know that can be done. A mineral surveyor is entitled to set up a mineral monument if it is too far to tie

to a section corner. If it is within reason, he ties it to a section corner. If not, he can tie it to a mineral monument and find the mineral monument located as near as he can to natural objects, and it is just as effective and just as legal as buying a ranch in Ohio with legal subdivisions in it. You understand?

Mr. HOLBROOK. Yes.

Senator MALONE. Now, to go into it a little deeper, just why a State would want to cloud that title by being able to claim it if it happened to fall in a section, I would not know, because the taxes are paid to the State, if any. And they can value it and tax it, just the same as any other property. And if it makes any money, and the State does not get it, the Government will anyway, it looks like. They get the income, do they not? The income tax? If it makes any money?

Mr. HOLBROOK. It would be subject to State income tax; yes, sir.

Senator MALONE. Now, you would not want to displace a man on unsurveyed ground that had located a mining claim and was doing his work out there and was working towards a patent, would you?

Senator WATKINS. Mr. Holbrook is arguing against the proposal, Senator. He is arguing with you.

Senator MALONE. No, no. I am clear beyond that. I have dismissed that, now. I have expressed my opinion about it. But I want to get him back on this idea of what he wants more Federal legislation for.

Do you want to get this man off for some reason, or what?

Mr. HOLBROOK. Senator, I think you have heard my observations for some years in the past with respect to the differences between particularly the Forest Service and other agencies and the rights asserted by a mining claimant. I think if we can get these issues that have been so controversial in the past resolved, without interfering materially with mining locations and development of mines, it will actually be of benefit to the mining industry, the little as well as the large.

Senator MALONE. Now, who is raising all this trouble? I have not heard of very much trouble except when I am in Washington. We get to sitting around in these soft cushions in air-conditioned rooms with our rents paid, and everything, and we cook up a lot of troubles for ourselves. But I do not hear any out in Nevada.

Mr. HOLBROOK. Well, we hear some in Utah.

Senator MALONE. What do they do in Utah? What are they trying to do over there that they cannot do?

Mr. HOLBROOK. And I have talked to a number of members of Congress who have given me the impression that this area of conflict should be resolved.

Senator MALONE. What is the area of conflict? Could you define it for the record? Is it between two departments, or is it between the prospector and the department?

Mr. HOLBROOK. No; the real area of conflict, Senator, has resulted from people locating mining claims for nonmining purposes.

Senator MALONE. Who are these people? And what remedy do you have now? What remedy do you have now as to that?

Mr. HOLBROOK. I am informed that that is done to acquire timber values in certain cases.

Senator MALONE. You mean to tell me that a prospector can go out there and locate a timber claim with no mineral in sight, and you cannot do anything about it?

Mr. HOLBROOK. No; I don't think he can make a valid claim without any mineral in sight. If there is some mineral, as long as he has an opportunity to develop his mineral and carry on his mining operations, I don't think he should lock up the other natural resources.

Senator MALONE. This is a claim 1,600 long and 1,500 feet wide, and he has locked up the resources?

Mr. HOLBROOK. You have referred to a lode claim. Of course, as you know, an association placer can embrace 160 acres, and there is no limit as to the number of claims that any one individual can locate.

Senator MALONE. Well, now, are you complaining about people who are mining and who have mineral claims, or are you complaining about people that do not have any showing of mineral?

Mr. HOLBROOK. I am complaining primarily with respect to the latter class. But I am informed, and I do not speak from first knowledge—that in some cases there are locations where there is an adequate discovery to support the location, but it is very obvious that it was not made for mining purposes. It was for some other purpose.

Senator MALONE. You have no remedy against a man like that. Does he have to do his work every year?

Mr. HOLBROOK. Yes. Or the ground would be open to relocation. He would not, as against any Government department.

Senator MALONE. Now, what are you complaining about? That he sells the timber, or rents it to grazing, or something?

Mr. HOLBROOK. Well, Senator, personally, I am not complaining, as I am sure you understand.

Senator MALONE. Yes; you must be. You are for this bill. Now, tell us why. I am trying to find out why. You are representing a great organization. I do not think you are representing any other one right at the moment.

Mr. HOLBROOK. That is right. I represent the American Mining Congress. I think it is a very important organization.

Senator MALONE. We have a right here to know why this mining congress comes up for this bill.

Mr. HOLBROOK. The reason it comes up is that we feel this bill will resolve the difficulties we have had, without materially interfering with mining operations. Any number of bills, Senator, that have been introduced to resolve this problem we think would create insurmountable problems.

Senator MALONE. They were not enacted, were they?

Mr. HOLBROOK. No.

Senator MALONE. You see, this committee has to pass on it.

Mr. HOLBROOK. Yes.

Senator MALONE. And I have a sort of old fashioned idea that if we do not vote for a bill it does not become public law. I may be a little old fashioned, now, with all the propaganda that you have, when it comes to the point that you are going to do this or do that. I hear that when I am out in Nevada. But I always try to listen to the evidence after I get back, and I go home mostly to try to get my own feet on the ground. You lose perspective here in Washington.

How long since you have been home?

Mr. HOLBROOK. Well, I left home Monday night.

Senator MALONE. Where do you live?

Mr. HOLBROOK. Salt Lake City.

Senator MALONE. Well, 3 months is the limit here without going back to talk to some folks who make it the hard way. So maybe you are oriented again. Did you see some of the folks out on the claims while you were there?

Senator BIBLE. You are a resident of Salt Lake City, are you not?

Mr. HOLBROOK. Yes.

Senator WATKINS. You have never lived in Washington, have you, Mr. Holbrook?

Mr. HOLBROOK. No; I get here very seldom.

Senator MALONE. Theoretically, a lot of people do not live in Washington, but they are here too long for their own good.

Now, I want to get back again to why you think these people ought to be put off of these claims and why you cannot do it as to purposes other than mining. Are you talking about Utah, as to these timber claims?

Mr. HOLBROOK. We do not have a great deal of timber in Utah, Senator.

Senator MALONE. We have 5 million acres of forest reserves out there in Nevada. And there is not over 200,000 acres that has trees on it that I can't stand flatfooted and jump over, as old as I am. Are they complaining about that kind of ground?

Mr. HOLBROOK. Well, there is a principle involved in it, I think, no matter where you are. I do not think anybody should enter land under the mining laws for nonmining purposes.

Senator MALONE. Well, I do not either. But I just asked you what the remedy was awhile ago, and you told me they could initiate proceedings, which I know they can, if the Department is on its toes and wants to do it. Now, you do not want to keep another man from locating it if he finds mineral, do you?

Mr. HOLBROOK. No; and this bill would not stop a man from locating it.

Senator MALONE. What the bill does, very frankly, is to give another step forward to the departments, here, none of whom know a mining claim from a farm barn, and they go in, and their objective is to get the man off. Our objective is to keep him there, if he is doing his assessment work. If your opinion is that the present law does not require enough assessment work—and I asked you that—then we should increase the requirement. We should discuss that.

Mr. HOLBROOK. I do not think there is anything in this bill, Senator, that permits any department to interfere with any mining operation.

Senator MALONE. Just what is there in the bill, then, that you want? I am talking about a prospector that is doing his assessment work and has a valid showing, has made a valid location. What is there here that will get him off, that will not now? How could you handle him?

Mr. HOLBROOK. I don't think there is anything designed particularly toward that situation, and I don't think this proceeding will be directed particularly toward that person.

Senator MALONE. It can be, can it not? They can judge.

Mr. HOLBROOK. No; I don't think there is anything in this proceeding that would remove him from the surface.

Senator MALONE. Well, there is something in the proceeding to let you dispose of the surface, is there not?

Mr. HOLBROOK. There is something in the proceeding that will let the Federal Government dispose of the timber and the forage.

Senator MALONE. And if it does interfere with him, he has his recourse; it that it?

Mr. HOLBROOK. It cannot interfere with his operation.

Senator MALONE. Suppose it does, and they say it does not, and he says it does, and then what?

Mr. HOLBROOK. He has his recourse.

Senator MALONE. Like you do now?

Mr. HOLBROOK. Sure.

Senator MALONE. Well, it would be easier, would it not, for the Government to take the recourse than an individual out there, that does not have any money to go to court?

Mr. HOLBROOK. This is directed, Senator, to a different situation than even contests. Now, contests would evict a man entirely from his claim.

Senator MALONE. Does this not do away entirely with the sandstone, gravel, pumice, pumicite, cinders, clay, and pumice stone?

Mr. HOLBROOK. Yes; it does.

Senator MALONE. It cuts all that out.

Mr. HOLBROOK. Yes; it does, Senator. I was speaking of the overall principle that you had been discussing with me, as to the minerals that can still be located under the mining law.

Senator MALONE. Pumicite is building material, is it not?

Mr. HOLBROOK. Well, I thought it was primarily an abrasive.

Senator MALONE. Yes; but do they not use it, and cinders and clay and pumice, for blocks of some kinds of buildings?

Mr. HOLBROOK. I think they do, yes. I think so. That is right.

Senator MALONE. But you would cut all that out. You would not have anything to do with that.

Mr. HOLBROOK. You could not locate for those minerals under the mining law.

Senator MALONE. Under the amendment?

Mr. HOLBROOK. That is right.

Senator MALONE. But you can now?

Mr. HOLBROOK. Yes, sir.

Senator MALONE. Well, now, why do you want to cut them out?

Mr. HOLBROOK. They are not totally cut out, Senator. Pumice, more than two inches in diameter, in one dimension, would not be excluded. Clays which have peculiar properties would not be excluded.

Senator MALONE. Well, now, pumice that is in place—you are talking about a gravel, or an aggregate?

Mr. HOLBROOK. Well, I understand that pumice occurs very generally. I am not a geologist. You probably know much more about that than I do. But over great areas—it is a volcanic ejector, so I am told, and it may be small, and some of it occurs in larger blocks. And that is not excluded from location under the mining laws.

Senator MALONE. But you would be excluded from taking this aggregate of pumice?

Mr. HOLBROOK. If it is less than 2 inches in 1 dimension, you would.

Senator MALONE. Well, now, wherever you find this, is it not a good deal like any other rock, that if you dig a little bit you are likely to find it in place? You know, sometimes there is a flow of this. There is a lava flow. Some of it is in place, and some of it over a few million years has disintegrated. It is like your placer. If you follow

it far enough, you will find a ledge sometimes. You do not always find it. It is generally there someplace.

Mr. HOLBROOK. Wherever you find pumice of those dimensions, it would still be locatable under the mining laws.

Senator MALONE. Then you would have to dig down through it or go back to where you find the pumice in place, or in chunks larger than 2 inches in diameter, in order to locate it. Then you could locate it.

Mr. HOLBROOK. That is right. Senator, it has been very carefully reviewed, with the thought that it would not materially interfere with mining operations.

Senator MALONE. It would interfere with that kind of a mining operation, would it not, right on the face of it?

Mr. HOLBROOK. A very fine aggregate, yes. But I do not think that is used extensively.

Senator MALONE. Well, I think it is. I think if you were to go down around Las Vegas and places where there is lots of building going on, you would find out about it. The gravel and the stone, and so on.

Now, how would you get this gravel and stone? Would you write a letter to the Secretary of Interior and lease it from him?

Mr. HOLBROOK. This act expressly provides for an amendment to the Materials Disposal Act to bring it under the provisions of that act that make it subject to sale.

Senator MALONE. What do you mean, sale? How would they sell it? At so much a cubic yard?

Mr. HOLBROOK. I do not know what the terms of sale are.

Senator MALONE. It may be that something could be worked out. But what you are doing in this act is upsetting the whole situation insofar as aggregate is concerned out on the public lands. And if you have a provision here, so that you can lease a pit, or lease a piece of ground that has this material in it, that is one step toward the leasing system that the Department of Interior has advised that they want for 22 years. They want it under a leasing system. I guess you know that.

Mr. HOLBROOK. Well, you know that I am opposed to a leasing system.

Senator MALONE. I did not know that. This is a step, in my opinion, toward the leasing act that they have always wanted. And you are for this?

Mr. HOLBROOK. Well, that was not my thought, Senator.

Senator MALONE. Another thing is that you have not convinced me by a good long ways—I will take a look at the record—that you do not have an adequate remedy now. The only thing you have convinced me of is that now the Department has to file the charges, whereas the Department can go out there and order him off, he has to file a case in court. And there are not many prospectors that locate first. Some of these prospects turn into small producers, and a hundred small producers may find their way to a mine that you people would be interested in.

Mr. HOLBROOK. My belief is that there is nothing in this bill, or any other bill, that would materially interfere with our mining laws. And I think the Interior Department would be in a better position to discuss the problems of available remedies than I am.

Senator MALONE. Well, I think that is all right, Mr. Chairman.

Senator BIBLE. We can rely on them, Senator Malone, to bring up that point.

Senator MALONE. You cannot rely on them but you can question them.

Mr. HOLBROOK. All right, sir. We will be very happy to have you question them.

Senator MALONE. You have taken this up with every mining association in the United States. Why are you so interested in it? What do you want to do to these prospectors? What kind of a remedy do you want against them?

Senator BIBLE. Senator Watkins?

Senator WATKINS. As a matter of fact, the American Mining Congress did not propose this bill at all, in the first place, did it?

Mr. HOLBROOK. No.

Senator MALONE. If you want to gather some correspondence with the mining associations of the country, I will do that for you.

Senator WATKINS. Well, I am asking the questions, Senator.

Mr. HOLBROOK. It is true that this bill has been discussed, I think, with representatives of all the State mining associations.

Senator MALONE. By your association?

Mr. HOLBROOK. By the State mining associations and by the American Mining Congress.

Senator MALONE. Now, maybe it is a good thing. Maybe it is a good thing for you to do that. But I just want to establish in the record that you have done that.

Mr. HOLBROOK. I think it is imperative that we do that, Senator. I do not want to be a party to any proposed changes in the mining law without having the views of the industry and the people who are working on these problems.

Senator MALONE. You have even got the women working on it, and they are not very good miners.

Mr. HOLBROOK. Well, I did not know that.

Senator WATKINS. For the record, I started to question the witness, and for the record, I want to say that I am one of the sponsors of the bill. This problem was discussed by me with various people prior to any discussion whatsoever with the mining people. Now, there have been abuses of this mining law on the national forests of the country. That has been called to my attention at numerous times, long before this bill was ever brought in. And we have had too many people that used the mining law to get a grazing location, or to get a summer home, or something else, or to get timber off the national forest. If they could find sand and gravel, and find some of these other materials mentioned there, or find another mineral that would give them enough of a trace, it would give them an opportunity to go on and file as many claims as they wanted to file. And there they were out in the middle of a national forest. It created all kinds of difficulty.

That is the reason I became interested in this problem. The mining people did not bring it to me, I will say very frankly.

Mr. HOLBROOK. We think that practice has been inimical to the mining industry.

Senator WATKINS. And the mining people, naturally, were consulted before we proceeded with a bill that would restrict to some extent the operations on national forests or on other public lands.

Now, you state that you have discussed this with the various State mining associations.

Mr. HOLBROOK. Yes, sir.

Senator WATKINS. And you have discussed it also with the representatives of the departments; have you not?

Mr. HOLBROOK. Yes, sir.

Senator WATKINS. I do not know as to that, but I know it has been discussed generally ever since I have been in Congress here. They have had discussions, more or less, on this problem. Every time they have had a mining bill discussed, it has come up to some extent. And it has been an effort to get together with the departments, the mining people, and all the people concerned, to see if we could not work out some kind of a bill that would furnish a remedy against these people who misuse the mining law and make these locations.

Mr. HOLBROOK. Yes, sir. I do not purport to speak, Senator, for the representatives of the State mining associations, I speak for the Mining Congress. But the congress was very interested in getting just as accurate as possible a cross section of the problem and the reaction among the various sections of the mining industry as it could.

Senator WATKINS. Well, this practice has been going on, and it has given the mining industry a lot of difficulty, has it not?

Mr. HOLBROOK. We think it has created problems.

Senator WATKINS. That is a very diplomatic way of answering my question.

I do not have anything further.

Senator MALONE. Well, I ask you, then: What is the remedy in a mining location difficulty at the present time.

Mr. HOLBROOK. Did you direct that to me, Senator?

Senator MALONE. The same as I did before, just to clear the record.

Mr. HOLBROOK. As I stated before, it is an administrative proceeding, and I think maybe the Bureau of Land Management, or the department can speak better. But I understand it would be a contest, or I am quite sure a proceeding could be initiated in a court of law.

I recall that the Department of Agriculture instituted such a proceeding in California about a year ago. I did not have an opportunity to follow the procedure, but I saw a comment on it. That was in a court of law. I think that was in a Federal Court.

Senator MALONE. And they have to file against this locator in a court of law?

Mr. HOLBROOK. That is one remedy. Another and totally different remedy is an administrative proceeding called a contest in the Department of the Interior.

Senator MALONE. Who decides that; the Secretary?

Mr. HOLBROOK. It would ultimately be decided by the Secretary if it were carried up.

Senator MALONE. Is it appealable to a court after his decision?

Mr. HOLBROOK. Well, it would be on any points of law. I am not too familiar, as I say, Senator, with that.

Senator MALONE. Now, what is the remedy if this bill passes. Then the shoe is on the other foot. They allege that he has no location, and he has to take action; is that right?

Mr. HOLBROOK. I would like to make that clear. This is a different procedure.

Senator MALONE. What is the procedure?

**Mr. HOLBROOK.** Here is a copy, Senator. The procedure in section 5 is called an in rem proceeding.

**Senator MALONE.** How do you spell that?

**Mr. HOLBROOK.** I-n r-e-m; which in effect means a proceeding against the land; and the effect of the proceeding is that if the mining locator does not come in and set up his rights, or if he loses, then his claim would be subject to the limitations and restrictions provided in the act. He would be in precisely the same status as a locator of a claim after this act is passed, as far as new locations are concerned.

**Senator MALONE.** Then he is subject to the Secretary of the Interior requesting publication of notice to mining claimants. And then they must come in. The claimants are already there. They must come in and file with the Secretary.

**Mr. HOLBROOK.** They file in the office where the notice was published a verified statement setting up their rights. Now, if there is no dispute as to their rights, they have all the rights they have had before.

**Senator MALONE.** If there is a dispute?

**Mr. HOLBROOK.** Then it will be set down for hearing.

**Senator MALONE.** And who decides it?

**Mr. HOLBROOK.** It is an administrative proceeding, again, in the Department of Interior.

**Senator MALONE.** And the Department of Interior would make the decisions?

**Mr. HOLBROOK.** That is right.

**Senator MALONE.** That means that the Bureau of Land Management, the local office in the State, would make the decision for the Secretary. And the man is out.

**Mr. HOLBROOK.** Then there would be a right of appeal to the Director of the Bureau and to the Secretary of Interior, too.

Now, if he did not come in, it is not a question of losing his mining claim. He can still carry on his mining operations. And nothing can be done that interferes with his mining operations under that procedure.

**Senator MALONE.** Even if he does not come in and file?

**Mr. HOLBROOK.** If he does not come in, he still has all the surface rights that he needs to carry on his mining operation. But the Government would have the right to manage and dispose of the timber, to manage and dispose of the forage, and to regulate other surface resources. And that is the status that claims which were located after this act becomes effective would have.

**Senator MALONE.** That are located after the act?

**Mr. HOLBROOK.** Yes. In other words, it does impose some limitations. But I do not think they are such as to affect the mining. They are aimed at the fellow who makes the location for nonmining purposes.

**Senator MALONE.** Now, your chief claim is that it interferes with the Forest Service, and I understand the Senator from Utah has that same idea. Is that it?

**Senator WATKINS.** Not only the forests, Senator, but it is other public lands as well.

**Senator MALONE.** Well, most of the forests are in the Forest Service, or in State control, somewhere.

**Senator WATKINS.** Not national forests. They are not under the control of the States.

Senator MALONE. National forests are under the control of the Forest Service.

Senator WATKINS. That is right. That is the only kind this law affects.

Senator MALONE. Now, would you have objection in case this bill was found to have some merit in the forests—of course, there is no timber on the Forest Service areas in Nevada, so I would not know about that. But if you find that that is a valid thing, and it looked like a movement along that line would not disturb the prospector too much—you know, you can harass a man to death. If you have 5 or 6 people working for the Government who come in, it is not a very congenial companionship. Would you have any objection to amending this bill to confine it to Forest Service lands?

Mr. HOLBROOK. Senator, if it is bad in principle to make a location under the mining law in the national forests, for nonmining purposes, it is equally bad outside of the national forests.

Senator MALONE. I have asked you about that. What it does, from your own testimony, is that it puts the shoe on the other foot. You can run him off and make him sue you if this passes, and the way it is now you have to sue him.

Mr. HOLBROOK. As a matter of fact, I think it is very undesirable, and as I stated in my preliminary comments, to have two sets of rules. I think the miner is much better off if he knows what his rights are under his mining location, no matter where he is.

Senator MALONE. Well, I would like to preserve for him some of these rights. And I am not talking about your company. You get along all right. I am talking about the fellow who does not have a fund of money back of him.

Mr. HOLBROOK. I do not want to take one single right away from the most humble prospector which would interfere in any way with his mining operation. And if I have, then I have done it without knowledge, Senator.

Senator MALONE. I think this is a start, a foot in the door, for the very thing that the Secretary of Interior has recommended for 20 years. And that is that it all eventually will go under a leasing system.

Mr. HOLBROOK. Well, it would be a means of avoiding the basis of friction, and it would help to eliminate any further urge for such a policy.

Senator MALONE. This committee has so far taken care of that.

Mr. HOLBROOK. Yes, sir.

Senator MALONE. And we can do it. And I have seen these bills come before. If you can do it piecemeal, I have seen these Government departments operate. In 2 or 3 years, they come with something else. It is just one thing after another. Finally, they get what they go after, because they have got money to operate on, and they are persistent, and they want to do everything from Washington, D. C., nothing from Carson City, Nev., or Salt Lake City, Utah.

Mr. HOLBROOK. I appreciate that some years back there was considerable pressure by advocates of a leasing system. I don't think that is true now.

Senator MALONE. It is still there, by the same people.

**Mr. HOLBROOK.** That is not my understanding, and I have felt that this may be a means of stabilizing this situation.

**Senator MALONE.** That is exactly what has been sent out to these mining associations, that to keep from getting something worse, you have to do this. I have letters from most of them. What I want to say is this: There is some advantage in being a little older than others. There are few advantages, but there are some. That is, you have seen all these jokers come and go. In 1934, there was a Taylor Grazing Act. I did everything I could to avoid it in Nevada. I was State engineer. I could not do it. Now it is there, and everybody out in our State are crying their eyes out because they have got it. Therefore, they have continued to pinch down the grazing, on the theory that they are developing grass. Now there is a shortage of rain out there this year, and if they ever developed any grass, it is not evident.

The people that were grazing that land for 75 years have nothing they can do about it. They have to get these leases for a 3-year period, or whatever period they have a mind to give it to them for. And they always can cut them down. And when you cut a man beyond his carrying capacity on the ranches, his income is cut without cutting his investment. And they are all going right out the little end of the horn.

Now, the same argument was made for that—I was right here, not on this committee, of course, not in Congress—in 1934. I was right here in the Senate Office Building talking about this thing. I talked exactly like you are talking. “This is going to be for the benefit of the cattlemen and sheepmen.”

Well, get some of them in here now and see what happened to them. You can get the miners in here about 5 years from now and see what you are doing to them.

That is all, Mr. Chairman.

**Senator BIBLE.** Mr. Holbrook, I am interested in some language here on page 3, that is taken from the bill, where you say, referring to (c) 1, on page 3:

to prohibit the use of any hereafter located unpatented mining claim for any purpose other than prospecting, mining, processing and related activities.

**Mr. HOLBROOK.** Yes.

**Senator BIBLE.** Now, is it your understanding under that language that if this were to be adopted one could locate a millsite in accordance with the regular mining laws of the Western States?

**Mr. HOLBROOK.** Oh, yes, sir.

**Senator BIBLE.** And a tunnel site?

**Mr. HOLBROOK.** Yes, sir.

**Senator BIBLE.** You could locate those without any difficulty?

**Mr. HOLBROOK.** Oh, yes.

**Senator BIBLE.** Now, as I understand it, section 5 goes only to claims that have been heretofore located. Is that a correct statement?

**Mr. HOLBROOK.** That is correct. You see, the two fit together. The other provisions of the act relate to claims located after enactment of the bill, and that particular section relates to those located before, and to meet problems incident to such locations.

**Senator BIBLE.** One thing that bothers me that Senator Malone has touched on is the fact that the forum in which the cause is heard and the determination made is the very same department that institutes

the adverse proceedings. As a practicing lawyer in Reno, I have had enough experience with the Bureau of Land Management to know that you hear an examining officer and then you appeal to the director, who is still under the same department as is the examiner who made the original decision. If you are not satisfied with that, you appeal to the Secretary of Interior and all administrative officers still within the same department. Now, is that a good thing for the prospector out in your State of Utah, if he is attempted to be "adversed out"? Would it be better if they were required to go to court?

Mr. HOLBROOK. Well, you see, Senator, we are talking now under section 5.

Senator BIBLE. Limiting my questions only to section 5.

Mr. HOLBROOK. Yes. We are just talking about the surface rights. In other words, if he does not appear in that proceeding, he would not be in any different position than the mining claimant who made a new location then next day after this act was passed.

Senator BIBLE. I have only heard the examination of section 5, and I am wondering if that is clearly spelled out.

Mr. HOLBROOK. Yes, I think so.

Senator BIBLE. You think that is all they can do in this adverse proceeding, take the prospector's surface rights—only his surface rights—from him, even though he does not have a valid discovery?

Mr. HOLBROOK. I think it would be very unwise, Senator, if a man did not have any discovery, to contest. I would certainly advise my client not to. I would be disposed to recommend that he file a waiver of any rights. Because I would not want to place in issue the question of discovery. If I lost solely on the grounds that I did not have an adequate discovery, I have made a record that would be available to others.

Senator BIBLE. Of course, I think you and I are both familiar enough with the mining law to know that there is a great divergence of opinion as to what is a valid discovery.

Mr. HOLBROOK. That is correct. And if there was any question of doubt, I would recommend that he not place that matter in issue. Because I do not think he would be hurt in any way; as I do not think people who locate claims in the future will be hurt. He has the right to use the surface for every use he needs to carry on his mining operation. And when he gets patent, he gets an unlimited title.

Senator BIBLE. I understand that. But I am talking about the man who is holding an open location, as so many thousands of prospectors do throughout the West. And of course, I am somewhat intrigued with the burden that it puts upon the small prospector to attempt to defend himself before the administrative officer in the adverse proceeding under section 5. It is certainly going to cost him money, is it not?

Mr. HOLBROOK. If he comes in and defends it. Of course, the only purpose of him defending it would be to claim some resource in addition to those he claims for mining.

Senator BIBLE. I understand that. That all costs him money, though, does it not? Because he will certainly seek the advice of some lawyer in Utah, or Nevada, or California.

Mr. HOLBROOK. Oh, yes. Of course, he has that same problem now under Public Law 585. In other words, this proceeding is identical

to that one; only in that proceeding it was a matter of conflict between Leasing Act minerals and minerals locatable under the Mining Law. This proceeding is identical with the one that was passed last year by Congress in that respect, except where the changes have been necessary to make it applicable to the situation.

Senator BIBLE. And it is your opinion that section 5 is clearly enough spelled out that the only adverse rights that are affected are surface rights, insofar as an open location is concerned?

Mr. HOLBROOK. Yes. Except as to the very point you raised, that the question of discovery may be placed in issue, and its indirect consequences. And there is no way to avoid that, Senator.

Senator BIBLE. It seems to me it is in that very field that you might be getting into considerable difficulty. I mean as to whether the prospector thinks he has a valid discovery and the hearing officer thinks he does not.

Mr. HOLBROOK. O. K. If that is the issue, I would recommend to my client that he not contest it.

Senator BIBLE. Well, sir, if he does not contest it, he would lose the claim.

Mr. HOLBROOK. No; he loses nothing.

Senator BIBLE. Except the surface rights.

Mr. HOLBROOK. Except the rights which will not affect his mining operation. He has all of the rights he needs to carry on his mining operation.

Senator BIBLE. I understand what you mean.

Senator MALONE. Mr. Chairman, as I understand it, under this mining bill they must file with the secretary any claims that they have now, or at least, if they want to have the protection the bill affords, they should, and in future they would, file with the Government, as well as the county recorder.

Mr. HOLBROOK. No, Senator. That is one of the very things that we tried our best to stay away from, and I hope will be accomplished by this bill. I think that is an undesirable practice, that you mentioned.

Senator MALONE. What does that section 5 do? Does that not ask them to come in and protect themselves?

Mr. HOLBROOK. Section 5 provides that if a proceeding is initiated by a department, then they have to come in and set up the basis of their claim. Now, what I thought you directed your comments to was the necessity of filing a certificate of location or a notice of location in the Bureau of Land Management Office.

Senator MALONE. I did.

Mr. HOLBROOK. And this stays entirely away from that. I have always been opposed to it, Senator.

Senator MALONE. I am glad that you are.

Now, you say that if you had a client and he did not have a valid discovery, meaning a mineral that had some showing, that had some indication of following a vein or some other valid discovery, that would turn out to be profitable, you would advise him just not to make a case out of it?

Mr. HOLBROOK. You see, Senator, the fundamental difference here: If the department initiates a contest, all they can do is determine whether my claim is valid or not. And if I lose, I am completely out.

I haven't anything. I have lost everything. And I have got to come in and appear. I cannot do anything else. But in this kind of a remedy, all I need to do is sit back and not spend a dime. I do not have to appear. Or, I can file a waiver. I can do either one. And my mineral rights will not be affected.

Now, you see, that is greatly to the interest of the mining industry, as compared to the old contest proceeding.

Senator MALONE. My question goes directly to the point of what is a valid discovery. If he is brought in and he refuses to file any waiver, and he says he has a valid discovery, how would you prove that he does not have a valid discovery?

Mr. HOLBROOK. I think in the ordinary process of any proceeding, no one is required to prove a negative. The burden would be the mining claimant to prove that he had a valid location, and one of the requisites would be discovery.

Senator MALONE. Do you have any idea that there is always a mineral showing on any discovery that is ever located and later turns into a good prospect?

Mr. HOLBROOK. No.

Senator MALONE. Then, if you go right out there on a ledge and the geological setup is right, according to what this fellow thinks—maybe he is a practical geologist, or maybe not at all, but he thinks if he digs on this thing he will find something. If he has not yet found anything, he can be ousted, can he not, under this law?

Mr. HOLBROOK. Under this law?

Senator MALONE. Yes.

Mr. HOLBROOK. If he has not found anything?

Senator MALONE. If he does not have a showing, yes.

Mr. HOLBROOK. No, sir. There isn't a think in this law that will permit them to oust him. But if they initiate a contest, and he loses, he is through.

Senator WATKINS. You mean under the regular mining law?

Mr. HOLBROOK. That is right. Now, that is why, Senator, it is greatly to the interest of the humblest mining locator—

Senator MALONE. Why don't you use the present mining act, then? I have never known anybody to lose out on a location, and I do not think he would lose. I think you are going to have to take him to court.

Mr. HOLBROOK. Oh, I think there are lots of cases where a man has lost on contests. I think there were great areas cleared up in the region of the Hoover Dam and in the region of the Shasta Dam. I think that remedy has been used rather extensively.

Senator MALONE. That is right, and we all recognize that. And under the mining law you have all the leeway that you need. Now, if he is in there locating after we build Boulder Dam—which was obvious to some of them; I did not pay any attention to it, because I knew it would come to court—but if he had a location before the appropriation was made, and he had any showing, he was paid for it.

Mr. HOLBROOK. Oh, yes. But I am talking about the cases where he could not make a showing.

Senator MALONE. Then he is out, and should be.

Now, I want to ask you: By the time a man goes to patent, which may take 5 or 10 years, or more, if he does not have the facilities to

work it as fast as he wants to, and does not see fit to turn it over to some company that has the money, but wants to make money himself—I know prospectors that will go broke because they will not give up control if they think they have a good prospect. Now, under this system, before he could patent it, they would have it denuded of everything by then, if they wanted to sell the timber, and he would not get anything anyway, would he, by that time? If they could come in and do anything on it they wanted to do, they could do it while he is doing his mining and accumulating enough to work to patent.

MR. HOLBROOK. Well, I have always thought, Senator, the mining laws were designed to permit the discovery and the development of minerals, and there is nothing in this law, as I see it, that would interfere with that. He could still go ahead with that. They cannot take his minerals off, and they cannot interfere with it.

Senator MALONE. They could do plenty of interference, but you said unlimited title, and made a point of that; so that they could have it all denuded of everything by the time he got to that point.

MR. HOLBROOK. They could take off all the merchantable timber.

Senator MALONE. Of course they could. That is the point I wanted to make.

Now, you are kind enough to say it he got title to it under a patent, then he could have whatever is on it. Is that true?

MR. HOLBROOK. Yes.

Senator MALONE. Now, then, let me ask you another question.

Senator WATKINS. Would it be after this bill is passed?

MR. HOLBROOK. Yes.

Senator MALONE. We have always figured—and it is the only thing a man without money can do in this country now on public lands—that when he located a claim and kept up his assessment work, he has the same right, as long as he does his assessment work and is in good standing. Is that true?

MR. HOLBROOK. I think that is true, Senator. That would not be true under this bill. I am assuming that he had a valid mining location, as I think you are.

Senator MALONE. I am talking about a fellow who goes out there and sticks a stick down, puts a little tobacco can there with a note in it. He does not have much with him, and he does not have his attorney with him, or his engineer, and if he did have, he could not pay them. What he has is a little piece of note paper he tears out of a little notebook or a tobacco can, and he builds a monument and puts it under the top rock, or puts down a stake and puts it in the fork of a stake. That is the kind of a guy I am talking about. He has 30 days to set the corner of this claim after he does that; does he not? And then he has a certain length of time to do his work. At the present time, if he does not have discovery, it is up to you to prove he has not. Is that not it?

MR. HOLBROOK. No, sir.

Senator MALONE. Well, let us go through that again.

MR. HOLBROOK. The burden is on the locator in every case when an issue is raised to prove that he has complied with the mining law prerequisites for a claim, and the first prerequisite is that he has a valid discovery.

Senator MALONE. What is a valid discovery? You are a lawyer. It would be interesting to a lot of us to know just what you think a valid discovery is.

Senator BIBLE. Did he not testify to that once?

Senator MALONE. I would like to hear it again.

Mr. HOLBROOK. Well, it is such a showing as would induce a reasonable prudent man to expend his money and his effort in the hopes of developing a mine.

Senator MALONE. Whose definition is it?

Mr. HOLBROOK. That is a definition, Senator, that is written into court decision. It is not a matter of statutory law.

Senator MALONE. Very good. Could it then be interpreted as a location that he would have a reasonable chance of hitting ore in if he drives his tunnel, or drives his shaft?

Mr. HOLBROOK. There is another rule, Senator, superimposed on that, that as long as I am in possession of a claim, diligently working it—and I mean physical possession, I would say at least 5 days a week and 8 hours a day—I may hold it without a discovery. But if I haven't got a discovery, and I quit for even a short interval, I think you can go in and relocate my claim.

Senator MALONE. What is a discovery? Is it defined?—now you are a lawyer, and I want to get this in the record—that he has to have a mineral showing in his little hole where he has done this work: assessment work?

Mr. HOLBROOK. It need not be commercial ore.

Senator MALONE. But does he have to have an assay?

Mr. HOLBROOK. I wouldn't say that is absolutely necessary, under the most recent interpretations, if he has a formation that has been productive in the area. Although you are now in a field of great controversy, Senator.

Senator MALONE. Well, there is just where I want to stay. And I want you to stay there, too. And I do not want some joker from the Federal Government that can go out there, that does not know anything about mining at all, to say, "You have no showing. Where are your assays?" And he is out unless he goes to court.

Mr. HOLBROOK. This bill makes no change in that.

Senator MALONE. You just cited one we passed last year, and I was for it. The year before, I think, when it was first passed, I was chairman of the committee. Something had to be done to coordinate the placer locations with the lode locations on account of various developments. Now, that was done very reluctantly, because we thought it was necessary. And I think the record will show we did not do this so that you will get a foot in the door. You have done it to get a further foot in the door. You say it is similar to that. I say it is not similar to it, simply because it was necessary in this uranium mining, and in oil and gas locations, which covered a good part of it; and so that the uranium miners could go in, we modified the Leasing Act to that extent and dovetailed those locations so that the prior locator, whether he was oil and gas or uranium, could have the right-of-way, and both of them could work the claim. But we did not say any Government department could go in there and do anything about it.

Mr. HOLBROOK. I believe, Senator, I said the proceeding was similar.

Senator MALONE. That is right. And that is exactly what you are going to say in about a year, in coming in with another step. The proceeding is similar.

Now, they have been doing that for 22 years, and I have appeared before committees before becoming a member of the committee. And that is exactly what we want to protect against, the taking up like a log hook, just taking up the slack each time, and just wearing them down.

Senator BIBLE. Is there anything further, Senator Malone?

Senator MALONE. Yes. I had another question to ask.

Now, is it not customary, when you have a discovery, and you actually think that you are going in to spend some money, on something that may develop into a real mine, that you make protective locations around this discovery? Some of them may be where you use the ground to tunnel in, to crosscut, to sink additional shafts to determine the course of the vein, and some of them may just be protection, where you would want to build a mill. The matter of a mill site was mentioned. But maybe you do not know where you want the mill site. So you locate several claims. But is it not customary for your company, or the bigger companies, to go in and locate a block of claims, where the showing is on one claim and no showing on any of the rest? And they are perfectly valid, because they are used to develop the main discovery.

Mr. HOLBROOK. Senator, that is the practice. But I don't think any mining claim is valid unless there is a discovery, or unless you are actually in possession, working the claim, looking toward a discovery. That is my understanding of the mining law.

Senator MALONE. All right. But it is up to you to show that, now, through interdepartment action, which you are not doing. And you admit that by needing this new act.

But what I am saying to you: The Anaconda Copper Co.—how many claims do you think they have out in the Yerington area now? How much of that country do you think they have located?

Mr. HOLBROOK. I presume a great part of it.

Senator MALONE. Do you think there is copper under all of it?

Mr. HOLBROOK. No, Senator. You pose a problem under the mining laws which should be the subject of further study. I think there is a definite problem there, and it is a matter that the mining congress has under consideration, namely, how can mining claims be held without a discovery? Frankly, I think this bill is absolutely vital to work out any such arrangement.

Now, if we want to hold claims where there is no discovery, and there are valuable surface resources, you can see the problems we enter into.

Senator MALONE. I am not talking about valuable surface resources, except that they protect you in your discovery. And you also need the ground to operate from. You may start tunnel on a thing where you know you are not going to hit anything. You may run it for 2,000 feet. You do not expect to hit anything until you get in here under the lode.

Mr. HOLBROOK. What you say is quite necessary. I do not think there is adequate protection under the mining laws. I think it should be changed. And I think the possibilities of getting such a change

will be greatly enhanced if we can pass legislation comparable to this.

Senator MALONE. Well, now, let me ask you this. You are a lawyer. The distinguished junior Senator from Nevada is a lawyer. And I have been an expert witness in some of these cases. Have you ever known any of these claims to be taken away from one of them, that they are using to develop a lode, or that they have reasonable expectation that they may use in a court?

Mr. HOLBROOK. I can't put my hand on it right now.

Senator MALONE. I wish you would get some cases of that for this committee.

Mr. HOLBROOK. But I can tell you this, that at the moment Mr. Odum, the distinguished financier——

Senator MALONE. I know him.

Mr. HOLBROOK. Is carrying on a uranium operation in the State of Utah. And there are certain claims which it was believed were key claims. And I am informed, to give security to those locations, since there was uncertainty as to the sufficiency of the discovery, the productive horizon being at depth, that men had been placed on each of these key claims, and operations are being continued, so that they will be in the position of being in possession, diligently looking toward the discovery.

Senator MALONE. Then he is protected under the present law.

Mr. HOLBROOK. He is protected under the law. Now, that is a situation that I think needs some clarification in the law.

Senator MALONE. Do you think he is protected here?

Mr. HOLBROOK. This would not affect it in any way.

Senator MALONE. Well, of course. So you are not protecting Odum. You are not protecting anybody. What you are doing is getting a foot in the door to get a few more Government officials out there to tell this fellow, "Now, you do not have a discovery here, and we are going to do something about it."

Mr. HOLBROOK. No, Senator. That is not the intent of this bill, as I understand it.

Senator MALONE. But you can take everything there. You are taking out of the bill the right to locate certain things bodily. You are changing the whole mining setup where for 50 years, 80 years, you have had decision after decision. Every miner knows exactly where he stands. If he goes to the junior Senator from Nevada, who has had experience as an attorney, he can say, "Now, what can I do? What are the decisions on this?" And he can be told. Everyone knows he can get into a lawsuit. But is it not very well established, the 1872 mining law? Are there not many court decisions, decision after decision, so that a man knows what he can do under it?

Mr. HOLBROOK. I do not think we are upsetting any decision by this case, except that we are taking those very common minerals out from under the mining law.

Senator MALONE. So you are arranging it so that he has no control until he finally patents it.

Mr. HOLBROOK. He has all the rights he needs to carry on his mining operations, Senator.

Senator MALONE. I am glad to have your idea. But you are changing the setup entirely from the fact that a man can now locate a mining claim, 1,500 by 600 feet, and he can go in and dig a hole any place he

finds through his experiment, and he can follow that through, and nobody can say, "You do not belong here, because this is where this resource is," and no one can harass him or talk to him.

**Mr. HOLBROOK.** No; that is not my understanding.

**Senator MALONE.** Is that not your understanding, that he owns the whole business?

**Mr. HOLBROOK.** You are assuming it is a valid location? No, I think there are great differences of opinion, and there are now cases in the courts as to whether he has any right to the timber.

**Senator MALONE.** I do not know. By going to the court, let the court decide whether he owns anything else or not. I have no objection to that. It would not make any difference if I did have. What I am objecting to is some smart people coming in here and at one fell swoop, changing the setup and the prospector's location. And I think it would have a very vital effect on it. I am afraid it will have. And I think you have an entering wedge. Right now you have referred to that other legislation 2 or 3 different times; that this is a similar step. The next one will be another similar step, only a little bit further. And it will be just one thing after another. And we have had spectacles here in Congress, we had one just a few weeks ago, and every little while you have your departments sitting in with the committees telling them what to do, with public sentiment coming in for it. Now, luckily for me, I did not come to the Senate until after I had been all through that. And I know how you get wires and letters. And I know when I go out there and explain what it is. Most of them are coming in with these letters now, saying, "To prevent injurious legislation, we have to take action." That is what we are getting.

**Senator BIBLE** (presiding). Thank you very much, Mr. Holbrook. We appreciate very much your patience and your kindness in being here.

We stand in recess until 2 o'clock.

(Whereupon, at 12:45 p. m., the committee recessed until 2 p. m.)

#### AFTERNOON SESSION

**Senator ANDERSON.** The committee will be in order.

The first witness this afternoon will be Mr. Woozley.

Will you state your name for the record, and your position, and proceed, please?

#### **STATEMENTS OF EDWARD WOOZLEY, DIRECTOR OF THE BUREAU OF LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR; ELMER F. BENNETT, LEGISLATIVE COUNSEL, DEPARTMENT OF THE INTERIOR; AND LEWIS E. HOFFMAN, CHIEF, MINERAL DIVISION, BUREAU OF LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR**

**Mr. WOOZLEY.** My name is Edward Woozley. I am Director of the Bureau of Land Management in the Department of the Interior.

It is a pleasure to be here today, and we certainly appreciate the opportunity of appearing before your committee, Mr. Chairman.

S. 1713 is a bill which is designed to meet a problem with which the Department of the Interior has long been troubled. We believe

that the provisions of S. 1713 are well conceived and essential to the effective carrying out of the responsibilities assigned to our department with respect to mining activities on the public lands. Therefore, we endorse the provisions of S. 1713 and we strongly urge that it be enacted.

This bill, as we understand it, would serve two needs. First, it would facilitate the use of the surface of a given tract of public lands for multiple purposes. Second, it would enable us to prevent abuses which are possible under the letter of the existing mining laws, but which violate their spirits. We may summarize the provisions of S. 1713 briefly by saying that the first three sections would forbid the location of mining claims based upon deposits of common varieties of sand, stone, gravel, pumice, pumicite, and cinders, and would provide a means for the disposal of such materials, while the fourth section would limit the surface rights of the holder of an unpatented mining claim, and the fifth and sixth sections would provide a procedure for the clarification of surface rights appurtenant to mining claims existing at the time of the bill's enactment. Section 7 would protect existing rights.

It should be understood at the outset that the enactment of S. 1713 would not deprive the Secretary of the Interior of any authority which he now has with respect to unpatented mining claims. His existing authority to declare mining claims null and void would be unimpaired. S. 1713 would not substitute new authority for old, but would, instead, give the Department additional authority with respect to the management, disposition, and the use of the surface resources of unpatented claims.

The situation which this bill is intended to meet has existed for many years, but, because of more intensive Federal use of the public lands in recent years, it has drawn ever-increasing criticism.

Loopholes in the existing mining laws permit many abuses. Persons holding unpatented mining claims may prevent the orderly management and disposition of valuable surface resources such as timber and may block access to such resources, and yet pay little or no attention to mining themselves. Moreover, persons may base their claims upon deposits of common varieties of such minerals as those with which section 1 of S. 1713 deals, and while such deposits are technically of sufficient value to justify a mining location, they are often in reality of little worth when compared with the other natural resources on the unpatented claims, the proper utilization of which is hindered or prevented by the superior rights of the mining claimant. Moreover, by obtaining a mining location, persons have been able to acquire a color of right to the use of tracts even though they actually use those lands for nonmining purposes, perhaps even for a use so foreign to the spirit of the mining laws as a summer homesite.

These abuses could all be prevented, we believe, if this bill were enacted. As I have stated, after enactment of S. 1713, mining claims could not be based upon deposits of common varieties of sand, stone, gravel, pumice, pumicite, and cinders, all of which would in future be subject to disposition under the Materials Act of 1947.

Section 4 of the bill provides that any mining claim located after the enactment of the bill could not be used prior to the issuance of patent for any purposes other than prospecting, mining, or processing operations and uses reasonably incident thereto.

Section 5 of the bill provides a procedure for determining existing mining claims and the rights of the locators of those claims to the use of the surface. This procedure seems to us amply buttressed with requirements for notice and hearings to protect the rights of mining claimants.

If S. 1713 were enacted, taken together with Public Law 585 passed by Congress last year, we believe that a far more beneficial use and conservation of the surface and subsurface resources of lands belonging to the United States could be provided. And yet in no way do we believe that this bill would conflict with the desires of the mining industry. This bill seems to us to have the particular merit of satisfying the needs of the mining industry, the other users of the federally owned lands, and the Federal Government.

Although we endorse this bill, we suggest that it be amended in certain respects. These amendments are explained in detail in the Department's report which has been submitted to you. I shall content myself with stressing only the desirability of making certain that the provisions of S. 1713 apply to the Oregon and California Railroad grant lands and the Coos Bay Wagon Road grant lands in the same manner as to other federally owned lands, with the exception that all timber rights after patent would continue to be reserved to the United States. To assure this result our report suggests appropriate language.

We recognize that, if this bill is enacted, there will be imposed on the Department of the Interior a heavy burden of additional duties. We shall undoubtedly be compelled to undertake a great expansion of our existing staff.

We cannot give you an estimate of the number of unpatented mining claims, but it must run into the hundreds of thousands. Other departments and agencies will ask us to adjudicate, under the provisions of section 5, immense areas covered by unpatented claims.

For example, at the present time we have, in the Bureau of Land Management, 15 mineral examiners, and we believe that, with our present workload, we could well use 25. However, if S. 1713 should be enacted, 35 would probably be needed within the first fiscal year after the enactment of the bill, and within 10 years 75 more would be required.

Because the provisions of section 5 would authorize the heads of Federal departments and agencies to seek a determination of surface rights, and would not compel them to seek such a determination, it is particularly difficult for us to predict with any hope of accuracy the actual magnitude of the task which the enactment of this bill would impose on the Department of the Interior. However, we have no hesitation in saying that the additional workload would be more than compensated for by the benefits which would accrue from the enactment of S. 1713.

Thank you, gentlemen.

Senator ANDERSON. Thank you very much, Mr. Woosley.

Senator Watkins, do you have any questions?

Senator WATKINS. No. I have no questions.

Senator MILLIKIN. Mr. Chairman.

Senator ANDERSON. Excuse me.

Senator Millikin.

Senator MILLIKIN. What does this do to the present rights of the miner?

Mr. WOOLEY. Actually if the miner actually has or will have a valid right it does very little.

Senator MILLIKIN. Who determines whether they have a valid right?

Mr. WOOLEY. I presume, Senator, that if he came in, at the time he was served concerning the surface rights, a determination would be made whether or not at that time he had a valid right, by the manager in charge of the Land Office.

Senator MILLIKIN. As distinguished from the law at the present time, who determines that at the present time?

Mr. WOOLEY. The same person.

Senator MILLIKIN. Then what is the difference?

Mr. WOOLEY. One difference would be that under the existing law we must make a minimal determination with a field examiner before we ask for a contest on his claim.

Senator MILLIKIN. What kind of a contest do you ask now?

Mr. WOOLEY. Well, we would file a protest. Or another agency may file a protest. If it is determined that the lands do not have sufficient mineral value or discovery has not been made, we can then, as we call it, advise the claimant to determine whether or not he does have sufficient mineral values.

Senator MILLIKIN. How is that determined at the present time?

Mr. WOOLEY. By hearings.

Senator MILLIKIN. Who holds the hearings?

Mr. WOOLEY. Well, either the Land Office manager or a person delegated with that authority.

Senator MILLIKIN. Is there any court action at the present time?

Mr. WOOLEY. Yes, sir.

Senator MILLIKIN. What is that?

Mr. WOOLEY. The court action may apply after the proper procedure has been entered into on appeals.

Senator MILLIKIN. And all the questions you have been discussing can be determined in court?

Mr. WOOLEY. Yes, sir; I assume they could.

Senator MILLIKIN. Then what abridgement of court rights is there in the present act to support legislation?

Mr. WOOLEY. In my opinion, there would be no abridgment of court rights.

Senator MILLIKIN. Then in what respects are the rights of the possessor of the mining claim changed in any way?

Mr. WOOLEY. Well, the only way would be that if he were called to come in and determine whether or not he had sufficient rights to hold his surface during the period that it is under location, that he would be required to do that if he wished to use the surface rights, except for mining purposes.

Senator MILLIKIN. I am talking exclusively now about mining purposes.

What does this bill do to the mining purpose?

Mr. WOOLEY. Actually I don't see that it would at all be inhibitive to the person holding the mining claim for mining purposes. He could still use the surface for purposes incident to mining.

Senator MILLIKIN. None of the provisions in here in any way limit his present rights for mining purposes?

Mr. WOOLEY. No, sir; I do not believe they do.

Senator MILLIKIN. What do they do then that is different?

Mr. WOOLEY. It would alleviate the necessity of making a mineral determination before we could use the surface rights or manage the surface rights.

Senator MILLIKIN. At the present time I make a mining location and follow the State procedure to do so. How does it interfere with that in any way?

Mr. WOOLEY. It would not interfere with that.

Senator MILLIKIN. I come back then to my question.

Senator ANDERSON. May I ask a question?

Providing that he was not doing it to get sand or gravel or something of that nature.

Mr. WOOLEY. Oh, yes.

Senator ANDERSON. For hard minerals it would be exactly the same.

Mr. WOOLEY. Yes, sir; that is correct.

Senator MILLIKIN. Well, I make a location and make a discovery and put out my stakes and so forth and so on. In what respect does this bill interfere with that and with the rights that flow from it?

Mr. WOOLEY. I do not think it interferes at all.

Senator MILLIKIN. In what respect does it inhibit the rights that I normally would have or think I have?

Mr. WOOLEY. Well, it might inhibit the rights, if you want to defend your claim or if you wanted to deny ingress or egress for livestock or for timber access roads or something of that kind across the claim while it was actually under location.

A mining claimant now, as I understand it, has the right to do that.

Senator MILLIKIN. What about timber rights?

First, let me ask you what are the present timber rights of a mining location in a perfected location but which has not gone to patent?

Mr. WOOLEY. I think that he is not permitted to cut and sell the timber. He is only permitted to use such timber as is needed in his mining operations from the surface during the time it is under location.

Senator MILLIKIN. He has that right?

Mr. WOOLEY. Yes, sir.

Senator MILLIKIN. Does this interfere with in in any way?

Mr. WOOLEY. No, sir.

Senator MILLIKIN. What does this do?

Mr. WOOLEY. It gives the agency managing the land the right to manage the timber resources pending patent.

Senator MILLIKIN. That is quite a change in the man's situation, is it not?

Mr. WOOLEY. Not as far as mining operations, Senator. It would in no way interfere with his mining operations.

Senator MILLIKIN. Explain to me what my present rights are as to timber as a locator. Not as a patentee, but as a locator, and as they will be inhibited or diminished or enlarged or otherwise changed under this act.

Mr. WOOLEY. Well, as I understand this act, it would not be changed because you would still use whatever timber was on the surface of the land that you needed in your mining operations.

Under the present law that is all the timber that you were permitted to use.

Senator MILLIKIN. Under the new law would those timber rights in any way be changed while I am in the course of perfecting my location and intend to obtain a patent? What can the Department do that it cannot do now?

Mr. WOOLEY. It could manage those timber resources. It could cut out the overmatured trees. I presume they could have a timber sale on there for the timber that is not needed in the mining operation.

Senator MILLIKIN. Who decides that?

Mr. WOOLEY. The person managing the surface rights.

Senator MILLIKIN. Who is the person managing the surface rights?

Mr. WOOLEY. It may be the Forest Service. It might be the Bureau of Land Management.

Senator MILLIKIN. Assuming their judgment is wrong, assuming that they clean off all the timber on a mining claim to which I have a valid right, how do I get timber to pursue my mining operation?

Mr. WOOLEY. I cannot answer that, I am afraid.

Senator MILLIKIN. Somebody ought to be prepared to answer that.

Mr. WOOLEY. Yes, sir. I would like to call on Mr. Bennett from the Department of the Interior to answer that.

Mr. BENNETT. The provisions dealing with the use, management, and disposition of the vegetative resources including the timber will be found on page 5 of the bill.

Now, if we assume that the mining claimant currently needs the timber in his mining operation, then this bill protects him with a legal right. If the Government should sell the timber under those conditions he would have a right to recover for the amount of the loss to him, in my opinion.

Senator MILLIKIN. Would the Government be required to supply him with the timber necessary to conduct his mining operations?

Mr. BENNETT. No; but he would be entitled to damages.

Senator MILLIKIN. That could be a rather naked right, could it not? Supposing I am proceeding with a mining operation and I need timber and I haven't got it because they have taken it off my claim. Is all that I have a lawsuit?

Mr. BENNETT. No, Senator. I believe that there is also authority today in the Government agencies—but not as a matter of legal right—to provide him with timber under those circumstances.

Now the Forest Service people have been or would be in a much better position to indicate whether, under the present regulations, they might have that kind of authority. However, there is no such authority conferred in this bill.

Senator MILLIKIN. All I am getting at is this, Mr. Bennett: I am a valid mining locator; I am entitled to the timber at the present time that I need to run my mining operation, no matter what that mining operation is, assuming it is a legitimate mining operation. The timber is gone because some agency has sold it.

Who makes the timber good?

I don't care for a lawsuit. I am not making a location on a lawsuit. I want timber. Who supplies it?

Mr. BENNETT. In my personal opinion the locator has nothing but a lawsuit under those circumstances.

Senator ANDERSON. Would it be fair to say, however, that if he is a valid claimant, if he is going in to file a valid claim for mining, his position with respect to his rights is not changed in the slightest by this bill?

Mr. BENNETT. Well, as of today, Senator, I could not agree with that for this reason: Under the mining laws the better authority seems to indicate that the Government would have no right to sell the timber off the area although the miner's right to the timber is limited to that quantity he might need for his mining operations. But under the present law the timber would have to be left on that claim so long as the claim was in a valid status, thus it would be available when the need arises. I believe I am right in that.

I think this problem, of course, comes up much more frequently in the Forest Service than it does with us in Interior.

Senator ANDERSON. Neither the Forest Service nor the Department of the Interior, which administers the O. & C. lands, makes it a practice to go in and strip the country of all its timber. They are interested in preserving the forests.

A mining claim locator has a right only to the timber that he needs in his mining operations.

Now, under S. 1713, he still has a right to that much timber?

Mr. BENNETT. Yes, he has a legal right to it under the language of S. 1713 if it is needed in his current mining operation.

Senator ANDERSON. Providing he is not mining sand and gravel or pumice.

Mr. BENNETT. That is right.

Senator ANDERSON. They have been claiming rights to timber while they were taking out sand and gravel and pumice at the present time.

Senator MILLIKIN. I repeat the question:

If they come in and remove the timber while I am pursuing a legitimate mining location, how do I get the timber for my mine?

Mr. Bennet suggested I have a lawsuit, and I did not make a location to get a lawsuit.

Senator ANDERSON. What do you have now but a lawsuit?

Senator MILLIKIN. They don't bother you at the present time.

Mr. BENNETT. At the present time Government agencies are faced with somewhat of a dilemma. They are put in a position where, if they are making a timber sale and they have reason to doubt the validity of the claims in the area, they have only one recourse if they are to be sure of their title. They must make a physical examination of each individual claim, and they must request the Department of the Interior to adverse those claims which they believe to be invalid.

Whether all of them are invalid or some of them are valid is not exactly the point here because what the Forest Service is interested in is an assurance of clear title when they make a timber sale.

Senator MILLIKIN. Must they do these things before they proceed to remove the timber?

Mr. BENNETT. If they don't, they are in a position where, Senator, they may have unlawfully destroyed a miner's property right to timber. However, in the end, the miner may have nothing but a lawsuit under the present law, in my view.

Senator MILLIKIN. Under the present law do they do any of those things while he is pursuing his mining location?

Mr. BENNETT. Well, if they believe that it is an invalid claim, the Forest Service or the Bureau of Land Management may commence adverse proceedings to test the claim's validity.

Senator MILLIKIN. Assuming that in the end it will be determined that he has a proper, valid location, in the meantime can they go in and take all the timber away and leave him nothing but a lawsuit?

Mr. BENNETT. Not without violating his legal rights, Senator.

Senator MILLIKIN. They would not do that at the present time, would they?

Mr. BENNETT. Not intentionally, I am sure.

Senator MILLIKIN. But could they do it intentionally under this act and leave him a lawsuit?

Mr. BENNETT. No. To the extent timber was cut to which he is entitled it would be a violation of legal right in exactly the same sense that it is under the present law.

Senator MILLIKIN. What is the difference between this law and the present law?

Mr. BENNETT. I could state quite a number of them, sir.

Senator MILLIKIN. I wish you would state them. I would like to have them stated.

Mr. BENNETT. To begin with, it takes certain common varieties of mineral materials, sand, stone, gravel, pumice, pumicite, cinders—but only the common varieties thereof—out of the mining laws completely. Mining claims could no longer be located with respect to those materials.

The second major effect of this legislation is to provide, as to future claims, that the Federal Government, while the claim is in an unpatented status, reserves the right to manage all of the surface resources to the extent that that management does not materially interfere with or endanger mining operations of the locator.

Further, it gives the authority to dispose of vegetative materials—that would include the forage and the timber on the claim—subject to the right of the mining operator to use such timber as is needed in his mining operations.

The third major effect of the legislation is to provide a proceeding under which the surface rights of existing claimants may be determined in what is expected to be a more expeditious manner than the present proceedings would provide, and it does that by the same quasi in rem proceeding which was provided in Public Law 585 of a year ago with respect to the competing rights of such persons as Mineral Leasing Act lessees and mining claimants.

Senator MILLIKIN. What about the location of townsites? I think there is lots of law on that. I think we have had cases involving the timber rights in connection with location of townsites.

Mr. BENNETT. I think that is so, sir, but I am not familiar with that.

I would say that you might have some conflicts involved here in which the homesite or townsite laws could be applicable to the surface rights reserved by the United States. But at all times any nonmining use of the surface of a mining claim would be subject to the requirement that it must not endanger or materially interfere with prospecting, mining or processing operations or uses reasonably incident thereto.

Senator WATKINS. You are quoting now from the law?

Mr. BENNETT. Yes; from the bill, on page 5.

Senator MILLIKIN. I am reading now from the case annotations of section 26 of title 30 of the United States Code Annotated. It says:

Extending into townsite lots the extralateral right of a locator to follow a mineral vein which apexes on his location beyond his own surface sidelines beneath other lands does not exist in townsite lots which are held under non-mineral townsite patents even though original location of vein is outside townsite.

That is one case.

The use of phrase "parts of veins" in contract between mine owners by which first mine owner granted to second mineowner all veins and parts of veins having their apexes within certain boundaries under townsite lot did not disclose intent to alter statutory scheme which parties were attempting to follow ordinarily applicable to property outside townsite lots.

I don't know that that is necessarily applicable to what I am talking about. I am getting at the point how does the present system injure anyone, and what does this bill do to correct it.

Mr. BENNETT. I think Mr. Woosley's statement and Mr. Holbrook's statement this morning pointed out the objectives of the legislation. There are hundreds of thousands of mining claims on public lands. They are initiated—and properly so, in our judgment—on a unilateral basis. But there is no requirement whatsoever under present law to require a man who is through with a mining claim and gives it up to take any action to eliminate his mining location as a cloud on the use of that surface by other parties in future years.

This bill is not designed in any way—

Senator MALONE. At that point, any human being 21 years old can locate it and file on it, can he not?

Mr. BENNETT. That is quite right, sir. And it could be jumped. The claim could be jumped if the—

Senator MALONE. You said there was no way out.

Mr. BENNETT. If the assessment work is not performed.

Senator MALONE. Then your statement is not correct.

Mr. BENNETT. No: I am talking about other uses. In other words, I am not talking about mining uses; I am talking about uses for grazing purposes or perhaps timber management by the Forest Service, or some other type of use.

Senator MALONE. You already explained you have your way of doing that if you instituted the proceeding.

Mr. BENNETT. That is right. And I am coming to a description of the difference between the proceeding that is involved in this bill and the proceeding which must be followed at the present time.

Now the land managing agencies, the Bureau of Land Management and the Forest Service, find that there are claims on the record which may be 50, 60, or 70 years old. Under those circumstances the areas embodied within those mining claims are in a status where the land managing agency or any other user of that area is taking a risk if he attempts to make any use of the surface of those areas. There is no way to determine whether those claims are active or whether they have been abandoned. And this procedure, which is set up on S. 1713, is designed to expedite the determination of those claims which are valid and those which are not for the purpose of surface rights only.

This procedure does not affect any mining claimant's rights to use the mining claim for mining purposes.

Even if this procedure is completed from the first step to the end the locator does not lose his mineral rights in any sense, or his right to use such of the surface as he may need for mining purposes. There is no effort in this legislation to reach that conclusion. This is merely designed to supplement the existing laws with respect to surface resources.

Now the purpose here is to deal with this kind of a situation: The better line of authorities in connection with mining law indicates that the mining claimant has a right of exclusive possession, but that his rights to use the surface are limited to those rights needed to carry on his mining operations.

So he, in effect, has a negative right other than his mining rights, a right to keep the United States or any other person from making any other use of the surface of the mining claim.

That is the problem that we are attempting to reach here. We are not proposing the establishment of any arbitrary statute of limitations. We are not requiring the recordation of mining claims or any of the other features which the mining industry has found so objectionable in legislative proposals that have come before this committee in previous years. And I can say without hesitation that our Department last year vigorously opposed proposals that were made for such recordation.

We are trying here, though, to solve the surface rights problem without disturbing in any way the mineral rights of a mining claimant.

Now what is wrong with the present procedure? The procedure, in the first place, has as its only statutory authority several very general statutes which merely say that the Secretary of the Interior may issue such regulations as he sees fit for the proper management of the public lands. There is no statutory procedure today defining exactly what kind of notice and hearing a mining claimant needs before the Secretary of the Interior can declare that his mining claim is invalid.

The regulations which are in effect today have been sustained by the Supreme Court in the Cameron case, which appears on 252 U. S. reports. But there is no assurance, I would like to point out in the beginning, under present law that some future Secretary of the Interior won't take away some of those notice-and-hearing requirements. Here the committee has before it proposed legislation which, in order to reach the surface rights problem, spells out a statutory procedure designed to give the mining claimant a full and adequate protection.

Senator MILLIKIN. Let us assume that I have made a claimed location, that I have a bona fide mining purpose. What can happen to me that might set up interferences as a result of this legislation?

Mr. BENNETT. You might have controversy. You would have it today, too, over the extent to which he is using the surface for a summer homesite, or perhaps you may have questions, which I know are involved in litigation today, between grazing permittees and the mining locator as to the kind of use he is making of the surface of the land. You have a number of controversies of that kind today.

Now this legislation is designed to make it clear that the surface is subject to other uses besides mining uses. In that respect those

mining claimants who locate claims in the future would understand from the beginning that the surface of the claim is still subject to their use so long as they are using it for mining purposes. But, to the extent they do not need it for mining purposes, it may be used for other purposes.

Senator MILLIKIN. What other purposes? I am trying to measure the number of conflicts or possible conflicts that could occur between a valid mining locator and grazing and fishing and other things that might be set up. What are the different uses that the mining locator might interfere with?

Mr. BENNETT. I think Mr. Woosley, as Land Manager, would be in a better position to give you a broad picture of the number of uses that would conflict than I am.

Of course, the grazing use, as you mentioned, is definitely one. Another is timber.

Senator ANDERSON. Mr. McArdle, Chief of the Forest Service, is going to testify next.

Mr. BENNETT. Thirdly, you have recreational uses, fishing, for example. At the present time it would appear that the law would permit a mining locator to prevent a fisherman from coming on the surface of the mining claim for the purpose of fishing.

Senator MILLIKIN. What restrictions on the new rights would there be to assure the orderly development of the mining claim.

Mr. BENNETT. The bill itself has provisions which were designed specifically for that purpose.

The proviso which appears in Subsection 4 (b) reads as follows:

*Provided, however,* That any use of the surface of such mining claim by the United States, its permittees or licensees, shall be such as not to endanger or materially interfere with prospecting, mining or processing operations, or uses reasonably incident thereto.

Senator MILLIKIN. Why is this not limited to forestry lands?

Mr. BENNETT. Because the conflicts with which this bill deals are conflicts which go beyond the timber field alone.

Mr. Woosley here could describe the very active conflicts that are occurring today in certain States of the West between grazing uses and mining uses.

The grazing lands, as you know, are largely under the jurisdiction of the Bureau of Land Management, and have nothing at all to do with the Forest Service. The Forest Service has grazing lands also, but the Bureau of Land Management is really the agency that is chiefly concerned with grazing conflicts.

Senator MILLIKIN. It has been suggested to me that under the Tort Claims Act administrative settlement is confined to those claims not exceeding \$1,000.

Mr. BENNETT. That would mean a court action would be necessary if it were over that.

Senator MILLIKIN. If it is over \$1,000 you have to have a court action?

Mr. BENNETT. Yes, that is correct. That is part of the provisions of the Tort Claims Act.

Senator MILLIKIN. And suit in a Federal court would be the only recourse then?

Mr. BENNETT. I would say so.

Senator MILLIKIN. Under this present bill.

Mr. BENNETT. That is correct.

Mr. WOOLEY. Two uses that have not been mentioned are watershed protection and erosion control.

Senator MALONE. What were those two?

Mr. WOOLEY. Erosion control in the Southwest and watershed protection.

Senator MILLIKIN. How could those interfere with the rights of the locator?

Mr. WOOLEY. Under present uses, I feel very definitely that some people are taking advantage of using the surface rights for purposes not incident actually to mining.

Senator MILLIKIN. Give me examples.

Mr. WOOLEY. I think your bulldozer examples out in New Mexico and probably in Arizona and Colorado and Wyoming, in the exploration for uranium, is one very good example.

Senator MILLIKIN. What are they doing?

Mr. WOOLEY. They are stripping the land in certain areas much more than is necessary for their actual mining operations, destroying the topsoil and allowing the wind to blow the land around.

Senator ANDERSON. Is it not true, Mr. Woolley, that they get a claim without regard to whether they know what is in there now? Of course, they couldn't know. But even without a good Geiger counter showing they will take a bulldozer and keep running it down to see whether the Geiger counter can reveal something.

Mr. WOOLEY. That is right.

Senator ANDERSON. You can go out today and get money for any kind of uranium mining by the sale of stock. We are having an epidemic of bad erosion practices by taking the bulldozers and just promiscuously running them across the landscape.

Senator MALONE. Do you mean, Mr. Woolley, that there is a great percentage of the area of these lands that is being bulldozed in that connection?

Mr. WOOLEY. There is sufficient, Senator, when you dig a hole on each claim or use a bulldozer on each claim, that it is setting up a terrific erosion problem. The Federal Government and the people using the range are spending money to build and vegetate these ranges, and, on the other hand, they are being abused.

Senator MALONE. Would you stop all this?

Mr. WOOLEY. We would have a much better chance of stopping that under this act than under the existing laws.

Senator MALONE. I ask you, Would you attempt to stop it? Do you want to stop it?

Mr. WOOLEY. We would stop the uses which are not necessary to exploration.

Senator MALONE. Who would judge what is necessary? You, as range supervisor?

Mr. WOOLEY. I think most of the States set up the guide lines under the State laws as to what is necessary for a discovery or exploration for discovery.

Senator MALONE. That would be a good deal like putting an engineer in charge of a hospital, would it not?

Mr. WOOLEY. I don't know what police powers the States are using in that regard.

Senator MALONE. I am talking about you.

Mr. WOOLEY. No. I think that if we could actually, Senator, under the terms of this bill, require those people who might have filed to come in and prove that they need the surface rights in operation of their mining, that plenty of these abuses could be stopped.

Senator MALONE. Do you want to put them through the trouble of coming into Washington and making application in the local government land office and proving to this man that they are likely to find mineral there before they start doing any location?

Mr. WOOLEY. No, sir. I don't think the minerals part of it comes in in the first instance. We are only interested in the protection of the surface rights. And the mineral rights do not come into a town unless the person comes in and wants to hold the full surface rights. Then they hold a contest.

Senator MALONE. What is he using the bulldozer for? Is it not to find out what is underneath?

Mr. WOOLEY. That is very questionable. It is just to do his assessment work, his necessary work. I do not think it is doing anything to determine what minerals are there, Senator.

Senator MALONE. Are you not then amending the wrong law?

Mr. WOOLEY. No. I think this law would do that.

Senator MALONE. Maybe you had better get at it and figure out what kind of assessment work he ought to do, if you know.

Mr. WOOLEY. I think the assessment work requirement is pretty well spelled out. It has to do with mining operations.

But we, as a management agency, have very little to do with the surface of the mining claim while it is under location under present law.

Senator MALONE. I do not want to divert from this.

Had you finished, Senator?

Senator MILLIKIN. You go right ahead.

Senator MALONE. You go ahead. I was very much interested in your questions.

Senator BARRETT. Would the Senator yield to me at that point?

I would like to get a little clarification of the statement that Mr. Wooley just made.

I do not interpret the bill that if it is enacted the Secretary of the Interior can call upon these mining claimants to come in and show what need they have for the surface. As I understand this bill—correct me if I am wrong—the only thing you can do is to serve a notice on them and make them come in and show cause and show that they are entitled to not only the mining claim but to the surface as well. And if they are not entitled to the surface, then they can keep the mining claim, they can go on with their mining, but they lose the right to the exclusive use of the surface.

Am I correct?

Mr. BENNETT. That is correct, sir.

Senator BARRETT. He doesn't make a showing about how much of the surface they need.

Mr. BENNETT. If the locator wishes to claim exclusive surface control all he needs to do is show that he has an existing valid claim under the laws as they were prior to the enactment of this bill. If he does that, he then has every right preserved to him which he has under the law today.

Senator BARRETT. And if he does not do anything he does not lose the right to minerals under that claim. He can still go ahead and do that, but he doesn't have the exclusive right to the surface.

Mr. BENNETT. That is correct. That is all he would lose by failure to come in.

Senator BARRETT. He does not have to make any showing about the use that he is making or intends to make of the surface?

Mr. BENNETT. That would be immaterial to the proceeding. The mining locator would not be required to make any such showing. All he would have to do is to show that prior to the date of enactment of this bill he had located a valid claim and that it was valid at the time.

Senator BARRETT. And that it is valid at the present time?

Mr. BENNETT. Yes.

Senator BARRETT. In that way he would have to show that he had made a legal discovery and that he had done the assessment work required.

Mr. BENNETT. He would not have to make a showing on the assessment work unless some third party had come into it as a protesting party and claiming adverse interest.

Senator BARRETT. There is no question raised in these proceedings as to the mining claim itself.

Mr. BENNETT. If by that you mean the right to the minerals and the right to use the surface as needed for the recovery of minerals, that is correct.

Senator BARRETT. There is nothing as against the minerals being undertaken; it is only against the surface.

Mr. BENNETT. That is correct.

Senator MILLIKIN. I still do not understand the purpose of the bulldozers. Why do they do this bulldozing?

Senator BARRETT. Let me explain it. I think I know something about it from a practical standpoint.

It is a very dangerous situation. It is happening out in Wyoming at the present time. They hire people to prove up or to do the amount of work necessary in order to make a showing for a discovery, and they get these bulldozers and start out on maybe a 20-mile hike across the country. They will skip the fee lands, deeded lands. But when they come onto a piece of land where the Government owns the minerals they will drop down and dig a hole. They will go along a short ways and drop down again and dig another hole. And they go on through the whole country. They are digging them all over creation.

Senator ANDERSON. Is it not true that the ranchers out there are pretty anxious about this?

Senator BARRETT. Very much so, because these open pits are very dangerous for livestock. They are dangerous for humans. A man driving along there after a snowfall with a horse could drop down in one of those holes, and it would throw him over.

Senator MALONE. If you dug it with a No. 2 shovel it would still be there, would it not?

Senator BARRETT. That is right. But I am trying to explain to Senator Millikin how they are doing it on a wholesale basis out there at the present time.

I do not want to get into any argument with these mining people because I am in favor of maintaining the mining law. And this bill maintains the mining law. I think I know something about this mining law because I have had some experience before the Leasing Act up in our country on this thing. I do not think there is a valid discovery in the whole State of Wyoming. If there is, there are so few of them you can count them on the fingers of your hands.

They are making these holes every 500 feet or 1,000 feet, whatever it is.

Senator MILLIKIN. Do they did those holes to find mineral or to exploit a discovery that has already been made?

Senator BARRETT. They dig those holes to establish a discovery. When they get through they come in and file a statement that they have discovered uranium on every one of them. Not 1 out of 10,000 of them will have a discovery of uranium.

Senator MALONE. Is it not also the assessment work?

Senator BARRETT. Not at the present time. But they could do it later on.

Senator MALONE. I think they do a lot of assessment work.

Senator BARRETT. Our country is new as far as this uranium business is concerned, and at the present time it is all based on discovery. The assessment work comes a year later. Isn't that right?

Mr. BENNETT. Well, Mr. Woozley, I think, is better qualified to answer that factual question. But I have understood that many of the complaints from the grazing people in particular have been in cases where the bulldozing work was done as a simple way of getting the assessment work accomplished. There was no particular reason to believe that they had not discovered it because they had done that, but it was to make a showing of discovery work, as Senator Malone indicated.

Senator MALONE. Let's take this discovery work. You have to do \$100 worth of work.

If you use a bulldozer that costs you \$100 a day, for 1 day, or use a man with a No. 2 shovel, who costs you \$10 a day, and he works 10 days, what is the difference? There may be a little difference in the way the dirt is moved. But it is not the amount of dirt you move; it is the amount it costs to move it, is it not?

Mr. BENNETT. Mr. Woozley would be able to answer that.

Senator MALONE. You are in the Department of the Interior.

Mr. BENNETT. I suppose you could dig a hole with a No. shovel, and it might look the same as it would with a bulldozer.

Senator MALONE. You could not.

Let's get down to bedrock. Where were you raised? Where are you from?

Mr. BENNETT. I am from Colorado.

Senator MALONE. Have you ever been in the mining business?

Mr. BENNETT. No.

Senator MALONE. Let me tell you something about it then.

It is a hundred dollars worth of work.

Mr. BENNETT. That is right.

Senator MALONE. In the logical way of doing mining work, if you put a couple of men out there to move a hundred dollars worth of dirt, if you have paid them a hundred dollars and they have worked steadily,

you can prove up that you have done your assessment work. If you take a bulldozer in there and it costs you a hundred dollars for 2 hours' work or a day, or whatever it is, and you prove you paid a hundred dollars and they actually worked, you can go in and file on your assessment work. Is that not about true?

Mr. BENNETT. That is right, sir.

It could be that there would be no more damage, from the point of view of the surface, from a bulldozer than there would be from a No. 2 shovel.

Senator MALONE. This is the first time that a miner has ever been attacked because someone wanted to use the range. In our State I have never heard a range man complain about assessment work.

Senator BARRETT. Let me tell you something here.

This is an entirely different situation than has ever prevailed before in the history of our country when, instead of having relatively few of these claims, we have got hundreds of thousands of them.

Senator MALONE. I can see your problem.

Then aren't we attacking it in the wrong way? If they think they are disturbing the range and they are doing too much of this work, it is not done in the right way, they have a way which was explained this morning by the witness of an interdepartmental setup to determine what they are doing, whether it is the legitimate way of doing it or not, and whether it is a legitimate location.

Now I certainly would never be in favor of trying to preserve the range as against a miner. That is to say, if it came to keeping them off the location of a mining claim because you need it for grazing. You might regulate how they are doing it.

Senator BARRETT. Don't misunderstand me. I was not raising any objection about doing this discovery work or assessment work, as far as this is concerned, or using the bulldozers.

I am merely trying to explain to Senator Millikin how it has worked out in practice. But I do think that the time has come when we have got to make some arrangements with reference to the multiple use of that surface. The people who have been there for the last 75 years have got some rights, too. They have got the right to use this land for harvesting the grass crop and so on.

Senator MALONE. I think there may be some way of getting at that.

I would like to know from one of you experts how you are going to know how much timber you are going to need for your mining operation until you know how extensive it is going to be. If you do know that there are hundreds of these locations made, in maybe 1 out of a hundred of them somebody will put in a couple of hundred thousand dollars to go ahead, or 10 thousand dollars to go ahead and dig a little while on it. They cannot tell whether they are going to need any timber or not until they find the character of the ground, how deep they are going to be, whether it will be a tunnel or whether it will be a shaft or whether it will be an open cut.

From your testimony, a man could work along there 2 or 3 years not knowing how much timber he is going to use. And maybe there's plenty of timber there for everybody. Maybe there are only 50 trees on it. But if he hits a mine finally—and one out of a hundred might turn into a mine—he might need a good deal of timber. But he cannot testify to that at the time until he has done his development work

and drilling and cost studies and whatever there is and determined the ores there in place.

And in the meantime, as Senator Millikin asked you, some smart bureau people have sold the timber, or they have made some arrangement so that he has no right to it. Then he could go and sue Uncle Sam and make him buy him timber for the mines.

Is that your idea?

MR. BENNETT. I did not say that was my idea. I was asked to interpret what the effect of the bill was. And that is the way I described it, Senator.

Senator MALONE. In other words, there is no human being on earth who can tell how much you are going to need until after you keep digging and borrowing money from your friends, and finally you will meet some engineer or somebody that will recommend to the man he is working for to put some money in it.

I think that is a thing that is established. I think you will admit that. Do you understand that? Do you, Mr. Woозley?

MR. WOOLLEY. Yes, sir, I understand that.

Senator MALONE. I wanted the record clear. Now as to grazing——

Senator BARRETT. Do you yield before you get to the grazing?

Senator MALONE. All right.

Senator BARRETT. Let me ask you this question, if you don't mind:

Supposing I got out here on the forest and file my claim and there is a fine stand of timber, and I build myself a little summer home out there and go into the business of harvesting the timber crop and do not bother my head about any mining operation.

Senator MALONE. It has been testified this morning that there is plenty of interdepartmental procedure to get rid of that fellow.

Senator BARRETT. There are some of them doing it.

Senator MALONE. If they are they are not doing their work. They may need more money to do it.

Senator BARRETT. I don't know about that. I have had some experience at that 30 years ago, and it is a pretty cumbersome job to get rid of them under the existing law.

Senator MALONE. It is. But the department will have to get off its sofa chair.

Senator BARRETT. There will have to be more appropriated for the Interior Department than we appropriate today.

Senator MALONE. I will give it to them. They are not enforcing the law as it is now.

I want to go on to this range thing.

We still have people out in our country up there in the timber with a couple of horses or a couple of burrows who go in there and turn them loose on the mining claims, and they probably graze on other people's claims, too. If you rent this range, and it is that important, what arrangements do you make for the fellow to put his own stuff on it while he is working on it?

MR. WOOLLEY. That is not the problem, Senator.

Senator MALONE. It would be a problem when you started to work under this bill. It could be easily.

Senator ANDERSON. Did this bill change anything?

Senator MALONE. He can go in and rent all that grass, and the fellow he rents it to can make this fellow keep his stuff off of it.

**Mr. BENNETT.** I don't believe so, Senator, under subsection (c) of section 4.

**Senator ANDERSON.** I wish you would find that in the bill.

**Senator MALONE.** Read it.

**Mr. BENNETT.** Subsection (c) of section 4 reads as follows:

Except to the extent required for the mining claimant's prospecting, mining, or processing operations and uses reasonably incident thereto, or for the construction of buildings or structures in connection therewith, or to provide clearance for such operations or uses, or to the extent authorized by the United States, no claimant of any mining claims hereafter located under the mining laws of the United States shall, prior to the issuance of patent therefor, sever, remove, or use any vegetative or other surface resources thereof which are subject to management or disposition by the United States under the preceding subsection (b).

If he had livestock, in other words, that he was using as a reasonable incident to his mining operations, he would be entitled to use the grass, and he would not have to go to the Bureau to get a permit either. It would be a legal right given to him by this bill.

**Senator MALONE.** Have you had any complaints that these fellows have either grazed too much country that they have located, or rented it to somebody else?

**Mr. WOOLEY.** Yes; we have. But that has been tried in the courts.

**Senator MALONE.** What happened to it?

**Mr. WOOLEY.** We had one case in Idaho, and I think there was recently one in Colorado.

**Senator MALONE.** What happened?

**Senator ANDERSON.** May I read what happened in the Rizzinelli case?

The circuit court ruled that lands in a forest reserve embraced in the mining claim continued to constitute a part of the reserve, notwithstanding the mineral location subject to all the legal rights and privileges of the locator.

In this case, the so-called mining claimant put a saloon on his claim. That sort of thing is going on all the time under the mining law. Mining claimants put hot dog stands in the national forests. That sort of thing has been going on under the mining laws for years, and is getting worse.

**Senator MALONE.** Can they do that?

**Senator ANDERSON.** This bill will go a long way toward preventing such abuses.

How do provisions for such a purpose change the right of a man who is coming in to run a bona fide mining operation? He has a right to the timber, under the bill, for his mining needs. He has a right to that much timber under present law. You are proceeding on the theory that the Federal Government is going to go ahead and strip this land. That is not the way the Forest Service operates.

**Senator MALONE.** They can take care of all these cases under the present law just as they do this. That is all I was trying to say.

But they have to get out there. They can't wear out so many cushions. They don't see these fellows out there on these mining claims at all.

**Mr. WOOLEY.** In this statement we stated that we have a certain number of mining evaluation engineers. They are busy men. They are not sitting on plush seats. But under the present system it would require many more times the people than it would under this because you would have to examine every claim.

Senator MALONE. We established this morning that what it does is it puts the shoe on the other foot.

Now you have to go out and do the work, and if you pass this bill the mining boy is in the soup, and he has to get the engineer to go over it. That is what we are trying to prevent.

Mr. WOOLEY. We are thinking in partnerships. Should the responsibility be entirely on the Government?

Senator MALONE. No, sir. We have tried, and I think successfully during this 20 years—and I am sorry that now it is 22—to fight off legislation that makes it increasingly tougher for a man to do anything on a mining claim.

Now, 2 years ago, when I was chairman of the committee considering Senator Millikin's and the present Governor of Colorado, Senator Johnson's bill, we had no difficulty in coordinating anything that was necessary to coordinate, and we passed that bill because it was necessary. Now it is being used as a precedent to pass this one. And if they get this one it will be used as a precedent to pass something else.

There's nothing new in this at all. It is a question of enforcing what you have.

Senator ANDERSON. No; I would not agree with that at all.

Senator BARRETT. Would you yield to me, Senator?

Senator MALONE. Yes.

Senator BARRETT. Let me get this clear.

If you concede what Senator Malone is indicating here and bring these actions under existing law you attack the rights to the mines, to the minerals as well as to the surface. There is the distinction.

This will not affect the minerals in the land. The fellow has a right to extract those minerals.

Senator MALONE. I have watched this thing for 22 years. You don't repeal their right to do the other. So you are just giving them an additional shove so they get on there and cut the timber, and then they say to you "I don't see any valid location here," and they still have the right to shut them off.

Senator BARRETT. You can still use the surface for all the rights incidental to the prosecution of the mining claim.

Senator MALONE. What I am saying is—and I think we can argue this out in committee—nobody knows how much timber you are going to use on a mining claim. You might have had it 20 years, and you don't know if you are still working it. If you hit it you have got it and you want it.

Senator BARRETT. They will contend you are defeating your own purpose by insisting upon recourse to a proceeding here that will rule out your rights to mine.

Senator MALONE. They still have that.

Senator BARRETT. Yes; but they are not proposing to use it.

Senator MALONE. Not right now.

Senator BARRETT. They are proposing to use only the one concerning the surface alone.

Senator ANDERSON. I am hoping we might suggest this: we have got 10 witnesses here. I wonder if the Senators—

Senator MALONE. I would like to ask one or two of them a question.

Senator ANDERSON. Mr. McArdle is here from the Forestry Service.

Senator MALONE. Mr. Woozley and Mr. Bennett are here, and they are two experts. Their testimony looks good until you ask them some questions. And if I could just pursue it I won't take long.

Mr. Woozley, either one of you can answer to expedite it.

Right at the moment, if there is a location and you think it is doing damage, what is your recourse?

Mr. WOOLEY. We could file adverse proceedings and proceed to hearings and the usual appeals through the department.

Senator MALONE. Where do you file it? And who files it?

Mr. WOOLEY. It is filed by the Land Office manager.

Senator MALONE. It has to be filed by the Land Office manager? Or could it be filed by any Government department that has some responsibility to the land in question?

Mr. WOOLEY. I will have to ask the attorney that. I think it is filed by the manager.

Mr. BENNETT. Actually those proceedings may be requested by other departments, but the Interior Department is really the one that is responsible.

Senator MALONE. The local land office in the State in which it is to be filed has to initiate the proceedings?

Mr. BENNETT. That is right.

Senator MALONE. Where does he file it?

Mr. BENNETT. It is really in his own office. It is a matter of serving notice.

Senator MALONE. Serving notice on himself?

Mr. BENNETT. No. On the holder of the claim.

Senator MALONE. Then it can be done right there without any fanfare. We know where the office is located. If they think someone is doing a little damage he can just himself initiate the proceedings and not bother anybody. Is that right?

Mr. BENNETT. No. He has to give notice, serve notice.

Senator MALONE. Serve notice on the man that is doing the damage and doing it illegally in his opinion.

Mr. BENNETT. That is right.

Senator MALONE. What happens then?

Mr. BENNETT. This is all under regulation and not under statute, Senator. I would like to have Mr. Hoffman up here because he is familiar with the regulations from the first word to the last word.

Senator MALONE. Let him come up.

Mr. HOFFMAN. Senator, I was hoping I could avoid this shower.

Senator MALONE. You heard my question. We don't want to avoid anything.

How long have you been there?

Mr. HOFFMAN. I have been connected with mining work—

Senator MALONE. I am talking about the Bureau.

Mr. HOFFMAN. I started on August 1, 1913. That would be 42 years.

Senator MALONE. Continuously?

Mr. HOFFMAN. No, sir. I was out 12 or 13 years practicing law.

Senator MALONE. What class of work was that?

Mr. HOFFMAN. It was from 1920 to 1933.

Senator MALONE. Then you went back in?

Mr. HOFFMAN. Then I went back in.

Senator MALONE. I think you are fully capable.

Senator MALONE. We established this morning that what it does is it puts the shoe on the other foot.

Now you have to go out and do the work, and if you pass this bill the mining boy is in the soup, and he has to get the engineer to go over it. That is what we are trying to prevent.

Mr. WOOLEY. We are thinking in partnerships. Should the responsibility be entirely on the Government?

Senator MALONE. No, sir. We have tried, and I think successfully during this 20 years—and I am sorry that now it is 22—to fight off legislation that makes it increasingly tougher for a man to do anything on a mining claim.

Now, 2 years ago, when I was chairman of the committee considering Senator Millikin's and the present Governor of Colorado, Senator Johnson's bill, we had no difficulty in coordinating anything that was necessary to coordinate, and we passed that bill because it was necessary. Now it is being used as a precedent to pass this one. And if they get this one it will be used as a precedent to pass something else.

There's nothing new in this at all. It is a question of enforcing what you have.

Senator ANDERSON. No; I would not agree with that at all.

Senator BARRETT. Would you yield to me, Senator?

Senator MALONE. Yes.

Senator BARRETT. Let me get this clear.

If you concede what Senator Malone is indicating here and bring these actions under existing law you attack the rights to the mines, to the minerals as well as to the surface. There is the distinction.

This will not affect the minerals in the land. The fellow has a right to extract those minerals.

Senator MALONE. I have watched this thing for 22 years. You don't repeal their right to do the other. So you are just giving them an additional shove so they get on there and cut the timber, and then they say to you "I don't see any valid location here," and they still have the right to shut them off.

Senator BARRETT. You can still use the surface for all the rights incidental to the prosecution of the mining claim.

Senator MALONE. What I am saying is—and I think we can argue this out in committee—nobody knows how much timber you are going to use on a mining claim. You might have had it 20 years, and you don't know if you are still working it. If you hit it you have got it and you want it.

Senator BARRETT. They will contend you are defeating your own purpose by insisting upon recourse to a proceeding here that will rule out your rights to mine.

Senator MALONE. They still have that.

Senator BARRETT. Yes; but they are not proposing to use it.

Senator MALONE. Not right now.

Senator BARRETT. They are proposing to use only the one concerning the surface alone.

Senator ANDERSON. I am hoping we might suggest this: we have got 10 witnesses here. I wonder if the Senators—

Senator MALONE. I would like to ask one or two of them a question.

Senator ANDERSON. Mr. McArdle is here from the Forestry Service.

Senator MALONE. Mr. Woozley and Mr. Bennett are here, and they are two experts. Their testimony looks good until you ask them some questions. And if I could just pursue it I won't take long.

Mr. Woozley, either one of you can answer to expedite it.

Right at the moment, if there is a location and you think it is doing damage, what is your recourse?

Mr. WOOZLEY. We could file adverse proceedings and proceed to hearings and the usual appeals through the department.

Senator MALONE. Where do you file it? And who files it?

Mr. WOOZLEY. It is filed by the Land Office manager.

Senator MALONE. It has to be filed by the Land Office manager? Or could it be filed by any Government department that has some responsibility to the land in question?

Mr. WOOZLEY. I will have to ask the attorney that. I think it is filed by the manager.

Mr. BENNETT. Actually those proceedings may be requested by other departments, but the Interior Department is really the one that is responsible.

Senator MALONE. The local land office in the State in which it is to be filed has to initiate the proceedings?

Mr. BENNETT. That is right.

Senator MALONE. Where does he file it?

Mr. BENNETT. It is really in his own office. It is a matter of serving notice.

Senator MALONE. Serving notice on himself?

Mr. BENNETT. No. On the holder of the claim.

Senator MALONE. Then it can be done right there without any fanfare. We know where the office is located. If they think someone is doing a little damage he can just himself initiate the proceedings and not bother anybody. Is that right?

Mr. BENNETT. No. He has to give notice, serve notice.

Senator MALONE. Serve notice on the man that is doing the damage and doing it illegally in his opinion.

Mr. BENNETT. That is right.

Senator MALONE. What happens then?

Mr. BENNETT. This is all under regulation and not under statute, Senator. I would like to have Mr. Hoffman up here because he is familiar with the regulations from the first word to the last word.

Senator MALONE. Let him come up.

Mr. HOFFMAN. Senator, I was hoping I could avoid this shower.

Senator MALONE. You heard my question. We don't want to avoid anything.

How long have you been there?

Mr. HOFFMAN. I have been connected with mining work—

Senator MALONE. I am talking about the Bureau.

Mr. HOFFMAN. I started on August 1, 1913. That would be 42 years.

Senator MALONE. Continuously?

Mr. HOFFMAN. No, sir. I was out 12 or 13 years practicing law.

Senator MALONE. What class of work was that?

Mr. HOFFMAN. It was from 1920 to 1933.

Senator MALONE. Then you went back in?

Mr. HOFFMAN. Then I went back in.

Senator MALONE. I think you are fully capable.

Let me ask you this question :

Let us just talk about my own State of Nevada. Under the present law, if there is someone down in a mineral county that is violating a law and a complaint comes in—and you have got 5 or 6 of these bureaus out there. As a matter of fact, how any range grows is a little beyond me because there are so many of them tramping over it.

But you get this complaint: you decide it is a correct complaint. Where do you file it, and who files it?

MR. HOFFMAN. I will have to lay aside the question for just a minute to present the background necessary for an understanding of my answer.

Senator MALONE. You will have to come back to it.

MR. HOFFMAN. Yes, I have to come back to the question.

There are two kinds of what we call adverse proceedings against a mining company, that is, the initiated step to test the validity or invalidity of a mining claim.

One is by private contest. Any individual can come in and contest the validity of a mining claim. And the second is by a Government agent. The Government agent usually contests a claim only when another agency wants to bring up the claim because it needs the surface, such as for establishing a bombing area.

Senator MALONE. It doesn't make any difference.

MR. HOFFMAN. It doesn't make any difference what the purpose is.

Senator MALONE. They get it anyway.

MR. HOFFMAN. To answer your specific question, our procedure is to send the mining engineer out on a claim before anything is done.

Senator MALONE. This is when some other department wants it for another purpose.

MR. HOFFMAN. Yes. Or when he applies for a patent, or if we start adverse proceedings, the first step is to send an expert, what we consider a qualified man——

Senator MALONE. I don't think you have got the question at all. Let's back up and start again. I know all about the condemnation proceedings. I know about the patent proceedings, having patented more land than a lot of you fellows have ever seen.

MR. HOFFMAN. Eighteen years as a mineral surveyor.

Senator MALONE. I want to ask you what if a man has what you consider a nonvalid location and is doing some damage that you do not think should be done. Or maybe he isn't, but his location is not valid in your opinion. What happens? How do you attack it? How do you go about it?

I know about the rest of it.

MR. HOFFMAN. We send him notice. We send the notice to the record owners of the mining claim as reflected in the county comptroller's office, preferring charges against the claimant. The usual charges are that the land is not mineral in character, or he hasn't pursued mining under the mining laws to a point of discovery, and possibly abandonment. Abandonment is rarely used because this is a hard one to prove.

We allow the mining claimant 30 days in which to answer such charge.

Senator MALONE. And he must answer.

Mr. HOFFMAN. He needn't, but his failure to answer is considered administratively an admission of the truth of the charges, whereupon we declare the claim null and void.

Senator MALONE. Then what do you do if he just stays there?

Mr. HOFFMAN. If he stays there?

After declaring the claim null and void he is a trespasser on public lands.

Senator MALONE. And you can remove him?

Mr. HOFFMAN. By proceedings.

Senator MALONE. Using the sheriff. That seems like a very direct procedure.

Mr. HOFFMAN. It is.

Senator MALONE. Do you follow that procedure?

Mr. HOFFMAN. We follow that as much as the congressional appropriation will permit us to do—and they are very meager.

Senator MALONE. Have you asked for additional appropriations to do that, for that specific purpose?

Mr. HOFFMAN. Yes, we have asked for additional appropriations. Congress has been very liberal with us at times, but not to the extent or in proportion to the number of miner claims that exist on the public domain.

Senator MALONE. All right, then. You have a definite remedy. The remedy is for your Land Office to file charges either that it is not mineral in character or he has not fulfilled his assessment work.

Mr. HOFFMAN. No, we can't file on that. The courts have held that it is none of our business about assessment work. It merely gives the right to an outsider, another individual, to jump his claim if he fails to do assessment work.

Senator MALONE. What can you do then? Can you only file on the reason that it is not mineral in character?

Mr. HOFFMAN. Not mineral in character, or he has failed to make a discovery or has abandoned the claim, he has not pursued it to discovery, charges along those lines.

As I say, the usual two common ones are that the land itself is not mineral in character, and that he has failed to make a discovery or to perform work leading to a discovery.

Senator MALONE. What is wrong with that procedure?

Mr. HOFFMAN. I find nothing wrong with it. I find not a thing wrong with it. And this law does not attempt to intimate that there is anything wrong with this procedure, this proposed act.

Senator MALONE. What does this law do then? What can you do on this mining claim the way it is? If you find he has proceeded in a proper manner and, in your judgment—and, of course, I would not trust the judgment of the Department as far as I could throw one of those baldfaced horses out there by the harness because I don't think they have ever discovered a mine, and they never will. The people that discover mines are people that keep digging where there isn't any ore. They are the kind of people that find the mines.

Mr. HOFFMAN. There is no question about that.

Senator MALONE. Those are the kind of people you want to throw off?

Mr. HOFFMAN. No, sir.

Senator MALONE. What can you do with a fellow that is out there digging away or who has done his assessment work and complied with

everything except, in the judgment of some bureau official, he has not discovered minerals?

Mr. HOFFMAN. You mean under the existing law?

Senator MALONE. Yes.

Mr. HOFFMAN. Let me say as a matter of policy—and let's talk about the present: Whatever complaints we may have had in the past, I like to speak about the people in charge now running the administration.

It has not been and it is not the practice, our policy, to go promiscuously throughout the public domain and charge mining locators with violations of the law. First of all, we don't have enough help to do it, and, secondly, we are not inclined to do it.

It is only when a certain use and an important use has a need of that particular land by another governmental agency that we are requested before they pay money out in buying up claims to determine their validity. And we often declare claims valid.

Senator MALONE. There is no question about the Government securing the claims. Every man at this table must have been through that. I have been through it 20 or 30 times.

Supposing we start building another reservoir on the Truckee River or the Carson River, which we hope to do, and there are claims for damages. You are called in, and you make an examination, and you evaluate that mine, that prospect.

Mr. HOFFMAN. Yes.

Senator MALONE. Then it goes to court, does it not, if it is a valid location?

Mr. HOFFMAN. Not necessarily.

Senator MALONE. Well, I know about that.

Mr. HOFFMAN. If you declare it valid—

Senator MALONE. I was trying to save time.

If you can get together with the fellow on the amount of money you pay him then and don't go to court.

Mr. HOFFMAN. That is right.

Senator MALONE. I am saying if he opposes you, however, you can go ahead and build the reservoir and take it into court, don't you?

Mr. HOFFMAN. Yes.

Senator MALONE. And he gets in damages what the court awards.

Mr. HOFFMAN. That is right.

Senator MALONE. Then there is no problem there, is there?

Mr. HOFFMAN. No, sir.

Senator MALONE. What I am trying to determine is where your problem is and what, in reality, you are trying to do.

I think some of you are very honest in this, but I think you are opening a gate that can be very dangerous to the mining people.

Mr. HOFFMAN. I appreciate that.

Perhaps you heard this morning, Senator Malone, what I think was a very explicit and able explanation of the purposes of the law and what it provides, by Mr. Holbrook. I don't want to be repetitious, to save time, but let me take a different angle.

We have had in the Congress in the 83d session certain legislation proposed both in the House and in the Senate which, from our point of view, would practically destroy the operation of the mines.

Senator MALONE. Do you think it has a chance to get by this committee?

Mr. HOFFMAN. I am trying to lead up to the reason for this bill.

Senator MALONE. We have got to take this or we are going to get something that will destroy them. Is that it?

Mr. HOFFMAN. You are anticipating, Senator. That is what I am leading up to.

Senator MALONE. I don't think you know anything about it.

It has got to get by this committee and I don't think it ever will.

Mr. HOFFMAN. Yes, but there are other problems.

Senator MALONE. Do you want me to tell these people up in my State that in order not to get something worse they take this?

Mr. HOFFMAN. It isn't exactly that. I wasn't trying to anticipate your—

Senator MALONE. As far as I am concerned, that is no argument.

Mr. HOFFMAN. All right, then, I will save my breath and won't make it.

Senator MILLIKIN. I think we should hear what the witness has to say.

Mr. HOFFMAN. We are faced with the problem of certain surface rights—

Senator MALONE. Now you are right back on the beam again.

Mr. HOFFMAN. I think Senator Malone would rather that I did not testify.

Senator ANDERSON. Senator Millikin and I would like to hear your statement on this. You say you are faced with certain surface rights—

Mr. HOFFMAN. Which are important both to governmental agencies and others. It was a problem that was almost unsolvable until we got together around the table with all interests.

You must give and you must take to reach a solution of the problem. So we came up—and when I say “we,” I mean the timber people, the American Forestry Association, representatives of the American Mining Congress, representatives of the Agriculture Department, and representatives of the Interior Department. We felt that there was almost no solution unless you actually abolished the mining law, on the one hand, or destroyed the right of the Government to its timber and forests, on the other.

So we took an example from what we had considered before of a conflict between two industries, the oil and gas industry and other leasable minerals industry and the mining industry, and after many, many discussions with Members of Congress we came up last year, after a 2-year study, with Public Law 585.

Senator MALONE. You say you came up with that?

Mr. HOFFMAN. I say the Government.

Senator MALONE. I don't think the Government did.

We had hearings with people all over the area out there. And, incidentally, we told some of you fellows.

Mr. HOFFMAN. Senator Malone, I just mentioned it was a cooperative effort by industry, the oil and gas industry and the American mining industry in cooperation with the Interior Department and with Members of the Congress who came up with some solution to resolve the conflict between oil and gas prospecting, on the one hand, and mining, on the other, on the same piece of land. And then when we were faced with the surface problem we looked for solutions. And

I might say that solution was suggested by the American Mining Congress representatives.

Senator MALONE. Suggested by the American Mining Congress?

Mr. HOFFMAN. Yes, sir; at the American Forestry Association meeting last year.

Senator MALONE. The American Forestry Association. What is that association?

Senator ANDERSON. The witness was going to testify.

Mr. HOFFMAN. My own poor vision of it from the little I know of it is that it represents the timber industry and the other products of forestry throughout the Nation. I may be wrong.

Senator MALONE. The American Mining Congress represents mining the same way?

Mr. HOFFMAN. The American Mining Congress represents the mining industry.

Senator MALONE. You think that is true?

Mr. HOFFMAN. I do. I have great respect for the American Mining Congress.

Senator MALONE. So do I.

Mr. HOFFMAN. I have attended many meetings where you were present.

Senator MALONE. So do I. But I don't think they represent all the mining industry, and I don't think the American Forestry Association represents all of forestry.

Mr. HOFFMAN. That is true of almost any industry. Take the petroleum industry.

Senator MALONE. I am very interested in your statement that the American Mining Congress came up with this bill.

Mr. HOFFMAN. No. I said the representatives of the American Mining Congress.

Senator MALONE. That is what I am talking about.

Mr. HOFFMAN. At this meeting at the American Forestry Association they proposed a similar solution which resolved the difference between the oil and gas and mining people as to the surface rights.

Senator MALONE. They proposed this bill. Is that what you are telling me?

Mr. HOFFMAN. No, sir.

That was the result of study by representatives of the American Mining Congress and—

Senator MALONE. That is what I am talking about. But they came up with this bill?

Mr. HOFFMAN. And other representatives; not themselves.

Senator MALONE. They proposed this solution?

Mr. HOFFMAN. Yes, sir.

Senator MALONE. Thank you.

Senator ANDERSON. I think that last is a very interesting statement because I know that our committee staff and several office assistants of the Senators sponsoring S. 1713 worked with these organizations to do the preliminary work of drafting this bill. Now I hear for the first time that it was proposed by the American Mining Congress. I wish you would check your recollection because I know that you are 100 percent wrong.

Senator MILLIKIN. Who sponsored this legislation?

Mr. HOFFMAN. I want to correct my statement, if I may.

When I was asked a specific question as to who suggested it I tried to answer with emphasis that it was a cooperative effort on the part of every segment of industry and every segment of Government concerned with both mining and surface rights to come to some solution. And when I say it was proposed I meant to—

Senator ANDERSON. I don't know how many hours you yourself spent on it, but I do know how many hours my office and Stewart French of the committee staff spent on it. I don't know how many hours Mr. Bennett spent on it. I have a great deal of respect for him and I seem to say so openly all the time. Also people in the Forest Service, with whom I have associated when I was the Secretary of Agriculture, and people all through the Government worked on it.

Naturally, you consult experts on activities affected, because if you are going to get a compromise solution of something that is causing a great deal of trouble you have to look to all points of view. If people do not think the problem is a very serious one, I hope they go with Senator Barrett and Senator O'Mahoney, who are going to hold some hearings in Wyoming soon to try to decide about the situation in Pumpkin-Buttes. There the range is being torn up by thousands of uranium prospectors who have neither knowledge of prospecting nor uranium, but who are primarily interested in selling mining stock.

Senator MALONE. I think we made a mistake to let them go in on gas leases.

Senator ANDERSON. I don't think you did. I think it was good legislation. I think it proved that it was good legislation. It proved that multiple purposes would work. Here we come with another bill to provide for multiple purposes on the use of these areas and—

Senator BARRETT. As a matter of fact, Mr. Chairman, it has just worked the opposite in our State. They opened up all the lands that were under oil and gas leases to the mining people. That is where the trouble has arisen today. Upward of a couple of hundred thousand acres that were under oil and gas leases were opened to mining claims by reason of 585.

Senator MALONE. This is something that we could discuss in committee, but it seems to me that we could tighten the work and the information that is necessary for these fellows to file on these claims. We could make it a little easier for these people to check. That is, when you go on a mining claim in Nevada or Colorado or New Mexico, I would not take away his rights and let some bureau official who doesn't know a mine from a bale of hay anyway go in there and say "Well, this isn't necessary for this mine." He is only using two men. Maybe in 6 months he will have 500.

But tighten the work and the assessment work. Maybe increase the assessment work; I don't know.

Senator ANDERSON. I think anybody who has opened up a mine—and it has been my unfortunate experience to try a little bit of it—knows that you have to have timber for it. You know what you are going to have to do when you start out. I would a whole lot rather that the timber was being managed by the Forest Service than being logged off by an individual who had a claim for sand and gravel and proceeded to sell all the timber off the land.

Senator MALONE. We could discuss that.

Senator ANDERSON. I would like to say that there are 2 or 3 witnesses here from out of town to whom I am very anxious to give a chance to testify.

Senator MALONE. The witness this morning, Mr. Holbrook, made it very clear to me, and I think the record should be clear that what you are doing is changing it around. Now the department has to initiate the proceedings to get him off that claim whereas if you pass a bill like this it puts the shoe on the other foot. The people can go in and do anything they want to do if he does not come in and make his showing. The kind of people that I see who discover mines do not have the money to go in and make a showing on anything.

Senator ANDERSON. Then I don't understand why so many people who are real mine operators have written in in support of S. 1713. They say it is a wonderful thing for them.

Senator MALONE. I haven't gotten any letters from them. I have some letters that would be very interesting when the time comes. But there is a little bit of this pressure on.

Senator ANDERSON. I don't know anything about pressure.

Would it be agreeable, Senator Malone, to let Mr. Hagenstein testify and 1 or 2 others from out of town so that they can get on their way? Then we can call Mr. Hoffman at any time, and also Mr. Wozzley.

Mr. Hagenstein, would you come up, please.

I apologize to you.

Senator MALONE. I would like to say at this point, Mr. Chairman, that I think this is a bill that should have hearings set in at least 3 or 4 different locations in the real mining areas to let the boys have their say.

Senator ANDERSON. It may be that such field hearings will be necessary. You will find when the time comes I am not going to be opposed to the fullest possible hearing.

You may proceed, Mr. Hagenstein.

#### **STATEMENT OF W. D. HAGENSTEIN, MANAGING DIRECTOR, INDUSTRIAL FORESTRY ASSOCIATION, PORTLAND, OREG.**

Mr. HAGENSTEIN. I am W. D. Hagenstein, managing director, Industrial Forestry Association, Portland, Oreg.

The Industrial Forestry Association represents the owners of more than 7 million acres of forests in the Douglas fir region of western Washington and western Oregon. Our members are in the business of producing logs and manufacturing lumber, pulp and paper, plywood, shingles, and other important wood products. In addition to managing their own forests for permanent operation of their industries, our members buy some timber from national forests and other Government lands. Therefore, we are interested in seeing Government forests managed under the best possible forestry. This means, first of all, the offering for sale each year of their allowable harvest under the principles of sustained yield.

At the same time we recognize that the Government forests are capable of supplying our economy with other resources besides timber. In accordance with the act of June 4, 1897, reference the national forests, we agree heartily with the Congress when it said then that the purpose of the national forests, among other things, was "to furnish a

continuous supply of timber for the use and necessities of the citizens of the United States."

Actually, the national forests have contributed all too little of their share of America's wood products as yet. This has been due principally to the lack of adequate timber access roads. Congress has reduced this problem substantially, however, in the last 2 years by appropriating for the first time funds for timber access roads somewhat commensurate with the needs.

I would like to present a tabulation which compares the estimated allowable annual harvest under sustained yield forestry with the actual annual harvest for the period 1945-54 in the Douglas fir region of western Oregon and western Washington.

With your permission, I would like to make that table a part of my statement.

Senator ANDERSON. It will be inserted in the record.

(The table referred to follows:)

*Annual log harvest and annual allowable harvest for national forests in Douglas fir region of western Washington and Oregon<sup>1</sup>*

[M board feet, log scale]

Calendar year	Annual log harvest	Annual allowable harvest	Percent harvested of allowable harvest
1945.....	744, 500	1, 635, 500	46
1946.....	721, 300	1, 634, 400	44
1947.....	1, 111, 900	1, 706, 700	65
1948.....	1, 157, 500	1, 756, 200	66
1949.....	949, 600	1, 753, 200	54
1950.....	1, 229, 900	1, 757, 300	70
1951.....	1, 345, 800	1, 784, 300	75
1952.....	1, 487, 600	1, 980, 700	75
1953.....	1, 857, 800	2, 063, 300	90
1954.....	1, 965, 800	2, 231, 800	88
Total.....	12, 571, 700	18, 303, 400	
Annual average, 1945-54.....	1, 257, 200	1, 830, 300	69

<sup>1</sup> Source: Regional Office, U. S. Forest Service, Portland, Oreg., May 10, 1955.

Mr. HAGENSTEIN. This tabulation shows that the national forests in our area have harvested only 69 percent of what they should have in the last 10 years. Besides, inadequate timber access roads, one other thing has also acted increasingly in the last several years as a road-block to attaining the allowable harvest. That is the location of mining claims for other than their intended purposes. By that I mean that mining claims have been located in many areas of the national forests on discoveries of sand, gravel, rock, pumice, and similar materials. Some claimants have denied the Government access across their claims. This has prevented the Government from building roads to its timber. Other claimants have denied the Government the right to sell timber. This makes it difficult, if not impossible, in many areas for the Government to practice forestry.

To the extent the Government cannot practice forestry because of mining claims, or any other reason, the economy of the public-land States is adversely affected. When Government timber is not harvested to the maximum allowable each year everybody loses. Workers who depend on the forest industries for jobs lose employment. County governments lose their share of timber receipts to which they are en-

titled by law. Local merchants who depend on basic forest industry payrolls lose business. Transcontinental railroads and water carriers lose freight. Consumers of forest products everywhere lose by paying higher prices because of diminished current supplies. Lastly, and by no means the least important, the Treasury of the United States loses its timber receipts.

Our purpose in appearing before you today is to support enactment of S. 1713 which would provide multiple use of the surface of the Federal lands except national parks, national monuments, and lands set aside for or managed by the Government in behalf of the Indians.

The proposed bill is designed to protect the intent of the mining laws. It would eliminate the filing of claims for common structurals like sand, gravel, and pumice, and make them subject to disposal under the Materials Disposal Act. It would prohibit the use of mining claims for other than the usual mining activities. It would safeguard the right of the Government to discharge its obligation to manage its timber and other surface resources without interfering with mineral development and operation. It would guarantee access to Federal lands.

In short, the principles embodied in the bill would safeguard all elements of our economy which can utilize under good business management the resources of the Government lands. The bill would neither discourage the quest for minerals by denying the fruits of discovery to the prospector, nor allow spurious claims to deny the Government the right to have access across and management of the surface resources. Certainly this is an equitable arrangement for all interested parties including the consumer for whom the Government properties should be managed.

Because the similar problem of separation of the surface from the subsurface was solved by the enactment of the Ellsworth law, Public Law 477, 80th Congress, which covered the Oregon & California Railroad and reconveyed Coos Bay Wagon Road grant lands in western Oregon, we respectfully suggest to the committee that following the words "United States" in line 2, page 2, of S. 1713, the words "including for the purposes of this act, lands described in the act of August 28, 1937 (50 Stat. 874) and the act of June 24, 1954 (68 Stat. 270)," be added to the bill.

Senator MALONE. What would that do?

Mr. HAGENSTEIN. Senator Malone, the act of August 28, 1937, is the act under which the O. & C. lands are managed, and the act of June 24, 1954, is the one which solved the controverted land problem of which this committee has heard so much.

Senator MALONE. How are they managed, these O. & C. lands?

Mr. HAGENSTEIN. The O. & C. lands are managed by the Bureau of Land Management of the Department of the Interior.

Senator MALONE. Would you want those excepted?

Senator ANDERSON. You have recommended what the Department of the Interior also recommended; have you not?

Mr. HAGENSTEIN. Yes; I have.

Senator MALONE. Do we except those lands from this act?

Mr. HAGENSTEIN. No.

My suggestion is that, for the purpose of this act lands described in the O. & C. Act should be made subject to the provisions of this bill.

Senator MALONE. Go ahead.

Mr. HAGENSTEIN. Thank you.

Also we suggest that following the word "made" in line 22, page 3, of S. 1713 the words, "and except that revenues from the lands described in the act of August 28, 1937 (50 Stat. 874) and the act of June 24, 1954 (68 Stat. 270) shall be disposed of in accordance with the provisions of said acts," be added to the bill.

That is with reference to the same two acts that I referred to before.

These suggestions would have the practical effect of covering all Federal lands subject to mining location in accordance with the basic statutes covering their administration.

To demonstrate the necessity for enactment of the proposed bill, I would like to cite several instances where unpatented mining claims have prevented the Government from practicing forestry on the national forests in our region. The basic details are cited briefly. The full story is available from the United States Forest Service which furnished these cases on my request.

Case No. 1: The Tolt working circle of the Snoqualmie National Forest in western Washington contains more than a half billion feet of currently merchantable timber. The estimated annual allowable harvest is 6.1 million board feet. Because the working circle is literally plastered by unpatented mining claims, no Government timber whatsoever is being harvested at the present time. This means that 6 million board feet is being lost forever each year, because allowable harvest cannot be hoarded. If the Government is to practice forestry it must remove its allowable harvest each year.

Six million feet does not sound like a lot of timber, but at present prices it is worth \$120,000 where it stands on the stump in the woods.

Senator MALONE. Are these lands in the forest reserve?

Mr. HAGENSTEIN. Yes, sir; they are national forest lands of the Snoqualmie National Forest.

It means a logging and manufacturing payroll of \$200,000. It means a half million dollars worth of lumber at mill prices. It means 690 new homes. It means \$30,000 per year to King County, Wash., for roads and schools. It means \$90,000 to the United States Treasury. All this is lost to our economy when the Government is prevented from practicing forestry in this small area of one national forest.

The Forest Service has repeatedly sought permission from the mining claimants in this area to build roads and to sell timber standing on the claims. For the most part, permission has been refused. So the forest stands unharvested and unmanaged.

Senator ANDERSON. Does timber get overripe and spoil?

Mr. HAGENSTEIN. Indeed it does. And the area I am talking about is occupied by that kind of timber.

Senator ANDERSON. I have flown over a great deal of that timber way down low in a small plane and have seen evidences how at the very top you can tell it is going to waste by not being harvested. It reaches maturity and needs to be harvested then, does it not?

Mr. HAGENSTEIN. That is right.

Senator MALONE. Did I understand you to say the Government cannot build any roads through this area?

Mr. HAGENSTEIN. No, because the mining claimants would deny them access across the claims.

Senator MALONE. Did you ever hear of condemnation proceedings if you want to build a road?

Mr. HAGENSTEIN. Yes. Of course, the Government could, if it wanted to, do that. You understand, of course, that many of the roads built in connection with national forest timber sales were built by the successful bidder for the timber as a part of the contract. He would have the same right, I presume, of condemnation.

But when you are selling timber in relatively small quantities—in our part of the country at the present time the average for these forest timber sales is 4 or 5 million board feet—don't you make it difficult if you require the timber sale purchaser to go to the trouble of condemnation in order to get rights-of-way across mining land?

Senator MALONE. I am not making a point of it. I wanted to establish that that could be done.

Couldn't the Government do it or establish it right before they sell it? You know when you condemn a thing you do not wait until the thing is settled. You go ahead and build your road. And then on examination or court evidence, if it has not a value, you don't pay for it, or very little.

Mr. HAGENSTEIN. You are getting into a field of law, Senator Malone, and I, like you, am an engineer and forester. I am not competent to discuss that.

Senator MALONE. You do not have to go very far in the law to know that the Government condemns anything and goes into court and pays the court value afterwards.

Senator ANDERSON. Yes, but a logging trail through a national forest by condemnation proceeding would be a weird operation because they don't go in the same way.

Senator MALONE. We can discuss this in committee, but I wanted to ask this witness if he was familiar with the fact that that can be done. It might be a way of bringing it out that these fellows have no mineral if they haven't.

That could be done, could it not, to bring it out that they have no mineral, if what you say is true?

Mr. HAGENSTEIN. I presume we could, Senator.

I was going to agree with the chairman that it is a cumbersome procedure.

Senator MALONE. I want the facts brought out.

Mr. HAGENSTEIN. I want to give them to you.

Senator MALONE. I know you do and I want to bring this out. The fact that it can be done through an intergovernment operation; in other words, you must have a Bureau of Land Management office in Oregon?

Mr. HAGENSTEIN. Yes, we do have.

Senator MALONE. They can initiate these proceedings on your own complaint or their own complaint, anything they want to do, can they not?

You heard this testimony a while ago?

Mr. HAGENSTEIN. I presume they can.

Senator MALONE. Have they ever done that?

Mr. HAGENSTEIN. Not to my personal knowledge.

Senator MALONE. Go ahead.

Senator BARRETT. Mr. Chairman, that is precisely the question I have in mind. I want to know what proceedings could be instituted

under existing regulations to take care of case number one that the witness just testified to.

Are you prepared to answer?

Mr. HAGENSTEIN. No, sir.

Senator BARRETT. Is there anybody here that can answer?

There is not anything they can do, in my judgment.

Senator ANDERSON. Mr. Hoffman?

Mr. HOFFMAN. I do not think we can do anything under existing law unless we attack the validity of the mining claims.

Senator ANDERSON. We are trying to keep away from attacking the miners' claims.

Senator BARRETT. The complaint is that there is nothing being done, it is standing there rotting.

Mr. HOFFMAN. The only way we can do is to have the forest management people challenge the claim and if they are valid, there is nothing we can do.

Senator MALONE. There is a blanket statement made that they are not valid. If no one has examined them, how do you know?

Senator ANDERSON. I do not believe there is a statement made that they are not valid.

Mr. HAGENSTEIN. I did not say that, Senator Malone. I said in response to the Forest Service and, mind you, these are all patented claims for permission to build roads either with Federal money or as a part of the timber sale contract across these claims to the forest timber that, in most cases, they have been denied permission to do it.

Senator BARRETT. It is a clear situation; we have to have this bill we are discussing here today.

Senator ANDERSON. The Government cannot go in to condemn its own property. The Government owns the property. The man has not yet reduced the claim to a patent, and yet he is in a position under the mining law, the present mining law, able to keep the Government from binding an access road to its own timber.

Senator MALONE. That I would like to see demonstrated.

Senator ANDERSON. It has been demonstrated.

Senator MALONE. We cannot go in and condemn the land and pay his own price.

Senator ANDERSON. Precisely.

Mr. HAGENSTEIN. I have a folder full of cases like that.

Senator MALONE. Did you ever try to go to court with it?

Mr. HAGENSTEIN. I cannot say that they have, but I think the chairman has made a good point.

Senator MALONE. I wish you would unburden your briefcase and give us a case where they tried to build a road and were prevented.

Mr. HAGENSTEIN. In response to Senator Malone's request, I would be glad to do that if I can have permission to finish my statement, which is very short.

Senator LONG. Go ahead.

Mr. HAGENSTEIN. On October 8, 1953, the Willamette National Forest in western Oregon sent out a notice of proposed timber sale to prospective bidders covering a sale designated "Deer Creek Sale No. 2." The proposed sale had been laid out on the ground in the summer of 1953.

On December 21, 1953, seven mining claims were filed in the area, and their location notices were dated October 25, 1953.

These claims cover two existing rock pits which had been used for several years by Government timber-sale purchasers for road-surfacing material. Also, the claims overlapped part of the area laid out in the timber sale and covered another gravel pit along the main timber-access road of the proposed timber-sale area.

One of the claimants stated that he desired to sell rock to the successful bidder of the proposed sale. Naturally, the Forest Service did not consummate the timber sale because the mining claims covered the majority of the timber to be sold and tied up the needed road-building material. Another area of national forest, therefore, is unharvested and unmanaged.

Case No. 3—and I think this is one of the most flagrant that I have encountered. A Eugene, Oreg., logger had an experience in January of 1955 which shows the necessity for reenactment of S. 1713 if the Government is to manage the surface resources of its national forests.

A man telephoned the logger to say he was going to file a mining location on rock pits which the latter was using in connection with a national-forest timber sale. The logger did not feel he should pay anyone for the use of gravel from national-forest land which he was using for ballasting roads used in the harvest of Government timber.

To protect himself, he filed a mining claim on the rock pits himself. Now he gets his rock without having to pay tribute for it. This indicates serious abuse of the opportunity to locate mining claims.

Taking these cases and multiplying them by hundreds of examples which could be given from the Western States indicates the urgent need for enactment of S. 1713. The bill will protect the equities of legitimate prospectors and miners. At the same time it will allow management and use of other resources of Government lands vital to our economy.

We want to give our unqualified support for the multiple use management of all the resources our public lands can yield to the Nation's economy.

The authors of the various bills embracing the present proposal should be congratulated on their joint endeavor to rectify the ills caused in the past few years by abuse of the privilege of all Americans to seek, prospect, locate, and develop bona fide mineral discoveries on Government lands.

We hope that S. 1713 will be reported favorably by the committee and enacted promptly.

That is all of my prepared statement.

SENATOR ANDERSON. Would you at a subsequent date supply us with a few more of these cases?

MR. HAGENSTEIN. I can. I have one other thing which is not in my prepared statement which may indicate graphically the problem.

I am sorry I only have four copies of a map here which shows the situation. What this shows, if I may look on with Senator Millikin here, it shows an area of national forest land with a timber sale that has been laid out and the orange-colored squares running at other than cardinal directions are mining claims, all unpatented claims.

These claims lie across the natural topographic routes of roads into the timber sales areas bounded by green and prevent access unless the claimants are willing to allow the Forest Service or the successful bidder on timber sale to cross those claims with a road.

Further, the claimant can also preclude the Forest Service from selling that portion of the timber inside those cutting areas which are covered by the claims.

Look at the little tiny white pieces in the claims left, a few pieces of land, mind you, of very rough mountainous country. . Who is going to be able to manage it?

By law, the Forest Service is obligated to manage it but they cannot when you have a hodgepodge thing where the rights of the parties are not clear.

Senator MALONE. Is there any Federal law or any State law that would apply to all the timber where it must be cut on a crop basis?

Mr. HAGENSTEIN. The acts of June 4, 1897, which is the organic act of establishment of the national forest, indicate that and the O. and C. Act which covers it.

Senator MALONE. Does not Oregon have some kind of law; it seems to me in 1938 I had a section on forestry and you had a very good State law there on a crop basis. You could make the private owners come in but you could not the State owned land.

I understand that since that time the private owners have nearly all complied with that to a great extent.

Senator ANDERSON. Is it not true that the private owners are the first ones that come in? They are the best foresters that you can imagine.

Mr. HAGENSTEIN. Being the chief forester for the Douglar Fir Industry, Mr. Chairman, I would like to say we think we are doing a good job, not that we do not have further to go.

We want to see the United States Government do it, too.

Senator MALONE. Is there a Federal law now that does the same thing with those forest lands that is effective?

Mr. HAGENSTEIN. Well, the law, the act of June 4, 1897, and the act of August 28, 1937, the first covers the national forests and the second, the O. and C. lands, establishes the policy wherein the forest lands of the United States would be managed permanently.

Senator MALONE. Who owns the O. and C. lands?

Mr. HAGENSTEIN. They belong to the people of the United States.

Senator MALONE. All right.

How does it come that we passed a law that covered only the O. and C., and not the remainder of the lands?

Mr. HAGENSTEIN. That is due to the fact that the O. and C. lands were once privately owned. As a result of a land grant made to the Oregon-California Railroad Co. in 1866—

Senator MALONE. They sold them to the Government?

Mr. HAGENSTEIN. No, sir; what happened, and it is a long involved thing which I am sure you have heard discussed in this committee many times.

Senator MALONE. I have heard it discussed but it involved Oregon and we had an Oregon Senator here and we should still have him. I assumed he knew what he was talking about so I never paid much attention to it.

Mr. HAGENSTEIN. There is no one who knows more about it than Senator Cordon with regard to the O. and C. lands.

Senator MALONE. Tell us, since he is not here, just what jurisdiction the Government took there and how they handle the O. and C. lands.

**Mr. HAGENSTEIN.** What happened was the railroad company to which the grant was made in 1866 defaulted on some of the terms of the grant under the act of Congress which granted them the land.

Following a litigation which went to the Supreme Court of the United States some time around 1912, an act was passed in 1916 re-vesting the land, the title to the land, in the United States. Those lands then were subject to disposal under the land laws of the United States, such as the Homestead, Timber, and Stone Act, and others I presume until 1937, when the act of August 28, 1937, Public Law 405, I forget the Congress, was enacted, known as the O. and C. Act, which established management on a perpetual basis in the interests of the communities on those lands.

**Senator MALONE.** That was a Federal law?

**Mr. HAGENSTEIN.** That was a Federal law.

**Senator MALONE.** Is there anything to keep us from extending this law if necessary to protect the remaining Federal forests there?

**Mr. HAGENSTEIN.** Well, I think the other Federal forests, namely, the Federal forests, are covered by the organic act.

**Senator MALONE.** Crop basis?

**Mr. HAGENSTEIN.** Yes, sir. Insofar as I know, it is the policy of the United States, established by statute, that all of the forest lands belonging to the Federal Government must be managed in perpetuity.

**Senator MALONE.** Then when these people go into a forest reservation to locate a mining claim, for all intents and purposes they own the timber?

**Mr. HAGENSTEIN.** If the claim is taken to patent.

**Senator MALONE.** If the claim is taken to patent.

**Mr. HAGENSTEIN.** Then they acquire it.

**Senator MALONE.** But they do not have it until it is patented; they do not have the management of the timber or grass that is on the land?

**Mr. HAGENSTEIN.** Well, I do not think they have title to it. I do not think they can dispose of it except that miners can use part of the timber necessary in the development of a claim.

**Senator MALONE.** We have heard the complaints here that they sell the timber; it seems to me that I have heard complaints. They would sell the timber on the claim and then they located the claim.

You mean there is no such procedure?

**Mr. HAGENSTEIN.** I do not think, and here again, not being a lawyer I am not competent to interpret the law, but I do not think the holder of an unpatented mining claim has the right to sell anything on the surface.

**Senator MALONE.** You have had no trouble in that where he did sell it? I want to get my own thinking clear.

**Mr. HAGENSTEIN.** I do not think so because I do not think he can sell the surface resources until it is patented.

**Senator MALONE.** But he can take what timber he needs to work that claim or group of claims?

**Mr. HAGENSTEIN.** Right.

**Senator MALONE.** That is the only complaint you have had?

**Mr. HAGENSTEIN.** That is not the complaint.

**Senator MALONE.** I mean as far as the ownership and use of the timber is concerned.

**Mr. HAGENSTEIN.** The only complaint we have is that insofar as the surface is not needed for the legitimate development of the minerals.

Senator MALONE. He does not try to dispose of this timber; all he does is hold it?

Mr. HAGENSTEIN. And prevent the Forest Service from managing it.

Senator MALONE. Have you ever tried to deal with these people that all you want is to take a crop off from year to year?

Mr. HAGENSTEIN. No; because private parties cannot deal. It is a matter of the Government dealing with them, because the land is under the administration of the Government.

Senator MALONE. Has the Government tried to?

Mr. HAGENSTEIN. Oh, yes; many times.

Senator MALONE. They will not let you harvest?

Mr. HAGENSTEIN. The Forest Service has repeatedly in these areas where they want to develop the timber requested access across these unpatented claims and has sought to sell the timber, and in many instances, although not all, it has been denied the permission by the claimant.

Senator MALONE. If you merely told the claimant that all you wanted to do is harvest?

Mr. HAGENSTEIN. Of course, in our country that means clear cutting. In our country we clear cut.

Senator MALONE. You cut it all off?

Mr. HAGENSTEIN. That is right. We take relatively small clear-cut setting and leave seed sources around it. Only in the case of failure of natural reproduction do we resort to planting.

Senator MALONE. How long does it take the crop to grow? Is it 70 years, 50 years, or 40?

Mr. HAGENSTEIN. A good average for our region would be 80 years.

Senator MALONE. Thank you.

Senator ANDERSON. Because I am going to try to get this map reproduced for the hearings by crosshatching, if you do not mind, we would like to have it.

Mr. HAGENSTEIN. Any use the committee cares to make of it, Senator, I would be pleased to have them do it.

Senator ANDERSON. I understand these portions are mining claims.

Mr. HAGENSTEIN. The ones that are colored.

Senator ANDERSON. Perhaps it will show differently when we reproduce it.

(COMMITTEE NOTE.—The map appears at the conclusion of Mr. Hagenstein's testimony.)

Senator ANDERSON. These are tracts of timber that the Forest Service desired to sell in what year, 1953, for example?

Mr. HAGENSTEIN. 1954.

Senator ANDERSON. 1954.

Mr. HAGENSTEIN. Right.

Senator ANDERSON. Were they able to sell them?

Mr. HAGENSTEIN. No.

Senator ANDERSON. The sale of the timber was blocked.

Mr. HAGENSTEIN. The sale was canceled for two reasons: One was they could not get access across the claims to reach the settings and they could not sell that portion of the timber on the settings which was based in a mining claim.

Senator BIBLE. Mr. Chairman, might I ask what type of mining claims they were? Was it sand, gravel, gold and silver, lead, zinc?

Mr. HAGENSTEIN. I think these were mineral claims other than for the common structural materials. I do not know what type but for some ore.

Senator BIBLE. Was there active mining operation on these claims?

Mr. HAGENSTEIN. No.

Senator BIBLE. Inactive?

Mr. HAGENSTEIN. Right.

Senator MALONE. They did assess them?

Mr. HAGENSTEIN. I really have no knowledge of that, Senator Malone.

Senator MALONE. Do you have any difficulty in any of our lands in Oregon except in the forest reserves in this connection?

Mr. HAGENSTEIN. No. The matter on the O. and C. lands was a problem until 1948 but, as I discussed it, I referred to the Ellsworth law; that was taken care of by that law. Since that time the Bureau of Land Management has had neither difficulty in getting access nor in selling timber on the land.

Senator MALONE. Do you have any objection from what you know about this matter of having the law passed confined to the Forest Service lands or Government reservations?

Mr. HAGENSTEIN. It seems to me it should embrace all that portion of the public lands which are suitable for multiple use, excluding as it does national parks, monuments.

Senator MALONE. I am asking you; you are complaining about Forest Service lands.

Mr. HAGENSTEIN. Basically, because that is the problem in our part of the country.

Senator MALONE. And monuments and Government withdrawal. Confined to Forest Service and Government lands, you say you would have no objection?

Mr. HAGENSTEIN. I have no objection.

Senator MALONE. We have 5 million acres of this forest reserve down in our area and all we need is forests.

Mr. HAGENSTEIN. I have been in some of it and it is single-leaf piñon.

Senator MALONE. We have none.

Mr. HAGENSTEIN. Someday it will be valuable.

Senator MALONE. It will be 1,000 years before it grows 2 inches.

Mr. HAGENSTEIN. It grows slowly.

Senator MALONE. When we get this cycle, whatever it is, there are redwood forests up in Nevada where the rainfall is an inch and a half, so there is a cycle. Maybe we could do a little mining in the meantime if we do not have quite so much of this interference.

Mr. HAGENSTEIN. I want to make it very clear, Mr. Chairman and gentlemen, that our industry is certainly not seeking anything, recommending, the enactment of such legislation as you have before you to the detriment or legitimate location and prospecting of the minerals of this country.

We think that is an important part of our economy to keep our mineral supply well known by giving people the right and encouraging them to have the right to find the fruits of their discovery when they find one.

Senator ANDERSON. You do not want to take one legitimate claim from one legitimate miner?

Mr. HAGENSTEIN. Not one.

Senator MALONE. In the first instance, in the first paragraph of the bill you want to take the stuff that you name out of the mining category?

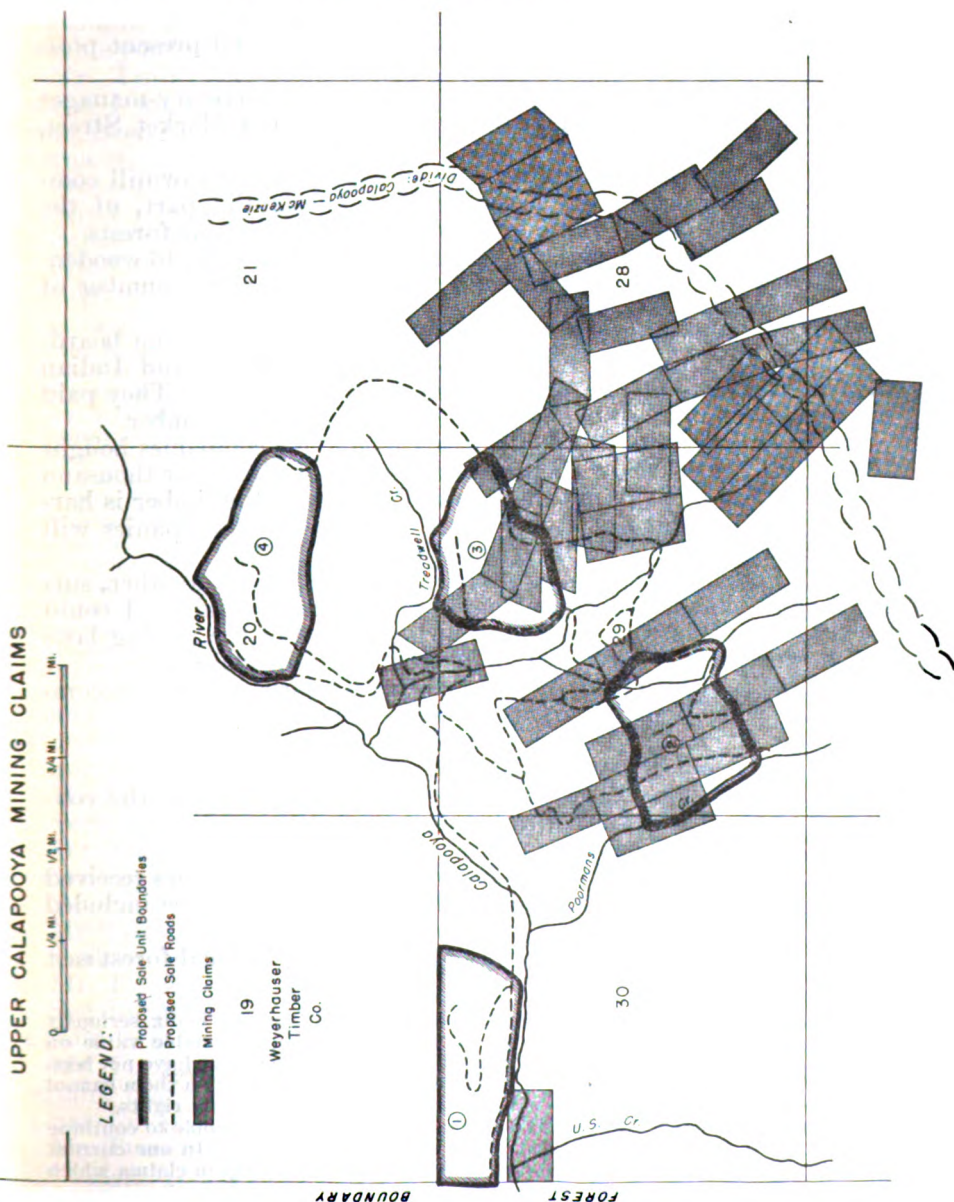

Mr. HAGENSTEIN. And put it under the Materials Disposal Act, which is in accordance with the way the bill is presently drafted.

Senator MALONE. I read it.

Mr. HAGENSTEIN. Yes, sir.

Senator ANDERSON. Thank you very much.

Mr. HAGENSTEIN. Thank you, gentlemen.

Senator ANDERSON. Next we have Perry A. Thompson.

**STATEMENT OF PERRY A. THOMPSON, SECRETARY-MANAGER,  
WESTERN LUMBER MANUFACTURERS, INC., SAN FRANCISCO,  
CALIF.**

Mr. THOMPSON. Thank you, Mr. Chairman and gentlemen.

I came from San Francisco for the purpose of talking to you for 4 or 5 minutes, possibly 10 at the most. I shall not read all of this report because I realize your time is limited.

Senator ANDERSON. Would you state your name and present position for the record?

Mr. THOMPSON. My name is Perry A. Thompson, secretary-manager of the Western Lumber Manufacturers, Inc., of 681 Market Street, San Francisco, Calif.

Western Lumber Manufacturers is an association of sawmill companies, each of whom purchases all, or a substantial part, of the timber it cuts from the State or Federal public lands and forests.

These companies own and operate more than 40 sawmills, 16 wooden-box factories, several moulding and door factories, and a number of miscellaneous wood-using plants.

In 1954 these companies purchased more than 350 million board-feet of timber from the national forests, public lands, and Indian lands in the State of California and in southern Oregon. They paid more than \$4 million into the Public Treasury for this timber.

During the first quarter of this year, 1955, these companies bought 108 million board-feet of timber at an average of \$15.25 per thousand feet. Total to be paid into the Public Treasury as the timber is harvested will be about \$1,650,000. It is expected these companies will buy around \$5 million worth of public timber in 1955.

Most of our member companies have, at some time or another, suffered at the hands of an unpatented mining claim holder. I could furnish you many case histories showing misuse of the mining laws for the purpose of collecting tribute from sawmill companies.

To save your time I shall include many case records in the more complete data which I shall ask you to insert in the record.

Senator ANDERSON. Do you have that with you?

Mr. THOMPSON. I have it with me.

Senator ANDERSON. The material referred to appears at the conclusion of Mr. Thompson's direct statement.

Mr. THOMPSON. Thank you.

I do want now to read short excerpts from just two letters received very recently, which are typical of the many which will be included in the data I shall submit.

This one is from a large company operating in a national forest east of Sacramento, Calif.:

1. At the present time our timber harvesting operations are being seriously hampered because of the presence of mining claims of questionable value on hundreds of acres of productive timberland. Many of these claims have not been worked for decades, yet millions of board-feet of timber growing on them cannot be cut because of claimants who will not waive the timber-cutting rights.

As you know, I don't think it's fair to the lumbermen or the people to continue allowing overripe timber to be tied up on such mining claims. In our current operating area there are about 26 million feet of timber tied up in claims which are not being worked at all.

Senator ANDERSON. You heard the question I addressed earlier, the question about timber becoming overripe and spoiling? Is that your experience?

Mr. THOMPSON. In any so-called mature forest, a certain amount of timber is ripe and overripe, and there is some constant deterioration; that sort of timber is more subject to bug damage and windrow and other types of damage than the younger timber and there is a constant loss.

Senator MALONE. Where is that timber located?

Mr. THOMPSON. In the Tahoe National Forest in California.

Senator MALONE. Has that been your experience that all of the trouble you have had is in the forest reserve?

Mr. THOMPSON. Principally, it happens that the companies for whom I work are operating in the forest reserve although they buy some from the Indian lands and some from the Bureau of Land Management.

Senator MALONE. But they are reservations?

Mr. THOMPSON. National forest, primarily.

Senator MALONE. Thank you.

Mr. THOMPSON. Two, this company operates in Northwestern California:

In 1952-53 we found that two different mining claims near our operation were on the same location as our planned access road over some public land. The Bureau of Land Management informed us that any right-of-way obtained from them was subject to existing valid entries, and that if we asserted that a mining claim was obviously invalid or fraudulent, that it was up to us to initiate the necessary court action to prove our assertion and remove the claimant. It appeared that both the claims were quite obviously invalid and/or fraudulent, and that one in particular was taken with the idea of blocking a necessary right-of-way in order to collect tolls.

We had to retain a mining engineer as well as our attorney to counsel us on the matter, for both claimants were adamant about their rights and privileges to collect damages. The mining engineer confirmed our opinion that the claims appeared invalid, and that the assessment work had never been done at all on one claim as stated in the proof of labor, and not done in the spirit of the law on the other claim.

Eventually, we called one of the claimant's bluff, the one who had perjured himself with a false proof of labor, and went ahead without his permission. The other claimant hired a prominent attorney, noted for his familiarization with mining and land laws, and stood pat. Eventually, this claimant "shook us down" for approximately \$700.

Senator MILLIKIN. What do you mean by "shake you down"?

Mr. THOMPSON. Sir, I am quoting from this letter.

Senator MALONE. Who wrote the letter?

Mr. THOMPSON. The letter was written by the forester for this private company.

Senator MALONE. Did he have experience in mining, this forester?

Mr. THOMPSON. No, sir; I do not suppose so.

Senator MALONE. Have you had some?

Mr. THOMPSON. I have had some.

Senator MALONE. Are you capable of determining whether there is a valid location?

Mr. THOMPSON. No. These people hired a mining engineer to determine that for them.

Senator MALONE. Go ahead.

Mr. THOMPSON (reading):

Other costs incurred brought our cost of this 1,000 feet of right-of-way on public land to approximately \$1,000. To have gone to court to invalidate these claims would have cost us more than that, and with the present mining laws as ambiguous as they are, it is questionable if we would have been successful.

Senator MALONE. Right at that point the testimony has been clear there that the Department of the Interior has the right to initiate such a claim and it is handled then by the Department of the Interior and it might be the Forest Service in this case which would be the Department of Agriculture, but there is a way of doing this.

Do they ever make any attempt to clear the way for you?

Mr. THOMPSON. Who, sir, the Bureau of Land Management?

Senator MALONE. Yes.

Mr. THOMPSON. I could not say about the Bureau of Land Management because so few of our companies buy timber from them. But the Forest Service has made many attempts, yes, to get from the claimants a right to or privilege to cut the timber.

Senator MALONE. What you say, you have made a very serious claim here about shaking you down. If there is any such maneuvering, the Government has a recourse.

I would like to know if there has been any attempt by the Government to protect these men that they sell this timber to, like your companies. You are making a very extravagant statement.

Mr. THOMPSON. I am just reading a letter from the company.

Senator MALONE. I am glad you made that clear.

Mr. THOMPSON. That is made clear at the beginning.

Senator MILLIKIN. They may regard as a shakedown anything that interferes with what they want to do?

Mr. THOMPSON. That is right.

Senator MILLIKIN. It may not have the meaning that you and I attribute to a shakedown.

Senator ANDERSON. I think if we wanted to, we can get ample testimony from the Forest Service that one person after another comes in and files these claims.

Mr. THOMPSON. We can produce the writer of this letter and the man took exactly that position.

Senator MILLIKIN. If the right is a right——

Senator ANDERSON. It is not a right.

Senator MILLIKIN. I say, Mr. Chairman, if they consider they have a right and they exert their right, they are not putting on a shakedown.

Senator MALONE. I would like to say that the Forest Service, we have had trouble with them for 30 years that I am familiar with in this arbitrary management of range. None of us like it but they are there and if we get into the matter of these bureaus' operations, that is going to be something.

Senator MILLIKIN. As I understand, you are just reading from a letter?

Mr. THOMPSON. May I proceed?

Senator MILLIKIN. Yes.

Mr. THOMPSON (reading):

We are facing a similar experience again this year in a different area, and I can see where it will happen again periodically as our logging operations move around. We shudder to think of the consequences as more unscrupulous people become familiar with this gimmick for extorting money from loggers. Without corrective legislation, it appears that our only salvation would be for us to be first to file questionable claims on the location of our future roads.

Senator MALONE. Who wrote the letter?

Mr. THOMPSON. A forester for one of our logging companies.

Senator MALONE. What is his name?

Mr. THOMPSON. Nicholson.

Senator MALONE. Is his name here?

Mr. THOMPSON. No; it is not. I will furnish a copy.

Senator MALONE. Yes.

Mr. THOMPSON. Now, I want to make it very clear that the lumbermen I am representing are businessmen. They have very large investments in plants, machinery, transportation of equipment, logging equipment, and timber. They pay large taxes into the county, State, and Federal treasuries. They employ thousands of people. They produce many millions of dollars' worth of woods products annually.

These men believe in the principles of private industry. Most of them began their careers without a dollar. Through their initiative, hard work, skill, and knowledge they have become proprietors and producers of jobs and materials.

These men represent a cross-section of the many lines of business on which our citizens depend for manufactured products. These men would be the last to put one stone in the way of another legitimate industry. They certainly recognize the great and growing importance of the mining industry.

They know full well that minerals are not renewable resources, like the timber they harvest, and that the continued prospecting and search for minerals must be encouraged. They have no quarrel with any legitimate prospector or miner; rather, they want to encourage and assist the individual whose plan is to discover, extract, and/or process into useful products the mineral wealth of our public lands.

But these lumbermen have been observing for years the practices of the many unscrupulous citizens who may call themselves miners or prospectors, but have been using the mining laws to get possession of parcels of public lands for purposes other than the extraction of minerals.

You will note I said "possession" of the lands. I did not say "get ownership" since, in most instances, title is not sought because of known doubt or certainty that the land would not qualify for patent under the mining laws.

However, since sand, gravel, pumice, and building stone, and so forth, have been held subject to appropriation under the mining laws, the nonminer landseeker has not had to worry very much about discovering valuable minerals on the land he covets. Sand, gravel, and building stone can be found on most any mountain creek or river and can be used as justification for a filing. A filing is all that is needed by the nonminer. I speak only of the nonminers.

Senator MALONE. Speaking of the nonminer or the miner?

Mr. THOMPSON. Speaking about the nonminer, not the legitimate one. With a filing he has been able to control use of all the land resources and land surface.

Up to this time the mining industry has contended that all remedies necessary to control the bogus miner were available in the existing laws; it has been said many times that Government agencies could control this situation if they wanted to. So the mining industry has resisted any change in the out-of-date mining laws.

I cannot believe they have fully realized the extent and character of the many abuses which have been, to my personal knowledge, practiced for more than 30 years. It has taken a lot of complaining, a lot of publicity, a lot of investigating, some by Congress, to fully open their eyes and understanding of the situation.

We are thankful the legitimate mining industry has at last decided something must be done to protect itself, to protect the rights of other industries and the public welfare.

This legislation is the outcome of joint effort by legitimate and broadminded mining men and their legal advisers, who represent the real mining industry, a segment of it at least, and public officials and foresters.

This legislation, if passed, may not prove to be the final and complete answer, but it is a long, and long delayed, step in the right direction. This legislation safeguards the rights of every bona fide prospector and miner.

Legislation must be enacted into law at this session of Congress. Time is of the essence of the problem.

The intensive search for uranium, which is taking thousands of inexperienced people into the fields and public forests and wild lands, cannot be properly directed and controlled under the old outmoded mining law. The situation is critical.

First, sand, stone, gravel, pumice, pumicite, cinders, and clay must be reclassified as "nonminerals." They can be disposed of in a practical manner under leases and special-use permits issued by the proper administrative agencies.

Second, the rights of the claimant of every mining claim must be limited to the right of occupancy solely for the purposes of prospecting for minerals and for extracting valuable minerals from the claim. Prior to patent, his use or control of the land surface of the claim and of the nonmineral resources of the land should be limited to those uses necessary to the process of extracting minerals.

We believe the legislation, as written, will accomplish these purposes and that it should be promptly passed.

We know the people engaged in mining and prospecting are divided in this matter. At least some legitimate miners, those with investments and experience, and the producers of minerals, favor this legislation.

On the other hand, many less responsible prospectors and pseudo-prospectors, those out for a quick "buck," those who are not too particular how they get it, and who are the ones who have for so long brought the legitimate miners into bad repute will, undoubtedly, make an effort to defeat this legislation.

We ask that you listen carefully to these people. We ask also that you study the documentary proof which will be presented to you by those in favor of the passage of S. 1713. When you do this, we are confident your committee will endorse this legislation and vigorously press for its early enactment by this Congress.

I could read the rest of my paper, sir, but I believe that covers the essential points we wanted to make.

I should like to offer these additional exhibits for your record if you would like to have them.

Senator ANDERSON. I think what we will do is accept them for the record and ask the staff to go through them and see how many of them need to be actually attached to the record.

Mr. THOMPSON. A great many of them I am sure will be duplicated by other people who are introducing evidence.

(The information referred to follows:)

(COMMITTEE NOTE.—The material submitted by Mr. Thompson consists of the following packets which are on file with the committee and are a part of its official records of this hearing.)

Exhibit No. 1. Title: "Packet of Material on Application of Mining Laws to National Forests," prepared by the United States Forest Service upon request of a special subcommittee of the House Committee on Agriculture, 82d Congress. It is dated August 1952.

Page 5, Summary of Mining Claims on the National Forests, national statistics are given as of January 1, 1950. For the State of California the up-to-date record is:

Number of mining surveys.....	21,000
Acres of national forest land claimed.....	602,000
Percent producing minerals.....	1
Percent considered valid.....	26
Volume timber on claims: 3½ billion board-feet.	
Current value of the timber, \$50,000,000.	

Exhibit No. 2: This is copy of a "Report on the Problems of Mining Claims on the National Forests by the National Forest Advisory Council," made for the Secretary of Agriculture by his citizen advisory group, and dated January 1953.

Beginning on page 55 and running to page 125 are more than 100 case histories illustrating the conditions which this legislation is designed to remedy. They are "must" reading. Only in this way can one get an understanding of the seriousness of this matter and of the great need for prompt remedial measures.

Exhibit No. 3: This is a collection of official records and papers having to do with the activities of prospectors and miners. This record is fully documented, and is convincing proof that this legislation is needed.

Exhibit No. 4: Excerpts from editorials concerning the mining law problems, clipped from newspapers in the county and mountain districts of the State of California.

Exhibit No. 5: Samples of mining claim conflicts in the national forests in California.

(Exhibits Nos. 1, 2, and 3, have also been entered in the record of the House hearing on H. R. 5891. Exhibits 4 and 5 are set forth below.)

#### EXHIBIT No. 4

##### SAMPLE EDITORIALS IN CALIFORNIA PAPERS

##### *Modoc County*

The legislation (S. 1713 and the companion House bill H. R. 5891) is actively supported by the American Mining Council. Last week the Plumas County chapter of the Western Mining Council voted to favor the bills.

Lumbermen and livestock men in the State and in Modoc County have been seriously concerned about the effect numerous claims might have on their public lands. The separation of surface rights from mineral rights is a step in the right direction—in keeping with the democratic principle of multiple use of public lands. This legislation reflects credit on the mining industry and all who assisted in writing it.

##### *Placerville*

A measure before Congress to correct widespread abuses of mining claim laws deserves wholehearted support of every citizen in Eldorado County.

These abuses by those seeking to acquire and control public lands for nonmining purposes pose a serious threat to our country's basic economy—our great recreational potential. If enough of these phony claims are established and our fishing streams, our camping and picnicking areas, our lake shores and beaches, our vast timber resources and our range and forage will be denied the public's use.

We vigorously support this legislation and urge voters in the county to give it the strongest support possible.

**Bakersfield, Calif.—Kern County**

For many years, an abuse of the terms of Federal mining laws has turned thousands of acres of choicest public lands into the possession and profit of individuals who have taken advantage of the loopholes to perpetrate this condition. Agencies administering these lands have been helpless to correct the wrongful possession and use.

Proposals, legislation introduced in Congress have been made to correct this. They have backing of Congressmen best acquainted with the situation, the USDA, the Forest Service, the American Forestry Association, and others.

In view of the commendable provisions of the measure and the benefits it will bring, support of its passage should be expressed from local organizations affected by management of the national forests, and there is scarcely a community in the West that is not in this category.

**FOOTHILL INDEPENDENT, GLENDALE, CALIF.: DREAM LAND CAN BE YOURS; FILE A CLAIM**

(By Jim Kenner)

Land today is a valuable proposition. In many cases more costly than the home or business erected upon it. Rates vary from a modest few dollars an acre for barren desert to \$10,000 a front foot for a number of glamorous city locations. And here's the dig. You can be a landowner for the price of filing a claim and keeping it up.

Beyond the foothills, land nestling in the verdant Angeles National Forest is yours to grab.

Land within echo distance of murmuring streams, land within earshot location of growing communities, and land that otherwise would sell for intoxicating prices.

File a claim, you ask? It can't be as simple as that. But it is!

Take for example the three San Fernando men who recently staked a claim adjacent to Little Tujunga Canyon Road, a few miles north of Foothill Boulevard.

Ben Kenney, Herman Mye, and Jack Carrigan all were amateurs with an eye out for that atomic "cash register" called uranium.

Unlike most citizens, they were armed with information that they could be landowners by meeting certain mining requirements.

Requirements that are easy on the pocketbook.

Some of them include—

First, a claim must be filed. To file, one must locate land which is open for mining. Angeles Forest officials determine whether or not it is open. Most of it is.

Secondly, one must establish the proximity of minerals on the land. Difficult! Not on your life! Minerals mean anything from uranium to a gravel deposit.

Okay, so now you've found minerals. What next, you ask?

Check to see if you can file. Unless someone else has beaten you to it, or unless the land is closed to claims, your claim probably will be valid.

How much land? Some 1,500 feet along the vein, and 399 feet on either side are now yours.

Primarily two types of claims are filed. Placer claims which mean surface deposits, and lode claims which mean minerals found in veins of hard rock.

After your claim is filed, certain improvements are required to keep it. Total sum is \$100 yearly. A report of yearly improvements must be filed in the county recorder's office.

That's it. For all practical purposes the land is yours. What's more you can hold it indefinitely, as long as you keep up the yearly improvements.

You can own it if you wish. But that means added expense. Proof of \$500 in improvements must be submitted along with an application asking for patent. A licensed mineral surveyor must examine the claim and verify the fact that it has commercial value. A dozen other details to undergo and then maybe you'll get a patent on the land.

But it's not worth it. Why own it? Build a cabin and be content with a vacationland where you can spend weekends and holidays, and say—for all practical purposes—"It's mine."

If you happen to find a little uranium on the side—well, no harm in that either, is there?

NEW LAW PROPOSED AS REMEDY FOR MINING CLAIM ABUSES

SONORA, May 2.—A proposed law which would correct many of the mining law abuses on public lands is being studied in Congress.

The American Forestry Association inaugurated the proposed bill February 10. It proposes to rectify abuses by persons seeking to acquire national forest or other public lands for nonmining purposes. The measure, the association states, if adopted, will "clear up 75 percent of the present mining law abuses." In a release, the United States Department of Agriculture agreed with the association. The mining industry, the Federal Department of the Interior, and the Agriculture Department are cooperating with the association in seeking passage of the measure.

Five Senators and an equal number of Congressmen have introduced the measure which Congressman Clair Engle, of Red Bluff, said yesterday probably would be acceptable to a large portion, "if not all," of the mining industry.

*No minerals, no claim*

The major bill, H. R. 5561, is designed to prevent anyone from filing a mining claim on public lands where valuable minerals are not apparent. The United States court, Sacramento, is considering two suits at present which are aimed at misuse of mining claims in the Stanislaus National Forest.

These "test" cases have been filed by the Federal Government against Avery C. Moore, Long Barn, and Roy Ritter, a part-time Nevada resident who holds mining claims in Iceberg Meadow, Tuolumne County.

The Government in these cases asks that the court oust Moore and Ritter from mining claims which they have filed in the forest in areas where the Government claims there are no great deposits of commercial minerals or metals. Moore and 28 others, mostly persons who purchased mining claims from Moore, are defendants in the first suit, filed last August, while Ritter is the single defendant listed in the suit filed in Sacramento this week.

*Proposals*

The proposed law would—

1. Ban the location of mining claims for common varieties of sand, stone, gravel, pumice, pumicite, and cinders, and make these subject to disposal by the United States under the Materials Disposal Act. Many of the abuses, as reported by the Government, have been mining claims filed on this type of location.

2. Prohibit the use of unpatented mining claims in the future for any purpose other than mining, prospecting, and related activities. At present, listed among the abuses, is the erection of cabins, corrals, pack stations, and even foodstands on mining claims in resort areas.

3. Authorize the Federal Government to manage and harvest timber on mining claims and to use them for access to adjacent land.

*Save timber*

4. Bar the filer from removing or using timber and other surface resources except to the extent required for mining and other related activities. Under the current mining laws, persons filing a mining claim can prevent the Government from harvesting the timber or having access to the claim—usually 20 acres—permanently.

5. Provide a procedure to permit the Government to reclaim by quiet-title action claims which have been abandoned or filed prior to the enactment of the bill as proposed.

Throughout the United States, the association said, there are more than 84,000 unpatented mining claims today, but only 2 percent are producing commercial ores.

*Oroville Mercury, Oroville, Butte County, Calif.: Miners favor Dawson bill by close vote*

The Butte County chapter of Western Mining Councils, vice-president Mark Parker presiding, adopted a resolution last night favoring the enactment of the Dawson bill. The vote was close. Last week the Plumas County miners voted to also favor the proposal.

Gene Kincaid, forester for the High Sierra Pine Mills, spoke to the gathering, explaining the purport of the bill and its advantages to both the forestry service and the miner over the existing laws.

The miners had been questioning the propriety of Government taking over the surface rights of claims. Kincaid explained that, under the Dawson bill

miners having a claim would have exclusive mineral rights and claim to any timber necessary to further development of their claims. Furthermore, that after patent rights had been granted, the miners would entertain the complete rights of an owner. Kincaid said that the Government anticipated that passage of this bill would enable the miner to secure patent rights within 6 to 12 months after application.

One of the purposes the bill would serve, Kincaid explained, would be to limit the amateur uranium miner, who has had no mining experience, from tying up vast areas of forest and mining land for no productive purpose. Under the Dawson bill a Government survey must be made of the mine to ascertain its productivity before rights are granted.

At the conclusion of the meeting, the Butte County council scheduled their next meeting for sometime in October.

*Feather River Bulletin, Quincy, Plumas County, Calif.: Mining council eyes proposed legislation at monthly meeting*

Members of the Plumas chapter of the Western Mining Council gathered at the Greenville Inn last night to dine on chicken and dumplings and to discuss and resolve on several vital issues.

The lengthiest debate of the evening centered around a report by Joe Goodwin on a bill now pending in Congress to modify the basic Federal mining law. The bill is House Resolution 5561, introduced on April 14 by Congressman Dawson, of Utah.

Goodwin said the bill was a compromise that sought to ease conflicts cutting in all directions among miners, conservationists, timbermen, and Government agencies. It was Goodwin's opinion that miners should support H. R. 5561 in an effort to ward off even more drastic legislation.

The meeting endorsed the bill.

The second proposed law endorsed by the meeting was H. R. 661, introduced by Congressman Clair Engle, which some speakers said would reopen the domestic gold market and curtail the Government's sale of Fort Knox gold to private industry.

A committee headed by Al Satova then made a report relevant to a recent editorial in the Feather River Bulletin suggesting a cooperative venture to promote a broader development of the mining industry in Plumas County. It was the committee's finding that the Bulletin proposal was not feasible at the present time.

But the committee did recommend formation of an exploration and development corporation. The amount of capital required was discussed lengthily, with final agreement settling on the sum of \$500,000. Satova was named chairman to continue the endeavor, in cooperation with the Plumas County Chamber of Commerce to launch the corporation.

Near the close of the meeting, Chapter Chairman Dwyer Skemp disclosed that unknown interests were preparing to invest \$10 million building mills and establishing ore stockpiles to process copper in the county. Skemp declines to divulge full details, but he said a quest for millsites was already underway.

The entire meeting was well sprinkled with unfavorable references to the invasion of "weekend prospectors" and "paperhangers" who are combing the hills for uranium. The consensus was that the tenderfeet and greenhorns are getting into the hair of the native miners.

It was announced that the first carload of uranium ore, mined in the Red Rock district, was shipped out of Doyle in Lassen County last week.

*Independent Journal, San Rafael: Keep mining claims for mining*

Scheduled for hearing soon before the House Committee on Insular Affairs is a proposal to alter mining law so that claims on Federal property will be for mining rights only, and not interfere with the Government's management of the forests and other surface resources on those claims.

Present law gives the mining claimants waiver rights on timber or other surface resources. They cannot touch the resources themselves, but neither can the Federal Government.

This may not sound serious, but look at the situation in California alone. Here there are approximately 21,000 claims, covering an area of 600,000 acres. Slightly more than a quarter of them are inside national forests.

Of this number of claims, only about 10 percent might develop into a mine of some sort. Only 1 percent will ever operate in such a way as to afford a livelihood for the claimants from minerals.

During 1953, mining claims tied up land carrying some 3½ billion feet of timber in California worth more than \$50 million. None of this can be touched without a waiver, and many of the claimants cannot even be located.

The proposed bill would limit a mining claim to mining and related activities; authorize the Federal Government to manage the timber and other resources on such land, and provide, among other things, a method of resolving uncertain titles on claims already granted through due process of law.

Conservationists, mining groups, lumbermen, and Federal officials seem satisfied with the proposal. Barring "cleepers," it looks like a good bill to us.

*Greenville: Miners favor enactment of Dawson bill*

Plumas County miners are ready for a change in the mining laws. At a meeting here last night, they adopted a resolution with only one dissenting vote, favoring enactment of the bill by Representative Dawson (Utah) that would make important changes in law that has been in effect for nearly 100 years.

The reason for the change of attitude by the miners lies in uranium. The uranium rush, like the gold rush of 100 years ago, is bringing into Plumas County thousands of people that the established miners refer to as "illegitimate miners," who, they say, are taking advantage of the 100-year law to such an extent that legitimate mining later on will be faced with drastic regulation unless moderate regulation is placed in effect now.

As the meeting progressed, many who at the start were against regulation of any kind in the time-honored fashion went over to the side favoring the Dawson bill. Among these was Dwyer Skemj, president of the Plumas chapter of the Western Mining Council.

Strict curbs seen:

Joseph Goodwin, past president of the chapter, had copies of the Dawson bill. He pointed out that in the present conflict between illegitimate miners and those favoring good management of natural resources, the transient miners are going to give mining a bad name and that unless a moderate measure is adopted now, more stringent regulation is sure to come later. After an hour of debate, the miners agreed that this position probably was the correct one.

(The Dawson bill was introduced this week of April 11 and has been referred to the committee of Representative Clair Engle. It has not been set for hearing.)

The Dawson bill, as explained at the meeting, results from a meeting of the American Forestry Association last February to rectify abuses by those seeking to acquire control of public lands for nonmining purposes. It is said the bill, if enacted, will clear up 75 percent of present mining-law abuses.

Bill outline:

The proposal would—

(1) Ban the location of mining claims for common varieties of sand, stone, gravel, pumice, pumicite, and cinders.

(2) As to mining claims hereafter located, it would, prior to patent—

(a) Prohibit use of the mining claims for any purpose other than prospecting, mining, and processing.

(b) Authorize the Federal Government to manage and dispose of the timber and forage, and to use the surface of the claim for these purposes or for access to adjacent land, without interfering with mining operations.

(c) Bar the mining claimant from removing or using the timber or other surface resources except to the extent required for mining or related activities.

3. Provide an in rem procedure, similar to a "quiet-title" action, under which the Federal Government could expeditiously resolve title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims, located prior to enactment of this measure. This procedure calls for adequate notice to mining claimants in the area involved, and a local hearing to determine any right to surface resources that may be asserted by claim holders. If a mining claimant fails to prove rights to surface resources, the claim would thereafter have the same status as claims hereafter located, with the Government having the right to manage and dispose of the timber and forage.

In this manner an area in which a timber sale, for example, is contemplated could be subjected to a conclusive determination of surface rights within as short a period as 6 to 12 months.

## EXHIBIT No. 5

## SAMPLES OF MINING CLAIM CONFLICTS IN NATIONAL FORESTS OF THE CALIFORNIA REGION

## CASE NO. 1—TIMBER SALE

In 1946 and 1947 a family filed 8 placer mining claims and 1 lode claim in the Susan River drainage within the Lassen National Forest. After considerable negotiation the Forest Service was given verbal permission to cut and remove the high insect-risk timber from the claims.

The marking and cutting operations were initiated and partially completed on two claims when the claimants, through their attorney, notified the Forest Service that they wanted no further cutting to be done. Falling of timber was stopped the same day the message was received.

Some time later the claimants instituted proceedings to recover damages in the sum of \$75,000 from a lumber company as purchaser of the timber from their claims.

The Forest Service subsequently filed charges in the District Land Office against the validity of the two claims on which timber had been cut and removed. A hearing was held and a decision sustaining the charges was recently handed down. However, the time of appeal has not yet expired. The case is further complicated by the death of one of the principals.

(No appeal filed—case was closed and suit eventually dropped.)

## CASE NO. 2—CHRISTMAS TREE SALE

In 1946 a Christmas tree sale was made to a party on an advertisement-bid basis in the Lassen National Forest.

Before the successful bidder had completed the cutting, the district ranger was approached by two men who stated that they had mining claims in the area and that they had not given anyone permission to cut the trees since they intended to market the trees themselves. The ranger went immediately to the sale area and stopped further cutting. The two mining claimants turned their case over to an attorney. Eventually the case was dropped. The district ranger and his assistant had thoroughly searched the area for claim notices and had strung cord around the area to be cut. After the conflict developed, the county records were checked and it was found that the two men had filed their claim just 4 days before the advertisement of sale.

## CASE NO. 3—TIMBER SALE—RIGHT-OF-WAY

This group of placer mining claims totaling about 2,250 acres involves choice timberland which is a natural and integral part of a large timber sale unit. The claims have been controlled for a great number of years by one party who refuses to waive any cutting rights.

In 1938 the Forest Service met with such serious opposition to a much-needed right-of-way across these claims that the proposed logging road location was abandoned. The road has since been built across the claims on an old roadway. Evidence on the ground shows that very little effort has been made to develop these claims during the past 40 years.

## CASE NO. 4—GRAZING CONFLICT

A mining company having 71 unpatented lode claims totaling 1,420 acres on the Mount Warren allotment within the Inyo National Forest requests that no grazing be permitted on its property. The area includes springs and excellent forage for a carrying capacity of 956 a. u. m. s., 525 of which are on the 140 acres of meadow covered by these claims.

## CASE NO. 5—MUNICIPAL WATER CONFLICT

A mutual water company in the Bear Valley area of the San Bernardino National Forest with a water development for municipal use has run into difficulties due to an association placer mining claim filing on its reservoir side. The claimant has prevented the water company from making any further developments and is contesting the company's right to the water. At the very least, the situation causes costly litigation and may indefinitely delay the development of use of the water.

CASE NO. 6—REAL ESTATE ACTIVITY—OCCUPANCY

In the Stanislaus National Forest an individual and association have made more than 275 mineral filings on and/or adjacent to the Sonora Pass Highway during the past 5 years, generally for the recorded purpose of the mining and processing of precious and nonprecious minerals, building stone, lava, basalt, granite, sand, rock, gravel, and other commercial deposits. Through newspaper advertisements the principal party who lives on one of the claims and his son have in one 2-year period succeed in obtaining contacts with people to whom they were able to sell their title and interest in some of the claims for an aggregate sum of more than \$14,000. To the best information neither the locators nor purchasers have made an attempt to develop any of the claims for mining purposes. Several contests have been initiated against these claims by the Forest Service which were successfully concluded only to have the owners refile on the same land.

CASE NO. 7—FISH PROJECT

The Forest Service, in cooperating with the California Division of Fish and Game and local sportsmen's clubs toward the construction of a reservoir to provide a fishing lake and to regulate streamflow, ran into complications due to a mineral filing. During the preliminary engineering work a rather fresh cardboard sign was found at the proposed site which read as follows: "Notice—Private Property—To Whom It May Concern: The property along this Holcomb Creek as described below is valid mining claims owned by [two claimants] \* \* \* Trespassers will be prosecuted."

Prospecting in the area is historic and fine colors can be found although there has been no commercial mining in the district since the early days. From experience it is known that this conservation project can be effectively blocked by the claimants or delayed to the extent that the required funds from the State Wildlife Conservation Board will no longer be available.

CASE NO. 8—RESIDENCE OCCUPANCY AND GRAZING CONFLICT

Two claims and a millsite were filed on by a party in the head of Live Oak Canyon of the Cleveland National Forest in 1926. Previous to that time the ground had been prospected, and tested for clay, only to be abandoned because the clayey fractions were too impure. When the filings were made in 1926 the claimant dug two shallow holes, not over 3 feet deep and 6 to 8 feet in diameter. He then proceeded to build a rambling clapboard residence and develop a spring on the hillside above the claims over which he foled a millsite. After piping water from the spring to his house he settled down in his residence until 1946 or 1947 when he passed away. The claimant willed the claims to a nephew who refiled on them but did nothing toward developing them. It is understood that a third party is buying the claims from the nephew.

The Forest Service has experienced considerable administrative difficulties because of the claims. In 1931 the claimant leased the grazing rights permitting 20 head of cattle to feed off the grass. When the Forest Service protested he became defiant but later removed the cattle. The same year an application for patent was made. In 1932 the Forest Service protested the entry and finally succeeded in having the application rejected although the claimant was permitted to hold the claims for further development. These claims are on grassland of the Santiago grazing unit which could not be utilized because of the claimants refusal to let the grazing permittee's stock graze on any part of claims or to water his cattle at the spring on the millsite notwithstanding the permittee's offer to install a watering trough with a float valve so that the claimant's water supply would not be affected.

At another time the claimant permitted a friend to run saddle and pack stock on the claims. None of the uses of the surface of these claims by the claimant or others by his permission contributed in any way toward the development of mineral.

CASE NO. 9—CAMP GROUND AND SPECIAL USE CONFLICT

One individual in the Mono Lake District of the Inyo National Forest made more than 94 mining and millsite filings since 1944. The claims along the Rush Creek and those adjacent to Gull Lake covering 980 acres have been the source of perennial complaints, demands, appeals, and controversies over the generally fictitious conflict with user of the Rush Creek Campgrounds, and Silver Lake, Public Dump, with special use pasture permittee and over water right applications and proposed relocations.

## CASE NO. 10—ACCESS

In the Trinity National Forest a party has filed claims which control access to private timber holdings as well as to adjacent Government stumpage. The claimant has demanded payment either lump sum, or on a per thousand basis of timber moved, for a right-of-way across the claims.

## CASE NO. 11—SPECIAL-USE CONFLICT

In 1941 the Forest Service issued a free special-use permit to Siskiyou County for the removal of sand and gravel from national-forest land for use on local county roads. This arrangement continued without any trouble until 1948 when a party filed a sand-and-gravel placer-mining claim over the pit area, placed a gate across the access roadway, and posted the area warning trespassers against removal of sand and gravel. This action was considered as a trespass and the Forest Service corresponded with the claimant on such a premise. Notwithstanding, the party continued to deny the county access to the pit even to remove the gravel which had been sized and stockpiled. The county then proceeded to build a short piece of road bypassing the gate and continued to remove and size gravel. At the same time the county filed a suit against the claimant. The hearing of the case was postponed two times and it is understood that the claimant elected to withdraw from his attempt to sustain an interest in the area.

## CASE NO. 12—RECREATION

In the Sierra National Forest a party is maintaining mining-claim status to 40 acres as 1 placer claim and 1 lode claim. Although not interfering with any specific project, the property has not been worked for an estimated 20 years. The only use being made of the claims is of a summer-home nature. There presently exists on the claim three good-quality cabins of log and concrete design, with a concrete floor poured for an additional cabin. Use is limited to hunting, fishing, and recreational parties.

## CASE NO. 13—SKI DEVELOPMENT

On Independence Creek in the Inyo National Forest a party has some mineral locations which he maintains covers lands on which the Forest Service has a campground and permitted the construction of a ski hut and rope tow. Because of the contention of this claimant, future development of the area for both summer and winter recreation is at a standstill.

## CASE NO. 14—CAMPGROUND

On the Tahoe National Forest an elderly woman has a 60-acre placer-mining claim which dates back for a great number of years but on which no mining has been done since 1915. In about 1926 the Forest Service laid out a campground adjacent to the State highway on land which recently was found to be within the boundaries of the claim. No objection or protest was made to the development and maintenance of this public camp until the Forest Service entered a protest to the issuance of mineral patent to the claim some 20 years later. Although the charges made by the Forest Service were sustained in a hearing and the patent application rejected, it was necessary for the Forest Service to evacuate the campground. The campground was the only Government camp for a distance of 25 miles. Notwithstanding heavy use by the traveling-camping public, fishermen, and hunters for 20 years or more, the public is denied continued enjoyment of land on which no mining was ever undertaken and no use other than camping ever made thereof.

Senator ANDERSON. Any questions, Senator Millikin?

Senator MILLIKIN. No questions.

Senator BARRETT. I want to ask one question.

Assuming that any claim that might be filed would have considerable of this sand, stone or gravel or pumice, as you indicated a moment ago, and the contest was initiated under existing regulations against the miner holding that claim, he would have little or no difficulty in proving that he had made a discovery of some of those materials, would he not?

Mr. THOMPSON. He would have no trouble in proving that he had made a discovery of those materials but I do not know in exactly what way the law is interpreted. I believe there has been some interpretation although I have not seen it in writing that there should be a possible market for these things.

The people from the Bureau of Land Management could answer that question much more clearly than I.

Senator BARRETT. Well, if he discovers it in commercial quantities, certainly he has complied with the mining law?

Mr. THOMPSON. As far as location is concerned, he has without doubt, yes.

Senator BARRETT. So the sum and substance of that situation would be that he would not be subject to attack under existing regulations in that case, would he?

Mr. THOMPSON. It is my belief that is so, yes.

Senator MALONE. Mr. Chairman, I think the witness's testimony is very clear and straightforward and he deserves a lot of credit for his statement.

Mr. THOMPSON. Thank you.

Senator MALONE. We have a homestead law and I have had considerable experience with it, with its use to obstruct certain use of water holes on the range. Somebody might file a homestead where obviously there was not enough water to irrigate the land to hold it.

It is rather irritating to the people who wanted to use his water for stock purposes, but nobody ever suggested that they change the homestead law; they simply suggested that it be administered so that if there obviously was not the water there and he was not making an effort to drill to get more, it could be hastened to make him comply.

The same thing is true with the mining claims. Some of us have experienced here a two-decade endeavor to get move after move to bring into the leasing act to be administered from Washington the prospecting for minerals, and we certainly know what would happen if they were successful.

Then you have someone breathing down your neck and this fellow is probably a graduate from a college but he is over you and you are harassed continually.

One thing with the mining law, and that is a thing that we would like to preserve and we would also like to see administrative procedure that would not prevent men like you putting their money in the business.

As a matter of fact, I know something about these men because I used to run logging roads.

Mr. THOMPSON. One of our members had headquarters in Reno.

Senator MALONE. What is his name?

Mr. THOMPSON. He is a big rugged fellow.

Senator MALONE. He runs a sawmill?

Mr. THOMPSON. That is right.

Senator MALONE. The head of my regiment, when I had one of the batteries, died not long ago and he was a lumberman. I have known lots of lumbermen. We in this mining act are not trying to destroy your operation, we are trying not to destroy the man that goes out there with little capital, and they are the ones that find the mines.

The mining companies that have offices in Sutter Street do not find the mines.

Mr. THOMPSON. Sir, I am sure that our members to the man would agree with you thoroughly. They started as men without any resources of their own and they are entirely in sympathy with that.

Senator MALONE. We do find this: We find mining companies who get big enough who are for this bill because they have a man in Washington who can come here and spent \$5,000 to get here and live in a good hotel and they get about what they need, but the men we are talking about, and I am sure that is what the senior Senator from Colorado has in mind, are the men you will never see.

Now, the fact that some of these men have taken advantage of it does not justify us in destroying the basic structure that allows a man to go out and do this. Most of the mines that we find have been found by people that an engineer would not say had a very good showing and they would probably chase him off. But they stay there and are persistent and they get along.

Finally, one out of a thousand of them gets a mine.

Mr. THOMPSON. That is right.

Senator LONG. We do not want to disturb that relationship. We do not want it so that some fellow here in the Bureau who is a graduate of a nice college will go out and say, "Look, there is no mineral here; you should know better than that." Therefore, he can give him all the trouble in the world.

Mr. THOMPSON. Senator, we studied this bill, we had legal advice on it, and we are told it will not interfere with legitimate prospecting just as you have heard testified here today by other mining men with whom I am not acquainted at all.

Senator MALONE. I am acquainted with all of them.

Mr. THOMPSON. I am convinced in my mind that this will not interfere with mining.

Senator MALONE. There has not been a mining man before us.

Mr. THOMPSON. I understood the gentleman, Mr. Holbrook, has had wise experience.

Senator MALONE. He is a lawyer, he is now working for the mining organization.

What I would like to see is to have these people go out to where these mining people are that do not have the money to come in here.

Senator ANDERSON. I do think that a large number of mining people have discussed this in their State meetings and with the exception of one State, they have been for it.

Senator MALONE. I can show you some letters.

Mr. THOMPSON. Some of the councils of the California Mining Association have approved this legislation for us.

Senator MALONE. They have been told that they are going to get something worse if they do not take this practically without exception and it will be a terrible opportunity if they give them an opportunity to say that in the meeting.

Senator ANDERSON. I want to assure everybody that I have not made any such statement as that.

Senator MALONE. It is an undercurrent.

Senator ANDERSON. I am anxious to take care of people who are here and are prepared to testify, but it is now 4:30. I have made only one commitment and wired Mr. Hudoba and told him I would hear him today at 10 o'clock, not knowing how long this would last. I would like to hear him.

Mr. McArdle, you will have to be before the House tomorrow and I think they would excuse you and let you come here perhaps.

I am wondering if we could hear Mr. McArdle at 10 o'clock and whether that would suit you.

Mr. McARDLE. Yes.

Senator ANDERSON. Then after Mr. McArdle, we would have Mr. Besley, Mr. Gutermuth, Mr. Granger.

How long is your statement, Mr. Hudoba?

Mr. HUDOBA. Three or four minutes.

Senator ANDERSON. I feel obligated because I told you I would hear you and I would like to make good on my promise.

Mr. HUDOBA. I appreciate your courtesy but I am not from out of town and I will be here tomorrow.

Senator ANDERSON. I wired you in New York and that is where I received the impression you were. If you will be here tomorrow, I assume the committee would probably like to hear you.

Mr. McArdle?

Senator MALONE. Mr. Chairman, before he starts I would just like to say that we do have one man here that represents a great mining organization, the Colorado Mining Association, and I would like some time tomorrow to give him an opportunity for 10 or 15 minutes to testify before this committee.

Senator ANDERSON. Mr. Palmer?

Senator MALONE. Mr. Robert Palmer of Denver, Colo.

Senator ANDERSON. Surely. We all know Bob Palmer and will be glad to hear him.

# **STATEMENT OF RICHARD E. McARDLE, CHIEF, FOREST SERVICE, DEPARTMENT OF AGRICULTURE**

Mr. McARDLE. Mr. Chairman and committee members, I appreciate the opportunity of appearing before you in support of S. 1713, a bill to amend the mining laws to provide for multiple use of the surface of public lands.

Mr. Ervin L. Peterson, Assistant Secretary of Agriculture, had hoped to represent the Department here today but, unfortunately, he had other commitments which have taken him out of the city and which could not be rearranged.

My statement will be brief.

I know there are numerous other witnesses whom you wish to hear, and you already know from the formal report of the Department that we recommend early enactment of this bill, with only one minor clarifying amendment.

This bill and seven companion measures in the House were introduced only a few weeks ago and the Department appreciates the attention which both the Senate and House committees are giving to these bills by holding hearings so promptly.

I do want to say that the problem of preventing misuse of mining claims on the national forests and providing equitably for multiple development of both minerals and national forest surface resources on such claims is probably the most important single problem facing the Forest Service at the present time in its administration of the national forests.

Therefore, this bill and its companions in the House constitute the most significant legislation affecting the national forests which is pending in the present Congress.

In the Department's report we described the provisions of this bill in some detail, and I shall not repeat them here. Briefly, it would:

1. Apply to all Federal lands subject to the United States mining laws;

2. Remove common varieties of specified materials such as sand, stone, gravel, and pumice from the United States mining laws and make them subject to disposal under the provisions of the Materials Act of 1947;

3. Provide that mining claims located after enactment of the bill would be subject, prior to patent, to the right of the United States to manage and dispose of the vegetative surface resources, and to manage other surface resources;

4. Establish a procedure similar to that in Public Law 585 of the 83d Congress, whereby the Secretary of the Department administering the Federal land may initiate action for determination of the surface rights, prior to patent, of holders of mining claims located prior to enactment of the bill.

The purpose of the minor amendment recommended in the Department's report is to make it clear that revenues from O. and C. lands under the administration of the Department of the Interior and lands administered by the Department of Agriculture under Public Law 426. of the 83d Congress, will be placed in the O. and C. fund.

The two departments collaborated with each other and with Congressman Ellsworth, author of H. R. 5577, in developing this language.

In the 82d Congress, bills were introduced by Senator Anderson and Congressman Cooley aimed at protecting surface values of the national forests, as well as bills by Senator Chavez and Congressman Regan which would have amended certain provisions of the Materials Act. This early action was stimulated in part, at least, by the Society of American Foresters, and was supported by various other conservation groups.

In the 83d Congress there were bills by Senators Anderson, Dworshak, and Chavez, and Congressmen Hope, D'Ewart, and Regan, all aimed either at protection of surface values of the national forests and the public lands, or amendment of the Materials Act.

In both the 82d and 83d Congresses, bills to amend the Materials Act passed the House, and again this Congress, H. R. 230, by Congressman Young, has likewise passed the House and is pending in this committee, as is a similar bill, S. 1098, by Senator Neuberger.

We have discussed our problems earnestly not only with conservation groups but also with the American Mining Congress and other representatives of the mining industry which have never condoned the use of mining claims on public lands for other than mining purposes.

Several months ago the Departments of Interior and Agriculture, and representatives of the mining industry, were invited by the American Forestry Association to talk their problems out in an effort to find what area of agreement might be reached.

In supporting S. 1713 and related bills, I believe you will find that for the first time the Departments of Interior and Agriculture, the

mining industry and many conservation groups are together in favoring the same legislation.

From the standpoint of the administrator of public land this bill does not go as far toward complete correction of mining problems as do some of the other bills in this and preceding Congresses. Even though this bill does not cure all problems, it is a very significant and major step forward, and if funds are available for its implementation, will result in correcting a very substantial portion of our problem.

During the past several years, the mining claim situation on the national forests and other public lands has become much more acute.

Fifty years ago when the national forests were established, mining claims were not the problem they are today. There were far fewer claims; prospecting was done by a relatively few bona fide miners; the national forests were inaccessible to most people; there weren't the conflicting pressure for surface use, and the job of managing the national forests was largely custodial.

Today the situation is entirely different. Population of the West has greatly increased. The highway and the automobile have taken the national forests out of the hinterlands, and put them in the backyard of metropolitan areas.

We have about 100,000 contracts each year with national forest timber buyers, grazing permittees, and various special use permittees; not to mention 30 million who use the western forests for recreation, including hunting and fishing.

Many city people are prospecting for uranium in their spare time in hopes of striking it rich. Methods of prospecting have changed, too. Yet, to effectively manage the national forests, the Federal Government must have access to and control of the surface resources.

Claimants have the right to locate without regard to other values, and the United States may not harvest timber or manage other surface resources without consent of the claimant. All this adds up to conflicts of interests, delays, higher costs, obstruction of orderly management, and tying up valuable timber and other surface resources.

We estimate that at the beginning of this year there were about 166,000 national forest mining claims, covering nearly 4 million acres. This is a 100-percent increase in 3 years, largely due to prospecting for uranium and other fissionable materials.

New claims are being filed on the national forests at the rate of about 5,000 per month, which would mean 225,000 claims by the end of this year.

We have over 100 billion board-feet of timber tied up on national forest mining claims, and this timber has a stumpage value of \$112 million.

Since 1952 the number of national forest mining claims in Arizona has increased seven times. They have quadrupled in New Mexico and Utah. Wyoming, Montana, Colorado, Nevada, South Dakota, and Washington have seen claims double or more than double in that period. Only in California, Idaho, and Oregon has there been no great change.

Nearly 10 percent of all national forest claims are based upon a finding of sand, stone, gravel, cinders, or low-grade pumice, which occur over large areas.

In northern New Mexico and Oregon and Washington, especially, have claims based on low-grade pumice been used as a basis for obtaining control of timber or other important surface values.

On the Santa Fe National Forest in New Mexico, 172 million feet of timber worth \$1.7 million is tied up because 3 timber sale areas are 75 to 90 percent covered by claims.

In Arizona and New Mexico we have 40 grazing allotments with a capacity of about 10,000 cattle, which are more than 75 percent covered by mining claims.

On the San Juan National Forest in Colorado, we know of 680 claims in a solid block, covering 28,000 acres, which makes up over 90 percent of the Piedra River unit, and timber sales involving 90 million feet are dependent on access over 10 miles of these claims.

On 4 other forests in Colorado, the White River, Gunnison, Pike, and Grand Mesa-Uncompaghe, there are 25 grazing allotments substantially covered by claims, as well as 17,000 acres of improved recreation areas, and a timber working circle involving 6 million board-feet.

The Fall River Ranger District in the Black Hills National Forest of some 85,000 acres is 75 percent covered by claims and another 50,000-acre area in the Black Hills, in the Elk Mountain Ranger District, is nearly 100 percent covered.

On the Bighorn Forest in Wyoming, at least 1 sheep allotment is nearly solid claims, and 2 cattle allotments are about 50 percent covered.

Of all the timber on national forest mining claims, about one-third of the volume and one-half of the value is in California. On the Tahoe and Sequoia Forests, for example, six ranger districts are one-third covered by claims which support half a billion feet of timber.

On the Sioux Ranger District of the Custer Forest in Montana and South Dakota 74,000 acres, or one-half the district, has been staked with 3,500 claims in the past year, and uranium prospectors are currently staking more claims as the snow recedes.

One cattle permittee running 170 head has applied for refund of a third of his 1954 grazing fee on grounds that mining activity kept his cattle off the range.

On the West Fork Ranger District of the Bitterroot Forest in Montana, 50,000 acres, or one-third of the area, is tied up by 1,000 claims, involving 50 million feet of timber.

In Oregon and Washington, for the 9 national forests where claims are most numerous, there are 4,370 claims covering 101,000 acres in working circles where timber is being harvested in the orderly course of management. These claims make it impracticable to sell 3.4 million feet of timber worth \$68 million. One fourth of this timber is on the 550 pumice claims.

On the Manti-La Sal Forest in central Utah, where uranium prospecting is very active, the Mesa-La Sal Ranger District of 175,000 acres is 75 percent covered by claims. Fourteen grazing allotments and 75 million feet of timber are involved.

Also, the Monticello District of 368,000 acres on the same forest is 80 percent covered. Involved are the community watersheds for Blanding and Monticello, Utah, 10 grazing allotments furnishing summer feed to 4,800 cattle and 6,500 sheep, and 100 million feet of

timber. Some reseeded range is being impaired and further reseeding has been stopped.

I could go on and give many additional examples, but I only wished to mention a few to show the need for remedial legislation promptly before the situation becomes even more acute.

One of the key provisions of S. 1713 is section 5, which would provide a procedure for determination of surface rights of claims filed prior to enactment of the bill. To implement this procedure in a reasonable way would cost probably from \$750,000 to \$1 million annually for perhaps a decade, as far as the activities of the Department of Agriculture are concerned.

I would not want to give the committee the impression that there would be no Federal expenditures in connection with the administration of the bill's provisions.

On the other hand, after these rights are determined and for all future time, there would be very little cost associated with the bill. Even a cost of \$10 million is small, in my judgment, if it frees \$100 million worth of Government timber and other valuable publicly owned surface resources.

Twenty-five percent of national forest receipts from the sale of timber and other resources is distributed to counties. Thus there would be a substantial return to both Federal and local governments by freeing these surface resources.

It is my judgment that this bill would go a long way toward alleviating our national forest mining problems and encourage multiple development of all their resources.

The Department has always favored the development of the mineral resources underlying the national forests, and we would not favor any legislation which would work a hardship on the bona fide miner or prospector. The support of the mining industry for this bill is clear indication that it would work no undue hardship.

The bill does not include all the changes in the mining laws which would be desirable from a good public land management standpoint. Some problems would remain with respect to mining in the national forests which this bill would not correct. However, the support of the Federal departments and conservation groups is clear indication that the bill would result in substantial progress.

Because of the accelerated rate at which mining claims are every day and every hour being filed on the national forests, may I again impress on the committee the importance of prompt action.

The estimated rate of 5,000 new claims per month means that 167 new claims are filed every day, 7 days a week. On the average, 7 new claims are filed every hour, 24 hours a day.

In the month since this bill was introduced, another 100,000 acres of national forest have been staked to mining claims, with resulting problems of surface management.

In summary, I can state my views on this bill in three or four sentences.

First, it is a good bill; I strongly urge its enactment.

Second, it will go a long way toward solving mining problems on the national forests if funds are available to implement it.

Third, some problems will remain which this bill won't solve.

Fourth, prompt action is important because at the rate the new claims are being filed, an already acute situation is rapidly getting worse.

That is the end of my prepared statement, Mr. Chairman.

Senator ANDERSON. Senator Millikin?

Senator MILLIKIN. No questions.

Senator ANDERSON. Senator Malone?

Senator MALONE. I am very much interested in your statement, Mr. McARDLE, and I am also very surprised at the activity in mining that you have described since the treatment received in Washington.

Now, your complaint is altogether Forest Service, is it not?

Mr. McARDLE. My testimony concerns the Forest Service of the Department of Agriculture.

Senator MALONE. Would you object if an amendment to this bill confining its provisions to the Forest Service or to the monuments and parks, or wherever mining claims are allowed in Government withdrawn land?

Mr. McARDLE. Several bills have been introduced in previous congresses which would apply only to the national forests of the Department of Agriculture. Personally, I think it would be well to cover all public lands at the same time under the same laws.

Senator MALONE. Would you object to such an amendment?

Mr. McARDLE. I do not think I can speak for the Department on that, Senator Malone. Personally, I would not object but again I would repeat that I think it would be advisable to have them apply to all land administered by the Federal Government.

Senator MALONE. Well, of course, for a couple of decades we have been subject to suggestions such as yours. I do not know whether you have been one of them or not but they have all pointed toward a leasing system for all mining claims, mining as well as all other uses of public lands.

What position do you take in that regard?

Mr. McARDLE. During the years that I have been here, which is about 11 now, I cannot recall that the Department of Agriculture has proposed a leasing system.

Senator MALONE. Are you familiar with the fact that the Department of Interior has?

Mr. McARDLE. No, sir; I am not. That does not mean they have not done it; it is just that I did not know.

Senator MALONE. They have, for your information. Now, every one of you have been here today, Government people, and you have all pointed to the law we passed, 585 or whatever it is, coordinating the oil, gas leasing act with the mining law as a step in the direction of more Federal bureau authority on these lands.

Some of us have the idea that this is just a step to that; this is not exactly what you want but a step toward it, another step.

Would you have any advice on that phase of it?

Mr. McARDLE. I was not aware that the bill was being proposed for that purpose. I thought that the bill was being proposed by Agriculture, Interior, mining industry and the conservation groups having joined in, suggesting this measure as a means of clearing up the situation that now exists.

I do not think it has too much to do with attempting to get more control for any Federal agency. It is a means of assuring to the

Federal Government the right to manage the surface resources of these claims while they are in claim status.

Senator MALONE. Is that not what it is all for; in other words, what the Taylor Grazing Act is for? It is what all these acts are for, is to get greater control of the public lands?

Mr. McARDLE. Certainly it would restore to the Federal Government control of these surface resources.

Senator MALONE. What do you mean restore?

Mr. McARDLE. I mean in this sense, Senator Malone: At the present time the Federal Government does not have the right to dispose of the surface resources, timber and forage, on a mining claim and neither does the locator. It is in limbo, so to speak.

Senator MALONE. Well, it could be that the folks who have been advocating these laws for 50 years, they lose there once in a while, but most of the time they win. Maybe that is the reason you have not had it.

Mr. McARDLE. Well, as I tried to say in my testimony, the situation was quite different 50 years ago when the national forests were established than it is today. There were not these conflicts in other uses, desires to use these public lands.

There has been testimony here today that there are citizens who desire to buy timber from the public lands who know that there are many thousands of people who have been for a great many years using these public lands to run cattle and sheep, using the forage.

We know that there is an increasing number of towns and communities and some are of no small size, some of which are completely dependent or partly dependent on these public lands for water. Some of these are of considerable size such as Denver, Colo., Portland, Oreg., Salt Lake City. There are at least 2,000 more in western States that have to depend on public lands for their water. They want certain things done with these lands because their water supplies are depended on.

So we have today a great many of the people who want to use these public lands who were not wanting to use them 50 years ago.

Senator MALONE. Some of us have been out there that long, you know.

Where are you from?

Mr. McARDLE. I am from Kentucky. I started my forestry career in Oregon, following which I served in Idaho, Colorado, Wyoming, South Dakota.

Senator MALONE. Some of us have been pretty close to this water storage and municipal water supply in our areas, too.

I never heard much complaint about using the grass by the miners in areas where these lands are located that will be affected outside the forest reserve. I have heard that for 40 years, continual encroachment on the people that are using those lands and have been using them for longer than that period for grazing.

Now, you have a job to do, and I know what it is in a general way, because I have been associated with people that use these lands.

The general disagreement with some of your rules and regulations is not against your forest conservation, but you are not equipped to handle grazing. You are set up to handle forests, and I do not know whether you have been in my State of Nevada or not, have you?

Mr. McARDLE. Yes; I have.

Senator MALONE. Have you been over the land in the forests there?

Mr. McARDLE. I have been to all except one.

Senator MALONE. What one?

Mr. McARDLE. Nevada State Forest.

Senator LONG. You are familiar with what kind of forests we have there?

Mr. McARDLE. That is right.

Senator MALONE. Did I aptly describe it once or twice today?

Mr. McARDLE. The Nevada national forests run largely to grazing lands.

Senator MALONE. But you still have the same rules in your forest land that apply elsewhere?

Mr. McARDLE. The basic rules; yes, sir.

Senator MALONE. That is right. Therefore, any attempt to change them is met with objections by your National Forestry Association that are entirely right where there are real forests because we do not have any real forests there. So I am perfectly familiar with your attempts all these years to do these things, and I think they probably apply in Kentucky or in Pennsylvania, where these forests are where it is not so necessary that the miners and cattlemen and sheepmen make use of these lands if there is any use to be made of them at all.

Mr. McARDLE. Sir, so that I will not be misunderstood on the record, most of the national forests in this country are in the West. There is about 20 million acres out of 180 million acres in the East. But the great bulk of the forests are in the West.

Senator MALONE. But the great bulk of the people that belong to these associations are in the East?

Mr. McARDLE. As to that, I could not say.

Senator MALONE. Well, I am telling you because I checked that. We get their advice all the time.

Mr. McARDLE. I just heard from two associations who are in the West.

Senator MALONE. They are not forest associations?

Mr. McARDLE. The ones we just heard from, yes.

Senator MALONE. There are lumber associations. There is a great difference, in case you had not heard. I supposed you knew.

Mr. McARDLE. Between those two associations?

Senator MALONE. Yes. There is a great difference in a lumberman's association and a forestry association.

Mr. McARDLE. Yes, we recognize that. There is also a difference between a lumberman's association and a grazing association. We deal with all of them.

Senator MALONE. We do not have any trouble with the Lumbermen's Association, nor the grazing or the mining either in our State. However, your statement would lead us to believe that the Lumbermen's Association is a forestry association.

Mr. McARDLE. No, I did not imply that. They deal with forests. They are primarily concerned with harvesting the forest crop.

Senator MALONE. That is correct. You want to bring all the forest land in whether you have anything to do with it or not. You object to any amendment that would confine it to your bailiwick.

Mr. McARDLE. No, sir; I did not say that I either objected or favored. I said, speaking only for myself here today, and not for the Department, that I thought it would be desirable to have all federally

owned land come under the same mining law provisions. That would apply whether they were forest lands or whether they were nonforest lands and primarily for grazing or whatnot.

Senator MALONE. I understand what most of your representatives want, but I am trying to get at what is necessary.

Mr. McARDLE. So far as the national forests are concerned, of course, as I have tried to make plain here today, I am mainly concerned with the administration of the national forests because we have the kind of problems that I attempted to illustrate.

I would like to get those solved. I would think that the Bureau of Land Management would speak for itself as to whether they wanted their problems solved. Certainly we want ours solved.

Senator MALONE. How long have you been in this work?

Mr. McARDLE. Thirty-one years.

Senator MALONE. Confined to the Forest Service work?

Mr. McARDLE. Thirty-one years in the Forest Service.

Senator MALONE. Are you familiar with the provisions of the 1947 Materials Act?

Mr. McARDLE. No, I am not.

Senator MALONE. You said in your testimony you would like to have the pumice and other materials regulated under that act. I thought maybe you knew something about that.

Mr. McARDLE. I am not familiar with the detailed operation of that act.

Senator MALONE. You do know what it is, of course?

Mr. McARDLE. I do know that many claims are now being located, particularly in the forest country of the Northwest, on land which has a showing of pumice. It is low-grade pumice.

Under the mining laws, it would qualify as sand. I think it would be rather difficult to operate those claims for pumice but the timber on them is worth thousands of dollars.

Senator MALONE. Do you know what are the uses of pumice?

Mr. McARDLE. Yes. It is used mostly as an abrasive for building materials.

Senator MALONE. You do not know anything about the 1947 Materials Act.

Mr. McARDLE. I do not pretend to be an expert on that act.

Senator MALONE. You recommended that they be handled under the act and I thought you must know something about it.

Mr. McARDLE. I know enough about it to recommend that.

Senator MALONE. What do you know about it?

Mr. McARDLE. I think if these materials that we are talking about here, such as pumice, stone, sand, and gravel, were handled under some different procedure than they are being handled now, where, frankly, Senator, people are using the basic mining laws in order to gain control of other resources rather than the materials themselves, we would be far better off and we would stop a lot of the complaints and a lot of these difficulties that we are having in the management of these areas.

If they were handled on a leasing basis, the men who had a legitimate desire to obtain those materials for building purposes or for other purposes could still obtain them.

Senator MALONE. That is what you are really for, a leasing system; is that correct?

Mr. McARDLE. I am not saying that I am for a leasing system. I am saying I am against the present system where people are abusing the present laws, and I think this would then put it clearly out in the open as to whether the locators of these areas are primarily for minerals, or whether they are primarily for timber.

Senator MALONE. Suppose we agree that there are abuses, and I think there probably are abuses of all the laws. I guess you would agree that there are abuses of any law on the statute books; is that not correct? We even break the city ordinances now and again.

Mr. McARDLE. Yes.

Senator MALONE. Would you agree that there might be other ways of tightening the administrative end of the mining laws rather than trying to do what some of us believe would give the small prospector a lot of headaches, the fellow who is really trying to discover a mine?

Mr. McARDLE. Let me make it plain again, as I tried to make it in my testimony, that the Department of Agriculture, and the Forest Service as a part of that Department, have no desire whatever to restrict or to hinder legitimate prospecting and legitimate mining.

We are now facing a situation where a lot of claims are being filed and a man does not have to be a legitimate miner or a prospector to file a claim and the mining laws are being abused.

I think these people are making it harder for the type of people you are attempting to protect and I think we are attempting to protect.

Senator MALONE. Let me say this to you, having been with them for 40 years: Many prospectors are farmers who, in the wintertime, do prospecting. They just go out to see if they cannot augment their income a little bit and I do not suppose under your examination they would qualify as miners, and the fellows who discover these mines a lot of times have no experience at all. So many of them go out there and start poking around that every once in a while you get pretty good prospecting, but what we have been doing here in Washington for a couple of decades is fixing it so if they discover something they cannot do anything with it.

I would like to see a tighter administrative policy.

Mr. McARDLE. We have given that a great deal of consideration, Senator Malone, over a good many years in the Forest Service, and in the Bureau of Land Management of the Department of Interior, and the mining industry has also had many discussions with us on that subject.

The difficulties come with the sheer physical fact that there are so many of these claims. It would take thousands of man-years of work. It would take millions of dollars to attempt to clear up some of these situations that are abandoned claims, or invalid claims, or some other reason.

We estimate—and this is purely an estimate—that it would take about \$30 million just to get caught up and about \$5 million a year from here on out. If they keep on filing claims at the rate they are going, then I would want to raise that \$5 million to a much higher figure. That concerns only the national forests. I do not know what it would be for the Bureau of Land Management.

Senator MALONE. Let me give you just a little bit of information.

Many administrative officials in Government over the last several years, up until last August, made speeches, and wrote briefs and

articles in the papers that uranium, for example, we had to get from the Belgian Congo and that we did not have it in the United States.

Some of us just happened to grow up with this thing.

In 1938 I made a report on Utah and Colorado with respect to uranium. I did not know what they were going to use it for particularly. I do not know why I paid so much attention to it, but you will find a report filed last August out of this committee that did not say it in the words I am going to say to you; but, due to the discovery of its use starting in Colorado and Utah, with the now 7 or 8 States covered by these people that you say do not know what they are doing, probably in about 2 years from now, if we do not run them off of the public land, uranium will be running out of your ears.

I only say that to you as an illustration. It took thousands of people to do this. There was an incentive there that they could make some money on account of a guaranteed price until 1962.

I know you would not know anything about this, but I wanted to give you this information so that you can see that anything you put in the way of a miner could very well result in your having to go to the Belgian Congo for something.

Many of us—I do not know how many I speak for—will go along with you for tightening the administration so that no one can do something with these claims that they are not supposed to do.

I do not like to put more power and, if I may say it, in your hands because I have been familiar with the Forest Service operation in the West for 40 years and I have no good reports to give you today on their administration of the grazing privileges and rights. There is a continual fight, and not only with respect to the fees and cutting down on the carrying capacity.

There is no use going into that here, but if it is of interest to you, we will go into it in some other manner. However, that is something that you ought to know something about. Many of us believe you do not know anything about it.

Mr. McARDLE. I may not know a great deal about mining because I do not pretend to be a miner, but I know a good deal about the surpluses of the national forests and I can speak with some conviction and some authority on that.

Senator MALONE. Undoubtedly that is true.

Mr. McARDLE. Not only for one State, but for other States.

Senator MALONE. That is undoubtedly true. You know, we have no forests in Nevada of any particular value. You know that, do you not?

Mr. McARDLE. There are about 2 million acres.

Senator MALONE. I would say about 200,000.

Mr. McARDLE. It is mostly mountain stuff.

Senator MALONE. And there is no timber value except in about 200,000 acres. You should know that. You can get juniper posts out there. There is no use you and I arguing about that because all you have to do is go to your records.

Mr. McARDLE. Those forests are perhaps of considerable value to the people in Nevada. I do not think they are of great value to folks in other States.

Senator MALONE. They are of no value to the Forest Service.

Mr. McARDLE. There is another aspect that I should bring in that has to do with administration. It is one that we have encountered.

That is, that after going through this process for filing, there is nothing to prevent a man from going out the next day and on a new showing restake a claim, and that has been done. Then you go through with it all over again.

Senator MALONE. Do you want to prevent restaking of a claim if there is an actual discovery?

Mr. McARDLE. No. We have not had that. I am talking about one where the protest was sustained. They go back to the same place and on a new showing restake it.

This bill would clear up these hundreds of thousands of old claims, some of which may be abandoned, some of which may be still alive, and would not in any way affect the claimants' mineral rights but would clear up for all time until the claims went to patent.

Senator MALONE. You would bring every one of these men in. They have to make a showing to file with the Secretary of Interior?

Mr. McARDLE. No; they do not have to. As stated this morning, they do not have to come in.

Senator MALONE. If they do not come in, what happens?

Mr. McARDLE. They can come in, but whether they come in or not, their mineral rights are not affected.

Senator MALONE. What is affected?

Mr. McARDLE. Their rights to manage the surface. It gives the Government access across their claims. It gives the Government the right to manage the timber and forage.

Senator MALONE. To show the uselessness of talking to anybody who has no mining experience, how would a prospector know how much timber he is going to need until he hits something of value?

Mr. McARDLE. I do not think he would know, Senator Malone, and there is nothing in this bill that anticipates his future need.

Senator MALONE. You can go in and take the timber off of the claim.

Mr. McARDLE. If there is timber we are taking off, he would be no better or no worse than the man who located where there was no timber.

Senator MILLIKIN. That does not answer anything.

Senator MALONE. That is like a statement that a man would be no worse off with water on his land than a man who located where there was no water.

Mr. McARDLE. There is nothing in this bill, as I understand it, that goes to the question of anticipated future needs of a miner.

Senator MALONE. I think it is obvious because you can take the timber off and it may develop in the following 4 or 5 years that he needs a great amount of timber for his mining operations, and then it is gone.

Senator MILLIKIN. Senator Malone, would you let me ask a question?

Senator MALONE. Yes.

Senator MILLIKIN. Mr. Chairman, would there be an objection to tightening the provisions in this bill whereby if the mining requirements for a claim were not met as far as timber is concerned by taking it away from them that the Forest Service or some responsible Federal agency would supply the timber they need to conduct their mining operations?

Mr. McARDLE. I do not think we would object to that.

Senator ANDERSON. I certainly would not object to it going in the bill.

Senator MILLIKIN. That is what we are talking about and I propose an amendment of that kind.

Senator ANDERSON. I think that would be a clarifying amendment. I can assure you, Senator Millikon, that I do not want anything cleared for any individual who is not going into a mining venture.

I went into one and I needed timber and acquired timber, but I did it in connection with a mining operation. It turned out to be a mistake, but it was my privilege. It was my own money.

Senator MALONE. Once in a while you get a man who will spend a couple of dimes.

Senator ANDERSON. It was a coal mine. Natural gas came in and took my market away from me, just after we put \$200,000 into it.

Senator MALONE. In Virginia City, there was produced a billion dollars. If every dollar that went into those tunnels was subtracted from it, the chances are they did not produce as much as was spent up on the mountain, but that is the way mining is done.

Senator ANDERSON. I think it would be very useful, Senator Millikin, following your questions and Senator Malone's questions along that line, if you would produce an amendment which might be submitted to us so that we could have a chance to submit it to the Interior and Agriculture. It sounds good to me.

Senator MILLIKIN. Thank you very much.

Tomorrow morning we will have Mr. Besley, Mr. Callison, Mr. Hudoba, Mr. Granger and Mr. Palmer.

We will recess until tomorrow morning at 10 o'clock.

(Whereupon, at 5:10 p. m., the hearing was recessed, to reconvene at 10 a. m. Thursday, May 19, 1955.)

# MULTIPLE SURFACE USES OF THE PUBLIC DOMAIN

THURSDAY, MAY 19, 1955

UNITED STATES SENATE,  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The committee met at 10 a. m., pursuant to recess, in room 224, Senate Office Building, Hon. Clinton P. Anderson presiding.

Present: Senators Clinton P. Anderson, New Mexico; Alan Bible, Nevada; Richard L. Neuberger, Oregon; George W. Malone, Nevada; Arthur V. Watkins, Utah; and Frank A. Barrett, Wyoming.

Present also: Stewart French, chief counsel, and N. D. McSherry, assistant chief clerk.

Senator ANDERSON. The hearing will come to order. Mr. Besley, of the American Forestry Association, and a number of other witnesses waited all day yesterday to be heard, but the questioning was so detailed and thorough that we were unable to reach them.

Mr. Besley?

## STATEMENT OF LOWELL BESLEY, EXECUTIVE DIRECTOR-FORESTER, THE AMERICAN FORESTRY ASSOCIATION

Mr. BESLEY. Mr. Chairman, my name is Lowell Besley, and I represent the American Forestry Association of which I am the executive director-forester.

Senator ANDERSON. Did you hear the questions yesterday about who the American Forestry Association is?

Mr. BESLEY. Yes, sir.

Senator ANDERSON. I know it well but I thought it might be well to have it in the record.

Mr. BESLEY. I have a written statement, sir, which I should like to submit for the record. Do you want me to read it?

Senator ANDERSON. Yes, if you will.

Mr. BESLEY. Our nonprofit, nongovernmental and noncommercial educational organization joins together some 25,000 or 26,000 members all across the country who, as good citizens and as leaders in community, State, and Nation, believe in the protection, proper management, and wise use of our natural resources.

For 80 years the American Forestry Association has ceaselessly fought for a sound national-forest policy and the wise implementation of that policy. Indeed, it was largely through AFA's influence that the great national forests were originally established.

## MINING ON PUBLIC LANDS

It is therefore small wonder that we have for some time been seriously concerned with the increasing problem of mining claim abuses on national forests and other Federal forest lands. The mining laws have too often been misused to obtain claim or title to valuable timber, summer homesites, or lands blocking access to water needed in the grazing use of the national forests. Other claims have amounted to private hunting or fishing preserves.

Not only has the use of the surface resources of the claims themselves been denied the public but, in many instances, access to adjacent public lands of much larger extent has been effectively obstructed by the strategic locations of these claims.

This situation has been interfering seriously with the orderly management and development of the surface values and resources of the national forests and other western public lands.

In attempting to correct this undue interference with the proper management of our surface resources of timber, water, forage, wildlife, and fish habitats, and outdoor recreation, great care must be used to avoid a converse undue interference with the discovery and development of minerals by the bona fide prospector and miner.

Our country needs these great mineral resources from the bowels of the earth just as it needs the renewable resources from its surface. Basically, both those primarily interested in the surface and those concerned with the minerals have long recognized the problem created by abuses of the mining laws and have wanted these abuses terminated. But they could not agree upon how to accomplish this.

## PAST PROPOSALS FOR CORRECTING ABUSES

I do not need to remind this committee of the many proposals which have been introduced or of the valiant efforts of your committee and the Agriculture Committee during the last three Congresses to arrive at an equitable solution to this problem. These efforts have not been in vain, for as a result of all this study and thought and discussion, you have before you in S. 1713 a unified proposal which we believe will go far toward solving the most serious problems of administering the surface resources without discouraging the continued discovery and development of the minerals.

## AFA'S PROGRAM

Perhaps you will better understand our position if I summarize for you briefly a little of the background of this proposed legislation.

After a preliminary conference and full discussion of 800 natural-resource leaders at the Fourth American Forest Congress in October 1953, a new Program for American Forestry, copy attached, was overwhelmingly adopted by referendum vote of the membership of the American Forestry Association.

Section III D, Mining on Public Lands, of this program reads as follows:

Efficient management of many millions of acres of Federal public lands, including the discovery and development of new or known mineral resources, is in the public interest. The legitimate miner and prospector should be encouraged to carry on such work. However, widespread abuses under the existing mining laws as a means of acquiring Government lands for other than mining purposes should be stopped. We, therefore, recommend that Congress revise the Federal mining laws to prevent their abuse by claimants or patentees who use their claims to tie up more valuable timber or other surface resources than they legitimately need to develop the minerals.

#### SITUATION ON NATIONAL FORESTS

Up until this year unresolved conflicts among leaders have, unfortunately, blocked constructive action. Meanwhile, as evidenced by the table on the next page, the situation has become increasingly acute.

Senator ANDERSON. The table will be made a part of the record.

(The table is as follows:)

*Analysis of mining claims on national forests as of Jan. 1, 1952, and 1955—Estimates prepared from figures published by the U. S. Forest Service by the American Forestry Association, May 1, 1955*

	Arizona	California	Colorado	Idaho	Montana	Nevada	New Mexico	Oregon	South Dakota	Utah	Washington	Wyoming	Total
Patented mining claims, national forests, as of Jan. 1, 1952:													
Number.....	1.1	3.1	17.0	3.2	5.1	0.7	0.7	1.4	1.0	1.4	1.2	0.8	36.3
Area.....	53	135	360	81	117	12	24	27	74	57	21	18	919
Percent of number ever commercially mined	5	14	12	28	17	50	16	22	7	10	8	1	15
Unpatented mining claims, national forests, as of Jan. 1, 1952:													
Number.....	5.0	19.6	9.4	15.8	6.9	2.9	2.3	7.8	2.6	7.8	2.9	0.9	84.0
Area.....	95	583	256	355	133	51	82	267	52	185	72	33	2,164
Volume of timber.....	70	3,490	80	1,170	85	(?)	225	2,301	81	7	751	36	8,298
Estimated value of timber.....	700	50,177	368	8,425	440	(?)	2,000	36,307	542	40	4,111	417	103,527
Value of timber per acre.....	140	2,555	39	532	64	(?)	851	4,756	298	5	1,442	485	1,232
Value of timber per acre.....	7.35	86.00	1.43	23.70	3.32	(?)	24.50	136.00	10.60	0.22	57.50	12.07	47.84
Percent of number producing minerals commercially	9.0	0.8	1.0	4.3	1.7	2.0	3.0	1.8	4.5	2.0	2.2	0.6	2.0
Percent valid under mining laws	22	30	37	42	46	60	24	55	30	50	52	55	40
Unpatented mining claims, national forests, as of Jan. 1, 1955:													
Number.....	34.3	21.0	16.7	18.4	14.6	6.2	8.7	6.7	4.8	28.4	3	2.0	166.2
Area.....	684	602	375	408	282	108	223	215	103	583	94	78	3,755
Unpatented mining claims, national forests, comparison 1955 with 1952:													
Number 1955 as multiple number 1952.....	6.9	1.1	1.8	1.2	2.1	1.8	3.7	0.9	1.9	3.6	1.8	2.5	2.0
Area 1955 as multiple area 1952.....	6.2	1.0	1.5	1.2	2.1	2.3	2.8	0.8	2.0	3.2	1.3	2.4	1.7

In the 12 Western States in which there are mining claims on the national forest, there are now in excess of 166,000 claims, covering nearly 4 million acres and tying up many billion board feet of timber worth many millions of dollars.

Three years ago, when there were only half as many claims, there were 81½ million board feet of lumber, worth at 1951 prices, over \$100 million on mining claims alone, not counting the large amount tied up on adjacent areas by obstruction of access. Unpatented claims on these national forests today are more than four times both in number and area all the claims which have ever been patented on these forests under the mining laws.

This fact is even more significant when we realize that only 15 percent of these patented claims have ever been commercial mining operations. Furthermore, of the 84,000 unpatented claims on these national forests as of January 1, 1952, only 40 percent were estimated to be valid under the very liberal interpretations of the present mining laws, while only 2 percent were estimated to be producing minerals in commercial quantities at that time.

The urgency of finding an answer to the problem is evident when we realize that one new claim is now being filed on the national forests every 8 minutes, 167 a day, 5,000 new claims each month.

#### CONFERENCE ON MINING CLAIMS

It was in this atmosphere that, after exhaustive conferences with Members of Congress and committee staffs, the American Forestry Association asked top leaders of the Departments of Agriculture and Interior and of the mining industry to sit down together around the table in a working conference on February 10, 1955, to try to evolve a workable solution that would eliminate questionable claims while fully protecting the legitimate interests of both the public and the mining industry.

By exhibiting a constructive attitude and a true desire to find a practical answer, and by concentrating on areas of agreement rather than those of disagreement, these representatives were able to forge the framework of the proposal which is before you with your cooperation, Senator Anderson, and that of your committee staff.

At this conference the Forest Service first stated clearly its desires. For new claims, these included:

1. Locator may use so much of the surface as reasonably necessary for prospecting, mining, and development;

2. Locator may use as much of timber on the claim, unless disposed of by the Government prior to use, as is reasonably necessary for prospecting, mining, and development, timber to be cut under sound rules of forest management except in required clearing for mining purposes;

3. Locator may not obstruct or prevent other uses of the surface of the claim if not in conflict with mineral development;

4. Mining claims are or become invalid:

(a) If not filed for record in the local United States district land office within 90 days from date of location;

(b) For noncompliance with the laws as amended, including insufficient discovery to justify further development and failure to meet annual work requirements;

(c) Upon failure for two consecutive years to file notice of performance of assessment work in the local United States district land office, or

(d) If application for patent not made within 10 years of date of location.

Section 4 of the proposed bill includes the first three items in full. Items 4 (a), (b), and (c), referring to land office records, and (d) limiting the life of claims prior to patent, were not agreed to by the conference.

In general, the conference concluded that recording in the land offices would be a hardship on the locator and extra work for the land office which would be unnecessary and of little use as long as the first three items were put into effect. Likewise, the mining industry representatives were strongly opposed to a time limit on claims because of the close relationship between mineral development and economics. It was pointed out that there are valuable mines today which were in claim status for 25 years or more before it became economically feasible to develop them.

The Forest Service proposed several provisions for patenting of new claims which, in effect, would separate the surface values from the minerals and would require the patentee to purchase, at fair market price, the surface and timber rights on his claim if he desired a fee simple title to the whole claim.

The mining representatives strongly opposed this as a destroyer of incentive and as removing a basic part of the long-established and generally successful patent system. Since agreement could not be reached, the conference omitted this proposal.

In lieu of a costly recording system and time limitation on existing claims, the conference agreed upon the "in rem" procedure provided in sections 6 and 7 of the bill for clearing up expeditiously the claim situation on specific areas of public lands.

The suggested proposal respecting common varieties of sand, stone, gravel, pumice, pumicite, and cinders was likewise agreed to and incorporated in section 3 of the bill.

A further report on this conference and subsequent action is contained in the May 1955 issue of *American Forests*, a copy of which has been sent each of you.

See the editorial on page 7 and *The First Step Toward Correcting Abuses of Mining Laws* on pages 18, 19, and 44. (This article is included with the remarks of Representative Cooley in the appendix of the May 10 Congressional Record, pp. A3140-A3141.)

(COMMITTEE NOTE.—The editorial is also on file with the committee and is a part of its records of this hearing.)

Provisions of proposed legislation: Summarizing, the proposed legislation will:

1. Ban the location of mining claims for common varieties of sand, stone, gravel, pumice, pumicite, and cinders and make them subject to disposal by the United States under terms of the Materials Disposal Act.

2. As to mining claims hereafter located, it would, prior to patent:  
 (a) Prohibit use of the mining claims for any purpose other than prospecting, mining, processing, and related activities.

(b) Authorize the Federal Government to manage and dispose of the timber and forage, to manage the other surface resources, and to use the surface of the claim for these purposes or for access to adjacent land, without endangering or materially interfering with mining operations or related activities.

(c) Bar the mining claimant from removing or using the timber or other surface resources except to the extent required for mining or related activities. Any timber cutting by the mining claimant, other than that to provide clearance, must be done in accordance with sound principles of forest management.

3. As to mining claims located prior to enactment of this legislation, an "in rem" procedure, similar to a "quiet-title" action, is provided by which the Federal Government can expeditiously resolve title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims in any area. This procedure calls for adequate notice to mining claimants in the area involved, and a local hearing, if needed, to determine any rights to surface resources that may be asserted by claim holders. If a mining claimant fails to assert rights to surface resources, or if the rights he asserts are not upheld, or if he voluntarily waives such rights, the claim would fall under the same rules as for claims hereafter located, as in 2 (a), (b), and (c), above.

#### EFFECTS OF PROPOSED LEGISLATION

From the standpoint of the Federal forest land administrator and from the public using the surface resources, the advantages of this legislation are at once apparent.

The surface of new claims, except for the small areas actually cleared for mining and related purposes may be managed and used just as if there were no claim there. In the case of old claims, the proposed procedure requires the claimants in any specific area being cleared up to come forward and assert their claims to surface resources and, unless the land administering agency waives its right, to substantiate these claims in a public hearing.

If the claims to surface resources are upheld, and it is expected that many will be either voluntarily or involuntarily washed out, their exact locations are made known to the administering agency so that it can plan accordingly.

It is for these reasons that Forest Service representatives have estimated that this legislation would clear up most of their mining claim troubles. Likewise, Bureau of Land Management representatives look upon it with favor as a means of clearing up many troubles without adding undue burdens in the way of the Land Office records specified by certain earlier proposals.

From the standpoint of the bona fide prospector and miner, the principal advantage of the legislation is that it promises to remove the incentive for locating mining claims for purposes other than actual mining operations and related activities without interfering with the rights the legitimate miner now enjoys under the mining laws.

Public condemnation against abuses has fallen indiscriminately upon the whole mining industry, the just and the unjust alike. The

legitimate miner will rejoice in deliverance from this unjust odium. At the same time, he still will enjoy the opportunity of locating mining claims, of mining any minerals found, and of making a profit if he is fortunate enough to discover and develop commercial deposits. Likewise, he can eventually secure his investment with a full title to mining claims when all the requirements for patent have been met.

#### RESOLUTION OF AFA EXECUTIVE COMMITTEE

At its meeting on April 15, 1955, AFA's executive committee unanimously passed the following resolution:

*Resolved*, That the American Forestry Association strongly supports the proposed revision of the mining laws which will permit multiple use of the surface of mining claims, both in national forests and on other public lands, and will eliminate the incentive to locate mining claims for purposes other than actual mining operations and related activities.

This legislation has been placed before the Congress in identical bills introduced by Representatives Dawson, Utah; Fjare, Montana; Young, Nevada; H. R. 5561, 5563, 5572, respectively, and in those which will be introduced or sponsored by many others on succeeding days.

We wish to thank the leaders of the Departments of Agriculture and Interior and of the mining industry who, upon our invitation, sat down together in a working conference and resolved their differences in order to formulate the constructive and sound principles upon which this proposed legislation is based. We wish to thank the representatives of these three groups who drafted the bills incorporating these principles. And we wish to thank the Senators and Representatives who have so enthusiastically undertaken the responsibility of introducing this legislation and who will support it in the Congress. We believe the enactment will be a tremendous step forward in correcting and preventing abuses and in enabling more efficient and more beneficial administration of the surface resources of our national forests and other public lands subject to the mining laws. Therefore, we urge all groups and individuals to join with us in strongly supporting this forward-looking legislation.

In conclusion, I should like to thank you, Mr. Chairman, and your committee, for the privilege of appearing before you on behalf of the American Forestry Association in full support of this sound, constructive, and urgently needed legislation.

I think that all of you received copies of our March issue which commemorates the 50 years of the United States Forest Service, and we were very pleased to have that opportunity to pay tribute to them and to trace their development over the years.

Senator ANDERSON. How long has the American Forestry Association been in existence?

Mr. BESLEY. We were founded in 1875, sir. At our first American Forest Congress back in 1872, there was the proposal for the forest reserves and the second one in 1905 was the one that set up the proposal for the Forest Service.

As you know, several of your predecessors as Secretary of Agriculture served as presidents of our association. Our present directors and officers are listed in the bookmark which is in the material I furnished you.

Naturally, having been so interested all through the years in the Forest Service, we have been extremely concerned with this problem of mining claims because we feel that it has been a serious detriment to the proper management of our national forests. It, of course, is a detriment to other Federal public lands, that is, these mining claim abuses.

It is unnecessary, I am sure, for me to repeat what the witnesses said so ably yesterday, tracing just how serious the mining claim problem is, but, as you know, Mr. Chairman, we, as an association, have no particular interest, as Mr. Hoffman mentioned yesterday; we do not represent the lumber industry although we are very proud to claim among our members a number of people in the industry, including Mr. Hagenstein, who testified yesterday, and he is a life member of our association.

Senator ANDERSON. He in turn represents some people that I have known for a long time. They are fine foresters.

Mr. BESLEY. Exactly.

Senator ANDERSON. Their lumbering and forestry practices are top-notch.

Mr. BESLEY. That is quite so. As a matter of fact, as you probably know, the Industrial Forestry Association is not a typical trade association but is an association of forest land owners of which, of course, a number of them are pulp and paper companies and lumber companies out in the Pacific Northwest. But they are primarily people who are interested in forestry and that is why they call themselves the Industrial Forestry Association.

We are very proud of our membership and of the objectives in the American Forestry Association. We feel that we represent to some extent the general public interest because we are not interested only in the timber but we are also interested in the forage and wildlife and fish habitats which the forests furnish, and we are very happy to have the support of groups who are interested particularly in one or more phases in connection with the national resources which the forests furnish or which are collateral to them.

I do not, of course, need to go into the history of how earnestly Congress has worked over this problem for many years. We feel that it has become extremely urgent that with the, as I understand, 8 new claims every minute on the national forests, and there are already 186,000, with the claims on the national forests having doubled in the last 3 years, that when we have today five times as many claims as has ever been patented back as far as the mining laws were established in 1872, and when we recognize that over half of the claims are believed to be invalid, certainly something must be done and must be done promptly.

I should be very upset if this problem is further delayed because we have worried about it for a great many years and it was one of the points in our program for American forestry which we drew up after careful consultation with the conservation leaders in every line of natural resources in the country after our forest congress in October 1953, at which there were about 800 leaders in the various fields of renewable natural resources.

We have arrived at a program for American forestry which we are trying to implement.

If you will notice where the bookmark is in the program, you will notice that one of the important points in this program has to do with mining on public lands. I might quote, it is a very short quotation:

Efficient management of many millions of acres of Federal public lands, including the discovery and development of new or known mineral resources, is in the public interest. The legitimate miner and prospector should be encouraged

to carry on such work. However, widespread abuses under the existing mining laws—namely, efforts by individuals to use the mining laws as a means of acquiring Government lands for other than mining purposes—should be stopped. We, therefore, recommend that:

1. Congress revise the Federal mining laws to prevent their abuse by claimants or patentees who use their claims to tie up more valuable timber or other surface resources than they legitimately need to develop the minerals.

In order to implement this recommendation, we have recognized the problem as you have, sir. We have tried to figure out some solution. We have backed some of the legislation in the past which we thought was aimed at that solution and it has been unsuccessful because we had a conflict of interest in that the previous legislation was felt by the mining people themselves to curtail and to detract from the proper discovery and development of the mineral resources of this country.

We felt that the best way was to try to get the various groups together to see if we could not work out a system which would be reasonably satisfactory to all and which would help to correct this situation.

With respect to the background of this particular legislation, I believe that we have some responsibility for it. On February 10 we called a conference at our office among the top leaders in the mining industry, with representatives from the American Mining Congress there, with representatives from the Forest Service in the Department of Agriculture, and with representatives from the Department of Interior. And I should like to pay tribute to those men who worked all day long very hard on this problem, who went into that conference with considerable differences of opinion, and who kept their eye on the ball, so to speak, and concentrated on points of agreement rather than on points of disagreement and have constructively laid down some principles which have been embodied into this legislation.

Consequently, we feel that this legislation may not be perfect but it certainly goes a long way toward clearing up one of the—to us—very serious sore spots in the administration of our Federal public lands.

Consequently, my board of directors has authorized me to appear before you and to recommend very strongly the passage of this bill, S. 1713.

Mr. Chairman, I could give you lots of other reasons but I do not want to take your time, with all of the witnesses that you have. I will be glad to answer any additional questions that you might have.

Senator ANDERSON. Thank you very much.

We will take this pamphlet, A Program for American Forestry, for the files.

Any questions, Senator Bible?

Senator BIBLE. I have no questions.

Senator ANDERSON. Senator Barrett?

Senator BARRETT. No questions.

Senator ANDERSON. Thank you, sir.

Mr. BESLEY. Thank you, gentlemen.

Senator ANDERSON. Mr. Callison?

**STATEMENT OF CHARLES H. CALLISON, CONSERVATION DIRECTOR,  
NATIONAL WILDLIFE FEDERATION, WASHINGTON, D. C.**

Mr. CALLISON. Mr. Chairman and members of the committee, my name is Charles H. Callison and I am conservation director of the National Wildlife Federation.

I wish to thank you for the privilege of presenting the views of the National Wildlife Federation on the proposed solution of the mining claim problem on the public lands.

The federation is a national, nonprofit organization whose member are State wildlife federations or sportsmen's leagues in the various States and Territories. We have affiliated organizations now in every State except Georgia, and also in Alaska and the District of Columbia. Through their member clubs and associations these affiliate groups represent some 3 million conservation-minded citizens.

For years conservationists have advocated reform of the mining laws for the purpose of correcting a situation which has widely complicated administration and development of the resources of the public lands.

Thousands of mining claims have been filed by persons described recently by Congressman William A. Dawson as "weekend miners." Their real purpose was not prospecting or mining at all, but rather to secure control of valuable timber or choice sites for fishing camps or summer homes. In some instances the claim sites have been used for commercial ventures bearing no relation to mining.

A recent boom in uranium prospecting has heightened the problem. No one knows what proportion of the total are legitimate mining operations but by January 1, 1955, the Forest Service estimated that 166,000 claims had tied up over 4 million acres of the national forests.

In some forest units, the Service finds itself unable to make a timber sale because both access and timber rights are frozen by mining claims.

In many areas of the West, the confused pyramiding of claims has practically paralyzed the management of the timber, range, and wildlife resources of the national forests. While not so many related resource uses may be involved on the public-grazing lands and on other portions of the public domain, the situation nevertheless is equally serious in many areas outside the national forests.

At their most recent annual convention, held March 11-13 at Montreal, Quebec, the State representatives who make up the voting membership of the National Wildlife Federation adopted a resolution endorsing the principles of the bill introduced by you, Mr. Chairman, S. 687, and the similar bills introduced in the House by Congressman Clifford R. Hope, H. R. 110, and Congressman Harold D. Cooley, H. R. 3414.

Parts of the bill under consideration at this hearing are identical in effect to certain sections of S. 687, and H. R. 3414, the Cooley bill, as they relate to deposits of common varieties of sand, stone, gravel, pumice, pumicite, and cinders. The federation has long favored taking such materials out from under the operations of the general mining laws and making them subject to the Materials Disposal Act of July 31, 1947, as here proposed.

Other sections of S. 1713 do not go as far as the earlier Anderson, Hope, and Cooley bills in separating surface rights from mineral rights in the national forests, and in reforming filing procedures.

This new bill, however, does have other advantages that persuade us to support it. Its corrective features would apply to all of the public lands, not just to the national forests.

It does provide a procedure through which, on given areas of the public domain, claimants can be challenged to show that their claims are legitimate and defensible. Thus, depending on the personnel and funds which may be made available for the purpose, the records and the lands may gradually be cleared of the clutter of phony claims.

As the name of our organization indicates, Mr. Chairman, the membership of the National Wildlife Federation has a special interest in the wildlife resources of the public lands and in the recreational opportunities which those resources may provide to the public.

I don't have to remind this committee of the importance of recreational use of the public lands. The Forest Service last year recorded more than 40 million recreational visits. Over 10 million of these visits were by hunters and fishermen.

Under present law a mining claimant may post his claim against trespass and deny access to a hunter or fisherman. He may deny access also to an agent of the Federal Government who may desire admittance for purposes of managing wild game habitat or improving a fishing stream. Indeed, many claims have been filed apparently for that very purpose.

Claims have been filed astraddle fishing streams, and sportsmen wading those streams have been forced to turn back. Other claims have been filed and posted at points to restrict public access to a good hunting area.

Thus, under the present law, mining claimants have been able to thwart the public harvest and proper management of fish and game resources on the public lands.

We interpret the language of section 4 (b) of S. 1713, Mr. Chairman, as corrective of this situation.

A claimant who files pursuant to this act will not be able legally to post his claim against trespass by hunters or fishermen. He cannot deny access to the Federal Government or its licensees or permittees when access is intended for the purpose of harvesting or otherwise managing the fish and wildlife resources, so long, of course, as such access does not "endanger or materially interfere with prospecting, mining, or processing operations or uses reasonably incident thereto."

In view of these considerations, we recommend that S. 1713 be reported favorably by committee and enacted by the Congress.

I thank you very much, Mr. Chairman.

SENATOR ANDERSON. We appreciate your coming here personally to do this because I know you were here and waited a long time and had to leave, and we are glad you came back.

Do you have any questions, Senator Bible?

SENATOR BIBLE. I was just wondering, Mr. Chairman, if section 4 (b) does what you claim it does, Mr. Callison. I was reading 4 (b) and I am wondering how that is brought about practically.

MR. CALLISON. Senator Bible, we interpret section 4, subsection (b) as guaranteeing access for hunters and fishermen or for agents of the

Government for purposes of managing wildlife resources because of the language which says:

Rights under any mining claim hereafter located under the mining laws of the United States shall be subject, prior to issuance of patent therefor, to the right of the United States to manage and dispose of the vegetative surface resources thereof and to manage other surface resources thereof.

Wildlife resources, wildlife and wildlife habitat, or other surface resources thereof.

Senator ANDERSON. In other words, a man might want very much to fish along a stream. However, at the present time anyone could file a claim along the stream—he could file several of them in succession, in fact, as illustrated by the timber man yesterday. In practice, a mining claimant could pretty well block the stream for fishermen by saying that you cannot fish or wade in the stream.

Mining claimants control the entire surface for all purposes, under the present mining law, do they not?

Mr. CALLISON. They certainly do and that very thing has happened in many places in the West and is happening today under the present mining laws.

The next sentence of subsection (b) also applies to that problem, section 4 (b), which says:

Any such mining claim shall also be subject, prior to issuance of patent therefor, to the right of the United States, its permittees and licensees, to use so much of the surface thereof as may be necessary for such purposes or for access to adjacent land.

While in most national forests no special written or formal permit is required by the Federal Government of hunters and fishermen, still they are permittees by virtue of their being permitted to harvest wildlife resources.

Under the laws of the States, the game and fish laws of the States, we have cooperative arrangements with the Federal Government for those purposes.

Senator BIBLE. You think that is sufficient as drafted now, Mr. Callison, to accomplish your purpose?

Mr. CALLISON. Senator Bible, according to our advices and according to our interpretation of the law, it will take care of this situation, our interpretation of the law, rather.

Senator BIBLE. As a practical matter, if I am a fisherman and I have a residence in Nevada and I want to go to Senator Barrett's mining claim across the Truckee River, he has a no trespass sign, what happens if I go across there? Does that fishing license give me access across this stream to his mining claim?

Senator WATKINS. You mean prior to patent?

Senator BIBLE. No. Under section 4.

Senator WATKINS. Prior to patent?

Senator BIBLE. Prior to patent if he has an open mining claim?

Mr. CALLISON. That would be true on claims filed pursuant to this act.

Senator BIBLE. That is what I mean, after this act goes into effect.

Mr. CALLISON. Yes.

Senator BIBLE. You interpret that to mean that after I show my fishing license to Senator Barrett that I can go across the property?

Senator ANDERSON. You may be able to, providing he does not assert he needs the surface for mining operations. He can only have so

much of the surface as is necessary for mining operations. Theoretically, he cannot go down the stream on the public domain and say, "You cannot indulge in any fishing because I have a claim here," unless he is actually using the stream banks for mining purposes.

Senator BIBLE. I was wondering if it was practically accomplished. I feel there is an area where they should not use mining claims to prevent fishermen.

Senator WATKINS. The Senator realizes that that is what is being done many times now?

Senator BIBLE. I understand.

Senator WATKINS. Under the present law.

Senator BIBLE. This is to correct that?

Senator WATKINS. In other words, there is no objection to a miner doing the things that a miner ought to do to develop a mining claim, but when he uses that as a subterfuge to tie up public domain where he does not have a legitimate mining claim, this bill is intended to correct that sort of abuse.

Senator BIBLE. The only purpose of my question was to determine from Mr. Callison if he felt that section 4 did permit the fishermen to go on the stream under those circumstances. I understand his answer is yes.

Mr. CALLISON. Mr. Chairman, in that connection I have a comment here from Seth Gordon, director of the department of fish and game of the State of California, raising the question of access by hunters and fishermen as a result of the present mining laws, and he attaches an opinion to that by the office of the attorney general of the State of California, and an analysis of how the present laws are interpreted to deny access to hunters and fishermen.

I should like to submit that for the record.

Senator ANDERSON. I think it ought to be printed in the record at this point.

(The information referred to follows:)

STATE OF CALIFORNIA DEPARTMENT OF FISH AND GAME,  
*Sacramento, Calif., January 13, 1955.*

Mr. CHARLES H. CALLISON,  
*Secretary, National Wildlife Federation,  
Takoma Park, Washington, D. C.*

DEAR CHARLIE: No doubt you have heard something of the difficulties we out here in the West are facing with the posting against all trespass of thousands of new mining claims. Our problems have been particularly aggravated by the multitude of recent uranium claims being filed, which in some cases blanket entire important watersheds.

The gravity of the situation prompted us recently to request an opinion from our attorney general, copy of which is enclosed.

I have today written to the directors of the 11 Western States asking that they give me a sizeup of their problems in this regard, and what steps they have taken so far to combat this serious threat to the use of our public lands by the sportsmen and other recreationists.

We should all, without delay, put forth our best efforts to get quick remedial legislation on the Federal level. We should not wait until we can get general mining-law revisions, although this particular situation could be used to build up public demand for prompt action on the entire problem.

The Federal law should definitely require that in the issuance of mining claims the right to hunt and fish shall be reserved to the public.

I strongly urge that the National Wildlife Federation take immediate action to initiate necessary remedial legislation and promote a campaign to assure

the Nation's sportsmen the right to hunt and fish without hindrance by mining claims.

Hoping you will tackle this problem without delay, I am, with best regards,  
Sincerely yours,

SETH GORDON, *Director.*

OPINION OF EDMUND G. BROWN, ATTORNEY GENERAL; AND RALPH W. SCOTT, DEPUTY ATTORNEY GENERAL

STATE OF CALIFORNIA,  
OFFICE OF THE ATTORNEY GENERAL,  
January 10, 1955.

W. T. Shannon, Deputy Director of the Department of Fish and Game, has submitted the following questions:

1. "May an angler fish along a stream or river which runs through a posted mining claim?"
2. "May a hunter walk over a mining claim on public domain or national forest lands?"
3. "Is it legitimate for the owner of (a) claim to post such areas against trespass?"

Our conclusions are summarized as follows:

A locator of a mining claim who in good faith complies with requirements essential to a valid location is entitled to exclusive possession of the claim and may maintain trespass against anyone entering the claim without his permission. Assuming the stream or river mentioned in question (1) is not navigable and has not become a public highway under the provisions of Government Code sections 25660-25662, an angler may not fish from that portion of the stream or river which runs through a valid mining claim posted against entry.

Question 2 is answered negatively provided the claim is posted against entry or trespass is otherwise prohibited by Penal Code section 602 or section 627.

Assuming the validity of the mining claim, the owner thereof may post such area against trespass.

#### ANALYSIS

The general policy of Federal mining laws is to permit the widespread development and exploitation of the Nation's mineral deposits and to afford mining opportunities to as many persons as possible (*cf. United States etc. v. Ickes*, 98 F. 2d 271, cert. denied, 305 U. S. 619, 83 L. Ed. 395; *Conger v. Weaver*, 6 Cal. 548). To that end Congress enacted legislation many years ago opening the public lands of the United States, not otherwise reserved, to location and patent, for the purpose of extracting minerals therefrom. This legislation is codified in United States Code, title 30, sections 21 et seq. In brief, the lands which are subject to location as mining claims must contain valuable mining deposits, must belong to the United States, and must be unoccupied and unappropriated at the time of location (*cf. South. Calif. Ry. Co. v. O'Donnell*, 3 Cal. App. 382; 17 Cal. Jur. 282). It is settled that a mining claim, once perfected and maintained under law, is property in the fullest sense of that term and may be sold, mortgaged, partitioned, or taken under execution without infringing on the title of the United States (*Brown v. Luddy*, 121 Cal. App. 494; *Van Ness v. Rooney*, 160 Cal. 131; *Wallace v. Hudson*, 170 Cal. 596). For all practical purposes a valid mining claim is an estate in fee (*Buchner v. Malloy*, 155 Cal. 253). It follows that the locator of a valid mining claim is not a mere licensee but is the absolute owner of an estate and cannot be deprived of inchoate rights by the tortious acts of others (*Gobert v. Butterfield*, 23 Cal. App. 1; *Watterson v. Cruise*, 179 Cal. 379; *Dalton v. Clark*, 129 Cal. App. 136). Under Federal law the locators of mining claims have " \* \* so long as they comply with the laws of the United States, and with State, territorial, and local regulations not in conflict with the laws of the United States governing their possessory title, \* \* the exclusive right of possession and enjoyment of all the surface included within the lines of their locations. \* \* " (30 U. S. C. sec. 26).

In keeping with this section it has been consistently held in this State that the locator of a mining claim is entitled to all of the privileges and incidences pertaining to the soil and his possession of the claim is sufficient to protect him against trespassers (*Grandall v. Woods*, 8 Cal. 136; *Roue v. Bradley*, 12 Cal. 228; *Lightner Mining Co. v. Superior Court*, 14 Cal. App. 642; *Empire Star Lines Co. v. Butler*, 62 Cal. App. 2d 466; *cf. also Page v. Fowler*, 37 Cal. 100; *Grover v. Hawley*, 5 Cal. 485; *Brandt v. Wheaton*, 52 Cal. 430).

While none of the cases mentioned in the foregoing paragraph involve trespass by hunters or fishermen, it follows as a matter of general application that the possessory rights of a mining claimant who in good faith complies with requirements essential to a valid location, entitles him to post the property against entry by fishermen and hunters (Pen. Code secs. 602, 627). It is elementary that every unauthorized entry upon the land of another is a trespass. However, if the stream or river mentioned in the first question is navigable or has been declared a public highway pursuant to Government Code sections 25660-25662, public entry cannot be denied. Within the limitations of fish and game laws, a person has the right to hunt or fish at any place where he may lawfully go, but the public has no right to invade or cross private lands in order to reach public lands or public waters (*Bolsa Land Co. v. Burdick*, 151 Cal. 254).

Mr. Shannon points out that many of the claims are located "solely for the purpose of obtaining a cabin site and then posted against trespass, commonly in areas which have always been open picnic areas." What we have said hereinabove with respect to the possessory rights of the locator of a mining claim is based upon the assumption that the claim is located in good faith and that the locator has complied and continues to comply with all the requirements of law with respect to the claim such as making improvements, etc. It is quite obvious that possessory rights of the locator depend upon the validity of the location or the legality of his claim. Mining laws do not contemplate the location of mining claims solely for the purpose of permitting the locator to build a cabin thereon for recreational purposes. Each case therefore will stand on its own merits, and if a person is denied access to the lands embraced within a mining claim, he will have the burden of establishing his right of entry by proving the invalidity of the claim (*cf. Watterson v. Cruse*, 179 Cal. 379; *Calif. Dolomite Co. v. Standridge*, 128 A. C. A. 756).

Article I, section 25, of the California Constitution does not appear to be applicable here, for the reason that that provision of the Constitution does not affect Federal public land but only pertains to State public land (*cf. 22 Ops. Cal. Atty. Gen. 134, 136*). As pointed out hereinabove, mining claims can only be located upon lands belonging to the United States.

Senator NEUBERGER. May I ask Mr. Callison one question?

Senator ANDERSON. Yes.

Senator NEUBERGER. You mentioned in your written testimony, Mr. Callison, that you felt while you support S. 1713, it did not go as far as you would like.

In what particular respect did you want it to go farther?

Mr. CALLISON. Well, we still think there will be an inducement for individuals to file mining claims that even under this act will be done for the purpose of gaining title to timber resources rather than mining.

The standing timber in many areas of the national forests is so valuable that there will still be an inducement under this bill.

Senator NEUBERGER. In other words, there is nothing to prevent a man who secures patent and secures a claim from harvesting the timber.

Mr. CALLISON. That is right, after it goes to patent the timber is his. In many instances he may prove a patent on a mining operation which amounts to very little, not enough to encourage a prudent man to proceed but he would acquire title to timber worth far more than any minerals.

Senator WATKINS. Does he not have to go much further than that to get a patent?

Mr. CALLISON. Yes, I think he has to show that he does have a legitimate and proper mining operation but still the timber may be worth more.

Senator WATKINS. That could possibly happen provided it was on a placer claim, but on a small load claim that would not be true. If it is a heavy timbered area, he would use some timber for mining operations?

Mr. CALLISON. Yes.

Senator WATKINS. Then he would be permitted to clear the timber off so he could operate?

Mr. CALLISON. Yes, sir; he is entitled to do that.

Senator WATKINS. For buildings and other things he would have to build. Suppose he had an ordinary sized claim?

Mr. CALLISON. I understand on that even on 20 acres of some of the national forest lands of Oregon and California, the timber may be worth \$15,000 or \$20,000.

Senator NEUBERGER. That is right.

Senator WATKINS. It could be possible on some of them.

Senator NEUBERGER. We had a situation just recently in Oregon, Senator Watkins, where 15 controversial claims, and it was denied that there was sufficient mineralization by both the Bureau of Forest Service and Bureau of Land Management, and yet the Secretary overruled both of those agencies on the basis of a private assay and gave the company patent and they commercially logged the timber on that, not for the use in access or using it for pit props or something like that. They commercially logged it for sale and the Forest Service tells me that the sale amounted to well over \$12,000.

Senator WATKINS. Yes.

Senator MALONE. How many claims?

Senator NEUBERGER. Fifteen. There were 23 claims involved. A patent was granted to eight without controversy. Fifteen were denied by both the Forest Service and the BLM, but the Secretary overruled them on a basis of a study made by a Mobile, Ala., assay corporation.

Senator BARRETT. Mr. Chairman, I would like to ask the witness a question. I understood him to say certain abuses with references to the harvesting of timber would or might occur under this legislation; is that right?

Mr. CALLISON. No; I did not intend to say that. I said there would still be an inducement to certain individuals who file mining claims when their main purpose would be to get the title to the timber rather than for mining purposes.

Senator BARRETT. Under this legislation how could they take advantage of timber resources by these phony filings that you speak of?

Mr. CALLISON. Perhaps it could not be called a phony filing in that sense.

Senator BARRETT. Any kind of filing, whether phony or otherwise?

Mr. CALLISON. When it goes to patent, they would get title. I was making a comparison to the earlier bill introduced by Senator Anderson.

Senator BARRETT. Well, then, what you are talking about is after patent, not before?

Mr. CALLISON. Yes.

Senator WATKINS. But after patent, then, you get the title to the fee of land?

Mr. CALLISON. Yes.

Senator WATKINS. And all that goes with it and you have established the main purpose apparently conclusively.

Senator BARRETT. After you have proved up as a mining claim.

Senator WATKINS. After you have proved that it is a mining claim, and it is a legitimate claim, and you are not there for any other

purpose, that is not in keeping with the objectives of the mining setup.

Mr. CALLISON. That is right.

Senator BARRETT. There is one other statement that I think is rather ambiguous and I am sure you did not intend it.

It is this one on page 2 where you say:

It does provide a procedure through which, on given areas of the public domain, claimants can be challenged to show that their claims are legitimate and defensible.

This legislation does not go quite that far, does it, Mr. Callison?

Mr. CALLISON. Perhaps my use of wordage there is not exactly correct, but what I mean by that was the procedure that is provided in this bill may be used by the Forest Service acting through the Department of the Interior, or by the Bureau of Land Management, through the Department of Interior, through various processes of notifying the claimant to arrange for hearings at which they can go into whether or not the claimant has a legitimate claim, one that can be defended.

Senator BARRETT. I do not think it goes that far; that is the point I am trying to bring out. I think the validity of his mining rights or his right to harvest the minerals from that land are not in question, only the question of the use of the surface resources.

When he gets through, the man can continue to exert his rights to recover any minerals on the claim, even though he may not use the surface except as incidental for that purpose.

Mr. CALLISON. That is essentially true, I believe, Senator Barrett, but I think at the hearing the Government would have an opportunity to show that it was believed he did not have a sufficient showing of minerals. They would have an opportunity at that time.

Of course, he could refile again but then he would refile subject to the provisions of this act.

Senator BARRETT. Yes; he would refile subject to the provisions of this act.

I do not think the purpose of the bill is to question the validity of his mining claim as such. I do not think there is any effort there to deny the man the right to proceed with the orderly development of the claim for mineral purposes.

Mr. CALLISON. I agree with you on that, sir. As you say, my sentence was ambiguous.

Senator BARRETT. I think that is a point we ought to make abundantly clear because that will be very important to these small miners that they will certainly not be subjected to the possibilities of having the right to continue the mining operations attacked by reason of this procedure.

Senator ANDERSON. I do not think there is a possibility of it; certainly that is not the intent and we will state that in the report and on the floor. There could not be any question on that.

Senator WATKINS. They would have no authority beyond stopping the legal operation. They may not be exactly illegal but they are not in keeping with the purposes of mining.

Mr. CALLISON. That is what I intend it to mean when I say challenging to show that their claims are legitimate. I did not mean that there would be opportunity to challenge that mining operation.

Senator WATKINS. This bill would not be necessary if these people had gone ahead and tended strictly to the mining business and nothing else, but they use this apparently as a no-man's land as far as the law is concerned, a rather hazy situation, and use that to develop other interests other than mining.

Senator ANDERSON. Are there additional questions?

Senator MALONE. Mr. Chairman, I would like to say at this time that the thing that disturbs some of us is the continual pressure from all sides, not only on this mining situation but in other situations so that we make the man who is trying to do something, put him on the defensive. You come in the doors and they come in the windows. Close the windows and they come up through the cellar floor.

We had a Secretary of Interior for almost 20 years and he was continually running out of petroleum. He was continually also attacking certain features like the depletion allowance, and if he could have won that fight, he would have run out of oil.

Of course, that is obvious now to everybody. He was not successful in abolishing the depletion allowance and now the oil runs out of our ears, but he ran out of it for 20 years.

Now, we had another situation here that has been fought through the Congress and extended. Now a worker or investor in any industry in this country has to show that his job or his investment is important to national defense in order to be protected.

Now we come to the mining claims and we have the picture of the United States Forest Service and the Bureau of Land Management making an investigation to determine whether a mining claim has any possibility of success.

I have not yet made the acquaintance of anybody in either of those services that knows anything about mining. They are not supposed to. They are built up for another purpose. Still, the witness says that they both made an investigation and they saw no possibility of success and therefore they turned this man down.

The Secretary, on an assay of a reputable assaying outfit, granted a patent.

Now, Mr. Chairman, what I think you are doing with this bill is putting the prospector on the defensive.

It was well established here yesterday morning by one of the witnesses, Mr. Holbrook, that now in order to make a case against a miner on a claim, it must be initiated in the department. It can be done, and if it can be shown that he has not located it for a mining purpose, it can be declared out of bounds.

However, he said it is quite a bit of work for the department to do that so they want something that puts the miner on the defensive so that he has to prove himself before their department that he has a legitimate mining operation.

Now, this is not to say that there are not abuses in all these things. For example, the homestead extension, there is a section that they could file on. All these things are abuses, veterans' pensions are abused. Pretty nearly everything suffers some abuses, but I want to call it to the attention of the distinguished witness here who represents the National Wildlife Federation, and I am in entire sympathy with the wildlife efforts to make available and improve the hunting and the fishing and all of the work in that connection.

We have it in our own State, a good outfit handling it, and they are trying to do a good job and I am trying to help them, but I am not trying to help them beyond their field.

I want to ask the witness what happens on a farm with respect to fishing rights?

Suppose a man owns a piece of land and it happens that a stream runs through it, what are the rules and regulations that affect the Wildlife Federation?

Mr. CALLISON. The owner of private property, private land, Senator, of course, has complete control of trespass. He can post it and keep them off.

When a mining claim goes to patent, the patentee will have similar rights.

Senator MALONE. Are you against all this?

Mr. CALLISON. No, sir.

Senator MALONE. Let me say this to you in all friendliness, that since 1872, when a man goes out and sets up a stake and starts to work his claim and fulfills all of the criteria, all of the rules and regulations laid down in the law to all intents and purposes, as long as he fulfills those regulations of the law, he owns that land. When he quits doing that, he has no rights. You understand that, do you not?

Mr. CALLISON. I understand that he has the right under the present law to post his mining claim; yes, sir.

Senator MALONE. Even if it is just a location, but his assessment work is done and he has full rights.

I have heard this delineated several times in the last 2 or 3 days that naturally you do not object after he gets a patent, but he owns that claim as long as he has his notice up and his location is filed with the county clerk and he has done his assessment work and he is just as proud of that little piece of land and is doing at least the amount of work that the law requires as after he patents it.

I would like for you to explain to me after I say something to you about a homestead why you object to a man controlling it when he has complied with the law, when you do not object after he gets a patent.

Now, this country was mostly settled up west of the Ohio River on homesteads. When a man goes out there and files a homestead, complies with the law, it takes him 3 years to get a patent. You are familiar with that, are you not.

Mr. CALLISON. Yes, sir.

Senator MALONE. Did you have any idea that he had any more rights when he got the patent than when he was filing on his homestead and was complying with all the laws? Do you have any idea that he had any more rights after he got patent than he had when it was underway?

Mr. CALLISON. No; I did not.

I think, Senator Malone, that the situation here is somewhat different in that there are other legitimate rights and interest in the public lands that are subject to mining claims, in addition to the locator's interests, that need to be protected. Some of those rights and interests involve just as much free enterprise and just as much American spirit as the mining enterprise, and I am speaking of the commercial harvesting of timber and the use of those lands for grazing purposes.

Those require certain things and are to the benefit of free enterprise and initiative and all the things that we call American just as much as the mining claim procedures.

Senator MALONE. Have you ever had any experience in the matter of mining or grazing?

Mr. CALLISON. I have in the matter of grazing.

Senator MALONE. Where are you from?

Mr. CALLISON. I was born on a homestead in Alberta.

Senator MALONE. Alberta, Canada?

Mr. CALLISON. Alberta, Canada. My parents were Missourians who went to Canada and homesteaded.

Senator MALONE. When did you come back?

Mr. CALLISON. I have lived in the United States since I was 6 years old.

Senator MALONE. What did you do after you got through school?

Mr. CALLISON. I grew up on a farm in Missouri after they came back to the United States.

After I got through school I have been in newspaper work and in conservation work since.

Senator MALONE. Well, I have been in this business that you are discussing. I have patented many of these claims, have been with these miners and livestock men for 40 years.

Mr. CALLISON. I know that is true, sir.

Senator MALONE. I want to say this to you. What all of us would like to do is not to handicap any other use but not to handicap the original purpose of the bill.

For 20 years there has been an attempt to get control in Government here in Washington. How long have you been in Washington?

Mr. CALLISON. Four years.

Senator MALONE. Well, that is too long. Nobody is normal here after 3 months unless they go back out there where they are earning a living the hard way. Every one of these people in Government begin to believe their clippings and think that, being a graduate of some college, they know everything about the public lands.

As a matter of fact, if you go back a little further until 1934, the policy of the United States Government in relation to public lands was holding them in trust for the States until they could figure out some way, homestead, mining, or some other way, to get them in private hands and let them get on the tax roll.

In 1934 they passed the Taylor Grazing Act. There never had been any charge for public lands. They were always looking for a way to give them to people to use them. They were always giving away good land from Ohio west for a \$15 filing fee, and all you had to do was to comply with the law; that was the duty of the Federal Government officials to see that they complied with the law.

Now, when they got out to western Kansas, where 160 acres was just a kind of aggravation and not enough to make a living, they passed a homestead extension, another 160 acres, and you could get 320. Are you familiar with all this business?

Mr. CALLISON. I am familiar with it.

Senator MALONE. You know it happened?

Mr. CALLISON. Yes, sir.

Senator MALONE. Why did they pass that additional 160? So that the man could make a living.

They got out on the mesas in Colorado and that became an aggravation, so they passed what they call the Stock Homestead Act; I do not have it exactly right but that was where you could file on 640 acres. Are you familiar with that?

Mr. CALLISON. Yes, sir; I am familiar with the history generally and I have personal experience.

Senator MALONE. Many of them went across the short-grass country, across Colorado and Utah. Then you got into the Great American Desert, and that includes a part of my State, and 640 acres was just an aggravation because the investigations of the United States Geodetic Survey said that an average, not every acre, some parts of very few acres can support a cow but in some places they cannot walk far enough in a day to get enough to eat. So the average in the whole State is 140 acres per cow unit, 40 acres per sheep unit.

Now, you are not talking about acres then, you are not talking about sections; you are talking about townships when you start talking about enough cattle and sheep to make a living for a family. A band of sheep or 250 head of cattle or whatever it is, in other words.

Now, to bring you up to date on that, gradually they are changing the objective of the Government, not now to hold the lands in trust for the States until they can find some way to put them in private ownership, but some way of getting tighter control in Washington.

I only mention these other approaches to show you that this is not the only approach. The petroleum approach through Mr. Ickes, he made a thousand speeches that we would be out of oil. You had to save this for war, not having any knowledge that the only way you find additional supplies of gas and oil is to make it profitable for what you have.

Now, when it was made profitable, and through the depletion allowance it was gambling money, that is all it was. Now you do not know what to do with your oil. We are importing oil and shutting down our own wells, but it is an approach to do just what you are trying to do and you do not even know it.

I do not want to say you do not know it; your testimony does not show it. Maybe you do know it. If you do, it is worse.

We have passed something here in the last few days that when it was passed in 1934, it changed a 100-year-old policy. We always protected a worker and the investor to the point of difference in the cost. Now we have a 3-year extension of the thing that a worker and an investor has to show that he is important to national defense to live.

Now we come in with this thing here. I know the mining law has been abused. I know every law on the statute books has been abused; I know every regulation of a city in driving is abused. I do it sometimes myself, although not purposely, but we all do it.

What do we do: abolish the driver, or do we tighten the restrictions?

Senator ANDERSON. There is nothing in the bill that tries to abolish the miner.

Senator MALONE. I know what is in the bill.

Senator ANDERSON. It does not try to abolish the miner.

Senator MALONE. What you are trying to do is put the shoe on the other foot and put the miner on the defensive.

Senator ANDERSON. I think you ought to state what is in the bill.

Senator MALONE. I am talking about what is in the bill. You are breaking the ice, you are starting it. Every man that has been on this thing, they have cited what we did 2 years ago or a year ago as a precedent for this one that this is in line with the uranium setup, which it is not at all.

What we did in that bill was to coordinate the oil and gas-leasing act with the mining act. It has nothing whatever to do with this bill. It did not modify it in any direction at all. It did not put under the Bureau of Land Management or under the Forest Service or under the Fish and Wildlife any direction of the mining law.

Now, this thing is simply a further opening wedge. We discussed this very thing when we coordinated the oil and gas-leasing act with the mining act that it was not to be used as a precedent to get a further leasing foot in the door.

If there is not plenty of authority on the part of the Government now, and it was testified by Mr. Holbrook that they could do it, then we could easily amend the mining act to give them that authority, to go in and make this examination and go to court with it, which he can now do.

But let me say something to you, Mr. Chairman, that if every man, prospector, is put off in his claim in the United States today, that the Forest Service and the Bureau of Land Management do not think has any showing and, as a matter of fact, where you could not find any showing, that I hear a reasonable man would spend his money on, mining men are not reasonable men. They spend their money where there is no showing but they have a hunch that there is ore there if they dig deep enough or if they sell enough stock or something; that is the way they find the mines.

They do not find mines by going to a joker in a department that does not know anything about mining and could not make a living if you gave him the money to start off with because he does not have the determination himself and the fever that sends them into these places to find this ore.

Mr. Chairman, I want to cite you something that if you do a little reading, in Virginia City, Nev., where they produced \$1 billion during and after the Civil War, they did not know the valuable ore there. People went out broke and crying and by accident somebody assayed a blue mud that they had been throwing down the mountainside and they found out it was silver.

Senator ANDERSON. We can tell a thousand stories of it and this does not stop that situation.

Senator MALONE. Yes, it does; it sends these jokers in there that do not know anything about mining at all.

Senator ANDERSON. It does not send a soul in.

Senator MALONE. Here is a man testifying and then supported by a Senator, that the Forest Service went in and decided that there was no sign of a mine there, it was not reasonable. The Bureau of Land Management went in and turned it down. Both of these great organizations turned that miner down and still the Secretary of the Interior, on an assay, decided to go ahead with the patent.

Suppose you had had a Secretary of the Interior like Mr. Ickes or somebody, and he would have said that the Bureau of Land Manage-

ment says there is nothing, and they would have turned down the patent.

Senator ANDERSON. He does not do it on that basis.

Senator MALONE. But he could and this is an encouragement for it.

Senator ANDERSON. He could not do it under existing law and he could not do it under this law. The only way he could reject it is if they had no mine.

Senator MALONE. I hope we have some witnesses later on this, because this, in my opinion, is one step in the whole Government program coming up through the cellar, the doors and windows to keep any man from having any authority over Government land; that started in 1934 and is continuing.

Senator NEUBERGER. The Senator said that the witness did not know anything about mining and that I supported him.

Senator MALONE. I did not say he did not know anything about the mining. I said there was all this timber and it has been turned down by the Bureau of Land Management. I did not say you did not know anything about mining. I may get to that later.

Senator NEUBERGER. How much do these mining operators know about commercial lumbering?

Senator MALONE. The testimony yesterday had been that these men had never sold commercially this timber. I forget who testified that. Maybe you have different information but as I understood it, it was that when they located these claims they had no difficulty in logging off of the claims.

Who was that; does anyone remember? I can look it up.

Senator NEUBERGER. You mean that this timber on those claims in the Rogue River National Forest was not logged or harvested commercially?

Mr. HOLBROOK. I did not testify to that.

Senator MALONE. Somebody testified that they had not generally had trouble with logging the claims off.

Senator NEUBERGER. But I question the specific instance that I referred to. Are you saying that this timber on the Rogue River National Forest, these claims in which the validity of them was challenged by the Forest Service and the Bureau of Land Management, and later both these agencies were overruled by the Secretary on the basis of a private assay by a firm from Mobile, Ala., 3,000 miles from the Rogue River National Forest; are you saying that the timber on those claims was not logged?

Senator MALONE. No, because they were patented.

Senator NEUBERGER. Sure, they were patented, but you are talking about the fact that we did not know anything about mining.

I am asking you how much these mining companies knew about commercial logging and lumbering.

Senator MALONE. They probably did not know much.

Senator WATKINS. They knew of their profit.

Senator MALONE. What I am saying is if the Secretary of the Interior, on an assay, and I do not care where the assayer lives because he does not have to know anything about particular area, if he says there was profitable ore there and the Secretary of the Interior was in accord with that, he owned it.

But no one has objected as a witness yet to their owning the timber after it is patented.

Senator ANDERSON. I was going to say, why do we not settle this among ourselves?

Senator MALONE. I am trying to settle here that the patent was issued by the Secretary because he thought, on the basis of the assay, they deserved it and they logged it.

Senator ANDERSON. On that basis, under the law the mining patentee had the timber, and under S. 1713, if it becomes law, he will have it.

Senator MALONE. Nobody has objected to them having the timber when it is patented. They are only objecting to it at first.

As an example, it was patented because the Secretary of the Interior believed the assays and there was no doubt.

Senator ANDERSON. All I am saying is that exactly the same situation would prevail under this bill.

Senator BARRETT. Mr. Chairman, I want to ask the Senator and the witness a question, if they will permit me to do so.

If you will refer to page 12 of the bill, you will find there this sentence in the middle of that page:

The procedures with respect to notice of such a hearing and conduct thereof, and in respect to appeals, shall follow the then established general procedures and rules of practice of the Department of the Interior in respect to contests or protests affecting public lands of the United States.

Senator MALONE. What are these?

Senator BARRETT. That is the exact procedure that is in force now and has been in force for many years. It involved contests of homestead and mining claims. There is no change at all with reference to the situation in that respect.

Senator MALONE. There is this change, Senator, that it puts the shoe on the other foot.

Senator BARRETT. No; it does not. It is right there as it has always been and that is the thing I am trying to bring out, that there is not any change. The requirements on the mining claimant remain the same.

Senator MALONE. If we have Secretaries like Mr. Ickes, we would not have any petroleum drilling or mining claims or anything else, because they said we did not have these minerals, too.

Senator WATKINS. They can go to the courts. If they do not like the decision of the departments, they can go to the court and have them reverse it, and they do occasionally.

Senator BARRETT. But there is no change in the existing law.

Senator MALONE. The little prospector can go to court and have it reversed?

Senator BARRETT. Let us ask the witness.

Mr. CALLISON. That is the way I interpret it, Senator Barrett; no change in the procedures.

Senator ANDERSON. I was going to say that this man here so testified. Mr. Holbrook is a competent attorney. He has testified that it does not change the rights in any way on this. He has testified over and over again, and if there is a change, I think we ought to have some interpretation of the law to show what it is.

I would be glad to have him come back to the stand.

Senator MALONE. The last question I asked him was, "Did this not reverse the procedure?" and he said it did.

Senator WATKINS. Mr. Chairman, I would like to say this, that I happen to represent a State that has something to do with mining.

Senator MALONE. Not much now. They are just about out of it.

Senator WATKINS. I think they are doing more active work in mining in the State of Utah than any other State.

I hope the Senator will give us a chance to speak. He has made his speech.

I say we have a deep interest in this mining situation. I happen to have an interest in the small miner, the prospector who takes his chances, but I happen to know that the burden has always been on him to show that he complied with the law. If the Department attempted to put him off, then the Department had to indicate where he was violating the law.

I cannot see one legitimate interest of a miner with respect to these public lands that this bill will take away from him. It is the illegitimate use of the mining law to tie up forestlands and other lands where there is not any reasonable hope of developing a mine or where there is sand and gravel, which appears everywhere, and ties up the forest.

I think that is an abuse which every legitimate miner ought to see that we get rid of. If it is going to take away any of the legitimate interests, I certainly will be against this bill and I will be glad to strike out anything that indicates that.

But when they get across the stream and say that you cannot fish here, and he probably does not have much except the hope and is there primarily for the purpose of the timber rather than the minerals, that is another thing.

We see them here and there with a little hole and they go back once in a while and do a little work. They tie it up probably forever and hold up the development of the country. It is that type of fellow we are after, not the fellow trying desperately to get a mine. I will do everything to protect them.

As my colleague over in the House described them, they are weekend miners.

Senator ANDERSON. I was just wondering if we could have Mr. Holbrook state whether or not this bill, S. 1713, would change the procedure for a man who is trying to develop a mine, trying to develop the mineral resources of a tract of public land.

Senator MALONE. Have we lost the other witness?

Senator ANDERSON. No; but we want to hear from Mr. Holbrook on this.

What would be the situation? Would it not be precisely what it is under the existing law, Mr. Holbrook?

#### STATEMENT OF RAYMOND B. HOLBROOK—Resumed

Mr. HOLBROOK. I do not think there is anything in the bill, Senator, that will interfere with legitimate mining operations. I think there is a slight difference in the status of his surface rights, but I do not think this difference in any way affects mining or prospecting or allied operations.

In other words, it is something different than mining.

Now, Senator Malone, I did not intend to create the impression that the procedure set up under this bill reverses the situation. Senator Watkins has stated the rule of law correctly as I understand it, that the burden has always been on the mining claimant to establish that he has a valid mining claim.

Senator WATKINS. That shoe has always been on that foot, has it not?

Mr. HOLBROOK. That is right.

Senator ANDERSON. For 75 years?

Mr. HOLBROOK. Yes. It is an absolute necessity in the matter of administering the law. You cannot prove a negative; it is a well-established point of law. So the miner has to establish that he has a good mining claim.

Senator MALONE. Under this bill?

Mr. HOLBROOK. Under existing law and all of the procedures involved in a contest and a protest, the mining claimant has to establish that he has a mining claim.

Senator WATKINS. You are talking about the mining law that is now in effect?

Mr. HOLBROOK. That is right.

Senator WATKINS. And that was in before we passed the bill last year?

Mr. HOLBROOK. Yes.

Senator MALONE. Let me read a part of this if you are through?

Senator ANDERSON. All right.

Senator MALONE. I am not interrupting anybody?

Senator ANDERSON. No, sir.

Senator MALONE. The bill says here as follows:

Except to the extent required for the mining claimant's prospecting, mining, or processing operations and uses reasonably incident thereto. \* \* \*

Under section 5, we find the following:

The Secretary of the Federal department which has the responsibility for administering surface resources of any lands belonging to the United States may file as to such lands in the Office of the Secretary of the Interior, or in such office as the Secretary of the Interior may designate, a request for publication of the notice to mining claimants, for determination of surface rights, which request shall contain a description of the lands covered thereby, showing the section or sections of the public lands surveys which embrace the lands covered by such requests, or if such lands are unsurveyed, either the section or sections which would probably embrace such lands when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument.

The last part of it is the guts of the thing. Then they go on:

The filing of such request for publication shall be accompanied by an affidavit or affidavits of a person or persons over 21 years of age setting forth that the affiant or affiants have examined the lands involved in a reasonable effort to ascertain whether any person or persons were in actual possession of or engaged in the working of such lands or any part thereof, and, if no person or persons were found to be in actual possession of or engaged in the working of said lands or any part thereof on the date of such examination, setting forth such facts, or, if any person or persons were so found to be in actual possession or engaged in such working on the date of such examination, setting forth the name and address of such person, unless affiant shall have been unable through reasonable inquiry to obtain information as to the name and address of any such person, in which event the affidavit shall set forth fully the nature and results of such inquiry.

The filing of such request for publication shall also be accompanied by the certificate of a title or abstract company, or of a title abstractor, or of an attorney, based upon such companies, abstractors, or attorney's examination of those instruments which are shown by the tract indexes in the county office of record as affecting the lands described in said request, setting for the name of any person disclosed by such instruments to have an interest in said lands under any unpatented mining claim heretofore located, together with the address of such person if such address is disclosed by such instruments of record.

"Tract indexes," as used herein, shall mean those indexes, if any, as to surveyed lands identifying instruments as affecting a particular legal subdivision of the public land surveys, and as to unsurveyed lands identifying instruments as affecting a particular probable legal subdivision according to a projected extension of the public land surveys.

Thereupon, the Secretary of the Interior, at the expense of the requesting department or agency—

In other words, that means one of his own agencies, does it not?

Mr. HOLBROOK. The expense could be borne by one of his own agencies or it could be borne by another Federal agency or department having the responsibility for administering the lands involved, depending upon which agency or department initiated the request.

Senator MALONE. That means the humble taxpayer ultimately, I guess.

Senator ANDERSON. This is all the Government.

Senator MALONE. Yes; after it gets the money from the little people out there.

Thereupon the Secretary of the Interior, at the expense of the requesting department or agency, shall cause notice to mining claimants—

these are the ones they dug out of the records—

to be published in a newspaper having general circulation in the county in which the lands involved are situate.

Such notice shall describe the lands covered by such request, as provided heretofore, and shall notify whomever it may concern that if any person claiming or asserting under, or by virtue of, any unpatented mining claim heretofore located, rights as to such lands or any part thereof, shall fail to file in the office where such requests for publication was filed (which office shall be specified in such notice)—

I presume that would be the Land Office in each State—

and within 150 days from the date of the first publication of such notice (which date shall be specified in such notice), a verified statement which shall set forth, as to such unpatented mining claim—

This refers to the locators of the claims.

Mr. HOLBROOK. To the mining claimant.

Senator ANDERSON. Doesn't this refer to the activities of the Department of the Interior?

Mr. HOLBROOK. The individuals he mentioned there are the people that hold the claims.

Senator MALONE. They are the locators of these claims. They are put on notice through publication, and they must then, within 150 days, do these things. And I understand there are nine publications. I think I read it some place in the bill.

Mr. HOLBROOK. That is right.

Senator MALONE. Once each week, is it?

Mr. HOLBROOK. Yes.

Senator MALONE. That would be 2 months. That would be 60 days after the 150. Within 90 days after the last publication then they shall file the following information with the Land Office. And I am talking now about the little mines or anybody that locates a claim:

(1) the date of location;

(2) the book and page of recordation of the notice or certificate of location—

I will ask you how many prospectors have any idea what they file it in, let alone the page and the book—

(3) the section or sections of the public land surveys which embrace such mining claims; or if such lands are unsurveyed, either the section or sections which

would probably embrace such mining claim when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument—

Now, Mr. Chairman, all of this is required of the locator. I will read that again so we don't miss it.

Senator WATKINS. From what are you reading?

Senator MALONE. Page 8 of your bill:

(3) the section or sections of the public land surveys which embrace such mining claims; or if such lands are unsurveyed, either the section or sections which would probably embrace such mining claim when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument—

The fellow who wrote that never lived out there, I will guarantee you that. I don't know who wrote it—

(4) whether such claimant is a locator or purchaser under such location; and

(5) the name and address of such claimant and names and addresses so far as known to the claimant of any other person or persons claiming an interest or interests in or under such unpatented mining claim—

Now all of us know that these claimants, whenever there is a little discovery in there, anywhere from 5 or 6 or 400 or 500 go in and file claims on top of each other hoping there will be a fraction.

So, Mr. Chairman, a prospector of the kind with which you and I are familiar is to notice this advertising in the paper, and, within 90 days after the last publication, he files this information: the date of the location; the book and page of the recordation of the notice or certificate of location; the section or sections of the public land surveys which embrace such mining claim, or, if unsurveyed, he must tie it in to a mineral monument; and then he must tell them whether such claimant is a locator or a purchaser and who he purchased it from, and trace that back; and the name and address of such claimants, names and addresses so far as known to the claimant or any other person or persons claiming an interest.

If you don't do any of these five things—

such failure shall be conclusively deemed (1) to constitute a waiver and relinquishment by such mining claimant of any right, title, or interest under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this act—

and those restrictions in section 4 are set out here. I will get back to those pretty soon.

But if he fails to do any one of these things he relinquishes all right and title.

Senator WATKINS. No.

Mr. HOLBROOK. No; not all right and title.

Senator MALONE. Let's go on a little bit. I am reading from your language. I presume you had a hand in writing this bill. Did you?

Mr. HOLBROOK. Yes, sir.

Senator MALONE. I knew that already. So I am glad to have it in the record [reading]:

such failure shall be conclusively deemed (1) to constitute a waiver and relinquishment by such mining claimant of any right, title, or interest under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this act as to hereafter located unpatented mining claims—

That means what it says, does it not?

Mr. HOLBROOK. Yes, sir.

Senator MALONE (continuing) :

and (ii) to constitute a consent by such mining claimant that such mining claim, prior to issuance of patent therefor, shall be subject to the limitations and restrictions specified in section 4 of this act as to hereafter located unpatented mining claims, and (iii) to preclude thereafter, prior to issuance of patent, any assertion by such mining claimant of any right or title to or interest in or under such mining claim contrary to or in conflict with the limitations or restrictions specified in section 4 of this act as to hereafter located unpatented mining claims.

If such notice is published in a daily paper, it shall be published in the Wednesday issue for 9 consecutive weeks, or, if in a weekly paper, in nine consecutive issues, or, if in a semiweekly or triweekly paper, in the issue of the same day of each week for 9 consecutive weeks.

Within 15 days after the date of first publication of such notice, the department or agency requesting such publication (1) shall cause a copy of such notice to be personally delivered to or to be mailed by registered mail addressed to each person in possession or engaged in the working of the land whose name and address is shown by an affidavit filed as aforesaid, and to each person who may have filed as to any lands described in said notice, a request for notices, as provided in subsection (d) of this section 5, and shall cause a copy of such notice to be mailed by registered mail to each person whose name and address is set forth in the title or abstract company's or title abstractor's or attorney's certificate filed as aforesaid—

and it goes on with a description.

But, unless this is complied with, according to (i) it constitutes a waiver and relinquishment by such mining claimant of any right, title, or interest under such mining claim contrary to or in conflict with the limitations or restrictions set forth in this bill.

Now I want to make this point in going this far, that this is the first attempt to make every prospector, every man that has any intention of filing a mining claim, to comply with these restrictions. And it is the first time you have made him step up to the barrier and make a public statement to the Bureau of Land Management as to whether or not he has such a filing, and, if not, he is subject to the law in any case.

Mr. HOLBROOK. Did you want me to answer that?

Senator MALONE. I don't care whether you answer it or not. I am telling the truth. This is what the law says.

Go ahead and explain it.

Mr. HOLBROOK. It is not the first time.

Public Law 585, which I understood you to say that you supported last year—

Senator MALONE. And it had nothing whatever to do with this. What it did was to try to get the Oil and Gas Leasing Act coordinated with the Mining Act, and it had nothing to do with going out and talking about grazing.

Senator ANDERSON. Does not that law have exactly these same provisions in it?

Senator MALONE. But there was a reason for that.

Senator ANDERSON. There is a reason they are in this measure also.

Senator MALONE. In my opinion, there is no reason to get a prospector when he is not in conflict with the Oil and Gas Leasing Act. And the oil and gas leasing is not in conflict with the other act.

These were two mining acts we were talking about. We were not talking about fishing and hunting. And we were very emphatic, some of us in the committee, that this should not be considered precedent to go on to the next step, to talk about handicapping a prospector.

Mr. HOLBROOK. May I answer your question?

Senator ANDERSON. Yes, sir.

Mr. HOLBROOK. The provisions as to procedure and the action that must be taken by the mining claimant, the locator, is exactly the same, Senator, in this bill as in Public Law 585.

Senator MALONE. But you extend it; do you not?

Mr. HOLBROOK. In Public Law 585—

Senator MALONE. Will you answer my question? Do you extend it to fishing—

Senator WATKINS. Mr. Chairman, I insist that the witness be able to answer the question.

Senator MALONE. I insist that he answer me.

Senator WATKINS. That is what he is trying to do.

I do not want to take advantage, but the witness is trying to finish his answer.

Senator ANDERSON. He should answer. And then you may ask him if he extended it.

Senator WATKINS. He was right in the middle of his answer, and the Senator interrupted him. It is not fair.

Senator MALONE. I interrupted him because I wanted to find out if it applied to fishing and hunting and grazing and forestry. In other words, he is explaining that all this does is exactly what the other law does. But this extends it. That is right; is not not?

Mr. HOLBROOK. Senator, it is hard to give a yes or no answer without giving a wrong impression at times.

This does extend the law or there would be no occasion for the new bill.

Senator MALONE. That is right. Of course, it is obvious.

Senator ANDERSON. What did the old law do? What did Public Law 585 do with precisely this procedure?

Mr. HOLBROOK. My point was that the procedure, the thing that the mining claimant had to do, the routine he has to follow, is precisely the same under this law as under the other law. Under the other law there was a conflict between the mining rights and the oil and gas rights. If the mining claimant did not make an appearance and assert his rights to the Leasing Act minerals, he lost the Leasing Act minerals. And it went further in this respect: that loss was perpetual. It is written into the patent. It is a part of the right that he gets. In other words, it is subject, if he does not come in, always to someone else claiming the Leasing Act minerals.

Now under this law, if he does not come in and set up his claim to the surface rights in addition to those rights required for mining, then he will lose his rights and his claim will be in exactly the same status as the claim located after this bill is passed.

Senator MALONE. In other words, it extends to grazing and to fishing and to forestry.

Mr. HOLBROOK. What I had—

Senator MALONE. Answer that. That is what it does, does it not? Extend it to these other uses?

Mr. HOLBROOK. Senator, as was testified yesterday, there is grave doubt whether he has the right to use them for those purposes.

But they have been locked up so that no one could use them.

Senator MALONE. Then if you are locked out there is no doubt, is there? In other words, we have tried for 75 years or 77, whatever it is—the chairman said a while ago—to establish the fact, just like a

homestead, that when you put your stake up there and you comply with all of the laws, you have the same rights there as you have after a patent. But if you lapse in any way whatever, you lose it.

But when you have done your \$500 worth of work and you have your showing in accordance with the patent law and you patent it, then it belongs to you just the same. You do not have any additional rights, but you have permanent rights.

Mr. HOLBROOK. No; that is not as I understand it.

A mining claimant cannot dispose of timber prior to the patent; but he can after a patent.

There is just one point, Senator. I don't want to take——

Senator MALONE. Let's just spend a little time on that point.

If he has a showing that he can substantiate in court and before the Secretary of the Interior, and it is located, he has got a location, and he has done his assessment work and has abided by everything in good faith, is there any record of them stopping him from doing anything he wanted to do on the claim?

Mr. HOLBROOK. He cannot cut and sell timber, Senator. That is well established.

Senator ANDERSON. We have a thousand records of that.

Senator MALONE. That is all right. I am trying to establish that.

But he has a right on the claim. Is it established that he cannot use the grazing?

Mr. HOLBROOK. That is in litigation, Senator, right now.

Senator MALONE. If he had a couple of horses and a milk cow or something, and he was living out there——

Mr. HOLBROOK. Certainly. And he can still do it. There will be no change in that.

Senator ANDERSON. It doesn't change it a particle.

Senator MALONE. How do you know he can do it?

Mr. HOLBROOK. I was talking about granting somebody else the right to use grazing rights or using it as a grazing entry. If it is necessary to mining he can still do it.

I know of your deep interest in mining. And my point was this, that under the existing proceedings, but which I call a contest, or it may be called an averse or a protest, the mining claimant must come in and set up his rights. He must prove that he has a valid mining claim. And if he doesn't, he is out.

Senator MALONE. You are making him do it.

Mr. HOLBROOK. What?

Senator MALONE. You are making him do it under this bill.

Mr. HOLBROOK. He has to under the existing law.

Senator MALONE. No; he doesn't have to do it except in a special case when you take issue with him.

This thing is a blanket thing.

Mr. HOLBROOK. What I mean is if a contest is issued he has to come in like any——

Senator MALONE. All right. But that is the point you made yesterday, and I think it was a very good point. But you have to initiate the contest, do you not?

Mr. HOLBROOK. Who does?

Senator MALONE. Through the department.

Mr. HOLBROOK. They initiate the contest in this case.

Senator MALONE. No, no. Just wait.

Mr. HOLBROOK. And they initiate the contest in the other case.

Senator MALONE. This is another thing.

You do it by advertising, and you do it all at once under this bill.

Mr. HOLBROOK. Yes.

Senator MALONE. But in the other case you have to initiate the contest personally against a certain mining claim owner.

Mr. HOLBROOK. I am not sure it cannot be done by publication, as I told you yesterday.

Senator MALONE. It never has been done in a blanket way, has it?

Mr. HOLBROOK. My point is this, that the burden always has been and it still is on the mining claimant to come in and assert his rights.

Senator MALONE. But the difference is—

Now you have put your finger on it again: you did yesterday after about a half hour of questioning; now you have done it again after about the same length of time. This time you are doing it with a blanket setup by publication, making every prospector in the United States come in and do this thing instead of having it as it has been for 75 years or 77 years where, if you don't believe that there is a proper location, you do it and it is a personal matter. You serve the mining claimant with a notice from the department, and then he does have to come in.

What you are doing is that you just throw a handful of shot over the whole thing, and they all have to come up and prove that they are doing a good mining job and that they have a mineral showing that justifies their claim.

Mr. HOLBROOK. All those who have mining claims within the prescribed area given in the notice would have to come in.

Senator MALONE. That is right. But you could, in the notice, take in the whole situation at one time, or you could take a whole county or several counties, can you not?

Mr. HOLBROOK. The notice could include a large area.

Senator MALONE. It could include the whole State of Nevada.

Senator BARRETT. They have got to be from one county. Am I not correct?

Mr. HOLBROOK. It has to be published in each county.

Senator MALONE. It could take in the whole State of Nevada or Wyoming in one fell swoop.

Senator BARRETT. You break it down to 20 claims in 1 county, not more than 20 claims, and it has to be all in 1 county.

Mr. HOLBROOK. The hearing could not embrace more than 20 claims.

Senator BARRETT. The notice would have to be as against all the people in that one county. The notice has got to be published in the county where the land is situated.

Senator MALONE. You can bring them all at one time.

Mr. HOLBROOK. You might, I think, publish a notice, the same notice, in 2 or 3 counties.

Senator MALONE. Or 17 counties.

Mr. HOLBROOK. There would have to be notice in each county.

Senator MALONE. Or 17 counties. You could do it all at once, could you not?

Mr. HOLBROOK. Because of your great interest in—

Senator MALONE. Will you answer that?

You could do it in 17 counties at 1 time by having your protests filed and advertising it in a paper of general circulation in each county. You could do it all at once.

Mr. HOLBROOK. If you describe the land in each county, I would think that could be done.

Senator MALONE. Of course. And what you would do—you are not bound to describe all of the land. The petitioner would only have to describe what he knew about and what you know about. You can get the lists. But the reason for the notice is to catch the people that maybe you don't even know about.

Mr. HOLBROOK. I don't see that it makes a bit of difference, Senator, whether a larger area is described or a smaller area is described, as long as the notice is adequate and as long as the man does not have to come in and sit around for 2 weeks or 3 months or a year for a hearing. The idea is that a hearing should be such that he won't have to wait, and that he doesn't have a transcript that will break him if he wants to take an appeal.

That is exactly why this is limited to 20 claims.

Senator MALONE. All right, it is limited to 20 claims.

Senator WATKINS. You are talking about the act we now have in existence that passed last year.

Mr. HOLBROOK. I am talking about this act.

Senator WATKINS. This is the same as the other one.

Mr. HOLBROOK. I don't believe the 20-claim limitation was in, but that was limited to 640 acres because that is the size, as I recall, of each mineral lease. I have not looked at that for quite a while.

Senator MALONE. I want to make this further point:

That was limited to mining acts. You were merely modifying one to fit into the other, and vice versa. In other words, you were trying to make two mining acts coordinate.

If you are in a hurry you can leave.

Mr. HOLBROOK. I am not, Senator.

Senator MALONE. What I am trying to say to you now is this: You have again made the point you made yesterday in a little different way. This is a blanket advertisement under which you can bring in every prospector in the State of Nevada or the State of Utah and make him comply with the rules and regulations of this act. He must come to town. He must do what you say in these five things here. He must furnish:

- (1) the date of location;
- (2) the book and page of recordation of the notice or certificate of location;
- (3) the section or sections of the public-land surveys which embrace such mining claim; or, if such lands are unsurveyed, either the section or sections which would probably embrace such mining claim when the public-land surveys are extended to such lands, or a tie by courses and distances to an approved United States mineral monument;
- (4) whether such claimant is a locator or purchaser under such location; and
- (5) the name and address of such claimant and names and addresses so far as known to the claimant of any other person or persons claiming any interest or interests in or under such unpatented mining claim.

The point is this: You can bring them in under a blanket setup—put the shoe on the other foot, just as you said yesterday, whereas, under the present law, you must take them one at a time or maybe a small group. If there has been a protest here you can file something in your department, or one department into another, and bring them in under the regular law, which you say it doesn't change. But there is no such thing here that you can make them show what you are attempting to make them show here, and to make them do it on a certain date, all of them together.

Mr. HOLBROOK. I don't understand what you mean by putting the shoe on the other foot, Senator. As a lawyer, I don't understand you.

Senator MALONE. Now let's make it a little bit different.

I have had a little difficulty with lawyers over my short career, and most of them are trying to satisfy everybody, and sometimes they don't get into the meat of it.

The meat of it is that now you can file against any mining locator. That is true, is it not?

Mr. HOLBROOK. This is a more expeditious procedure.

Senator MALONE. Wait a minute.

I asked you: You can do that, can you not?

Mr. HOLBROOK. You can publish the notice and bring everybody in, require them to come in, who have claims within the described area.

Senator MALONE. Under this bill.

Mr. HOLBROOK. That is right, sir. And under Public Law 585.

Senator MALONE. 585, as I have explained to you, dealt with two mining acts. That is true, is it not? It dealt with two acts, one of them oil and gas, and, the other, minerals, and they conflicted.

Mr. HOLBROOK. Yes, sir.

Senator MALONE. But they were both mining.

Yes, oils and minerals; they are mining acts.

Mr. HOLBROOK. Yes, sir.

Senator MALONE. We did not bring in fishing; we did not bring in range; we did not bring in the forest service, did we?

Mr. HOLBROOK. That is correct.

Senator MALONE. But still you as a lawyer say that that is a precedent for this.

I don't think it is.

But nevertheless you are entitled to your opinion.

You say they are just alike; nothing is changed here. But under the old act you can't just publish a newspaper article and have them come in or forfeit their rights under certain conditions, can you?

Mr. HOLBROOK. Are you talking about Public Law 585?

Senator MALONE. No. I am talking about the 1872 act as amended up to that time. We didn't touch all this funny stuff at all. What we were doing was trying to get miners together, and we did, and I am in favor of that.

Mr. HOLBROOK. As I indicated——

Senator MALONE. Now you as a lawyer say that is a precedent for anything you want to do.

Mr. HOLBROOK. As I indicated yesterday, Senator, I am not familiar with the details of administrative procedure in one of these adversary actions except that I do know——

Senator MALONE. Under the old act you don't know anything about that.

Mr. HOLBROOK. Except I do know that the burden is on the mining claimant to come in and set up that he has a valid claim.

Senator MALONE. After you file charges against him in an inter-departmental charge.

Mr. HOLBROOK. Yes.

Senator MALONE. And you do that with one or a small group, and you notify the claimant, do you not? You don't just publish it in a newspaper.

Mr. HOLBROOK. I can't answer that because I don't know.

Senator MALONE. Why didn't you look it up? You are testifying on a very important point here, and you are a lawyer. You are working for the—

Who are you working for?

Mr. HOLBROOK. The United States Smelting, Refining & Mining Co.

Senator MALONE. That is what I thought.

Mr. HOLBROOK. We don't initiate any proceedings.

Senator MALONE. Of course you don't. And a company the size of the company that you just mentioned has no trouble at all in doing anything because they have the money to spend.

We are trying to talk about miners as a blanket proposition.

Senator ANDERSON. Would the Senator—

Senator MALONE. I wanted to ask him this one final question.

There is that difference. You say you don't know that there is that difference. But you must know that under the 1872 Mining Act what you do, you protest a claimant, a certain claimant. You don't just throw a handful of shot. You name them, don't you, in the Department of the Interior?

Mr. HOLBROOK. I don't believe that is in the mining law. I think it is, as Mr. Hoffman testified, a matter of rules and regulations in the Department.

Senator MALONE. I will tell you what it is. It is a matter of 75 years of precedent and court decisions. That is what it is.

Senator ANDERSON. Would the Senator permit me to suggest that we put the rules and regulations into the record at this point?

(The rules and regulations referred to are as follows:)

#### PART 221—RULES OF PRACTICE

##### SUBPART A—PROCEEDINGS BEFORE MANAGER

###### INITIATION BY CONTESTS OF PROTESTS

§ 221.1 *By whom contests or protests may be initiated.* (a) Contests may be initiated by any person seeking to acquire title to, or claiming an interest in, the land involved, against a party to any entry, filing, or other claim under laws of Congress relating to the public lands, because of priority of claim, or for any sufficient cause affecting the legality or validity of the claim, not shown by the records of the Bureau of Land Management.

(b) Any protest or application to contest filed by any other person shall be forthwith referred to the State Supervisor of the Bureau, who will promptly investigate the same and recommend appropriate action.

###### APPLICATION TO CONTEST

§ 221.2 *Form of application.* Any person desiring to institute a contest must file, in duplicate, with the manager, application in that behalf, together with statement under oath containing:

(a) Name and residence of each party, adversely interested, including the age of each heir of any deceased entryman.

(b) Description and character of the land involved.

(c) Reference, so far as known to the applicant, to any proceedings pending for the acquisition of title to or the use of such lands.

(d) Statement, in ordinary and concise language, of the facts constituting the grounds of contest.

(e) Statement of the law under which applicant intends to acquire title and facts showing that he is qualified to do so.

(f) That the proceeding is not collusive or speculative, but is instituted and will be diligently pursued in good faith.

(g) Application that affiant be allowed to prove said allegations and that the entry, filing, or other claim be canceled.

(h) Address to which papers shall be sent for service on such applicant.

§ 221.3 *Corroboration required.* The statements in the application must be corroborated by the affidavit of at least one witness having such personal knowledge of the facts in relation to the contested entry as, if proven, would render it subject to cancellation, and these facts must be set forth in his affidavit.

§ 221.4 *Allowance by manager.* The manager may allow any application to contest without reference thereof to the Director; but where notation on the records of the Bureau of Land Management is required, the manager must immediately forward a copy thereof to the Director, who will promptly cause proper notations to be made upon the records, and no patent or other evidence of title shall issue until and unless the case is closed in favor of the contestee.

#### CONSENT NOTICE

§ 221.5 *Form of notice.* The manager shall act promptly upon all applications to contest, and upon the allowance of any such application shall issue notice, directed to the persons adversely interested, containing:

(a) The names of the parties, description of the lands involved, and identification, by appropriate reference, of the proceeding against which the contest is directed.

(b) Notice that unless the adverse party appears and answers the allegation of said contest within 30 days after service of notice the allegations of the contest will be taken as confessed.

#### SERVICE OF NOTICE

§ 221.6 *How notice may be served.* Notice of contest may be served on the adverse party personally or by publication.

§ 221.7 *Personal service.* (a) Personal service of notice of contest may be made by any person over the age of 18 years, or by registered mail; when served by registered mail, proof thereof must be accompanied by post-office registry return receipt, showing personal delivery to the party to whom the same is directed; when service is made personally, proof thereof shall be by written acknowledgment of the person served, or by affidavit of the person serving the same, showing personal delivery to the party served; except when service is made by publication, copy of the affidavit of contest must be served with such notice.

(b) When the contest is against the heirs of a deceased entryman, the notice shall be served on each heir. If the heirs of the entryman are nonresident or unknown, notice may be served upon them by publication as hereinafter provided. If the person to be personally served is an infant under 14 years of age or a person who has been legally adjudged of unsound mind, service of notice shall be made by delivering a copy of the notice to the statutory guardian or committee of such infant or person of unsound mind, if there be one; if there be none, then by delivering a copy of the notice to the person having the infant or person of unsound mind in charge.

§ 221.8 *Abatement of contest.* Unless notice of contest is personally served within 30 days after issuance of such notice and proof thereof made not later than 30 days after such service, or if service by publication is ordered, unless publication is commenced within 20 days after such order and proof of service of notice by publication is made not later than 20 days after the fourth publication, as specified in § 221.10, the contest shall abate: *Provided*, That if the defendant makes answer without questioning the service or the proof of service of said notice, the contest will proceed without further requirement in those particulars.

#### SERVING NOTICE BY PUBLICATION

§ 221.9 *When notice may be given by publication.* (a) Notice of contest may be given by publication only when it appears, by affidavit by or on behalf of the contestant, filed within 30 days after the allowance of application to contest and within 10 days after its execution, that the adverse party can not be found, after due diligence and inquiry, made for the purpose of obtaining service of notice of contest within 15 days prior to the presentation of such affidavit, of the postmaster at the place of address of such adverse party appearing on the records of the land office and of the postmaster nearest the land in controversy and also of named persons residing in the vicinity of the land.

(b) Such affidavit must state the last address of the adverse party as ascertained by the person executing the same.

(c) The published notice of contest must give the names of the parties thereto, description of the land involved, identification by appropriate reference of the proceeding against which the contest is directed, the substance of the charges contained in the affidavit of contest, and a statement that upon failure to answer within 20 days after the completion of publication of such notice the allegations of said affidavit of contest will be taken as confessed.

(d) The affidavit of contest need not be published.

(e) There shall be published with the notice a statement of the dates of publication.

§ 221.10 *Publication and posting of notice.* (a) Service of notice by publication shall be made by publishing notice at least once a week for four successive weeks in some newspaper published in the county wherein the land in contest lies; and if no newspaper be printed in such county, then in a newspaper printed in the county nearest to such land.

(b) Copy of the notice as published, together with copy of the affidavit of contest, shall be sent by the contestant within 10 days after the first publication of such notice to registered mail directed to the party for service upon whom such publication is being made at the last address of such party as shown by the records of the land office and also at the address named in the affidavit for publication, and also at the post office nearest the land.

(c) Copy of the notice as published shall be posted in the office of the manager and also in a conspicuous place upon the land involved, such posting to be made within 10 days after the first publication of notice as provided in paragraph (a) of this section.

§ 221.11 *Proof of service.* (a) Proof of publication of notice shall be by copy of the notice as published, attached to and made a part of the affidavit of the publisher or foreman of the newspaper publishing the same, showing the publication thereof in accordance with §§ 221.9 and 221.10.

(b) Proof of posting shall be by affidavit of the person who posted notice on the land, and the certificate of the manager as to posting in the district land office.

(c) Proof of the mailing of notice shall be by affidavit of the person who mailed the notice, attached to the postmaster's receipt for the letter or (if delivered) the registry return receipt.

#### DEFECTIVE SERVICE OF NOTICE

§ 221.12 *Effect of defective service.* No contest proceeding shall abate because of any defect in the manner of service of notice in any case where copy of the notice or affidavit of contest is shown to have been received by the person to be served; but in such case the time to answer may be extended in the discretion of the manager.

#### ANSWER

§ 221.13 *When and how answer must be filed.* (a) Within 30 days after personal service of notice and affidavit of contest as above provided, or, if service is made by publication, within 20 days after the fourth publication, as prescribed by the rules in this part, the party served must file with the manager, answer, under oath, specifically meeting and responding to the allegations of the contest, together with proof of service of a copy thereof upon the contestant by delivery of such copy at the address designated in the application to contest, or personally in the manner provide for the personal service of notice of contest.

(b) Such answer shall contain or be accompanied by the address at which all notices or other papers shall be sent for service upon the party answering.

#### FAILURE TO ANSWER

§ 221.14 *Effect of failure to answer.* Upon failure to serve and file answer as herein provided, the allegations of the contest will be taken as confessed, and the manager will forthwith notify the parties by ordinary mail of the action taken.

#### DATE AND NOTICE OF TRIAL

§ 221.15 *Manager to fix time and place for trial.* Upon the filing of answer and proof of service thereof the manager will forthwith fix a time and place for taking testimony, and notify all parties thereof by registered mail not less than 20 days in advance of the date fixed.

PLACE OF SERVICE OF PAPERS

§ 221.16 *Proof of delivery of papers.* (a) Proof of delivery of papers required to be served upon the contestant at the place designated under § 221.2 (h) in the application to contest, and upon any adverse party at the place designated in the answer, or at such other place as may be designated in writing by the person to be served, shall be sufficient for all purposes; and where notice of contest has been given by registered mail, and the registry-return receipt shows the same to have been received by the adverse party, proof of delivery at the address at which such notice was so received shall, in the absence of other direction by such adverse party, be sufficient.

(b) Where a party has appeared and is represented by counsel, service of papers upon such counsel shall be sufficient.

CONTINUANCE

§ 221.17 *When hearing may be postponed.* Hearing may be postponed because of absence of a material witness when the party applying for continuance makes affidavit, and it appears to the satisfaction of the officer presiding at such hearing, that:

(a) The matter to which such witness would testify, if present, is material.

(b) That proper diligence has been exercised to procure his attendance, and that his absence is without procurement or consent of the party on whose behalf continuance is sought.

(c) That affiant believes the attendance of said witness can be had at the time to which continuance is sought.

(d) That the continuance is not sought for mere purposes of delay.

§ 221.18 *When more than one continuance may be allowed.* One continuance only shall be allowed to either party on account of absence of witnesses, unless the party applying for further continuance shall, at the same time, apply for order to take the testimony of the alleged absent witnesses by deposition.

§ 221.19 *When continuance will be denied; continuance on behalf of United States.* (a) No continuance shall be granted if the opposite party shall admit that the witness on account of whose absence continuance is desired would, if present, testify as stated in the application for continuance.

(b) Continuances will be granted on behalf of the United States when the public interest requires the same, without affidavit on the part of the Government.

DEPOSITIONS AND INTERROGATORIES

§ 221.20 *When testimony may be taken by deposition.* Testimony may be taken by deposition when it appears by affidavit that:

(a) The witness resides more than 50 miles, by the usual traveled route, from the place of trial.

(b) The witness resides without, or is about to leave, the State or Territory, or is absent therefrom.

(c) From any cause it is apprehended that the witness may be unable to, or will refuse to, attend the hearing, in which case the deposition will be used only in the event personal attendance of the witness cannot be obtained.

§ 221.21 *Affidavit required showing grounds for deposition; proposed interrogatories.* The party desiring to take deposition must serve upon the adverse party and file with the manager an affidavit setting forth the name and address of the witness and one or more of the grounds set forth in § 221.20 for taking such deposition, and that the testimony sought is material; which affidavit must be accompanied by proposed interrogatories to be propounded to the witness.

§ 221.22 *Cross interrogatories.* The adverse party will, within 10 days after service of affidavit and interrogatories, as provided in the preceding section, serve and file cross-interrogatories.

§ 221.23 *Commission to take deposition.* (a) After the expiration of 10 days from the service of affidavit for the taking of deposition and direct interrogatories, a commission to take the deposition shall be issued by the manager directed to any officer authorized to administer oaths within the county where such deposition is to be taken, which commission shall be accompanied by a copy of all interrogatories filed.

(b) Ten days' notice of the time and place of taking such deposition shall be given by the party in whose behalf such deposition is to be taken to the adverse party.

§ 221.24 *Completion of deposition.* The officer before whom such deposition is taken shall cause each interrogatory to be written out and the answer thereto inserted immediately thereafter, and said deposition, when completed, shall be read over to the witness and by him subscribed and sworn to in the usual manner before the witness is discharged, and said officer will thereupon attach his certificate to said deposition, stating that the same was subscribed and sworn to at the time and place therein mentioned.

§ 221.25 *Deposition to be returned to manager.* The deposition, when completed and certified as aforesaid, together with the commission and interrogatories, must be enclosed in a sealed package, endorsed with the title of the proceeding in which the same is taken, and returned by mail or express to the manager, who will endorse thereon the date of reception thereof, and the time of opening said deposition.

§ 221.26 *When certificate of official character is required.* If the officer designated to take the deposition has no official seal, certificate of his official character under seal must accompany the return of the deposition.

§ 221.27 *Deposition by filing stipulation.* Deposition may, by stipulation filed with the manager be taken before any officer authorized to administer oaths, and either by oral examination or upon written interrogatories.

§ 221.28 *Testimony taken by order of manager.* Testimony may, by order of the manager and after such notice as he may direct, be taken before a United States Commissioner or other officer authorized to administer oaths, at a time and place to be designated in a notice of such taking of testimony. The officer before whom such testimony is taken will, at the completion of the taking thereof, cause the same to be certified to, sealed, and transmitted to the manager in the like manner as is provided with reference to depositions.

§ 221.29 *No charge for examining deposition.* No charge will be made by the manager for examining testimony taken by deposition.

§ 221.30 *Fees for taking testimony.* Officers designated to take testimony will be allowed to charge such fees as are chargeable for similar services in the local courts, the same to be taxed in the same manner as costs are taxed by managers.

§ 221.31 *Substitution of officer to take testimony.* When the officer designated to take deposition cannot act at the time fixed for taking the same, such deposition may be taken at the same time and place before any other qualified officer designated for that purpose by the officer named in the commission or by agreement of the parties.

§ 221.32 *Time for issuing order to take testimony.* No order for the taking of testimony shall be issued until after the expiration of time allowed for the filing of answer.

#### TRIALS

§ 221.33 *Exclusion of witnesses from the trial.* The manager and other officers taking testimony may exclude from the trial all witnesses except the one testifying and the parties to the proceeding.

§ 221.34 *Examination of witnesses by manager.* The manager will be careful to reach, if possible, the exact condition and status of the land involved in any contest, and will ascertain all the facts having any bearing upon the rights of parties in interest; to this end said officer should, whenever necessary, personally interrogate and direct the examination of a witness.

§ 231.36. *Facts to be ascertained under homestead and other laws.* Under the homestead and other laws, the conditions affecting the inception of the alleged right, as well as the subsequent acts of the respective claimants, must be fully and specifically examined. The manager will particularly ascertain the nature, extent, and value of alleged improvements; by whom made, and when; the true date of the settlement of persons claiming; the steps taken to mark and secure the claim; and the exact status of the land at that date as shown upon the records of this office.

§ 221.37 *Cross-examination of witnesses.* Due opportunity will be allowed opposing claimants to cross-examine witnesses.

§ 221.38 *Objections to evidence.* Objections to evidence will be duly noted, but not ruled upon, by the manager, and such objections will be considered by the Director. Officers before whom testimony is taken will summarily stop examination which is obviously irrelevant.

§ 221.39 *Testimony to be reduced to writing.* (a) At the time set for hearing, or at any time to which the trial may be continued, the testimony of all the witnesses present shall be taken and reduced to writing.

(b) When testimony is taken in shorthand the stenographic notes must be transcribed, and the transcription subscribed by the witness and attested by the officer before whom the testimony was taken: *Provided, however*, That when the parties shall, by stipulation, filed with the record, so agree, or when the defendant has failed to appear, or fails to participate in the trial, and the contestant shall in writing so request, such subscription may be dispensed with.

(c) The transcript of testimony shall, in all cases, be accompanied by certificate of the officer or officers before whom the same was taken, showing that each witness was duly sworn before testifying, and, by affidavit of the stenographer who took the testimony, that the transcription thereof is correct.

§ 221.40. *Action on demurrers.* (a) If a defendant demurs to the sufficiency of the evidence, the manager will forthwith rule thereon. If such demurrer is overruled, and the defendant elects to introduce no evidence, no further opportunity will be afforded him to submit proofs.

(b) When testimony is taken, before an officer other than the manager, demurrer to the evidence will be received and noted, but no ruling made thereon, and the taking of evidence on behalf of the defendant will be proceeded with; the manager will rule upon such demurrer when the record is submitted for his consideration.

(c) If said demurrer is sustained, the manager will not be required to examine the defendant's testimony. If, however, the demurrer be overruled, all the evidence will be considered and decision rendered thereon.

(d) Upon the completion of the evidence in a contest proceeding, the manager will render a report and opinion thereon making full and specific reference to the posting and annotations upon the records.

§ 221.41 *Decision of manager; right to move for new trial, or appeal.* The manager will, in writing, notify the parties to any proceeding of the conclusion therein, and that 15 days will be allowed from the receipt of such notice to move for new trial upon the ground of newly discovered evidence, and that if no motion for new trial is made, 30 days will be allowed from the receipt of such notice within which to appeal to the Director.

#### NEW TRIAL

§ 221.42 *Ground for new trial.* (a) The decision of the manager will be vacated and new trial granted only upon the ground of newly discovered evidence, in accordance with the practice applicable to new trials in courts of justice: *Provided, however*, That no such application shall be granted except upon showing that the substantial rights of the applicant have been injuriously affected.

(b) No appeal will be allowed from an order granting new trial, but the manager will proceed at the earliest practicable time to retry the case, and will, so far as possible, use the testimony therefore taken without reexamination of same witnesses, confining the taking of testimony to the newly discovered evidence.

§ 221.43 *Notice of motion for new trial; time for answer.* Notice of motion for new trial, setting forth the grounds thereof, and accompanied by copies of all papers not already on file to be used in support of such motion, shall be served upon the adverse party, and, together with proof of service, filed with the manager not more than 15 days after notice of decision; the adverse party shall, within 10 days after such notice, serve and file affidavits or other papers to be used by him in opposition to such motion.

§ 221.44. *Consideration of motions for new trial.* Motions for new trial will not be considered or decided in the first instance by the Director or the Secretary of the Interior, or otherwise than on review of the decision thereof by the manager.

§ 221.45 *Manager to forward all papers to Director.* (a) If motion for new trial is not made or if made and not allowed, the manager will, at the expiration of the time for appeal, promptly forward the same with the testimony and all papers in the case, to the Director, with letter of transmittal, describing the case by its title, nature of the contest, and the land involved.

(b) The manager will not, after forwarding of decision, as provided in paragraph (a) of this section, take further action in the case unless so instructed by the Director.

## FINAL PROOF, PENDING CONTEST

**§ 221.46** *Submission of final proof excused pending disposition of proceedings.*

(a) The pendency of a contest will excuse the submission of final proof on the entry involved until a reasonable time after the disposition of the proceedings, but final or commutation proof may be submitted at any stage thereof. The payment of the final commissions or purchase money, as the case may be, should be deferred until the case is closed, when, if the contest is dismissed and the proof is found satisfactory, claimant will be allowed 30 days from notice within which to pay all sums due and furnish a nonalienation affidavit, upon receipt of which the proper form of final certificate will issue.

(b) In such cases the fee for reducing the proof testimony to writing must be paid at the time the proof is submitted.

(c) The final proof should be retained in the district land office until the record in the contest case is forwarded to the Bureau of Land Management, but will not be considered in determining the merits of the contest, though it may be used for the purpose of cross-examination during the trial.

(d) In such cases the party making the proof will at the time of submitting same be required to pay the fees for reducing the testimony to writing.

## APPEALS TO DIRECTOR

**§ 221.47** *Service and filing of notice required.* No appeal from the action or decision of the manager will be considered unless notice thereof is served and filed in the land office in the manner and within the time specified in § 221.48.

**§ 221.48** *Notice of appeal; filing of briefs.* Notice of appeal from the decision of the manager shall be served upon the adverse party and filed with the manager within 30 days after receipt of notice of the decision. Within 20 days after service of notice of appeal, the appellant may file a brief, a copy of which must be served upon the appellee. Within 20 days after such service the appellee may file his brief, a copy of which must be served upon the appellant. Briefs must be served upon the opposing party within the same period of time allowed for their filing with the manager. When a motion for a new trial is made and denied, notice of an appeal shall be served within 15 days after the receipt of notice of the denial of the motion.

**§ 221.49** *Effect of failure to answer or appear.* No person who has failed to answer the contest affidavit, or, having answered, has failed to appear at the hearing, shall be allowed an appeal from the final action or decision of the manager.

**§ 221.50** *Notice of appeal to be in writing; failure to serve and file notice closes case.* (a) Such notice of appeal must be in writing, and set forth in clear, concise language the grounds of the appeal, in the form of specifications of error, which shall be separately stated and numbered; where error is based upon insufficiency of the evidence to justify the decision, in the assignment thereof the particulars wherein it is deemed insufficient must be specifically set forth in the notice. All grounds of error not assigned or noticed and argued in the brief will be considered as waived.

(b) Upon failure to serve and file notice of appeal as provided in §§ 221.47 to 221.49 the case will be closed.

**§ 221.51** *Effect of failure to move for new trial or appeal.* (a) When any party fails to move for a new trial or to appeal from the decision of the manager within the time specified, such decision shall, as to such party, be final and will not be disturbed except in case of fraud or gross irregularity.

(b) No case will be remanded for any defect which does not materially affect the aggrieved party.

**§ 221.52** *Manager to keep all documents on file.* All documents received by the manager must be kept on file and the date of filing noted thereon; no papers will, under any circumstances, be removed from the files or from the custody of the manager, but access to the same, under proper regulations, and so as not to interfere with transaction of public business, will be permitted to the parties or their attorneys.

## COSTS AND APPORTIONMENT THEREOF

**§ 221.53** *Costs to preference-right and other claimants.* A contestant claiming preference right of entry under the second section of the act of May 14, 1880 (21 Stat. 141; 43 U. S. C. 185), must pay the costs of contest. In other cases each party must pay the cost of taking the direct examination of his own witnesses and the cross-examination on his behalf of other witnesses; the cost of noting

motions, objections, and exceptions must be paid by the party on whose behalf the same are made.

§ 221.54 *Excessive costs.* Accumulation of excessive costs will not be permitted. When the officer before whom testimony is being taken shall rule that a course of examination is irrelevant, the same will not proceed except at the sole cost of the party insisting thereon and upon his depositing the amount reasonably sufficient to pay therefor.

§ 221.55 *Cost to settlers.* Where a party contesting a claim shall by virtue of actual settlement and improvement establish his right of entry of the land in contest under the homestead, or desert-land laws by virtue of settlement and improvement without reference to the act of May 14, 1880 (21 Stat. 141; 43 U. S. C. 185) the costs of contest will be imposed as prescribed in the second sentence of § 221.53.

CROSS REFERENCES: See the following parts in this chapter: For homesteads, Alaska, Parts 65, 66; for homesteads, generally, Parts 166-170; for soldiers' and sailors' homestead rights, Part 181; for desert-land entries, Part 232.

§ 221.56 *Cost chargeable by managers.* The only cost of contest chargeable by managers are the legal fees for reducing testimony to writing. No other contest fees or costs will be allowed to or charged by those officers, directly or indirectly.

§ 221.57 *Security for costs.* Managers may at any time require either party to give security for costs, including expense of taking and transcribing testimony.

§ 221.58 *Return of excess deposit.* Upon the filing of the transcript of the testimony in the land office, any excess in the sum deposited as security for costs of transcribing testimony will be returned to the parties depositing the same.

§ 221.59 *Cost to Government.* When hearings are ordered on behalf of the Government all costs incurred on its behalf will be paid from the proper appropriation, and when, upon the discovery of reason for suspension in the usual course of examination of entries and contest, hearings are ordered between contending parties, the costs will be paid as required by § 221.53.

§ 221.60 *Collection of costs.* The costs provided for by the preceding rules will be collected by the manager when the parties are brought before him in obedience to the order for hearing.

#### NOTICES

§ 221.61 *Preparation and service of notices.* All notices and other papers not required to be served by the manager must be prepared and served by the respective parties.

§ 221.62 *Manager to make provision for notices not specifically provided for.* The manager will require proper provision to be made for such notices not specifically provided for in the rules in this part as may become necessary in the usual progress of the case to final decision.

#### APPEAL FROM DECISION REJECTING APPLICATION TO ENTER PUBLIC LANDS

§ 221.63 *Action by manager to facilitate appeals.* To facilitate appeals from his action relative to applications to file, enter, or locate upon the public lands, the manager will:

(a) Endorse upon every rejected application the date of presentation and reasons for rejection.

(b) Promptly advise the party in interest of the action and of his right of appeal.

(c) Note upon his records a memorandum of the transaction.

§ 221.64 *When notice of appeal must be filed; form of notice.* The party aggrieved will be allowed 30 days from receipt of notice in which to file notice of appeal in the land office. The notice of appeal, when filed, will be forwarded to the Bureau of Land Management with full report upon the case, which should recite all the facts and proceedings had and must embrace the following particulars:

(a) The original application, with reasons for the rejection thereof.

(b) Description of the tract involved and statement of its status, as shown by the records of the land office.

(c) Reference to all entries, filings, annotations, memorandum, and correspondence shown by the record relating to said tract and to the proceedings had.

## FINAL PROOF, PENDING CONTEST

**§ 221.46** *Submission of final proof excused pending disposition of proceedings.*

(a) The pendency of a contest will excuse the submission of final proof on the entry involved until a reasonable time after the disposition of the proceedings, but final or commutation proof may be submitted at any stage thereof. The payment of the final commissions or purchase money, as the case may be, should be deferred until the case is closed, when, if the contest is dismissed and the proof is found satisfactory, claimant will be allowed 30 days from notice within which to pay all sums due and furnish a nonalienation affidavit, upon receipt of which the proper form of final certificate will issue.

(b) In such cases the fee for reducing the proof testimony to writing must be paid at the time the proof is submitted.

(c) The final proof should be retained in the district land office until the record in the contest case is forwarded to the Bureau of Land Management, but will not be considered in determining the merits of the contest, though it may be used for the purpose of cross-examination during the trial.

(d) In such cases the party making the proof will at the time of submitting same be required to pay the fees for reducing the testimony to writing.

## APPEALS TO DIRECTOR

**§ 221.47** *Service and filing of notice required.* No appeal from the action or decision of the manager will be considered unless notice thereof is served and filed in the land office in the manner and within the time specified in § 221.48.

**§ 221.48** *Notice of appeal: filing of briefs.* Notice of appeal from the decision of the manager shall be served upon the adverse party and filed with the manager within 30 days after receipt of notice of the decision. Within 20 days after service of notice of appeal, the appellant may file a brief, a copy of which must be served upon the appellee. Within 20 days after such service the appellee may file his brief, a copy of which must be served upon the appellant. Briefs must be served upon the opposing party within the same period of time allowed for their filing with the manager. When a motion for a new trial is made and denied, notice of an appeal shall be served within 15 days after the receipt of notice of the denial of the motion.

**§ 221.49** *Effect of failure to answer or appear.* No person who has failed to answer the contest affidavit, or, having answered, has failed to appear at the hearing, shall be allowed an appeal from the final action or decision of the manager.

**§ 221.50** *Notice of appeal to be in writing; failure to serve and file notice closes case.* (a) Such notice of appeal must be in writing, and set forth in clear, concise language the grounds of the appeal, in the form of specifications of error, which shall be separately stated and numbered; where error is based upon insufficiency of the evidence to justify the decision, in the assignment thereof the particulars wherein it is deemed insufficient must be specifically set forth in the notice. All grounds of error not assigned or noticed and argued in the brief will be considered as waived.

(b) Upon failure to serve and file notice of appeal as provided in §§ 221.47 to 221.49 the case will be closed.

**§ 221.51** *Effect of failure to move for new trial or appeal.* (a) When any party fails to move for a new trial or to appeal from the decision of the manager within the time specified, such decision shall, as to such party, be final and will not be disturbed except in case of fraud or gross irregularity.

(b) No case will be remanded for any defect which does not materially affect the aggrieved party.

**§ 221.52** *Manager to keep all documents on file.* All documents received by the manager must be kept on file and the date of filing noted thereon; no papers will, under any circumstances, be removed from the files or from the custody of the manager, but access to the same, under proper regulations, and so as not to interfere with transaction of public business, will be permitted to the parties or their attorneys.

## COSTS AND APPORTIONMENT THEREOF

**§ 221.53** *Costs to preference-right and other claimants.* A contestant claiming preference right of entry under the second section of the act of May 14, 1880 (21 Stat. 141; 43 U. S. C. 185), must pay the costs of contest. In other cases each party must pay the cost of taking the direct examination of his own witnesses and the cross-examination on his behalf of other witnesses; the cost of noting

motions, objections, and exceptions must be paid by the party on whose behalf the same are made.

§ 221.54 *Excessive costs.* Accumulation of excessive costs will not be permitted. When the officer before whom testimony is being taken shall rule that a course of examination is irrelevant, the same will not proceed except at the sole cost of the party insisting thereon and upon his depositing the amount reasonably sufficient to pay therefor.

§ 221.55 *Cost to settlers.* Where a party contesting a claim shall by virtue of actual settlement and improvement establish his right of entry of the land in contest under the homestead, or desert-land laws by virtue of settlement and improvement without reference to the act of May 14, 1880 (21 Stat. 141; 43 U. S. C. 185) the costs of contest will be imposed as prescribed in the second sentence of § 221.53.

CROSS REFERENCES: See the following parts in this chapter: For homesteads, Alaska, Parts 65, 66; for homesteads, generally, Parts 168-170; for soldiers' and sailors' homestead rights, Part 181; for desert-land entries, Part 232.

§ 221.56 *Cost chargeable by managers.* The only cost of contest chargeable by managers are the legal fees for reducing testimony to writing. No other contest fees or costs will be allowed to or charged by those officers, directly or indirectly.

§ 221.57 *Security for costs.* Managers may at any time require either party to give security for costs, including expense of taking and transcribing testimony.

§ 221.58 *Return of excess deposit.* Upon the filing of the transcript of the testimony in the land office, any excess in the sum deposited as security for costs of transcribing testimony will be returned to the parties depositing the same.

§ 221.59 *Cost to Government.* When hearings are ordered on behalf of the Government all costs incurred on its behalf will be paid from the proper appropriation, and when, upon the discovery of reason for suspension in the usual course of examination of entries and contest, hearings are ordered between contending parties, the costs will be paid as required by § 221.53.

§ 221.60 *Collection of costs.* The costs provided for by the preceding rules will be collected by the manager when the parties are brought before him in obedience to the order for hearing.

#### NOTICES

§ 221.61 *Preparation and service of notices.* All notices and other papers not required to be served by the manager must be prepared and served by the respective parties.

§ 221.62 *Manager to make provision for notices not specifically provided for.* The manager will require proper provision to be made for such notices not specifically provided for in the rules in this part as may become necessary in the usual progress of the case to final decision.

#### APPEAL FROM DECISION REJECTING APPLICATION TO ENTER PUBLIC LANDS

§ 221.63 *Action by manager to facilitate appeals.* To facilitate appeals from his action relative to applications to file, enter, or locate upon the public lands, the manager will:

(a) Endorse upon every rejected application the date of presentation and reasons for rejection.

(b) Promptly advise the party in interest of the action and of his right of appeal.

(c) Note upon his records a memorandum of the transaction.

§ 221.64 *When notice of appeal must be filed; form of notice.* The party aggrieved will be allowed 30 days from receipt of notice in which to file notice of appeal in the land office. The notice of appeal, when filed, will be forwarded to the Bureau of Land Management with full report upon the case, which should recite all the facts and proceedings had and must embrace the following particulars:

(a) The original application, with reasons for the rejection thereof.

(b) Description of the tract involved and statement of its status, as shown by the records of the land office.

(c) Reference to all entries, filings, annotations, memorandum, and correspondence shown by the record relating to said tract and to the proceedings had.

Senator ANDERSON. The department does do it by publication, and has done it by publication. I myself have participated in that.

Senator MALONE. That is all right.

What I am trying to say is you name the claimant. It is not a blanket proposition.

This time what you are doing is stepping out and you can do it for the whole State at one time. You are cooking up the objections yourself within your own department. That is what I am objecting to.

Mr. HOLBROOK. Senator, may I make one statement?

Because of your great interest in mining as a Western man, I would like the record perfectly clear on this point.

I think there is a great advantage to the mining industry in this respect about such a proceeding, and Senator Barrett mentioned it yesterday. Under the existing proceedings, in a contest when the mining claimant comes in, he wins or loses in whole; there is no half-way point.

Senator MALONE. That is what he should do.

Mr. HOLBROOK. If he loses he has nothing.

Under this new proceeding it merely raises the issues of these surface rights that you have been talking about. It reserves to him all of the surface rights that are required in his mining operation.

Senator MALONE. That he knows of at the present time.

Mr. HOLBROOK. Well, the language of the statute is that he has the right to use it for prospecting, mining, processing, and incidental uses. We thought that was broad enough.

Senator MALONE. Yesterday it was very well established that no prospector knows how much timber or anything else he is going to need unless he hits something. He always thinks he is going to and keeps spending his money.

So if you log that off, the Senator from Colorado suggested an amendment that you furnish the timber after you had taken it away from him if he eventually needs it. I think that might run into some complications, too. But it is a fairly good suggestion.

Let us go on here with this act.

Senator ANDERSON. Could I ask a question about this particular point?

Senator MALONE. Yes.

Senator ANDERSON. I recognize that Senator Malone is just as much interested in protecting the rights of the miners as anybody I have ever seen in my life. I am trying not to get in a controversy with him about this bill. But I want to deal with this question of these sections he has been quoting and reading. They only deal with surface rights, do they not?

Mr. HOLBROOK. That is the only issue involved in the proceeding. That is all that it is intended to do. It says "Subject to the limitations and restrictions of section 4." And those are the rights of the Government and its permittees to use the surface for purposes which will not interfere with mining.

Senator ANDERSON. So they only deal with surface rights which are not necessary for mining?

Mr. HOLBROOK. That is right.

Senator MALONE. Not as I read the next paragraph.

Senator ANDERSON. Yes, but the fact is as Mr. Holbrook and I have stated with reference to this section, it deals only with surface rights

not needed for mining. It doesn't touch a claimant's minerals. He does not have to do a thing about answering the descriptions—

Senator WATKINS. Unless he wants to raise it himself. If he wants to come in and raise it himself I think he would be very unwise, as Mr. Holbrook pointed out yesterday. He said he would advise his client not to raise the question of mineral rights. There is no jurisdiction to decide those unless he raises them.

Senator MALONE. There are many people I know you are not even going to reach with these newspaper advertisements. And if you do they haven't got the money to come in and do this.

Senator ANDERSON. Yes, but it only deals with surface rights and with respect to them is restricted to those not necessary for mining.

Senator MALONE. I understand that. Let me go on. If he doesn't do this his failure shall be deemed—

(ii) to constitute a consent by such mining claimant that such mining claim, prior to issuance of patent therefor, shall be subject to the limitations and restrictions specified in section 4 of this act as to hereafter located unpatented mining claims, and

(iii) to preclude thereafter, prior to issuance of patent, any assertion by such mining claimant of any right or title to or interest in or under such mining claim, contrary to or in conflict with the limitations or restrictions specified in section 4 of this act as to hereafter located unpatented mining claims.

In other words, you probably won't find some of them at all, and it will go by default. If you do, they will come in and tell you a pitiful story that they are working here and doing this thing, and they don't know how much timber they are going to need. They don't know how much of anything else that is on the claim they are going to need.

So what can they say to you with your formal hearing where they have to establish that they are going to need, we will say, 100,000 board-feet for timbering their mine when they are just getting a good start and they don't have a commercial claim?

Mr. HOLBROOK. There would not be any issue, Senator, as to how much timber would be required at all.

The only issue that would be involved was whether or not he is entitled to those surface rights, and that would depend upon whether he had a valid mining claim.

Senator MALONE. If he has a valid mining claim then he is entitled to all the surface rights. Is that it?

Mr. HOLBROOK. If he has a valid mining claim and he can establish it, that ends it.

Senator ANDERSON. He gets them all.

Senator MALONE. In other words, you cannot go on there and sell any of the timber or grazing.

Mr. HOLBROOK. That is right. You cannot take any right—

Senator MALONE. You just told me a while ago that the prospector did not have these rights until he has patented it. I did not question it because you are a lawyer. You are familiar with it.

Mr. HOLBROOK. What I had in mind then was that, as to claims located in the future under this law or as to claims located in the past, if he doesn't come in and set up his rights.

If he comes in and sets up his rights and establishes that he has a bona fide mining claim I don't think that we could pass any law that would take those away from him because he has a vested right in a claim at the time this law is passed.

Senator MALONE. But on a future location he would not secure these rights under this act.

Mr. HOLBROOK. Under this act all future locations will be subject to the limitations and restrictions specified in section 4.

Senator MALONE. Just what I have been reading.

Mr. HOLBROOK. I think you did read part of section 4.

Senator MALONE. And unless he makes this showing, unless he comes in at his own expense and makes this showing, he relinquishes his right.

Mr. HOLBROOK. That is right.

Senator ANDERSON. But only as to the surface rights not necessary for his mining. They can't touch his minerals.

Senator MALONE. I am talking about a man having to come in and defend himself in the things that he may have to do on this claim.

What you have done here in this bill is to make every one of these people get away from this thing and make them come in and file so that the Government would know exactly who they are and where they are.

Senator ANDERSON. Not if they don't want anything beyond the surface rights that are necessary for mining. If they want to run a saloon or a dance hall, then they do have to come in.

Senator MALONE. I don't know but what maybe you might want an eating house on it if you had to feed the help.

Senator ANDERSON. That would be essential to mining, required for mining. That would not be in question either.

Senator WATKINS. Not a commercial enterprise.

Senator MALONE. Drinking is legitimate. This is an academic thing. Some people like it after a day's work. And maybe that is necessary if there aren't any within 50 miles.

Senator ANDERSON. I think saloons have uniformly run into difficulty. I would sort of hope they would continue to. But a man can do his own buying and bring it home.

Senator MALONE. I am talking about Federal law. There is no Federal law against it, is there?

Senator ANDERSON. There is no Federal law against it, but that is not regarded as essential to mining.

Senator MALONE. I am against it. I am not so sure. Most of the mining has been done that way in most of the West. I am not saying it is necessary. I have worked in the mines and I am not saying it is necessary to have a drink. But if we are passing a prohibition law, let's get into that.

Senator ANDERSON. You aren't.

We are talking about abuses that have taken and are taking place I read you a court decision yesterday. These abuses have been going on under the 1872 law for 75 years.

Senator MALONE. All right.

I don't know of anything that has been prohibited. If it is already prohibited, what do you need the act for?

Senator ANDERSON. We tried to explain yesterday that here sat some timber in a State that the Government cannot sell because people have come in and filed fictitious mining claims for the sole purpose of holding them up.

Senator MALONE. Then we come back finally to the timber.

I have asked the question 50 times if you object to confining it to forest reserves.

Mr. HOLBROOK. Senator Malone—

Senator MALONE. What you are after is to get beyond the forest reserves, using that as bait.

Mr. HOLBROOK. As I stated yesterday, I think if it is a good rule on the forests it is a good rule on all public lands.

Senator MALONE. But it cannot be for the same purpose. You all come back and say that they are prohibited from coming in and selling the timber. That is exactly the reason we passed the other law, was because it prohibited uranium claimants from going on oil and gas leases. They couldn't proceed to a patent, and, therefore, they weren't legal.

We cured that; did we not?

Now we want to cure any problem that proves to be a problem on the public domain without killing the fellow. Just cure him; don't kill him.

Mr. HOLBROOK. There are problems outside of the national forests.

Senator MALONE. You don't have the problem of forests outside the national forests.

Mr. HOLBROOK. There are some other forests.

Senator WATKINS. You have fishing streams and the Taylor Grazing Act.

Senator MALONE. That is exactly what you are trying to do; get them all in.

Senator ANDERSON. The C. and C. lands are not in a national forest. But they are forest lands. Those are the Oregon and California lands we have been discussing.

Senator MALONE. Let us make a stipulation in it that it be classified as forest lands. We have got 4 or 5 million acres in national forests. If there are 200 acres that I cannot run or jump over I will eat the tree.

Senator ANDERSON. That is why this law would have little significance in your State.

Senator MALONE. This law would have application in my State.

Senator ANDERSON. That is right; but there probably is no State in the Union where the surface rights are of as little significance in connection with mining claims as is the case with Nevada.

Senator MALONE. This law says specifically, or it implies that you can send the Bureau of Land Management in there and harass the miner and do anything they need to do to rent this land and see that the people get the grazing. That is what it says.

Senator ANDERSON. I wish you would find the language in the bill.

Senator MALONE. It implies that here.

Senator ANDERSON. It doesn't mean to, Senator. I am sure of that.

Senator MALONE. Can we except the grazing, except everything except that which can classify as timber?

Senator WATKINS. I would like to answer that question.

I think the mining law should be that mining claims should be confined to mining purposes. And if it is for the grazing of his own animals that he has on the place, and that he needs in connection with his mining, all well and dandy. But if he is going to take a mining claim—and a placer claim runs into hundreds of acres—if he is going to take all of that and use it under the guise of mining

to get the right to graze, then I think that ought to be stopped in the future.

Senator MALONE. I am really familiar with this in my State, and it is not a contest. None of the stockmen are having trouble.

Senator WATKINS. Then they won't have any trouble if they are not violating the law. It is only the violators that have trouble.

Senator ANDERSON. Can we move on?

Did you have one more statement?

Mr. HOLBROOK. I would like to make this one observation, Senator Malone:

You have referred to the possibility of blanket proceedings. I think it is an unfair assumption to assume that there will be blanket proceedings.

There is never any occasion to institute a proceeding or a lawsuit unless there are some issues.

May I finish my statement, please?

Senator MALONE. Yes, sir. I did not interrupt you, I don't think.

Mr. HOLBROOK. Unless there is some conflict between the surface uses and the mining claims, I think there is no occasion to assume that there will ever be any proceeding. There is just no reason for doing it.

I don't think Government officials, any more than individuals, are just starting proceedings because of the entertainment in doing it. Where there is a contest, there are some surface rights involved, my thoughts is that the mining claimant is much better off not to be putting all of his chips on the table, but to have some chips left if he loses.

You pointed out very effectively, particularly with respect to mining locations, the great problems in getting discoveries. And that is how mining claimants lose their claims.

Senator MALONE. Are you familiar with the court decisions on determining discoveries? It seems to me the courts are rather lenient, and have been in a succession of decisions for 75 years. I do not know that you would run very many people off their claims because they did not have what you would consider something you would invest your money in. That doesn't happen. It just doesn't happen.

Mr. HOLBROOK. Senator, the day before I left I considered some patent applications that involved the sufficiency of some discoveries. They had been contested by the Government. We discussed it fully with our engineers and our geologists, and we concluded that it would probably be best for us not to make an issue of it. We were not sure that we would win.

Senator MALONE. I think maybe you had good judgment. But I have had those decisions to make, to, as a mineral surveyor, and I have made them. Maybe I would go out and turn down the job because I did not think they had the required amount of work done. Because the patent surveyor has to make the affidavit, as you know.

But if the patent surveyor makes the affidavit, generally it may not even be a commercial operation at the time.

You know we have prospects now in Utah and Nevada—and I take in Utah because I am somewhat familiar with it—where they were in the mining business in lead and zinc until we got this idea of free trade and furnishing Europe with the money to buy the stuff to send in here. So they turned it into country rock.

But I would like for some of you smart people to go out there and try to keep them from patenting some of these claims that they mined profitably up until this law passed.

You can't do it. And I know you know that.

But it is not profitable now, and they are shutting down. They are going broke. One of the finest Utah men I know they just broke. He was in the manganese business out there in Nevada and Utah, the lead and zinc business. He is on his coattails.

Mr. HOLBROOK. I am in complete agreement with you that the commercial—

Senator MALONE. It doesn't have anything to do with commercial.

Mr. HOLBROOK. Has nothing to do with discovery.

Senator MALONE. It is the mineral there and the amount of work done, and the general overall judgment of the mineral surveyor and the Secretary of the Interior when it finally comes down to it, isn't it?

Mr. HOLBROOK. All those facts are considered.

Senator MALONE. Of course, we all know what they are. I have been in it for 30 years.

What you are doing with these things here is you are simply bringing in what I predicted. I think probably the hearings will show it—when we were holding the hearings and I was chairman of the committee 2 years ago and we passed the first act—that they will try to use this as a precedent to go further into other situations to control the rights of the man that is trying to mine these claims when, as a matter of fact, all we did—and I have heard it used as a precedent here 50 times in the last day or two—all we did was to try to coordinate two mining acts. We did not say to these prospectors in there that they have to come in under the Bureau of Land Management and the Forest Service and all of the rest of it. It was a very simple matter to coordinate.

And we don't want conflicts. There may be serious conflicts where your uranium claim or some other mineral claim would conflict where you wanted to drill a well. But we ended that by the first locator. In a conflict the first locator prevails.

So there is no such thing. This is not a precedent for this cockeyed thing that you have here now. But you are using it for a precedent.

Mr. HOLBROOK. I have referred to it as a similar procedure.

I am inclined to think, Senator, that in all cases if natural resources are locked up, which are not necessary in a mining operation, that those resources should be made available.

Senator MALONE. What resources are locked up? I will just let you explain that one more time.

Mr. HOLBROOK. Well, the most classic example of resources being locked up is the many cases that have been referred to where access to timber is denied.

Senator MALONE. It is a simple thing.

Mr. HOLBROOK. Senator, I am fully aware that you are trying to limit this bill to the national forests.

Senator MALONE. It is a simple thing. Maybe not national forests but to forests.

If you go out on a prospect in Nevada where there isn't a tree within 40 miles he is not obstructing the Forest Service. He is not obstructing the marketing of timber, is he? All you have to do is just have someone see the claim that is in contest. And if it can be classified

as a timber claim I have no particular objection to your bill. But you are not doing that. You are making this a blanket thing. That has been tried so many times in the last 22 years. And the next thing is a leasing act.

Don't try to explain it to me. I know what you are after.

Senator ANDERSON. Thank you, Mr. Holbrook, for your testimony.

Mr. HOLBROOK. Thank you, Mr. Chairman.

Senator ANDERSON. Mr. Hudoba?

**STATEMENT OF MICHAEL HUDOBA, WASHINGTON REPRESENTATIVE, SPORTS AFIELD MAGAZINE**

Senator ANDERSON. Will you identify yourself for the record, please?

Mr. HUDOBA. Thank you, Mr. Chairman.

My name is Michael Hudoba. I am Washington editor of Sports Afield magazine.

Senator MALONE. What paper?

Mr. HUDOBA. Sports Afield magazine.

Senator MALONE. Do you have a statement that we can have?

Mr. HUDOBA. Senator Malone, I was just going to make a brief oral comment and ask for the privilege to insert several requests by organizations for endorsement.

I want to thank the chairman and the committee for the privilege of appearing to make a brief presentation in support of S. 1713.

We feel that mining is one of the most essential industries in this Nation, also that it is one of the most glamorous, reflecting probably the last vestige of the original system under which this country was developed and explored.

We also feel that the multiple-purpose use of the public lands and national forests is extremely important, those multiple-purpose uses to include and including watershed protection, minerals, grazing, timber production, and recreational uses.

We are interested in this particular bill because we feel that there are a number of abusers, using the mining laws of 1867 which were codified in 1872, whose purpose is not for mining at all and, yet, who have served, through their spurious activity, to prevent the multiple-purpose uses of surface values of the resources under the management of the United States Government.

We do not wish to restrict any of the individual multiple-purpose uses, but we feel that it is urgent, in order to protect a balanced management program for all of the resources of this type by the objectives of this legislation.

Our interest has come into this because we have received over the years a number of letters from some of the 40 million visitors who have gone onto public lands and the national forests for recreational activity and have come up against the adverse effects of the phony or spurious mining claim which has restricted a public-interest use.

As a result of that we employed an experienced observer-reporter to make an 8,000-mile trip that covered the better part of a year investigating these various reports that come to us via voluntary letters.

Mr. Chairman, I would like to offer, from the May 1952 issue of Sports Afield, the article on page 47 which was the result of that survey.

(The article referred to was filed as an exhibit for the information of the committee.)

Senator MALONE. Who was the writer?

Mr. HUDOBA. Cleveland Van Dresser.

Senator MALONE. What was his background?

Mr. HUDOBA. Newspaper business, newspaper reporter.

Senator MALONE. How old a man is he?

Mr. HUDOBA. He is in his early fifties.

Senator MALONE. What has been his experience in the mining field and in the field of public lands prior to this?

Mr. HUDOBA. The purpose of the article, Senator Malone, was to investigate the reports, and, as a trained, experienced reporter, to determine whether there was substance to the statements in the material that had been submitted to us.

Senator MALONE. In order to determine that—I don't want to interfere with your statement because we can take this up later—but, in order to determine whether there was substance to it, he would have to know whether there was a sufficient showing of mining, minerals, or a showing in accordance with the law, and whether the work was being done in accordance with the law, would he not?

Mr. HUDOBA. The purpose of the survey was to determine whether there were loopholes in the 1867-72 mining laws that encouraged and induced the type of spurious and phony claim activities.

Senator MALONE. In other words, you think he was experienced enough to determine by himself as to whether there was a showing sufficient to justify the location of a mining claim in this area.

Mr. HUDOBA. We did not expect him to make an individual survey on an individual claim as to the validity of the claim.

Senator MALONE. What he did was to determine that these people had located claims in the forest reserves, and they had interfered with recreation and forests. Is that what he investigated?

Mr. HUDOBA. Yes. He would—

Senator MALONE. The claims were there. And the forest reserve people and some of the recreation people said it interfered with their activities. Is that what he investigated?

Mr. HUDOBA. There would be a report of a very palatial residence located on a forest reserve area. And, in checking into it, he would find that it was a mining claim location—

Senator MALONE. But no mine.

Mr. HUDOBA. But no mining activities of any sort. And that is the type of evidence.

Senator MALONE. Have you ever entered any complaint to the Secretary of the Interior on these cases? Or did you just assume that the mining act was wrong because he was there?

Mr. HUDOBA. There was no assumption of any wrong until we had this material developed and looked into. And then the article was made available.

Senator MALONE. Then you just assumed that there was no remedy at the present time for it.

Mr. HUDOBA. We make no assumption of there not being a remedy because we are here endorsing this S. 1713.

Senator MALONE. Then if you are convinced that there is a remedy it would be a criticism of the Department of Interior, would it not?

Senator ANDERSON. There is no remedy under existing law, is there, for a palatial residence being built?

Senator MALONE. I guess not.

I have known of people that build a mill before they find the ore.

Senator ANDERSON. I not only know of them but I did it once, I am sorry to say.

Senator MALONE. I do not want you to be sour against our prospectors on that account because it would take a pretty good salesman to raise the money for a mill to show that it is an active area.

I am trying to find out from you just the objective of this article.

You just wanted to find out if these people were out there. You did not investigate whether there was a remedy for it in the first instance, did you?

Mr. HUDOB. The article did come to the conclusion that the difference between the surface and subsurface rights was an aggravation and an inducement which created these particular problems. And because those problems did exist and because we do feel that mining activities and prospecting of individuals—some of whom are ardent fishermen and hunters in their own right—but because of that type of phony and spurious activity we are also concerned that it has been a serious reflection on the legitimate mining operations.

Senator MALONE. Let me ask you another question because this is very interesting to me.

You, of course, know or at least you did not follow up my question that this man you sent out had no mining experience, no experience in anything except observing, and he observed a man who had come there and located a mining claim and built a residence.

Now did he investigate whether they had mineral showing or not? And, if they did not, did he make a complaint, or were there any complaints made by the Forest Service and others to the Department of the Interior so that they might investigate and make him show his mineral showing? Make him prove it?

Mr. HUDOB. Well, these investigations, Senator Malone, were the obvious, glaring examples.

Senator MALONE. I understand.

We used to have some fellow—I forget who he is—make a periodical trip through the West and write an article about the desert lands and how they are being abused by the stockmen and all that.

What was his name? You should remember. You are in that business.

Mr. HUDOB. Well, there are a number of writers.

Senator MALONE. He is the one that Colliers published several times. What was his name?

Mr. HUDOB. I don't recall the one you are talking about.

Senator MALONE. He is a mighty good writer, but he showed an abysmal ignorance on the use of forage on the public lands.

What was his name?

Senator BARRETT. De Voto.

Senator MALONE. De Voto.

You must be familiar with the great DeVoto's writings on the desert lands.

Mr. HUDOB. I read some of them.

Senator MALONE. Is this article the same as those on lands except in the forests? The man knows nothing about what he is writing

about except he goes out and finds that these lands have been located, and he doesn't investigate whether there is a remedy for it or anything at all?

Mr. HUDOBA. We feel we have an objective reporter, Senator Malone. Senator MALONE. You think you had.

The objective was to see if these men were there, and talk to the Forest Service people and the Bureau of Land Management people——

Mr. HUDOBA. And mining people.

Senator MALONE. Did you find a miner that objected to it?

Mr. HUDOBA. I don't have the notes of the individual who wrote the article, Senator Malone.

Senator MALONE. Would he be available to come here to the committee?

Mr. HUDOBA. I imagine that he would.

Senator MALONE. I think we ought to hear him since you have made this a matter of record.

Mr. HUDOBA. I imagine he would. He is not in our employ. He is a free-lance writer.

Senator MALONE. Where are you from, for instance?

Mr. HUDOBA. I was born in Ohio.

Senator MALONE. How long have you been here?

Mr. HUDOBA. I have been here off and on for 20 years.

Senator MALONE. I haven't been here that long. I have been coming here for about 30. From what I know and what I believe, it would take many years, and, without becoming familiar with the work and paying the taxes, you could not write that article.

Mr. HUDOBA. But from where I live I commute 120 miles a day, Senator Malone. The community I live in has a population of about 100, and we are concerned with farming operations.

Senator MALONE. That is wonderful.

All these people within 20 miles of Washington are living on Washington, in case you hadn't heard, unless they inherited money.

Mr. HUDOBA. I will show you a lot of callouses.

Senator MALONE. I have got them, too, but they are from bridle reins. I do it to keep my weight down.

You are probably an agriculturist. Do you know the difference between a farmer and an agriculturist?

Mr. HUDOBA. Yes; I believe I do.

Senator MALONE. The farmer makes his money on the farm and spends it in town. The agriculturist makes it in town and spends it on the farm.

Washington and New York are full of them.

We have got quite a few of them in Nevada now from the outside who come in and stay there, but we don't take their testimony in mining claims.

I am interested in wildlife. And I am probably more interested in Nevada than you are. We try to coordinate all of our expenditures on flood control and irrigation with wildlife propagation and fish and all that sort of thing. We are right in the middle of it now with the Carson project.

And I read your magazine. I picked it up on the newsstand in Chicago coming in the other night.

But you always have to identify what a man says with his background. That is the reason I am inquiring about it.

Mr. HUDORA. I appreciate your invitation to do that, Senator Malone, because one of the requirements of an editor on our staff is that we get out and participate. And it has been just within the past year that I took a considerable amount of time and money from the magazine to make an extensive trip, and, in line with that, I get away from Washington at least once every 3 weeks. We have personal friends in every State of the Union, and I have been in every State in the Union and spent time.

Senator MALONE. Do you investigate mining operations? Livestock operations?

Mr. HUDORA. Yes, sir, I have. And, as a matter of fact, I have been an improvement man myself for at least 3 years in prospecting.

You have mentioned the illustration of Virginia City. You had some blue metal going down with the mine tailings as waste that gets some yellow metal called carnotite back there when there was no market for it.

Senator MALONE. You must know by now—you have just had a taste of it, and the chairman says he has—that probably there is more money spent in mining than is ever taken out and marketed. Mining is a fever. Some people have it and some don't. I never had the mining fever. I only had the fever to work for these people in mining. And I have seen them, hundreds of them broke, and once in a while one of them gets out with a little money. But that fever persists as long as they have an opportunity, which we gave them under the 1872 Mining Act.

Some of us have tried to preserve it. But when you make it unprofitable, which we have done in Washington now, you are not raising a new set of miners. The kind of miners you are raising is like you. They take a flyer because it looks easy. They lose a little money, maybe more than they can afford, but they are cured.

You don't cure a miner.

Mr. HUDORA. I agree with you on that because I have not been cured in over 20 years.

Senator ANDERSON. I want to agree with him also. If I could get away from the Senate and have the life to live that I wanted to I think I would spend most of it actually out in the field prospecting. It is the most fascinating business, and I know it is the easiest to lose money in of any I have ever seen.

Senator MALONE. That is right.

But the thing you have to do is make an incentive and have it profitable. And we right here in Washington in 22 years have taken the profit out of mining. And the people who took it out don't have the faintest idea that they have done it, in most cases. But the people who promote these activities that the good people promote, there are some behind that who do know what they are doing, and they make it just impossible for a prospector to go out and get any money now because the fellow says to him and grins at him, "What would you do with it if you found it?"

Lead, zinc, gold, all the rest of it, you can't mine any more because you can mine it in cheaper-living countries and bring it in cheaper than you can mine it here.

The last straw is to start moving in on him on the public lands. Go ahead. I am sorry I interrupted you.

Mr. HUDOBA. Mr. Chairman, I have appreciated the opportunity to get back to some very pleasant memories because I intend to get back into the western country which has captured me so wonderfully.

Senator MALONE. You are talking about interfering with timber and all that.

I would just like to have the opportunity, if I am able to do it, to take you on a little trip.

Mr. HUDOBA. I have an invitation from the Governor to do that. I am looking forward to it as soon as possible.

Senator ANDERSON. Senator Malone was connected for many years with an organization interested in the development of western resources. He has traveled every one of those Western States, including mine. If you ever get started with him on a trip in Nevada he may end up with you in the middle of Montana because he is interested in the West, and loses all track of State lines. I promise you he will take you all over the Rocky Mountain West.

Senator MALONE. In 1931 I served on the President's Public Lands Committee. Some prominent people from New Mexico, the Senator's State, and the Senator on this work that he was talking about, helped materially in setting it up. We don't disagree on the objective; we disagree on how these bureau officials here edge in and finally make it impossible for anybody to do anything on public lands.

Senator ANDERSON. Finish your statement and submit what you can as briefly as you can, Mr. Hudoba.

Mr. HUDOBA. Yes, Mr. Chairman.

I am extremely interested that no emergency of any sort imperil or invade any constitutional freedom of any individual. But we are also concerned that the conservation and wise use of our natural resources is fundamental to the strength of this country. And what is done with those individual resources is extremely important to the future, especially in this world peril.

We are concerned that where there are loopholes which abuse and permit the inadequate management of grazing, timber, recreational assets, and other assets which we may not know about at the present moment, there is something that needs to be done to examine that problem carefully and to offer solutions for it.

In 1872 the population of this country was 38,550,000. There was 1 person for each 10 square miles in Nevada; 4 persons for each 10 square miles in New Mexico.

The population today is 165 million. Forty million people go out to these public lands to enjoy and to appreciate the resources that are available. The resources of these lands are extremely important to the economic and material wealth of this country. And the development that can come out of mineral discoveries and mineral development will be extremely important, particularly in this new age of the atom when we will need new types of minerals and new types of mineral products to meet the needs that will be developed.

So my interest in conservation is an unselfish interest in a desire to see to it that we urge and support the claims that will help the total country and not restrict individual rights.

I would like to offer, Mr. Chairman, for the record, a letter from the Izaak Walton League of America, in which they endorse the objectives of S. 1713.

Senator MALONE. It will go into the record at this point.  
(The letter referred to is as follows:)

THE IZAAK WALTON LEAGUE OF AMERICA, INC.,

Chicago 2, Ill., May 3, 1955.

HON. WALTER ROGERS,

*Chairman, Mines and Mining Subcommittee,  
Committee on Interior and Insular Affairs,  
House Office Building, Washington 25, D. C.*

DEAR MR. ROGERS: Since it will be impossible for me to be in Washington this month when hearings are held on H. R. 5561 and other bills relating to mining claims (H. R. 5563, H. R. 5572, H. R. 5577, H. R. 5595, H. R. 5742, and perhaps others of a similar nature), I would appreciate your having this inserted in the record of your hearings as the expressed opinion of the Izaak Walton League of America.

We would like the Izaak Walton League to be recorded in favor of the essence of these bills as introduced. We are convinced that such language is, however, the absolute rock-bottom minimum that should be considered for the strengthening and improvement of the mining claims situation from the standpoint of administration of law, administration of related or adjacent resources, and the general welfare of the country.

As an organization, the Izaak Walton League has for many years helped in publicizing and focusing attention upon the fraudulent or undesirable practices possible under our antiquated Federal mining laws. More recently we have been greatly disturbed by developments connected with uranium prospecting and claim filing. Federal departments and others testifying before this committee no doubt will detail these things completely and there is no need of burdening the record with additional facts and factors now.

The Izaak Walton League of America is happy to join with the American Mining Congress, livestock interests, the Departments of Agriculture and Interior, timber interests, and other natural resource conservation organizations in urging early and favorable action on H. R. 5561 and similar bills, provided such bills are acted upon without substantial, crippling, weakening amendments. We do wish to emphasize that we consider the present language of the bills as our final defense position below which we do not care to retreat through compromise or conciliation.

Sincerely,

WILLIAM VOIGT,  
*Executive Director.*

Mr. HUDORA. Also, I offer, for the record, at the request of the National Parks Association, a letter to the chairman in endorsement of S. 1713.

Senator ANDERSON. Is that the letter of May 16?

Mr. HUDORA. Yes, sir.

Senator ANDERSON. The chairman was asked to include it, and, since you also have it, I will include it in the record at this point.  
(The letter referred to is as follows:)

NATIONAL PARKS ASSOCIATION,  
Washington, D. C., May 16, 1955.

Senator JAMES E. MURRAY,

*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.*

DEAR SENATOR MURRAY: The National Parks Association believes revision of the mining laws to correct prevalent abuses and to prevent future misuse of national forest and other publicly owned lands is urgently needed. Present practices have thrown the administration of these lands for their varied benefits and resources seriously out of kilter. The fraudulent claimant, who is not honestly seeking to develop mineral resources, is able to secure privileges far removed from the proper intent of mining laws; he can seize title to timber, homesites, or other lands in the guise of mining, prevent public use of large tracts of other

lands, and even endanger the orderly management of entire forest units. The National Parks Association is especially concerned by the threat to the national forest wild and wilderness area system represented by such illegitimate claims.

Proposals to amend the laws to achieve this goal have been before Congress for several years. The problem has long been criticized, but the present uranium boom has made it so acute that further delay would be seriously against the national interest.

It is our belief that the problem can best be solved by reserving the surface rights and resources to the United States, subject only to such use by miners as are essential to that purpose. Nonmetallic substances should be placed under the Mineral Leasing Acts, which provide for their orderly extraction without the dangers inherent in including them in the location acts. The present inefficient and ineffective procedures for determining the validity of many claims should be streamlined, and a method for eliminating the obsolete and fraudulent claims now existing should be devised.

The board of trustees of the National Parks Association formally endorsed Senator Anderson's and Congressman Hope's bills, now before Congress as S. 687 and H. R. 110, as most effectively solving this problem, and believes they, or the Cooley bill, H. R. 3414, should be enacted. However, in view of the jurisdictional disputes and opposition that have arisen about them, and because of the need for steps to be taken at once to ameliorate the problem, it is desirable that if S. 687 and H. R. 110 cannot be enacted, S. 1713 and H. R. 5561 should be approved promptly. These bills are carefully drawn and will correct a large part of the difficulty, while still protecting the interests of the miners. We note the provision of section 1 that exempts the national park system from this legislation, and concur with that provision.

It is requested that this letter be made a part of the official record.

Sincerely yours,

FRED M. PACKARD, *Executive Secretary.*

Senator MALONE. I would like to suggest that, as long as we brought this special writer into it and his article has been included in the record, that we bring him before the committee. I would like to question him and see what he knows about it because these special writers, I must say to the chairman, are very important. They spend their lives learning how to write to influence the public, which is a very fine profession. They also can be very dangerous.

Mr. DeVoto is a very dangerous writer because of his lack of personal knowledge of what he is doing.

Most of them read the menu backward, if you know what I mean. They have objectives that they want to accomplish, and they set out to get the evidence to do that.

I don't say that you sent this man to get the evidence to do this, but I could go out with my knowledge of the West, where most of these lands are located, and spoof anybody that does not have any personal knowledge of his own.

There are 2 or 3 stages in a man's education. Mine and yours are in the first stage.

I have had to learn something about public relations because I was State engineer of my State at one time. Now I am here.

I was in the private engineering business for 30 years. I learned something about it. I was a consulting engineer in the Central Valley project in California, and State engineer in my State where we built some dams.

What do you think we did with the fish?

It was full of bass, and below it was full of trout.

Mr. HUDOB. If I may interrupt, sir, our fishing editor spends his winters in your State.

Senator MALONE. That is great.

Let me say something to you.

I am also interested in hospitals. I am interested in public relations. I am interested in your magazine. I read it. But I don't know anything about the business of it.

Don't you see?

I don't know what makes a success of your magazine, or how to run a hospital.

I am one of the ones who helped build some hospitals all over this Nation. I have just been a little cog in the wheel. But I don't know anything about running them.

When I get to talking about business I talk only about the things that I think I understand, the range and mining and engineering and how to build a dam, and those various things.

But when I find men posing as experts to influence legislation on something about which they know nothing, my temper gets shorter and shorter.

If we were investigating how to run a successful sports magazine, you would be a wonderful witness.

In the matter of mining, unless you establish yourself—and I have always had to establish myself as an expert witness when I go before any court—unless you establish yourself as an expert witness you can be very dangerous, if you know what I mean.

I have a most friendly feeling toward you because you are one of the people who provide reading material. I don't get to fish much, but I like to find out what the fishermen are doing.

I am not an expert in fishing. I depend on people like our own fish and game commission to tell me what they want, and then we try to make it a part of the law. We are trying to do it now on the Truckee and Carson Rivers. It is a question of hearing.

There is a difference between an expert witness and one who knows what he wants as an objective and knows nothing about the practical matters that lead up to it.

In 1934 we changed our whole objective of the public lands from Ohio west. The Congress' position was we were holding them in trust for the States until such time as they could figure out some kind of law to get them into private ownership and on the tax rolls. All you have to do is read it. That was for 140 years.

In 1934 we changed that. Mr. Ickes discovered 100 million acres or a billion acres—whatever it was—that nobody knew anything about at all. The only people that knew about them were the people who were making a living off them.

He said we should charge for the use of the stock to the stockmen of all these lands. As a matter of fact, every public land State had been taxing these lands through the livestock on patented land. You couldn't raise the taxes on the stockman. All you could do is redistribute it if he owned all those public lands.

But you heard me outline a while ago that 960 acres was the greatest acreage any man could own. When he got over in the short-grass country—take a sheepman: do you have any idea how much land it takes to run them on out there? We are talking about a township, not sections. Therefore, we were taxing this sheepman, taxing his patented land for waterholes and irrigated land, everything the traffic would bear, which meant he had to have these lands to run his band of sheep.

Ickes comes in and, entirely ignorant of everything—God bless him, he is dead now, but they said all these things while he was alive, so I

am not bringing him up for any purpose except an illustration—he practically ruined many stockmen by his rules and regulations. And the Forest Service is doing the same thing because they are a national outfit.

I have no quarrel with them in the way they run the forests. I think they are expert. But when they get out where there are no trees—and they have lands in the forest reserve—they do not know how to run a range.

Anybody that could stay in business running a magazine these days is an expert because there are certain laws that affect them, too. We just had one up here. That is another thing that might interest you. You are not testifying as an expert in things you know about; you are testifying as an expert in something about which you know nothing, according to your own testimony.

I am sorry I have to say that.

Ninety percent of the witnesses who have been here have no personal knowledge whatever about what they are testifying to.

Senator ANDERSON. You may proceed with your statement.

Mr. HUBODA. Having specialized and dealt with this subject of natural resources for the past 14 years, having been recognized and received a number of awards for such service and knowledge of resources—

Senator MALONE. Received what?

Mr. HUBODA. Awards.

Senator MALONE. What did this experience include? Tell us again. I am interested in it. I really am. And I am sorry to have to go into it.

Mr. HUBODA. Probably no group of individuals, Senator Malone, are more sensitive and more on-the-ground alert to the whole subject of surface values and surface resources than the hunters and fishermen of this country.

Senator MALONE. I am a hunter and a fisherman. Every year I get a deer because I can shoot a rifle.

Mr. HUBODA. You would do better than most of the deer hunters.

Senator MALONE. I know how to shoot a rifle. That is not theoretical with me. I am interested in that very much. But I also have my roots down in the thing we are talking about here, and you don't.

I want to know what you got those awards for, what your experience entails. You brought the subject up.

Mr. HUBODA. To continue, Senator Malone, the statement that I had started, that those interested in the out-of-doors, the hunters and fishermen like yourself, have a unique appreciation of the surface values and the scenic outdoor opportunities, the 33 million license buyers in this country—

Senator MALONE. That includes me.

Mr. HUBODA. The 33 million license buyers of this country, one of each 5 adult individuals, are a cross-section representing every field of activity—you, the distinguished Senator from Nevada, the distinguished chairman from New Mexico, the lawyers, the miners—

Senator MALONE. All of that I admit. But I don't testify as an expert witness on anything that I am not entirely familiar with. And they have not given me any awards for hunting, although I think maybe I could compete with some that have received them. They don't give me any awards for knowing how to handle a recreation area because it is not my business.

I have just known practically all about them in my own State and generally in other States.

What they give me an expert standing on is a matter of building dams and reclamation and flood control and mining and various things where for 30 years I have been familiar and have been drawing pay for it. I could qualify in a court. You can't qualify in a court for running a magazine and talking about a situation about which you are entirely unfamiliar. That is the thing you don't know, in my opinion.

You don't know that the safety of this country depends on producing enough of these minerals or having them produced in an area available to us in time of war, for our safety, for our security. You can do without buffalo, you can do without deer in time of war, but you cannot do without these minerals.

Senator ANDERSON. He might. You can't probe his mind.

Senator MALONE. I want to see if he knows. He has nothing to say that indicates it at all.

Mr. HUBODA. I think possibly the statement that Senator Malone has just made about the future strength and welfare of this country depending on the natural resources may likely have originated in my own editorial columns.

Senator MALONE. Give us one of your editorials, the substance of it.

I know what your editorial probably is, that you have to save these minerals and import them until a war starts, and then you would go out and dig them out. That is what Ickes started, and I think you all followed him.

Senator ANDERSON. Couldn't he testify on this bill?

Senator MALONE. He did. I want to qualify him and see what he knows about it.

Mr. HUBODA. My knowledge of mining has been enhanced in listening to the testimony and the cross-examination by Senator Malone over the past 2 days.

I also have had the privilege of reading a number of reports and documents which he has originated in his own committee.

And, in listening and in covering the capital for 12 years and attending practically every hearing on natural resources subjects and having available the authorities of the country up here in Washington and in the various States, and as a reporter trained to talk and to probe, just as you have been doing in this particular instance, to get the information, we feel that some of it has possibly rubbed off.

But in each instance as we publish once a month we have got to get a vote of confidence, which means that our readers have to accept or reject what they read. And we can only reflect what the body of readers—

Senator MALONE. Right at that point, I am sorry that I have to interrupt, but I think you have established it already.

I can testify on a hospital like you are testifying about this business, but I do not have any information of my own. In other words, if you were testifying about the best rifle to use in shooting a deer, I might dispute what you said but I would have to recognize you as somewhat of an expert. You have hunted and you have studied and you can write an article about that with substance in it.

But when you go beyond that, when you want some regulation out here just as Ickes was successful in getting on the forage when he didn't know the south end of a cow going north, it is something that interferes with the living of these people and the security of this country. And it has been sold to this country. Maybe you helped to sell it. That is the reason I wanted to get this editorial.

"Save our minerals; don't mine them until after the war starts." We can just have them, you see.

Ickes wanted to save all the oil because we would be out of oil. It is running out of our ears now and he is dead.

Of course, there is nothing you can do about it. But his policies did not prevail.

If your policies prevail we are finally going to get a leasing act, and that is what you all want in this mining business. This is another step. I think you are out of the mining business. Of course, you are out of it anyway as long as some of the laws Congress has passed are in force.

But you say you have been here studying this testimony for 12 years. I could study a doctor's testimony for 400 years if I lived that long and still not know what I am talking about.

Mr. Chairman, that is all I have to say about it. I think this witness has established that he is here because he believes the things he has been hearing as to how you ought to handle public land.

I respect you in your business. I read your magazine.

Senator ANDERSON. Go right ahead and finish your statement.

Mr. HUBODA. Mr. Chairman, if I may continue just briefly, referring to the bill, we are concerned in this legislation about the wildlife refuges and the effect it would have on the wildlife refuges. We are also concerned under section 2 that there are special acts of Congress dealing with the appropriation of money on refuge receipts, and so forth, and that matter may be taken into consideration.

We have a concern in section 4 (b) that if the interpretation of the United States is a United States agency, its permittees and licensees, that there may be an effect upon an individual fisherman or hunter who is licensed by a State, and whether there would be a restriction there.

If the United States is interpreted to be the individual State, then there would be no concern. But if the interpretation is an agency of the Government, the Federal Government does not issue fishing and hunting licenses.

Senator MALONE. I think we are coming to that in due time, that about the next thing will be, after we get all through with this thing, the Government will be issuing fishing licenses.

So no one has to move out of Washington. They can just sit here on their nice soft cushions with air conditioning and do the whole business right from here.

Mr. HUBODA. Senator Malone, the Supreme Court has stated in decisions that the fish and wildlife resources, with the exception of migratory birds, are the property of the State which is the custodian for the resources.

Senator MALONE. I have seen that Supreme Court change entirely around in 30 years. So you can expect anything just as soon as they get a place to hang their hats.

Mr. HUBODA. In closing, Mr. Chairman, I would like to state that we are again interested in the multiple-purpose use of all of the resources. We do not feel that any constitutional freedom of an individual should be impaired under any circumstance for any emergency.

In examination of this proposed legislation we do not feel that that is the case. And I want to endorse the excellent statement on conservation made by Senator Anderson as a preliminary to this hearing. I want to commend the American Mining Congress for its recognition of this problem, and the American Forestry for its auspices in helping to bring this matter to this point.

Thank you.

Senator MALONE. I have been glad to see you.

Senator ANDERSON. Let me just say that the Izaak Walton League also sent a letter addressed to the chairman, which will be placed in the record at this point.

(The letter referred to follows:)

THE IZAAK WALTON LEAGUE OF AMERICA, INC.,  
WESTERN OFFICE,  
Denver, Colo., May 16, 1955.

Re S. 1713.

HON. JAMES E. MURRAY,

*Chairman, Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR MURRAY: Izaak Walton League members living in the western public-land States have long been concerned at the grave loss of public values in the national forests due to our antiquated mining laws. We have been hopeful that some changes might be devised, acceptable to all interests concerned, which would eliminate the abuses possible under present law and eliminate avoidable loss and damage to the important surface values of timber, watersheds, grazing, wildlife, and recreation.

We have studied the legislation which your committee is now considering, especially S. 1713. We do not believe this legislation, if enacted, will solve all the problems. However, we do believe it will go a long way toward correcting many of them, and it has our endorsement.

We respectfully urge that your committee report S. 1713 favorably.

Sincerely,

J. W. PENFOLD,  
*Western Representative.*

Senator ANDERSON. Senator Malone, I did not put the magazine article in the record. I merely put it in the files of the committee.

Senator MALONE. That is a good idea.

Could we call the man in who wrote that article?

Mr. HUBODA. I don't know where he is. He is on another assignment now for us, and I would have to find out.

Senator MALONE. Find out where he is.

Mr. HUBODA. He is not our employee.

Senator ANDERSON. May I put in the record also a letter from Alfred J. Kreft, past president, Portland (Oreg.) Chapter of the Izaak Walton League of America, dated May 11, 1955, enclosing an editorial which he requests permission to put in the record. The letter reads as follows:

HON. CLINTON ANDERSON,

*Chairman, Interior and Insular Affairs Committee,  
United States Senate, Washington, D. C.*

DEAR SIR: I enclose a very excellent editorial from the Portland (Oreg.) Journal, an independent newspaper, which commends very highly the proposed bills that you and Representative Ellsworth have introduced this session in your respective branches of the Congress. The editor hopes for its passage, as do many of us.

As past president of the Portland (Oreg.) Chapter of the Izaak Walton League of America, I have personally studied this bill and find that it corrects most of the abuses that the league has been criticizing.

I urge that your committee approve this bill and work for its passage in the Congress. Please make this editorial and my letter part of the official record of the hearings.

Very sincerely,

ALFRED J. KREFT, M. D.,

*Past President, Portland (Oreg.) Chapter, Izaak Walton League of America.*

The editorial from the Oregon Journal reads:

#### REALISTIC MINING-TIMBER ACT

Last year 1,067 mining claims were filed on national forest lands in Oregon and Washington. They have pushed the total of unpatented claims on Forest Service lands in the two States to 10,417, of which 6,667 are in Oregon.

They have tied up 284,588 acres of forest land, on much of which the Federal Government can neither harvest timber nor build access roads to adjacent lands.

This tells only a small part of the story of widespread abuses based on the weak and outmoded mining laws of 1872. "Bogus miners" by the thousands have filed claims on valuable stands of timber and summer-home sites with no intention of seeking mineral deposits. Last year, of 84,000 unpatented claims in the Nation, only 2 percent were producing commercial quantities of ore, according to Forest Service figures. It was estimated that not more than 40 percent might prove to be valid under the mining laws.

Year after year remedial legislation has been presented in Congress but has always met defeat, partly through pressure on the part of legitimate mining interests which feared the proposals went too far.

Legislation now before Congress seems to have a better chance of success. H. R. 5577, bearing the name of Oregon's Representative Ellsworth, would go far toward cleaning up the mining-law abuses. Several other identical bills are in the House, and a like bill in the Senate is signed by Senator Clinton Anderson (Democrat, New Mexico), author of a more drastic 1953 bill which failed.

These proposals have the backing of the Departments of Agriculture and Interior, the American Forestry Association, and several mining organizations.

The legislation would put an end to the practice of filing mining claims for sand, stone, gravel, pumice, and cinders, and make them subject to the Mineral Disposal Act.

It would, prior to patent, prohibit use of mining claims for any other purpose than prospecting, mining, and related activities; permit the Government to manage and dispose of timber and other surface resources and to build access roads; prevent the mining claimant from removing timber or other surface resources, except for that required for mining activities; set up a legal procedure by which the Federal Government might more expeditiously resolve thousands of abandoned, dormant, or unidentifiable claims.

Earlier bills sought to keep control of timber in Government hands even after patent. This the Ellsworth bill does not do, but forestry officials assure us that by far the larger number of abuses lie in claims which never could be patented. They are satisfied with the bill as written. We hope Congress will give it the green light.

I would like also to have in the record at this point a statement from the Independent Timber Farmers of America.

(The statement referred to follows:)

#### STATEMENT OF CHRISTOPHER M. GRANGER, REPRESENTING THE INDEPENDENT TIMBER FARMERS OF AMERICA IN SUPPORT OF THE ENACTMENT OF S. 1713

The Independent Timber Farmers of America is an association of small timberland owners and operators active in a number of central and northwestern States. Its purpose is to facilitate the operations of its members and to promote good forestry practices on their holdings. Also, as forest-land managers, the group is strongly conservation minded and favors all constructive conservation legislation. It endorses the purposes of S. 1713 and recommends its enactment.

It is known that this measure represents a compromise between Federal land administrators, the mining industry, and conservation groups. Concessions were

made by the three groups in the interest of joint support of a measure to remove or lessen some of the abuses of the general mining law. Unquestionably the bill, if enacted, will represent a very desirable step in that direction, without interfering with legitimate mining operations on the Federal lands.

The situation requires prompt action. Mining claims are being located at a terrific rate on Federal lands, multiplying daily the actual or potential difficulties of properly administering the other resources of these lands. It is urged that this legislation be enacted without fail during this session of Congress.

When enacted, this measure should be given a fair and thorough trial. I have no thought of suggesting any amendments now. But it is well to bear in mind that conservationists would like to have seen included several added features which have appeared in whole or in part in earlier bills, such as:

1. A requirement that the claimant should pay a fair price for the surface resources of the claim upon patent—particularly the timber not needed in operating the claim. This would further reduce any incentive to patent a claim of low mineral value in order to obtain high-value surface resources.

2. A requirement that surface operations, including placer mining measures, and discovery operations on both placer and lode claims must be conducted under reasonable restrictions to minimize soil erosion, pollution of water resources, damage to watersheds, and for restoration of the surface. A large and increasing amount of avoidable damage is occurring.

Experience under this bill, if enacted, may show the need for later consideration by those who united to advocate this legislation of some additions similar to the foregoing.

CHRISTOPHER M. GRANGER.

Senator ANDERSON. I also am in receipt of a letter dated May 12, 1955, from Stuart Moir, Forest Counsel of the Western Forestry and Conservation Association, addressed to me, which reads as follows:

DEAR SENATOR ANDERSON: We would like to present our views on your bill, S. 1713, which is a proposal to amend the mining laws so as to correct certain weaknesses in the existing laws.

The Western Forestry and Conservation Association represents forest landowners in the western United States. It is a nonprofit organization, interested in the proper protection and management of forest lands and the wise use and sound administration of all natural resources.

We realize that the mining industry is essential to the economic welfare of the United States and that an efficient domestic mining industry must be maintained as a basic component of national security, and that any legislation affecting the mining laws must give full cognizance to this fact.

For years there has been a conflict of interest in several areas in the West with the forest properties on one hand and mining claims on the other. In many cases the mining claims were for common materials such as sand, gravel, stone and pumice. These conflicts have materially increased in recent years, due to the impetus given to the development of both mineral and forest resources resulting from the recent war and its aftermath.

We believe that the frequent abuse of the present law to acquire summer homesites or tracts of valuable timber by locating such common materials should be corrected promptly. The filing on a marginal timber claim just to acquire timber should be made unlawful.

Many forest operators are now seriously handicapped in their operations by being cut off from access to their properties by mining claims; and many millions of feet of Government-owned timber is bottled up and rendered unavailable for operation by the same action on the part of some mine claimants.

Your bill, S. 1713, provides safeguards against the abuses of the mining laws, such as I have mentioned above, and will enable the United States Forest Service and the Bureau of Land Management to sell timber on mining claims prior to their being patented and will also provide for access across mining claims to operating forests. Its provisions would not adversely affect a bona fide mining claim locator engaged in the development of the mineral resources. Approval of the bill by your committee and its enactment by Congress is greatly to be desired, and this association sincerely hopes that Congress will accomplish this improvement.

We respectfully submit this statement for your consideration and request that it be included in the hearings of the Committee.

Sincerely yours,

STUART MOIR,  
Forest Counsel.

Senator ANDERSON. Also for the record the committee is in receipt of a telegram from the American National Cattlemen's Association, F. E. Mollin, executive secretary, which reads as follows:

We wish to make the following statement in favor of enactment of S. 1713 and ask that it be included in the record.

The American National Cattlemen's Association, Denver, Colo., was organized in 1898 and is a voluntary association representing 24 State cattlemen's associations, many local and regional and regional cattlemen's groups and thousands of individual cattlemen.

In January the association passed a resolution deploring the present laws with respect to letting and holding mining claims as outmoded and inconsistent with the proper use of Federal land, pointing out that many claims are filed on and held for years for purposes other than mining. The resolution asked that our mining laws be revised so that claims will be held consistent with the proper use and management of Federal lands for all users.

The American National Cattlemen's Association has consistently supported free enterprise and individual initiative and has always favored full development of the natural resources of the Nation for the benefit of all the people. It has no desire to interfere with the legitimate efforts of prospectors to locate and develop claims.

However, there has been in recent years a growing tendency to take advantage of the broad latitude in our present mining laws and to use claims held under those laws for purposes far removed from development of mineral resources.

We believe that S. 1713 will help to correct this tendency and that it is in accordance with the desire expressed in our resolution cited above. It would bar the use of unpatented mining claims for purposes other than prospecting and mining and processing and gives the Government the right to dispose of timber, forage, and other surface resources not actually needed in the mining operation.

Old and abandoned mining claims have created uncertainties and confusion as to the rights to the use of many pieces of land for grazing. S. 1713 provides for a procedure under which control of the surface value of lands can be resolved and uncertainties cleared up, with due consideration for the rights of legitimate operators of active claims.

The bill provides that the Government or its licensees or permittees may use such surfaces of unpatented claims as are necessary for access to adjacent land so long as that does not interfere with the mining or related operations. Mining claims have often unnecessarily blocked livestock trails and prevented proper use of adjacent land.

May we urge your favorable consideration of S. 1713.

Senator ANDERSON. Also, for the record, I have a letter addressed to the chairman, dated April 29, 1955, from C. H. Murphey, executive director, New Mexico Mining Association, which reads as follows:

DEAR SENATOR MURRAY: It is our understanding that S. 1713 will probably come before your committee for consideration shortly after the middle of May.

In order that you may be informed concerning the attitude of our organization with respect to this proposed piece of legislation, we wish to advise that the majority of our members endorse enough of its provisions to permit a full endorsement on our part. It is expected that some of the abuses of the mining laws that have been erroneously charged against our industry will be corrected with the enactment of this measure.

With assurance of our best wishes, I am

Cordially yours,

C. H. MURPHEY,  
Executive Director.

Senator ANDERSON. Now we will hear from Mr. Palmer.  
Mr. Palmer, will you identify yourself and your organization.

**STATEMENT OF ROBERT S. PALMER, EXECUTIVE VICE PRESIDENT,  
COLORADO MINING ASSOCIATION**

Mr. PALMER. My name is Robert S. Palmer.

Senator ANDERSON. What is your position?

Mr. PALMER. My position is that of executive vice president of the Colorado Mining Association. I am actively engaged in mining in New Mexico and Utah and in Colorado, and I have been in the active practice of the law, mining law in particular, for the last 22 years.

Senator ANDERSON. Your office is in Denver?

Mr. PALMER. My office is in Denver. I appear here by request and not through any desire of mine to impose upon the time of this committee.

The National Western Mining Conference held in Denver last February attended by 2 members of your Senate committee and some 3,500 mining people from public land States unanimously adopted a resolution opposing any change in the basic mining law on the grounds that it had been interpreted by the courts to such an extent that it could be easily understood by the average prospector without fear of some new interpretation involving expensive litigation.

The executive committee of the Colorado Mining Association recently voiced its approval of S. 1713 with the expressed hope that its provisions would be amended so as to restrict its application to national forests, and the further hope that no valid mining locator would be deprived of the use of timber found on his claim or contiguous claim for essential mining purposes.

The executives of the association which I represent have a very high regard for the acting chairman of this committee and the other sponsors of this legislation, and were greatly impressed with the assurance of Senator Clinton P. Anderson that it was not the intent of the legislation to deprive any miner of valid rights.

May I here add that we in Colorado consider Senator Eugene D. Millikin the ablest mining lawyer who has ever served our State in the Congress, and we rely implicitly on his analysis of pending legislation affecting our vital industry. As for Senator George Malone, we are highly appreciative of the great work he has done and is doing to make America a have nation as far as minerals are concerned so that the United States will not become dangerously dependent upon foreign sources for the safety and security of our people.

The fear we have of this legislation is that its administration and interpretation may not be in line with the intent of Congress.

As an illustration of this point, when the Leasing Act of 1921 was enacted into law it was not the intent of Congress, as shown by the debates, that leased lands were to be withdrawn from mineral entry. Yet the Department of the Interior, in Joseph E. McCloy, et al. (50 L. D. 623, 1924), held that the Leasing Act was effective to withdraw from mining location all lands known to be valuable for Leasing Act minerals and all lands for which an application was pending for a mineral lease.

I wish to state that I am one of the few people who has read all of the debates on the floor of the Senate when the Leasing Act was under consideration, and can state without any fear of contradiction that there was no intent on the part of any Member of the Senate expressed

in that debate that the Oil Leasing Act was designed to withdraw any area from mineral entry.

Under present law, lands in national forests are open to location only in strict accordance with forest regulations. I have before me a reprint of the *Utah Law Review*, volume 4, No. 2, which was recently presented to me by the editor, in which this is pointed out.

The cases cited are *U. S. v. Mobley* (45 Fed. Supp. 407, supplemented by 46 Fed. Supp. 676 (S. D. Cal. 1942)) and *U. S. v. Rizzinelli* (182 Fed. 675).

Senator ANDERSON. That is the saloon case which I mentioned yesterday.

Mr. PALMER. The latter case, as we all know, decided, as far as the law is concerned, that no one can acquire a mining claim for the purpose of locating a saloon there.

Formal acts of appropriation must be accomplished in strict compliance with Federal and State law in order to initiate rights to a lode claim.

The average miner, therefore, asks why penalize valid locators of mining claims simply because some unscrupulous people attempt to violate the law.

We have pointed out many times that enforcement of the present law will alleviate the difficulty. This was not only the position of our association, but every other mining association, including the Mining Congress, up until last year.

Why the change?

Mr. Richard E. McArdle, Chief of the Forest Service, said yesterday, in part, and I quote:

The problem of preventing misuse of mining claims on the national forest and providing equitably for multiple development of both minerals and national forest surface resources on such claims is probably the most important single problem facing the Forest Service at the present time in its administration of the national forests.

If we accept this statement at face value, one might reasonably ask why extend the provisions of the proposed legislation to all public lands outside the national forests.

The answer has been suggested that all areas should be treated alike. We ask, if it is impossible to patrol the national forests, how is it going to be possible to enforce the legal requirements for valid locations and see that every tree or bush is cut on every location—and I quote from the bill: “in accordance with sound principles of forest management.”

A miner asked me before I left Denver, “Suppose I locate a claim on the Colorado Plateau and cut a tree or bush not in accordance with sound principles of forest management. Under the provisions of this act are they going to throw me in jail?”

Senator ANDERSON. What did you tell him?

Mr. PALMER. I refused to answer the question, sir.

Senator ANDERSON. But you could have answered it.

Mr. PALMER. I am not sure what the answer is.

Senator ANDERSON. How many years have you practiced mining law?

Mr. PALMER. I was admitted to practice in 1928.

I will be very happy to give him your answer, Senator.

As William Colby, that eminent mining lawyer who practiced law in California for some 30 years with the great Lindley, who compiled the classic works on mining law, said, if you can't enforce the present law, what assurance do we have of enforcement of the new law?

Mr. McArdle said this bill is a very significant and major step forward, and, if funds are available for its implementation, will result in correcting a very substantial portion of our problem.

A step forward to what?

Elimination of the prospector from the national forests?

Are we to have Forest Rangers chasing miners all over our mountains?

If so, then I fear there will be serious reaction in the public land States.

Senator ANDERSON. Do you believe that is the purpose of the bill?

Mr. PALMER. I do not believe that the Congress intends that as the purpose of the bill.

Senator ANDERSON. Do you think that if it is passed that the Forest Rangers will start running the mining prospectors off?

Mr. PALMER. Senator, may I say to you that I honestly believe that more miners have come into my office in Denver for advice on conflicts with the Forest Service than into any office in the United States. It so happened that just before I left Denver three miners came into the office stating that their mining location was being contested by the Forest Service under the present law.

Senator ANDERSON. Do you mean the present law?

Mr. PALMER. Under the present law.

Senator ANDERSON. I thought the present law was something they couldn't touch a man under.

Senator MALONE. Yes; that is what I have been arguing about for 2 days.

Mr. PALMER. I strictly said here, Mr. Chairman—"Enforced."

Senator ANDERSON. The present law was enforced.

Mr. PALMER. That is right.

Senator MALONE. That is right.

Mr. PALMER. And these men were being hounded by the forest ranger for constructing a cabin on a location which they had made for the purpose of developing a mine. The mineral that they had found in place was iron pyrite. They were driving a tunnel with hand steel. They were formerly employed in Leadville as miners and were now retired because of age and were attempting to make a livelihood through the location of a mining claim in a national forest.

Senator ANDERSON. How did the forest ranger harass them?

Mr. PALMER. The forest ranger is said to have told them to get off the property, that they had not found any mineral in place in such quantity as would justify a reasonable person in pursuing his claim, and with the further allegation, which has been filed with the regional administrator of the Land Office, that the lands were more valuable for forest uses than they would be for mineral uses.

Senator ANDERSON. Does the forest ranger concede that he made that statement?

Mr. PALMER. I have discussed the matter with the local authorities. I have not discussed the matter with the forester himself. But the matter is being set for hearing under contest procedure.

The point that I make is that here is a situation in which, under present law, there is quite a good deal of activity on the part of the officials of the Forest Service.

I might cite to you just one other illustration.

One of our members has some patented placer claims in the vicinity of Denver. On these patented claims are some trees. The owner of the property authorized the cutting of some of the trees for the purpose of thinning out an area. The cutters trespassed on the national forest 10 feet without knowing that they were doing so, and immediately the forest ranger appeared and advised them of the trespass, and suggested that they pay the Government a stumpage fee for the timber that had mistakenly been cut.

Senator ANDERSON. Is there anything wrong with that?

There is nothing wrong with that. I commend the Forest Service for enforcement of the law.

Mr. PALMER. The point I am making is that the statement was made in testimony here that it is not possible for the Forest Service, with present personnel, to enforce the mining laws in the national forests.

As far as I know, in Colorado it not only is possible; it is being enforced.

Senator ANDERSON. In my home town a man built a garage and he inadvertently built it an inch and a-half over on the other man's area. Now as a lawyer you know what the other man's remedy was, don't you?

Mr. PALMER. That is right.

Senator ANDERSON. He told him to move the whole building.

He had that right, didn't he?

Mr. PALMER. That is right.

Senator ANDERSON. The Forest Service had the right, did it not?

Mr. PALMER. That is right.

Senator MALONE. I think the point was that the fellow was on the job and he was enforcing it and doing a good job and was to be commended. But the testimony here for 2 days has been that it is not effective the way it is now; the present law is not effective.

Senator ANDERSON. I was thinking, Senator Malone, of an incident when I went home one summer. I spent 4 or 5 days in Albuquerque and tried to maintain an office in the Federal Building. One of our men who is most militant against the Forest Service—I heard his boots coming down the hall, and he came in boiling. He told me that the Forest Service had taken his telephone number away from him at his sheep camp. He had 22R at his house, and 22J at his sheep camp. And they had taken his number away from him, and he wanted the Forest Ranger fired that day.

That is why I asked the question about the Forest Ranger.

He insisted that I fire him then on his absolute assurance that that had happened.

That man was a fine man, a long-time personal friend.

Senator MALONE. Maybe he overrates the Senator as to what he can do.

Senator ANDERSON. At that time I was the Secretary of Agriculture.

He wanted me to fire him that day, and he wanted me to do it personally while he stood and watched me do it.

I delegated to one of the men the responsibility of running the case to a complete end.

He found the man, and the man admitted that the telephone company had done it, and, on his own volition, the Forest Ranger had driven all the way in to Albuquerque, 100 miles, to protest because he said that this man would not take it lying down.

The Forest Service Ranger did that, but to this day we keep hearing the story about how he took his telephone number away from him.

That is why I wanted to know if these Forest people had admitted that they had been in there browbeating people and harassing people.

Senator MALONE. The Forest people in Nevada, I have no quarrel with them at all as far as forests are concerned. I only quarrel with them when they try to do something entirely out of their field.

Of course, in our State it may be an exception. I think they do a good job. I think they are fully capable of doing the job that this bill is designed to do. That is, I think, the point that Mr. Palmer made.

Mr. PALMER. Now, Mr. McArdle estimates that at the beginning of this year there were 166,000 national forest mining claims. If this be true, then in our forests alone there will have to be completed \$16,600,000 worth of assessment work this year, and if the 4 million acres go to patent there will have to be \$83 million worth of work done on those claims, and, in addition, the United States Government will receive \$20 million in revenues besides the mineral surveyor fees, court costs, beans and bacon, legal fees, trucks, equipment, supplies and whatnot which will have to be paid for by the miners.

And I have assumed in these compilations, Senator, that no production from any of these claims will take place. If production takes place the revenue received by the Federal Government will be in substantial amounts.

Senator ANDERSON. Do you know whether or not a man has to do his assessment work the very first year when he files one of these claims?

Dr. PALMER. I know the law, yes, sir.

Senator ANDERSON. Do you know any loopholes to the law?

Mr. PALMER. No, sir; not when it is properly enforced.

Senator ANDERSON. Do you know that if a man fails to state on his application blank that he is a citizen of the United States that in certain types of mining claims, at least, that can delay it from 14 to 18 months? It just takes that long to go through the routine of writing back and getting data to show that he is a citizen.

Mr. PALMER. You mean in a contest?

Senator ANDERSON. No. In the first step of mining. I don't say when he goes out and files under the ordinary 1872 law, but when he is filing for a coal mine, for example, under the 1920 law. How many years can you postpone it before you have to do any assessment work?

Mr. PALMER. Under the mining law you are required to do it every year.

Senator ANDERSON. Would you anticipate that out of these claims all of them or a substantial part of them are trying to do assessment work?

Mr. PALMER. That is a very difficult question for me to answer, but I would say that at the present time—and I assume that a great many of

these claims are uranium locations that have been cited by the representative of the Forest Service—a great deal of money is being expended in the exploration and development of these claims.

I would like to take just a minute here to say one word about these expert miners, geologists, and mining engineers who have been referred to as competent locators of mining claims.

Would Charlie Steen or Vernon Pick qualify as an experienced, qualified mining man?

Senator ANDERSON. Do you find anything in this bill that would prevent Charlie Steen from going out and hunting for it?

Mr. PALMER. I find nothing whatever. But the Forest Service, before bringing a contest, generally sends out a competent mining official to examine the premises and to see whether ore has been found or mineral has been found in place in such quantity as would justify a reasonable person—not a miner, but a person—in the development of his claim. And I wish to—

Senator ANDERSON. You understand, don't you, that there is not a person connected with this bill who wants to stop that from being done?

Mr. PALMER. I think that is a correct statement with respect to the Members of Congress.

Senator ANDERSON. That is what I said, a person connected with the bill.

Mr. PALMER. The only reason that I appear here by request is to point out that, No. 1, legislation has been enacted by this Congress which has been interpreted by the Departments adversely to the best interests of the Nation and to the best interests of the development of our mines.

Secondly, we feel that a great deal of money has been expended in litigation, cases which have been decided by our Supreme Court with respect to the present law. And I am sure you will agree that when new legislation is enacted that the miners or anyone else do not know its true meaning until the courts have interpreted the language.

We have full confidence in the authors of this bill and in the members of this committee. But we have some apprehension as to what the interpretations may be in its application to an industry which we consider vital to the welfare of the Nation.

Senator ANDERSON. I think I would agree with you to this extent, that a good law can be so badly administered that it might better not have been passed at all.

But that does not justify administering agricultural laws the way they were not intended to be handled. And I think you will see that in every Department of the Government.

I only say that all you can do in the Congress is to try to enact what you think is going to be a good law and going to improve the situation, and probably hope for the best.

Mr. PALMER. Well, I wish to commend Mr. Holbrook and the American Mining Congress committee, and Mr. Bennett and others who have participated in the drafting of part of this legislation. I really feel they have done an excellent job. But I do feel that when you draft new legislation affecting the mining industry that great care is required. It is not because we do not agree with you in principle. It is not that we are critical of any of these other

organizations, or in disagreement as to fundamental concepts of mining law. It is just that the average miner today does not have the funds with which to enjoy the luxury of litigation.

Senator ANDERSON. He need not have litigation, Mr. Palmer. Public Law 585 that we passed attempted to say that there was a conflict between oil and gas, on the one hand, and mining or minerals on the other, and tried to resolve that by exactly the same in rem procedures that are involved in this. Not precisely, but almost precisely.

In this particular instance you have the same sort of a conflict between surface rights and mining rights, and you try to handle it on exactly the same basis.

The only conflict is as to surface rights not connected with mining. But you recognize that this law does not in any way touch the Mining Act of 1872 as far as minerals are concerned, nor the use of surface rights for that mineral.

It does involve the illegitimate and improper uses. And I have difficulty understanding why mining men are opposed to that sort of thing.

There used to be an editorial writer at the old London Spectator who wrote many years ago that a great wrong dies in the hour of its greatest triumph. And this filing of thousands and thousands of uranium claims and trying to tie up timber development, and doing it in the name of liberty for the individual miner, may cause trouble to the mining law of this country some day. But if you would permit us to try to rectify that great wrong, then you will preserve the mining law of 1872 and continue to have it applicable.

Mr. PALMER. May I make this observation of that statement, Mr. Chairman—

Senator ANDERSON. Yes, I wish you would because, as you know, we don't seem to agree on this legislation. But I have a good deal of respect for your judgment over a long period of years. I am interested in what you have to say.

Mr. PALMER. I say that officially we agree with you on this legislation. We are trying not to disagree with you. If it were sponsored by others we certainly might.

You are chairman of the Joint Committee on Atomic Energy. As late as a year ago the former chairman of the Atomic Energy Commission wrote a book—I refer to Gordon Dean—"A Report on the Atom," which led the reader to conclude that there were no substantial amounts of primary uranium ore in the United States. In other words, the United States was largely dependent for its sources of atomic energy on outside sources.

Senator ANDERSON. That is not the interpretation of that statement, I don't believe.

Gordon Dean knows that the Colorado Plateau is full of uranium, and says so in the book, the Report on the Atom.

Mr. PALMER. Gordon Dean specifically stated in the book that there were no substantial amounts of primary uranium ore in the United States.

Senator ANDERSON. Is there?

Mr. PALMER. Since that report the people to whom you have referred as going out and locating mining claims have uncovered primary deposition of substance in the United States. Just before leaving the West it was announced that in a new area in Utah which had

previously been pronounced barren, uranium ore was being found as a result of drilling. Claims which some people would have condemned as invalid locations were now valid. Because somebody had sense enough to put down a drill hole, and ore was found at a depth.

Senator ANDERSON. I am sure there must be a misunderstanding as to his use of the term because at the time he wrote the book, just prior to his writing the book, he discussed with me the large mining in New Mexico which has \$100 million worth of uranium ore. You and I know which State now has the largest undeveloped uranium ore deposits in the Union.

Mr. PALMER. I recognize your leadership, sir.

Senator ANDERSON. Gordon Dean and I discussed that before his book was published and while he was engaged in the writing of it.

So I say to you that it is a confusion of terms. He understands that there is uranium in this country.

Mr. PALMER. Yes as to the deposits which are not considered as primary. I think the term I am using is correct. I think the term used by Gordon Dean was correct at that particular time. I am not criticizing Mr. Dean. I have a very high regard for him.

But the point I make is that some people are criticized for making questionable locations, which later developments prove are very much in the public interest. The people who are primarily responsible for the uranium development in the United States are not major companies and are not necessarily engineers or capable locators but just average Mr. America. The people who have brought into production the major deposits of uranium in the United States have been the prospectors concerning whom Senator George Malone has addressed a great many of his comments.

I wish to point the value of the prospector.

Senator ANDERSON. I don't argue this question of prospectors, not only in these minerals but in oil. We all know the story as to who digs up the new fields and brings them in.

As I say, I recognize that you don't always succeed.

You are familiar probably with the mining venture that I got myself into in the northern part of New Mexico.

Senator MALONE. Mr. Chairman, I would say right at that point, and I think the distinguished Senator from New Mexico, if he stops to think, knows as well as the Senator from Nevada or the secretary of the Colorado Mining Association, that it is the wildcatters and prospectors without adequate funds, many times without any funds, to carry through the operation, that go out and find this material—oil, gas, and minerals—because they just have nothing better to do. They spend their lives doing that. If they hit it, they make some money; that is, if Washington does not interfere with it; and if they do not hit it, they die broke.

Hundreds of them broke where one makes it. We all know that. It is a fever.

Now, the men with the money generally are represented by an engineer of some reputation. He sends his engineer in after the discovery has been made. These engineers really go out on exploration ahead of time.

Now, they do have some that do that, but the majority of the explorers and prospectors and wildcatters are financed by their friends or through selling stock.

I could name 5 or 6 men that have money or have backing, like Odlum, who has gone in and bought out 1 man that did not know any more about prospecting for uranium than my grandson, bought him out for \$9 million or \$10 million. He says himself in his life story that he knew nothing about uranium, but he went in there with his wife and they worked like a pair of slaves and they had a little luck of the Irish and they found some ore that the money was attracted to.

I could name 5 or 6 that have gone in there, but they did not go in and find it. They go in on some of these people that found it on the claims that these experts, these soft-cushion experts in Washington, would have run off the claim.

They are the people I am talking about.

The fellows that these men have testified to, this is the second day, would not let these people go. They would say no prudent man would put his money in there. Of course, they wouldn't. But they are not prudent men, these wildcatters, in the oil and gas. They are not prudent men these prospectors. They are men sometimes at the end of their rope. They have to do something and they have this fever. When they get the showing which 1 out of every 100 maybe gets, gets something like Odlum or someone representing them, and they buy control.

Very often the man who sells it doesn't make much money, but it is a good deal to them. But they have money to lose. But the men we are interested in are the men these people have been talking about for 3 or 4 days. What did they call it? They had a name for it. Fraud. That is what they said. These are fraudulent claims that this man found this uranium and got \$10 million. That is a fraudulent claim, if these fellows had examined it ahead of time.

Senator ANDERSON. That is not correct.

Senator MALONE. There is nothing in there that a prudent man would put money in.

Senator ANDERSON. Let me ask this question: Is it any cheaper for a miner to defend himself under the rules and procedure now established under the law of 1872 than it would be under S. 1713?

Mr. PALMER. The answer to that question obviously as to the validity of his claim is "no." But the full answer to the question is that there is an obligation placed upon the locator under the terms and conditions of this bill which does not exist in the present legislation.

Senator ANDERSON. As to surface rights not needed for mining?

Mr. PALMER. Well, of course, people may differ as to what surface rights needed for mining are.

May I point out, to you, Senator, that there are some other questions involved in this bill which are quite substantial. For example, at the present time, they are finding uranium in conjunction with coal beds. Now, under the terms and conditions of this bill it is possible for a licensee to acquire coal lands and to have a very definite advantage over a locator of uranium on the same area; that is a question which I do not think can be decided at this hearing, and undoubtedly will require some interpretation.

I understand the commission is giving it some thought and consideration at the present time.

Senator ANDERSON. Let me say that when that arrives, I will try just as hard as I tried on the original Public Law 585 to be fair and to be helpful to the people in that area as will Senator Malone and everybody else. I do not believe we have different goals. I do believe very strongly that the continued filing of mining claims for the purpose of getting surface rights and not intending to try to get the minerals is placing the whole mining program in jeopardy. Such practices make it more difficult to be of assistance to mining than it has been in the past.

My whole purpose in sponsoring this proposed legislation from the very beginning was to try to make sure that we did not get so many bad practices that the prospecting for minerals would get into difficulties. I still hope to keep it on that basis.

Mr. PALMER. Will there be bad practices under your law as well as under present law?

Senator ANDERSON. I think there will not be. I think, for example, the people who go and try to acquire a piece of mineral land for the sake of water and timber will not do it.

Mr. PALMER. I wish to point out, Senator, and I am sure you are familiar with the area in which most of the uranium is being found, that it is not in a green forest with a babbling brook flowing through it but an isolated area where temperatures go as low as 25 or 26 below, where mud conditions are extreme and where sand and other difficulties are encountered causing a great hardship for those miners who seek to locate claims in these areas.

Senator ANDERSON. I agree with you completely. I wish you would do this, Mr. Palmer, if you have any additional suggestions with regard to this bill or any additional points that are at issue, that you would submit them to the committee.

We do not want you to feel that we are not interested in your opinion. We are very much interested.

Mr. PALMER. Thank you very much.

Senator MALONE. Mr. Chairman, I would like to ask Mr. Palmer a couple of questions because I think it might clear up some of the uncertainties in the testimony.

Would you for the record, Mr. Palmer, give us a statement on the coordination of the Federal and State laws as far as the location of mining claims is concerned, whether the Federal laws cover it and the area covered by State laws?

Mr. PALMER. May I call your attention to the fact, Senator, that the State of Colorado and the State of Wyoming have recently amended the location requirements?

Senator MALONE. This is important, Mr. Chairman.

Mr. PALMER. In other words, doing away with the necessity of the former requirement of a 10-foot pit or shaft. Both of those statutes have nothing to do with discovery but simply with location shafts and, under new procedure both in Colorado and Wyoming was adopted permitting other methods of discovery. These State laws were designed to do away with the criticism that bulldozers were being used across the country and ruining the grazing and forestry areas. No longer in these two States, nor in Utah for that matter, is it necessary to sink a location shaft.

I think the practice in Wyoming and Colorado will be to use other methods of discovery of minerals in place rather than digging a pit 10 feet deep; such a shaft is still required in Nevada, I believe.

Senator MALONE. That is a pit?

Mr. PALMER. That is right.

Senator MALONE. Now, you changed the law there so that the required amount of work, \$100 worth of assessment work, can be done in a different way?

Mr. PALMER. A drill hole is sufficient.

Senator MALON. If you spend \$100 in diamond drilling, for example, you have done your work?

Mr. PALMER. And make a discovery.

Senator MALONE. That, then, is in the control of the State itself, is it?

Mr. PALMER. Well, the discovery provision is a Federal provision.

Senator MALONE. But the method of discovery?

Mr. PALMER. The method of discovery or the regulation is a matter of State requirement.

Senator MALONE. The discovery that is required by the Federal statute has nothing to do with the type of work?

Mr. PALMER. That is right.

Senator MALONE. Does it specify the amount of work?

Mr. PALMER. It simply is that the accepted definition of a discovery is a mineral in place and such quantities as will justify a reasonable person in pursuing the development of his claim.

Senator MALONE. That is now the law?

Mr. PALMER. That is the law.

Senator MALONE. The point is, then, that there is no requirement in the Federal law that any work be done at all. If you make your discovery in an exposed ledge, that is all that is necessary?

Mr. PALMER. That is right, except the annual assessment requirement of \$100 a year.

Senator MALONE. That is a Federal law?

Mr. PALMER. That is a Federal requirement.

Senator MALONE. That is what I wanted to establish for the record. How you do that \$100 worth of work is within the purview of the legislature of the State.

Senator ANDERSON. The discretion of the individual, is it not?

Mr. PALMER. The detailed requirements are generally set forth in State legislation on location. I know of no specific provisions on annual assessment work but the courts have held consistently that the work must be done in improving the property.

Senator MALONE. You say that the law has changed from a 10-foot shaft in Colorado and in Wyoming to allow the work to be done in another manner, like the diamond drilling?

Mr. PALMER. That is right; that is in the establishment of your valid location.

Senator MALONE. And could be by a bulldozer?

Mr. PALMER. It can be done by a bulldozer, yes.

Senator MALONE. In Utah, you say it is still a law that you have to have this 10-foot shaft?

Mr. PALMER. No, it has never been the law in Utah but it is the law in Nevada, I believe.

Senator MALONE. But that has not been changed?

Mr. PALMER. That has not been changed.

Senator MALONE. And you still have to have the 10-foot shaft?

Mr. PALMER. That is right.

Senator MALONE. For discovery?

Mr. PALMER. Yes.

Senator MALONE. And to do the assessment work?

Mr. PALMER. It has nothing to do with the assessment work.

Senator MALONE. Establishing the location?

Mr. PALMER. Establishing the validity of your location; that is right.

Senator MALONE. In other words, if you in Nevada discovered a ledge, outcropping, you still have to sink your 10-foot shaft?

Mr. PALMER. Senator, that is a matter of Nevada law and I am not thoroughly familiar with the court interpretation in your State, but I feel reasonably sure they would follow the same reasoning and procedure which exists in Colorado.

Senator MALONE. But it is the law?

Mr. PALMER. It is the law.

Senator MALONE. Now, as long as that is the law, that you have to have a discovery, then, if I have followed your testimony, all the departments have to do is to enforce the law?

Mr. PALMER. That is correct.

Senator MALONE. Now, I am very much interested in your testimony and your resolution there that this act, if it is passed, be confined to the forest areas.

Does your resolution confine it to the forest areas or the forest reserves?

Mr. PALMER. To the national forests, the reason for that being that the complaint we have read in the press has generally been designed to impress the public with the incorrect idea that miners are going out and making locations in forests and destroying the forest reserves of the Nation.

If that is the intent and purpose of this legislation to correct that, then why should these isolated areas such as I have mentioned in the Four Corners district in which uranium is being found be placed under this particular type of legislation?

Senator MALONE. Is it not a fact that the areas in States like my own State of Nevada are practically all isolated when you get away from the small towns and the population centers?

Mr. PALMER. That is correct.

Senator MALONE. So that what we have been trying to do over the years is to induce people to go out there and do a little digging and to acquire property; is that not right?

Mr. PALMER. That is right.

Senator MALONE. What happens when a man locates a mining claim and he has a valid location filed, keeps up his assessment work; is he subject to the county assessor waiting on him just the same as any other property?

Mr. PALMER. That is correct. In Colorado and in your State they have the right to assess and in Utah they have the right to assess unpatented mining property.

Senator MALONE. That is up to the State?

Mr. PALMER. That is up to the State.

Senator MALONE. The Federal Government does not interfere with it one way or the other?

Mr. PALMER. That is correct.

Senator MALONE. Now, the Federal Government comes in and if there is an income from the sale of this ore or the sale of the property, then the United States Government gets its share according to the law?

Mr. PALMER. That is right.

Senator MALONE. I think you covered this particular question that I had in mind but are you familiar with the fact that prominent officials in this Government, very prominent I might say, are making continual speeches up until last summer that of course we had to defend Belgium in order to get uranium from the Belgian Congo because there was no adequate amount here and that it was just assumed up until very recently that there was no adequate amount of uranium in sight; is that a fact?

Mr. PALMER. That is correct.

I call your attention to the often-cited illustration of a meeting in the Blair House, at which time it was represented that unless certain secrets were disclosed with respect to the manufacture of atomic energy, that our foreign supply of uranium would be curtailed or cut off.

Senator ANDERSON. I have no knowledge of such a meeting.

Mr. PALMER. It was attended by the two Senators from Colorado—Senators Millikin and Johnson. I understand the decision was made that the information would not be disclosed and that the program of the Atomic Energy Commission was adopted which encouraged the production of uranium in the United States and we have found substantial deposits here which many feel would make us self-sufficient in case of an emergency.

Senator ANDERSON. When was that meeting?

Mr. PALMER. Approximately 1948, I would say.

Senator MALONE. There was much publicity at the time, not of the meeting, Mr. Chairman, but evidently the result of this meeting that unless publicity throughout the country fostered by international mining publishers, and I could name a good many of the people that would make us break down and cry, that unless we disclosed these secrets they would do the same thing in uranium that they had recently done in monazite sands in India.

They thought we did not have monazite sands so in peacetime India curtailed the shipment of monazite sands, not that they needed the money but they thought they could blackmail us into another agreement. That is exactly what was attempted under this uranium setup.

Now, this committee rendered a report last August with which the chairman of this committee is fully familiar and assisted in the work, and since that time there have been no such speeches made by any prominent Government official that you had to go across an ocean to get such material. I do not believe there will be any more made because it would be very embarrassing.

I want to call attention to the fact that this publicity is carried forward for another objective, in the opinion of the Senator from Nevada, to carry out something that they want to do, having an objective, and then they use this shortage of this material as a weapon.

Many people want to buy all of the materials from the foreign nations and I guess they are going to accomplish that unless the people rise up and destroy the foundation for it, which I feel they will do in time.

One more question in that regard. The people that have really discovered these minerals and are profiting by it, are they always the experts and engineers that have found them? What kind of people are they?

Mr. PALMER. No; I have stated that most of the men who have been the most successful are the inexperienced prospectors.

One man from Minneapolis found one of the most substantial deposits.

Senator MALONE. Do you think the experts in the Forest Service or the experts in the Bureau of Land Management would be qualified to determine whether a man had a valid location or not?

Mr. PALMER. Well, there has to be some reasonable gage, I will admit that. I will say that even in the opinion of Mr. Woosley, the field examiners have been incorrect in some of their examinations.

Senator ANDERSON. That, however, could likewise be said about some of the people who have made examinations of oil properties?

Mr. PALMER. Correct.

Senator ANDERSON. They said, "You have a good prospect here and a bad prospect there." You develop the bad prospect and get oil and the good prospect is a dud.

Senator MALONE. You are right, Mr. Chairman. For 50 years the geologists said there was no oil in a volcanic area. In Nevada we forgot it, they were experts.

I was in school when they first made that statement. Finally, in Utah some of these wildcatters got off the reservation and spent money in an area where the Bureau of Land Management would not let them locate in the first place and they hit an oil well.

We now have an oil well in the middle of Nevada and the geologists say that it is likely it will spread over a considerable area.

We are all familiar, of course, with the great worry of the Department of the Interior over a couple of decades that we were running out of oil and had to save it. Now it is running out of our ears and we do not know what to do with it, but due to the wildcatters, not the people who come out of Chicago and New York and get these nice jobs down here out of school and immediately become experts.

What is the history of mining? You have been familiar with it, Mr. Palmer, over a long period of years. When these fellows who do not know anything about it go out there and finally get it, 1 out of 5,000 of them because the rest die broke, what becomes of this prospect? Does he carry it through, or does someone with plenty of money set him up as part owner to go on and develop it, or how is it done?

Mr. PALMER. The trend on the plateau at the present time is consolidation with substantial financial interests in the further exploration and development of the properties. I think that has been the history of the mining industry, generally speaking, that many the small miner under trends in world events has been pushed out of business and some more substantial people have been able to take over properties and operate them.

I think that one of the tragedies throughout the United States is the slaughter of the small miners.

In your State of Nevada, I used to attend large meetings where there would be thousands of people who were in the mining business.

In Colorado we used to have thousands of small miners before the uranium boom.

In New Mexico, when I used to address the New Mexico Mining Association, it was composed of a large number of small operators.

I would say that conditions are quite changed today.

Senator MALONE. To what do you attribute the decrease in the number of enthusiastic small prospectors, miners?

Mr. PALMER. Well, there are quite a few factors. I would say that had this committee passed a piece of legislation in which our groups was very much interested, or had the Congress passed that legislation, I think much of the difficulties which exist would have been alleviated.

I think that it has been well established that with cheap transportation from abroad by boat, with low-cost labor abroad, with the international trend that seems to prevail, that it is possible to import materials into the United States at a much lower cost than they can be produced in the United States under American standards of living.

Senator ANDERSON. Could I break in to ask you if you had reference to S. 2105 that we struggled with in this committee as one of the things that might have helped?

Mr. PALMER. I want the chairman to know that the mining people throughout the Rocky Mountain region are still deeply grateful to the chairman and the other members of the committee for the great battle you put up in behalf of that legislation.

Senator ANDERSON. We tried hard. Senator Malone and I went down together on each one of those rounds.

Senator MALONE. I want to follow just a little further.

Is the fact that we have put our miners in direct competition with these low-wage countries in the matter of the production of these minerals, has that had anything to do with the lack of young people going into this business?

Mr. PALMER. It has made the mining business, up until the incentives which were offered for uranium, very unattractive, and I think that in the event of an emergency in the United States, we are going to find a definite shortage of experienced miners.

Senator MALONE. This uranium incentive, that is a fixed price to 1962?

Mr. PALMER. Right.

Senator MALONE. I predict that after 1962, you will either have to extend the special price or guarantee for a substantial length of time or you will have to have a tariff on uranium to stay in business.

Is it not a fact for as long as I remember, which is quite a considerable length of time, that most of these prospectors and miners that are out there without capital, their chief hope is to discover something of a nature that an engineer that represents capital will come down and look at it?

Is that not the common talk which has been going around for 30 or 40 years?

Mr. PALMER. Well, I think that is correct, Senator.

Senator MALONE. Then the hope is that he will recommend that one of his clients spend a few thousand dollars to go deeper to find out whether he has anything; is that right?

Mr. PALMER. We find that \$10,000 for developing a mining claim today is insignificant as compared with a few years ago.

Senator MALONE. Well, that is true, but as long as these people can make money with discovery, if they made a lead discovery or tungsten discovery, generally a prospector had a pretty good idea how rich it

had to be to interest anyone but as long as the condition prevailed that when he discovered a deposit of a certain value per ton, they knew they would operate, would they not?

Mr. PALMER. Yes.

Senator MALONE. What is the reason they are not operating there now, that if they make the discovery they still cannot make any money?

Mr. PALMER. That is correct.

Senator MALONE. I think, Mr. Palmer, you have made a great contribution to the testimony. You are the only one, so far, with any mining experience to appear before the committee.

I say again, Mr. Chairman, that I would like very much that the importance of this legislation I have noticed over a period of years that it is not the legislation that you do not pass that hurts the country. If we could have time at the end of this session to hold hearings out through the mining country and get some evidence from people who perhaps cannot afford to come back here on their own and do not represent an association, and do not represent a Government department on an expense account, I believe this committee would be in a much better position to pass on a modification of the mining law.

I wanted to ask once more the question if you would have any particular objection to this act if it were confined to the forest reservation?

Mr. PALMER. That is the resolution of our association, that they would support the bill with that reservation.

Senator MALONE. One more. Does your association, your members, or any association that you know about, have they been flooded with information for a considerable time that they would either take some legislation like this or you would get a more restrictive act?

Mr. PALMER. Yes, I think that is the general sentiment; that was the information which has been passed on and is the explanation which has been given as to why some of the organizations which have felt that strict enforcement of the present law would answer the problem have succumbed and are endorsing this proposal.

Senator ANDERSON. Mr. Palmer, you mean in New Mexico? Have you talked in New Mexico to any miner who has that impression?

I have letters without end from down there and not one has told me that.

Mr. PALMER. That is correct.

Senator ANDERSON. Did Joe Taylor tell you that?

Mr. PALMER. No; Joe Taylor did not.

Senator ANDERSON. Can you find me one that did that I do know?

Mr. PALMER. I have a very high regard for Joe Taylor and I respect his judgment very highly.

Senator ANDERSON. You may.

Mr. PALMER. I think that it is a mistake for mining executives in eastern mining offices to make decisions on legislation as important to the average life of the average miner as this legislation is without consulting with the fellows who day after day are confronted with the problem of making valid locations.

I know there is more understanding in the mind of an executive than in the mind of the average miner. I am fully cognizant of the fact that there are pressures here which must be taken into con-

sideration by the Congress, but I would say without any fear of contradiction that if hearings were held on this proposed legislation in most of the mining camps of the West, that there would be very strong opposition to its passage.

There has been strong opposition expressed to me not only by miners but by very, very prominent geologists and mining engineers whose names I would prefer not to mention. A certain amount of leadership is required here and a certain amount of understanding which I think is being exercised by the leaders of the mining congress and others.

If this is to set a precedent, however, then I feel that in other matters, when additional legislation is introduced it would be very much worthwhile to hold hearings in the areas where the miners themselves can attend and express their feelings.

Senator MALONE. Mr. Chairman, this would be embarrassing to some people but it is not to me. I know all of these people and some of these larger organizations referred to by the secretary of the Colorado Mining Association. I have the highest regard for them. I think they are very efficiently run, they make money, they are wonderful people and maybe if I were president of one of the companies I would do just what they are doing because they are working for their stockholders. I want to say to you that legislation that does not touch those people, or if it does touch them it helps them, because any time you can make a thing more technical, make location a little harder to comply with, make it more technical, you help a going concern, large company, at the expense of the smaller fellow because this thing, this evolution, is going on all the time.

When a man that did not know anything about uranium at all went out and stuck a stake down, and there are probably 5,000 of them out there that have done the same thing but have not made any money, other than this one man who came out with \$10 million. Now, he is not too close from now on to the fellow like he was when he started because he is now doing the best he can to promote the whole setup, but he is not down there with them every day.

People that come in with the money, that an engineer represents, people that will spend \$2,000, \$5,000, \$10,000, \$50,000 to develop a prospect that a prospector has found, they are not prospectors and it is making easier for them to get this from the prospector because he does not have the money, for example, to do what someone testified to yesterday, that the large operators, they have a man on each claim out there. No prospector can do that. When he makes a new discovery he locates 7 or 8 mining claims around it and you correct me if I am wrong, Mr. Palmer, you are an attorney long experienced in this business.

You can do your assessment work on one spot if it is reasonable to suppose that you can develop the whole group.

Mr. PALMER. If it tends to improve the whole group.

Senator MALONE. In other words, you do your best to locate along the line of the vein or discovery. Maybe you are right and maybe you are wrong, but you can do it if you have 5 claims, you can do \$500 worth of work on one place if you are reasonably sure that it will develop the whole thing?

Mr. PALMER. That is right.

Senator MALONE. Those things are well established in court, as Mr. Palmer has said.

I want to say to you, Mr. Chairman, one more time. I know a lot of these people. I grew up with them. I surveyed their mining claims in their locations and in their further patents, many of them. A lot of those fellows, if they have a tobacco can in their pocket and a piece of note paper to make the location, that is a secondary consideration.

He looks around for that after he makes his discovery. He gets to his county seat and that is as far as he is going to go, or he sends somebody; that location is made. If he had to file with somebody else or if he has to answer a newspaper advertisement to come in and defend himself, he is simply not going to do it in 99 percent of the cases.

Senator ANDERSON. And of course he does not have to.

Senator MALONE. He does not have to if he does not lose some stuff under this bill.

Senator ANDERSON. Not a thing in the world.

Senator MALONE. In other words, he will lose the timber.

Senator ANDERSON. Not if he needs it for mining.

Senator MALONE. If he does not establish it at that time, he has lost it.

Senator ANDERSON. No; he does not lose it.

Senator MALONE. All right, I will read it to you again. It says that after this notice, 9 consecutive weeks of having it published, that if this man does not come in within 150 days from the date of the first publication of such notice, "which date shall be specified in such notice, a verified statement which shall set forth, as to such unpatented mining claim," and then you have 1, 2, 3, 4, 5. I have already read them into the record.

Senator ANDERSON. Yes.

Senator MALONE. If he does not do that, he is subject to these other provisions.

Senator ANDERSON. Those provisions are that he loses his claim to the surface except what is needed for mining.

Senator MALONE. That is right, but he does not know what is needed for mining until several years have passed.

Senator ANDERSON. He does not have to. This preserves him. This preserves all of his rights.

Senator MALONE. In the meantime, they can take the timber off.

Senator ANDERSON. Exactly, and that is what Senator Millikin has suggested and that is what we are going to try to correct.

Senator MALONE. I should say that there are several things we need to correct and one of them is to confine it where the damage is being done.

I have no quarrel with the Forest Service because we have 5 million acres that I hope to get reclassified sometime to put it out of the Forest Service. We will come to that some day here because it ought to be in the public land classification and should not be in the Forest Service at all; that is something we can take up later because if it is a question then of damage done to timber and it is more valuable for a forest reserve than anything else, and I hear that statement made all the time that, regardless of the mining location, if it is more valuable for something else, a miner should not be there.

I would go along with that but, Mr. Chairman, I am very reluctant to go along with a bill that digs these fellows out of the canyons and

they have to come in and make a showing and register with an outfit, with a Federal registration, that they are simply, many of them, not only incapable of making without an attorney which they could not hire, but they do not have the money to come in and do it.

Mr. Palmer, I am very appreciative that you have come before this committee. I think you have assisted in establishing a good record.

Senator ANDERSON. I am, too.

Mr. PALMER. Thank you.

Senator ANDERSON. The Western Oil & Gas Association has entered some objections to portions of this bill and has suggested some revised language.

We will check with them to find out whether they want this material made a part of this record.

(COMMITTEE NOTE.—The Western Oil & Gas Association proposals are as follows:)

WESTERN OIL & GAS ASSOCIATION,  
Los Angeles, Calif., May 17, 1955.

HON. CLINTON P. ANDERSON,  
Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.

DEAR SENATOR: The public lands committee of the Western Oil & Gas Association feels some concern that S. 1713 upon which your committee will conduct hearings tomorrow, might, under some interpretations, affect the reservation of Leasing Act minerals under Public Laws 250 and 585, 83d Congress.

You will recall that legislation enacting those two public laws was passed at the suggestion of this association's committee and with a good deal of cooperative effort on the part of Messrs. R. T. Patton and J. M. Jessen, members of said committee.

Mr. Patton has sent me the attached letter in which he proposes a simple amendment to section 7 which would remove any doubt as to the intentions of the authors of S. 1713 with respect to limiting the reservation of Leasing Act minerals. He feels, with the concurrence of other members of our public lands committee, that the amendment is essential even though the authors of this legislation had no contrary intention.

Your consideration of our viewpoint will be greatly appreciated.

Due to their interest in the legislation which became Public Law 585 and Public Law 250 I am sending copies of this letter and copies of Mr. Patton's letter to Mr. Frank Barrett and Mr. Stewart French.

Sincerely yours,

FRANK W. ROGERS,  
Washington Representative.

MULTIPLE SURFACE USE BILLS H. R. 5561, 5563, 5572, 5577, 5891, S. 1713

MAY 12, 1955.

MR. FRANK W. ROGERS,  
Western Oil & Gas Association,  
Washington 6, D. C.

DEAR FRANK: Confirming our telephone conversation of last week, we should like to submit the following amendment to these bills:

Substitute a semicolon for the period at the end of the last section (sec. 7) and add the following: "and nothing in this act shall be construed in any manner to modify, amend, supersede or repeal any of the provisions of the act of August 12, 1953 (67 Stat. 539) or the act of August 13, 1954 (68 Stat. 708)."

The purpose of the suggested amendment is to make sure that nothing in the multiple surface use legislation limits or affects the Leasing Act minerals reservation in either unpatented or patented mining claims under Public Law 250 and Public Law 585, 83d Congress, and that the provisions of section 6 of Public Law 585 will continue to control in regard to the use of the land as between mining operators and Leasing Act operators.

While I am sure the authors of the multiple surface use legislation had no contrary intention, there is some language in the bills which, read literally and alone, might raise a doubt (comments based on the corrected copy of H. R. 5577):

Section 4 (a) : "Any mining claim hereafter located under the mining laws of the United States shall not be used, *prior to issuance of patent therefor*, for any purpose other than prospecting, mining, or processing operations and uses reasonably incident thereto." [Emphasis added.]

This suggests that, conversely, the mining claimant might have carte blanche use of the lands after patent is issued, which is of course not the case under Public Law 585 in situations where the patent is issued subject to the Leasing Act minerals reservation.

Section 4 (b), second sentence : "Any such mining claim shall also be subject *prior to the issuance of patent therefor*, to the right of the United States, its permittees and licensees, to use so much of the surface thereof as may be necessary *for such purposes or for access to adjacent land*." [Emphasis added.]

Since the right of access referred to is not expressed as being solely for the purpose of disposing of vegetative and other surface resources, the underscored language suggests the possibility that the right of the United States, its permittees and licensees, to access to adjacent land for all purposes would be cut off after the issuance of patent. If so, this would seriously limit the comprehensive extralateral rights which section 4 (2) of Public Law 585 gives to the United States, its lessees, *permittees and licensees*, not only prior to the issuance of patent but also in the proper case after the issuance of patent.

The closing proviso of section 4 (b) : "*Provided, however, That any use of the surface of any such mining claim by the United States, its permittees or licensees, shall be such as not to endanger or materially interfere with prospecting, mining, or processing operations or uses reasonably incident thereto*." [Emphasis added.]

This restriction is not confined to the use of the land for disposition of vegetative and other surface resources, but applies to "any use" of the surface by the United States, its permittees or licensees, which would include mineral Leasing Act operations. Furthermore, standing alone it would impose an absolute and unlimited noninterference requirement on Leasing Act operations, with no recognition of "first on the ground" preferential position, whereas section 6 (c) of Public Law 585 requires only noninterference with existing mining facilities and their use and also provides for adjudication of conflicting uses.

The closing proviso of section 7 : "and nothing in this act shall be construed in any manner to authorize inclusion in any patent hereafter issued under the mining laws of the United States for any mining claim heretofore or hereafter located, of any limitation or restriction not otherwise authorized by law"—

protects the mining claimant against any unauthorized limitation or restriction in his patent. However, being in the negative, this proviso could not be safely relied on to affirm and preserve all other limitations and restrictions which are authorized by law (such as those in Public Law 585) in view of the presence in the bills of the provisions discussed above.

I have taken this matter up with Mr. Mattel, who agrees that any inferences in the multiple surface use bills which could in any way, however remote, suggest conflict with Public Laws 250 and 585 should be cured in order to avoid even the possibility of doubt or controversy. I feel that the suggested proviso at the end of section 7 is the simplest way of accomplishing the purpose and I would see no reason for any objection to it.

Your assistance will be appreciated and any views or suggestions will be welcomed.

With best regards.

Sincerely,

ROBERT T. PATTON.

Senator MALONE. Will we have any further hearings?

Senator ANDERSON. I do not contemplate any further hearings at this time. Of course, if in our consideration of the bill, the need for additional facts and views becomes apparent, then the committee will consider when and where those facts and views should be obtained. But for the present, I think the record is sufficiently complete to enable the committee to reach a determination on the measure.

Senator MALONE. In that event, Mr. Chairman, I will want to make a statement on this bill.

Senator ANDERSON. The committee will of course be glad to have your views in the printed record.

**STATEMENT OF HON. GEORGE W. MALONE, UNITED STATES  
SENATOR FROM THE STATE OF NEVADA**

Senator MALONE. Mr. Chairman, the purpose of your proposed amendment to the 1872 mining law is, according to its sponsors, to prevent:

1. Clearly invalid mining locations, unsupported by any semblance of discovery, and
2. Mining locations having mineral disclosures which might satisfy the basic requirement of discovery, but which were in fact made for a purpose other than mining.
3. To make it easier for the Federal bureaus to bring up for review claims and claimants which in their judgment includes land more valuable for another purpose.

That is the statement of the principal witness, Mr. Raymond B. Holbrook, an attorney employed by the United States Smelting, Refining & Mining Co. for 17 years, and who is the chairman of the public lands committee of the American Mining Congress. Mr. Holbrook was the nearest approach to a mining man who appeared for the bill.

**LEGITIMATE OBJECTIONS COVERED BY MINING LAWS AND DECISIONS**

The first purpose is amply covered by the present mining law as interpreted over the years by the Supreme Court of the United States. Both the public and the prospector are fully protected, with recourse to the courts.

The second and third are clearly an imposition on the rights of the prospector since they open the door for the first time in more than 80 years for a Government bureau employee to allege that the land is more valuable for another purpose than mining and bring the case before his own bureau where the only appeal is to a higher employee or official in that same bureau.

**CONGRESS COULD DESTROY INCENTIVE**

Since it is even conceivable that evidence might show that the value for other purposes might temporarily be greater than the immediate value of a small mining property, it is inconceivable that the Congress would allow a bureau official, in no way connected with mining, such as the Forest Service or the Bureau of Land Management, and having no firsthand knowledge of the industry, to be the complainant, judge, and jury.

The history of mining is clear that you must have prospects before you have small mines and you must have small mines before you can have big mines—and that it often requires many years before the larger bodies of ore can be developed, even after they are known to exist.

**FIRST LOCATOR SELDOM PROFITS**

History also shows that the property many change hands many times through the first locators “going broke” and either relinquishing the claim to another locator or selling out for what they can get because of their inability to continue working the property, or because

of lack of "assessment" work simply losing to another locator. Rarely does the first locator profit from the discovery.

There used to be a byword in the ranching business—that it was the third or fourth homesteader of a homestead that made it stick. The mining business is even tougher.

#### GOVERNMENT BUREAUS

The principal witness, Mr. Holbrook, further testified that—

We have had the pleasure of working with the Forest Service and the Bureau of Land Management and understand their position is that these problems could not be entirely met by effective administration of existing laws for the following reasons:

1. The available remedies are slow, expensive, and not conclusive; and
2. There is great difficulty in establishing the invalidity of a location, supported by discovery, on the basis that the location was made for a purpose other than mining.

The weight of evidence of the witnesses called—all but one holding some Government position—was that the Government bureaus should be given the clear power to determine the validity of a mining location within their own department.

This power in the hands of the bureau officials would destroy the prospector and reverse the Supreme Court decisions for more than 80 years.

They would also have the authority to determine whether or not the land is more valuable for another purpose than mining.

#### OBJECTIVE—LEASING SYSTEM

It is clear that the Government bureaus are still moving toward a leasing system which they have continually advocated for two decades.

#### DESTROY LAW INTENT AND COURT DECISION

The prospector can be moved under the 1872 law if he has not complied with it, which is the intent and the extent of the original law.

The Supreme Court decisions, for more than 80 years, have clarified and established the law.

It has been established that if the prospector has complied with the law in setting up his monuments, in filing with the county recorder, and has done the required "assessment" work, that a Government department cannot move him or interfere with his work by alleging that "a reasonably prudent man would not expend his money and his effort in the hopes of developing a mine" (Holbrook, p. 91, May 18, 1955).

The amended act opens the door for continual interference by Government officials.

It limits the locators' inherent rights prior to patent, since when patent issues there is no change in the fee simple ownership, and the timber, forage, and all other assets go to the patentee. It does not make sense to allow the Government to deplete his claim in accordance with their judgment before patent.

There may have been abuses under the law, but when investigated it will generally be found that the Government has not met its responsibilities under existing law and that the law itself or court decisions provide the remedy.

## PROSPECTOR ON THE DEFENSIVE

As it now stands, the Government must initiate any proceedings to prove the location invalid, which is exactly what was intended and must be maintained, under the proposed law the prospector will be on the defensive and will be continually harried and tormented by inexperienced and irresponsible Bureau officials.

## HEARINGS IN MINING AREAS

It is abundantly clear that hearings should be held in the mining areas of this Nation before any action is taken, since no real miners were heard and the mining associations of the several States were clearly intimidated through threats of more severe legislation unless they accepted the proposed legislation as written.

## LAST STAND OF SMALL CAPITAL

The present simple location system for acquiring prospecting ground for mining is the last stand for the man of small capital.

It requires no money, just a sack of beans and some coffee and many of them have been known to dispense with the coffee until they can show enough to acquire a grubstake from someone who is willing to gamble with them.

They can build a rock mound or stick up a stake and lodge the location notice on it, then set up the corners within 30 days and start the location work.

The ground is then his own as long as he does the required annual assessment work and files proof of it in the country recorder's office of his county.

It is not necessary to have a surveyor or an accurate placing of the corners of his property. If he inadvertently takes in too much territory then, when there is a conflict, which there will most certainly be when and if he makes a strike, he can only hold the 1,500 by 600 feet of the regulation mining claim.

## MINING IS A GAMBLE—NO PRUDENT MAN

Mining is a gamble. It is also a disease, which once acquired means that they will "hit" a mine or die broke. Where a very limited few develop a mine, thousands die broke, but it is the incentive of "striking it rich" that keeps them in the hills where the ore is to be found.

Probably 90 percent of the digging done by prospectors is on ground where no "prudent man" would dig—and this Nation can thank God that they have continued to dig on such ground, because most of the prospects developing into mines are discovered by these miners confirmed in the faith.

The testimony by Government witness, and witnesses inexperienced in the actual prospecting operation, was to the effect that many mining claims are located on ground where no "prudent man" would dig. Prospectors are not prudent men.

ONLY ONE MINING MAN HEARD

There was only one mining man at the hearing who testified and his testimony was emphatically against the bill unless modified, and he recommended that hearings be held in the mining areas before it was reported to the Senate floor. The witness was Mr. Robert S. Palmer, secretary-treasurer of the Colorado Mining Association, which is one of the largest and most important of such associations in this Nation.

NO PRECEDENT

Several witnesses have testified that a precedent for this proposed legislation was set in the passage of Public Law No. 250, 83d Congress, amending the 1872 Mining Act.

There could have been no precedent set in the previous legislation for this type of bill since it only dealt with coordinating the use of the same mining claims for different minerals—petroleum, uranium, and other minerals. The amended act provided that you could mine uranium on an oil claim but the petroleum producer had the priority and you could not interfere with him, and that you could develop and produce oil on a uranium claim but that you could not interfere with the operation of the prior locator.

PRECEDENT WOULD BE SET

It positively had nothing to do with timber or forage or sagebrush. It had absolutely nothing in common with Senate bill 1713, which does set a precedent for leasing ground for materials.

HEARINGS IN MINING AREAS

Certainly hearings should be held in the mining areas. Let the miners have a chance to help work it out.

CAN BE WORKED OUT

I believe that if this is done a satisfactory piece of legislation can be worked out that will benefit all concerned, and that will not curb the prospector, and that will not discourage independent investors and grubstakers interested in locating, developing, and producing minerals.

SHOULD BE CONFINED TO FOREST AREAS

If the legislation is to be voted on today as set up without hearings in the mining areas of the country, then its application should certainly be confined to the forest reserve areas where most of the testimony before the committee applied.

Senator ANDERSON. Thank you. The committee hearing will now stand in recess.

(Whereupon, at 2:10 p. m., the committee recessed subject to the call of the Chair.)

# VIRGIN ISLANDS NATIONAL PARK

THURSDAY, MAY 19, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON TERRITORIES AND  
INSULAR AFFAIRS OF THE COMMITTEE,  
ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 10:30 a. m., in room 224-A, Senate Office Building, Senator Henry M. Jackson, chairman of the subcommittee, presiding.

Present: Senators Henry M. Jackson, Washington (chairman of the subcommittee); and Alan Bible, Nevada.

Also present: Stewart French, chief counsel and staff director.

Senator JACKSON. The subcommittee will come to order.

We will consider first S. 1604, a bill introduced by the chairman at the request of the Department of the Interior to authorize the establishment of the Virgin Islands National Park.

I understand that the proposed park is not to exceed 9,500 acres. Of this total, up to 50 acres may be on the Island of St. Thomas, with the remainder on the Island of St. John or the smaller islands in the vicinity of St. John.

I understand that Mr. Laurance Rockefeller has already acquired over 5,000 acres on the Island of St. John for donation to the proposed national park. The remainder of the park area would be acquired with donated funds.

We are pleased to have as witnesses this morning Mr. Conrad Wirth, director of the National Park Service, and Mr. Allston Boyer, representing Mr. Rockefeller.

We will place a copy of S. 1604 in the record at this point, together with copies of the letter of transmittal from the Interior Department, and the favorable report of the Bureau of the Budget.

(The documents the inclusion of which was directed by the Chairman are as follows:)

[S. 1604, 84th Cong., 1st sess.]

A BILL To authorize the establishment of the Virgin Islands National Park, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a portion of the Virgin Islands of the United States, containing outstanding scenic and other features of national significance, shall be established, as prescribed in section 2 hereof, as the "Virgin Islands National Park."*

The national park shall be administered and preserved by the Secretary of the Interior in its natural condition for the public benefit and inspiration, in accordance with the laws governing the administration of the National Parks (16 U. S. C. 1, and the following).

SEC. 2. The Secretary of the Interior is hereby authorized, subject to the following conditions and limitations, to proceed in such manner as he shall find

to be necessary in the public interest to consummate the establishment of the Virgin Islands National Park:

(a) The acreage of the national park shall be limited to a total of not more than 9,500 acres of land area, such total to be comprised of not more than 50 acres on the Island of Saint Thomas, and not more than 9,450 additional acres to be comprised of portions of the Island of Saint John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park.

(b) Tentative exterior boundary lines, to include land not in excess of the aforesaid acreage limitations, may be selected for the park in order to establish the particular areas in which land may be acquired pursuant to this Act, such tentative boundaries to be selected and adjusted as may be necessary by the Secretary of the Interior.

(c) The Secretary, on behalf of the United States, is authorized to accept donations of real and personal property within the areas selected for the park until such time as the aforesaid total of 9,500 acres shall have been acquired for the park by the United States, and he may also accept donations of funds for the purposes of this Act.

(d) Funds made available for purposes of this Act may be used by the Secretary in such manner as he shall find to be in the public interest, in order to procure by purchase or otherwise, land or interests therein for the park.

(e) Any Federal properties situated within the areas selected for the park, upon agreement by the particular agency administering such properties that such properties should be made available for the park, may be transferred without further amortization to the Secretary by such agency for purposes of this Act.

(f) Establishment of the Virgin Islands National Park, in its initial phase, shall be and is hereby declared to be accomplished and effective for purposes of administration when a minimum acreage of not less than 5,000 acres in Federal ownership for purposes of this Act shall have been acquired by the United States in specific areas containing such acquired lands to be designated by the Secretary.

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

---

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY.  
Washington 25, D. C., March 17, 1955.

HON. RICHARD M. NIXON,  
*President of the Senate,*  
Washington, D. C.

MY DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill to authorize the establishment of the Virgin Islands National Park, and for other purposes. This would provide for the establishment of a national park of not to exceed 9,500 acres in extent. It would permit the acceptance of lands and funds that will be donated for the purpose. Mr. Laurance S. Rockefeller has already acquired over 5,000 acres on the Island of St. John for donation to the Government for the park. The remainder of the park area would be acquired with funds to be donated.

We shall appreciate the reference of this proposed bill to the appropriate committee for consideration. We recommend that it be enacted.

The purpose of the proposed park is to conserve for public benefit and enjoyment a portion of the Virgin Islands containing outstanding scenic and other features of national significance, educational value, and fine recreation possibilities. In addition, we believe that its establishment would materially help the Virgin Islands economy, through the tourist industry, to become more self-supporting.

The proposed park, limited to 9,500 acres in extent, would be comprised of not more than 50 acres on the Island of St. Thomas and not more than 9,450 additional acres to be comprised of portions of the Island of St. John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park.

St. John Island is a mountainous area, 9 miles long and approximately 5 miles wide, with a total area of 19.2 square miles. The highest peak is 1,277 feet

above sea level. About 85 percent or more of the island is covered by bush and second-growth tropical forest. There is little arable land, the largest area being west of Coral Bay, at the eastern end of the island, which area would not be included in the park. The climate is subtropical and pleasant—the lowest temperature ever recorded being 69°, the highest 91°. Seven hundred and forty-six people were reported living on the island in 1950.

The scenic quality, plant life, and the setting of the island in the protected channels of the Virgin Islands are totally different from anything set apart in the United States or its Territories for national-park purposes. The plant and animal life of the island and of the surrounding waters are of exceptional interest and educational value. The proposed park presents fine recreation possibilities, including excellent sport fishing in the surrounding waters. Relics of the prehistoric Carib Indians are found on the island, as well as remnants of sugar mills and the plantations of the early historic period. The island in its picturesque surroundings is unquestionably of national-park caliber. The Nation will be fortunate indeed if Mr. Rockefeller's generous offer is accepted and the national park established. There has been favorable editorial comment and support for the proposal in the press in New York, the Virgin Islands, and elsewhere.

The proposed boundaries would include the finest portions of the island for park purposes and would exclude the settlements and agricultural lands required by the natives. The proposed park would not require elaborate development, since retention of the area's unspoiled charm would be a principal objective. We estimate that approximately \$60,000 would be required annually for its maintenance and operation.

The Bureau of the Budget has advised that there is no objection to the submission of this proposed legislation.

Sincerely yours,

ORME LEWIS,  
*Assistant Secretary of the Interior.*

**A BILL To authorize the establishment of the Virgin Islands National Park, and for other purposes**

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a portion of the Virgin Islands of the United States, containing outstanding scenic and other features of national significance, shall be established, as prescribed in section 2 hereof, as the "Virgin Islands National Park."*

The national park shall be administered and preserved by the Secretary of the Interior in its natural condition for the public benefit and inspiration, in accordance with the laws governing the administration of the National Parks (16 U. S. C. 1, and the following) :

SEC. 2. The Secretary of the Interior is hereby authorized, subject to the following conditions and limitations, to proceed in such manner as he shall find to be necessary in the public interest to consummate the establishment of the Virgin Islands National Park :

(a) The acreage of the national park shall be limited to a total of not more than 9,500 acres of land area, such total to be comprised of not more than 50 acres on the Island of St. Thomas, and not more than 9,450 additional acres to be comprised of portions of the Island of St. John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park ;

(b) Tentative exterior boundary lines, to include land not in excess of the aforesaid acreage limitations, may be selected for the park in order to establish the particular areas in which land may be acquired pursuant to this Act, such tentative boundaries to be selected and adjusted as may be necessary by the Secretary of the Interior ;

(c) The Secretary, on behalf of the United States, is authorized to accept donations of real and personal property within the areas selected for the park until such time as the aforesaid total of 9,500 acres shall have been acquired for the park by the United States, and he may also accept donations of funds for the purposes of this Act.

(d) Funds made available for purposes of this Act may be used by the Secretary in such manner as he shall find to be in the public interest, in order to procure by purchase or otherwise, land or interests therein for the park ;

(e) Any Federal properties situated within the areas selected for the park, upon agreement by the particular agency administering such properties that

such properties should be made available for the park, may be transferred without further authorization to the Secretary by such agency for purposes of this Act;

(f) Establishment of the Virgin Islands National Park, in its initial phase, shall be and is hereby declared to be accomplished and effective for purposes of administration when a minimum acreage of not less than 5,000 acres in Federal ownership for purposes of this Act shall have been acquired by the United States in specific areas containing such acquired lands to be designated by the Secretary; and

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington, D. C., April 14, 1955.

HON. JAMES E. MURRAY,

*Chairman, Committee on Interior and Insular Affairs, United States Senate, Washington, D. C.*

MY DEAR MR. CHAIRMAN: This is in response to your request for the views of this Bureau on S. 1604, a bill to authorize the establishment of the Virgin Islands National Park, and for other purposes.

The bill authorizes a park of not to exceed 9,500 acres of land area. Of this total, not more than 50 acres may be on the island of St. Thomas, not more than 9,450 acres on the island of St. John, and not more than 1,000 acres on small islands, rocks, and cays in the general vicinity of St. John. The Secretary of the Interior is authorized to accept donations of real and personal property within the areas selected for the park, and also to accept donations of funds for park purposes. The park shall be considered established when a minimum of 5,000 acres have been acquired.

Mr. Laurence S. Rockefeller recently purchased over 5,000 acres on the island of St. John which he has offered to give to the United States for park purposes. Thus, if S. 1604 is enacted into law, the Government can acquire without cost sufficient lands to establish the park. The National Park Service estimates that annual cost of operation and maintenance will approximate \$60,000.

The greatest assets of the Virgin Islands are their scenic beauty and remarkably fine year-round climate. Exploitation of these assets through development of the tourist industry should materially improve the economic condition of the islands, an contribute to their eventual self-support. Establishment of a national park in the islands should make a major contribution to the development of a thriving tourist industry.

Accordingly, the Bureau of the Budget recommends that your committee give favorable consideration to this bill.

Sincerely yours,

DONALD R. BELCHER, *Assistant Director.*

Senator JACKSON. I am sorry, gentlemen, that we are in rather cramped quarters this morning. We are having another committee meeting in the other room, but as long as we can get some work done, I assume you do not mind. As a matter of fact, as far as I am concerned, I enjoy it.

Mr. Wirth, do you care to make a statement?

STATEMENTS OF CONRAD L. WIRTH, DIRECTOR, NATIONAL PARK SERVICE; WILLIAM ARNOLD, ASSISTANT DIRECTOR, OFFICE OF TERRITORIES, IN CHARGE OF ISLAND AFFAIRS; AND A. M. EDWARDS, ASSOCIATE SOLICITOR, DEPARTMENT OF THE INTERIOR

Mr. WIRTH. I think in opening up, Mr. Chairman, I would like to sketch briefly the efforts that have been made in the past, a little bit about the park, some of the plans we have, the economic values, and what the people in the Virgin Islands think of it.

First, we had considered this park back in the thirties, and in 1939 we had a report made of the area and were proceeding to bring it to the attention of Congress with our recommendations. However, the war emergencies came along and that was never done.

Senator JACKSON. You say a study was made of it in 1939?

Mr. WIRTH. In 1938 and 1939 when we were operating the CCC program down there. I was down there at the time, and our man, Mr. Hubler, made a study for us. That laid dormant up until just a little over a year ago when Mr. Rockefeller had the same idea. A few years preceding that he had been on a cruise down there and had fallen in love with the island and bought Caneel Bay as a place to go to and make the place available for other visitors.

I met Mr. Rockefeller shortly after this idea occurred to him, and he was talking about it. He had read one of our earlier reports and found out that we had been interested in it. He wanted to know whether we were still interested. I told him we were as far as I knew, but I would not be in position to say definitely or make any recommendation on it until we had another study of the island, because so much time had elapsed since 1938, and I did not know exactly what conditions prevailed.

This study was made last year. In the meantime Mr. Rockefeller did go ahead and has bought about 5,000 acres with the idea that if the proposed park is authorized he would give everything that he has down there, including Caneel Bay. In order not to embarrass anybody, and knowing the full impact of national parks on land values and the local economy, he felt it would be wise to buy the land prior to park establishment. If the park is authorized, he would then make the donation. If it is not authorized, that would be something else. I want to make it clear, that his whole purpose is a gift to the public and that there is no personal profit involved.

Senator JACKSON. When did he start acquiring the land?

Mr. WIRTH. He acquired Caneel Bay about 3 years ago, and he started acquiring this land just last fall. He has now acquired about 5,000 acres of the proposed area.

His intention is to give everything that he has there. In fact, he has already transferred the title to the Jackson Hole Preserve, Inc., which is a nonprofit corporation organized under the laws of the State of New York for charitable, educational, and scientific purposes, including the purpose of restoring, protecting, and preserving for the benefit of the public the primitive grandeur and natural beauties of the landscape in areas notable for picturesque scenery, and particularly in the Jackson Hole area in the State of Wyoming, although the acquisitions by the corporation are not limited to Jackson Hole.

Senator JACKSON. How can they transfer it to a corporation for a purpose for which the corporation is not set up? That is a corporate entity set up for preserving land in the Jackson Hole National Monument, is it not?

Mr. WIRTH. No, sir. The corporation has that name, but its purposes are applicable anywhere in the United States. The corporation is acquiring the land on St. John Island. The money is given to the corporation and it acquires the land for the purpose of donating it to the Government if the proposed park is authorized.

# VIRGIN ISLANDS NATIONAL PARK

THURSDAY, MAY 19, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON TERRITORIES AND  
INSULAR AFFAIRS OF THE COMMITTEE,  
ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 10:30 a. m., in room 224-A, Senate Office Building, Senator Henry M. Jackson, chairman of the subcommittee, presiding.

Present: Senators Henry M. Jackson, Washington (chairman of the subcommittee); and Alan Bible, Nevada.

Also present: Stewart French, chief counsel and staff director.

Senator JACKSON. The subcommittee will come to order.

We will consider first S. 1604, a bill introduced by the chairman at the request of the Department of the Interior to authorize the establishment of the Virgin Islands National Park.

I understand that the proposed park is not to exceed 9,500 acres. Of this total, up to 50 acres may be on the Island of St. Thomas, with the remainder on the Island of St. John or the smaller islands in the vicinity of St. John.

I understand that Mr. Laurance Rockefeller has already acquired over 5,000 acres on the Island of St. John for donation to the proposed national park. The remainder of the park area would be acquired with donated funds.

We are pleased to have as witnesses this morning Mr. Conrad Wirth, director of the National Park Service, and Mr. Allston Boyer, representing Mr. Rockefeller.

We will place a copy of S. 1604 in the record at this point, together with copies of the letter of transmittal from the Interior Department, and the favorable report of the Bureau of the Budget.

(The documents the inclusion of which was directed by the Chairman are as follows:)

[S. 1604, 84th Cong., 1st sess.]

A BILL To authorize the establishment of the Virgin Islands National Park, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That a portion of the Virgin Islands of the United States, containing outstanding scenic and other features of national significance, shall be established, as prescribed in section 2 hereof, as the "Virgin Islands National Park."

The national park shall be administered and preserved by the Secretary of the Interior in its natural condition for the public benefit and inspiration, in accordance with the laws governing the administration of the National Parks (16 U. S. C. 1, and the following).

SEC. 2. The Secretary of the Interior is hereby authorized, subject to the following conditions and limitations, to proceed in such manner as he shall find

to be necessary in the public interest to consummate the establishment of the Virgin Islands National Park:

(a) The acreage of the national park shall be limited to a total of not more than 9,500 acres of land area, such total to be comprised of not more than 50 acres on the Island of Saint Thomas, and not more than 9,450 additional acres to be comprised of portions of the Island of Saint John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park.

(b) Tentative exterior boundary lines, to include land not in excess of the aforesaid acreage limitations, may be selected for the park in order to establish the particular areas in which land may be acquired pursuant to this Act, such tentative boundaries to be selected and adjusted as may be necessary by the Secretary of the Interior.

(c) The Secretary, on behalf of the United States, is authorized to accept donations of real and personal property within the areas selected for the park until such time as the aforesaid total of 9,500 acres shall have been acquired for the park by the United States, and he may also accept donations of funds for the purposes of this Act.

(d) Funds made available for purposes of this Act may be used by the Secretary in such manner as he shall find to be in the public interest, in order to procure by purchase or otherwise, land or interests therein for the park.

(e) Any Federal properties situated within the areas selected for the park, upon agreement by the particular agency administering such properties that such properties should be made available for the park, may be transferred without further amortization to the Secretary by such agency for purposes of this Act.

(f) Establishment of the Virgin Islands National Park, in its initial phase, shall be and is hereby declared to be accomplished and effective for purposes of administration when a minimum acreage of not less than 5,000 acres in Federal ownership for purposes of this Act shall have been acquired by the United States in specific areas containing such acquired lands to be designated by the Secretary.

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

---

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY.  
Washington 25, D. C., March 17, 1955.

HON. RICHARD M. NIXON,  
*President of the Senate,*  
Washington, D. C.

MY DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill to authorize the establishment of the Virgin Islands National Park, and for other purposes. This would provide for the establishment of a national park of not to exceed 9,500 acres in extent. It would permit the acceptance of lands and funds that will be donated for the purpose. Mr. Laurance S. Rockefeller has already acquired over 5,000 acres on the Island of St. John for donation to the Government for the park. The remainder of the park area would be acquired with funds to be donated.

We shall appreciate the reference of this proposed bill to the appropriate committee for consideration. We recommend that it be enacted.

The purpose of the proposed park is to conserve for public benefit and enjoyment a portion of the Virgin Islands containing outstanding scenic and other features of national significance, educational value, and fine recreation possibilities. In addition, we believe that its establishment would materially help the Virgin Islands economy, through the tourist industry, to become more self-supporting.

The proposed park, limited to 9,500 acres in extent, would be comprised of not more than 50 acres on the Island of St. Thomas and not more than 9,450 additional acres to be comprised of portions of the Island of St. John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park.

St. John Island is a mountainous area, 9 miles long and approximately 5 miles wide, with a total area of 19.2 square miles. The highest peak is 1,277 feet

above sea level. About 85 percent or more of the island is covered by bush and second-growth tropical forest. There is little arable land, the largest area being west of Coral Bay, at the eastern end of the island, which area would not be included in the park. The climate is subtropical and pleasant—the lowest temperature ever recorded being 69°, the highest 91°. Seven hundred and forty-six people were reported living on the island in 1950.

The scenic quality, plant life, and the setting of the island in the protected channels of the Virgin Islands are totally different from anything set apart in the United States or its Territories for national-park purposes. The plant and animal life of the island and of the surrounding waters are of exceptional interest and educational value. The proposed park presents fine recreation possibilities, including excellent sport fishing in the surrounding waters. Relics of the pre-historic Carib Indians are found on the island, as well as remnants of sugar mills and the plantations of the early historic period. The island in its picturesque surroundings is unquestionably of national-park caliber. The Nation will be fortunate indeed if Mr. Rockefeller's generous offer is accepted and the national park established. There has been favorable editorial comment and support for the proposal in the press in New York, the Virgin Islands, and elsewhere.

The proposed boundaries would include the finest portions of the island for park purposes and would exclude the settlements and agricultural lands required by the natives. The proposed park would not require elaborate development, since retention of the area's unspoiled charm would be a principal objective. We estimate that approximately \$60,000 would be required annually for its maintenance and operation.

The Bureau of the Budget has advised that there is no objection to the submission of this proposed legislation.

Sincerely yours,

ORME LEWIS,  
*Assistant Secretary of the Interior.*

**A BILL To authorize the establishment of the Virgin Islands National Park, and for other purposes**

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That a portion of the Virgin Islands of the United States, containing outstanding scenic and other features of national significance, shall be established, as prescribed in section 2 hereof, as the "Virgin Islands National Park."

The national park shall be administered and preserved by the Secretary of the Interior in its natural condition for the public benefit and inspiration, in accordance with the laws governing the administration of the National Parks (16 U. S. C. 1, and the following):

SEC. 2. The Secretary of the Interior is hereby authorized, subject to the following conditions and limitations, to proceed in such manner as he shall find to be necessary in the public interest to consummate the establishment of the Virgin Islands National Park:

(a) The acreage of the national park shall be limited to a total of not more than 9,500 acres of land area, such total to be comprised of not more than 50 acres on the Island of St. Thomas, and not more than 9,450 additional acres to be comprised of portions of the Island of St. John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park;

(b) Tentative exterior boundary lines, to include land not in excess of the aforesaid acreage limitations, may be selected for the park in order to establish the particular areas in which land may be acquired pursuant to this Act, such tentative boundaries to be selected and adjusted as may be necessary by the Secretary of the Interior;

(c) The Secretary, on behalf of the United States, is authorized to accept donations of real and personal property within the areas selected for the park until such time as the aforesaid total of 9,500 acres shall have been acquired for the park by the United States, and he may also accept donations of funds for the purposes of this Act.

(d) Funds made available for purposes of this Act may be used by the Secretary in such manner as he shall find to be in the public interest, in order to procure by purchase or otherwise, land or interests therein for the park;

(e) Any Federal properties situated within the areas selected for the park, upon agreement by the particular agency administering such properties that

such properties should be made available for the park, may be transferred without further authorization to the Secretary by such agency for purposes of this Act;

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

---

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington, D. C., April 14, 1955.

HON. JAMES E. MURRAY.

*Chairman, Committee on Interior and Insular Affairs, United States Senate, Washington, D. C.*

MY DEAR MR. CHAIRMAN: This is in response to your request for the views of this Bureau on S. 1604, a bill to authorize the establishment of the Virgin Islands National Park, and for other purposes.

The bill authorizes a park of not to exceed 9,500 acres of land area. Of this total, not more than 50 acres may be on the island of St. Thomas, not more than 9,450 acres on the island of St. John, and not more than 1,000 acres on small islands, rocks, and cays in the general vicinity of St. John. The Secretary of the Interior is authorized to accept donations of real and personal property within the areas selected for the park, and also to accept donations of funds for park purposes. The park shall be considered established when a minimum of 5,000 acres have been acquired.

Mr. Laurence S. Rockefeller recently purchased over 5,000 acres on the island of St. John which he has offered to give to the United States for park purposes. Thus, if S. 1604 is enacted into law, the Government can acquire without cost sufficient lands to establish the park. The National Park Service estimates that annual cost of operation and maintenance will approximate \$60,000.

The greatest assets of the Virgin Islands are their scenic beauty and remarkably fine year-round climate. Exploitation of these assets through development of the tourist industry should materially improve the economic condition of the islands, and contribute to their eventual self-support. Establishment of a national park in the islands should make a major contribution to the development of a thriving tourist industry.

Accordingly, the Bureau of the Budget recommends that your committee give favorable consideration to this bill.

Sincerely yours,

DONALD R. BELCHER, *Assistant Director.*

Senator JACKSON. I am sorry, gentlemen, that we are in rather cramped quarters this morning. We are having another committee meeting in the other room, but as long as we can get some work done, I assume you do not mind. As a matter of fact, as far as I am concerned, I enjoy it.

Mr. Wirth, do you care to make a statement?

**STATEMENTS OF CONRAD L. WIRTH, DIRECTOR, NATIONAL PARK SERVICE; WILLIAM ARNOLD, ASSISTANT DIRECTOR, OFFICE OF TERRITORIES, IN CHARGE OF ISLAND AFFAIRS; AND A. M. EDWARDS, ASSOCIATE SOLICITOR, DEPARTMENT OF THE INTERIOR**

Mr. WIRTH. I think in opening up, Mr. Chairman, I would like to sketch briefly the efforts that have been made in the past, a little bit about the park, some of the plans we have, the economic values, and what the people in the Virgin Islands think of it.

First, we had considered this park back in the thirties, and in 1939 we had a report made of the area and were proceeding to bring it to the attention of Congress with our recommendations. However, the war emergencies came along and that was never done.

Senator JACKSON. You say a study was made of it in 1939?

Mr. WIRTH. In 1938 and 1939 when we were operating the CCC program down there. I was down there at the time, and our man, Mr. Hubler, made a study for us. That laid dormant up until just a little over a year ago when Mr. Rockefeller had the same idea. A few years preceding that he had been on a cruise down there and had fallen in love with the island and bought Caneel Bay as a place to go to and make the place available for other visitors.

I met Mr. Rockefeller shortly after this idea occurred to him, and he was talking about it. He had read one of our earlier reports and found out that we had been interested in it. He wanted to know whether we were still interested. I told him we were as far as I knew, but I would not be in position to say definitely or make any recommendation on it until we had another study of the island, because so much time had elapsed since 1938, and I did not know exactly what conditions prevailed.

This study was made last year. In the meantime Mr. Rockefeller did go ahead and has bought about 5,000 acres with the idea that if the proposed park is authorized he would give everything that he has down there, including Caneel Bay. In order not to embarrass anybody, and knowing the full impact of national parks on land values and the local economy, he felt it would be wise to buy the land prior to park establishment. If the park is authorized, he would then make the donation. If it is not authorized, that would be something else. I want to make it clear, that his whole purpose is a gift to the public and that there is no personal profit involved.

Senator JACKSON. When did he start acquiring the land?

Mr. WIRTH. He acquired Caneel Bay about 3 years ago, and he started acquiring this land just last fall. He has now acquired about 5,000 acres of the proposed area.

His intention is to give everything that he has there. In fact, he has already transferred the title to the Jackson Hole Preserve, Inc., which is a nonprofit corporation organized under the laws of the State of New York for charitable, educational, and scientific purposes, including the purpose of restoring, protecting, and preserving for the benefit of the public the primitive grandeur and natural beauties of the landscape in areas notable for picturesque scenery, and particularly in the Jackson Hole area in the State of Wyoming, although the acquisitions by the corporation are not limited to Jackson Hole.

Senator JACKSON. How can they transfer it to a corporation for a purpose for which the corporation is not set up? That is a corporate entity set up for preserving land in the Jackson Hole National Monument, is it not?

Mr. WIRTH. No, sir. The corporation has that name, but its purposes are applicable anywhere in the United States. The corporation is acquiring the land on St. John Island. The money is given to the corporation and it acquires the land for the purpose of donating it to the Government if the proposed park is authorized.

I might say that through the years Mr. John D. Rockefeller, Jr., and now Mr. Laurance Rockefeller following his footsteps, have donated to the Government park purpose moneys, lands, improvements, and various other things amounting I believe to more than \$30 million.

For instance, in the Great Smokies he matched dollar for dollar the \$5 million raised by North Carolina and Tennessee.

Senator JACKSON. I know they have an outstanding record.

Mr. WIRTH. Everything he has down there, including Caneel Bay, is in the area to be transferred for the park if it is approved.

As to the island itself, it is an outstanding Caribbean island with only 700 people on it. I would like to tell you some facts about the island. It is located 1,400 miles southeast of New York and 50 miles east of Puerto Rico. I would like to point out that 1,400 miles is about half the distance between New York and San Francisco. Relatively, therefore, the proposed park is not as distant as many of the western parks.

As to the physical characteristics, the island of St. John is 19.2 square miles, or a little over 12,000 acres, about half the size of the District of Columbia. The highest point on the island is Bordeaux Mountain, 1,277 feet. Eighty-five percent of the island is covered with brush and second growth timber. There are only about three or four hundred acres of arable land, and that land is outside of the area we are proposing as the national park.

The lowest temperature down there ever recorded is 69, and the highest is 91. While you have a warm sun, you have cool evenings and nights. It is very delightful. It has about 50 inches of rainfall, mostly at night, and there is no clearly defined rainy season.

Perhaps one of the most interesting features is Coral Bay on the east side of the island, which has a beautiful harbor. The harbor is about a mile and a quarter across the mouth and about two and a half miles long.

As to the history, the island was apparently first sighted by Columbus in 1493. It was then inhabited by the Carib Indians, who probably came from South America. A German historian by the name of Oldendorp, records that the Indians were driven from the island in 1555 by Charles V of Spain.

The Virgin Islands were first settled in 1625 and St. John in 1684. Denmark claimed the island in 1687, but ownership was contested by Great Britain.

On March 25, 1717, the first permanent colony was established by the Danes at Coral Harbor on the east end of St. John, and they defied the British to drive them off. They had at that time 20 planters and 5 soldiers, and they built what is known as Fort Berg on the east end of the island. The ruins of the fort are still there.

Senator JACKSON. This is the Danish invasion you are talking about?

Mr. WIRTH. This is when the Danes took over the island, made the first permanent colony and defied the British to drive them off.

In 1733 there was a total of 38 planters on St. John and everything was apparently prosperous and gay, but there was slavery. On November 23, 1733, the slaves revolted, and the whites sought protection on what is now known as Caneel Bay Plantation. For about 4 months, the plantations of the island were pillaged, until they just ran rampant.

The French captured the slaves—some of whom killed themselves by jumping off the rocks. Slavery continued until 1848. Since the abolition of slavery, the economy of the island has deteriorated. Most of the island has now reverted to jungle.

The United States almost bought it in 1887, but the United States Senate refused to ratify a treaty that had been arranged by Secretary Seward and the Danish Government. In 1917 the United States bought St. John and certain other Virgin Islands.

Senator JACKSON. Bought it, together with the islands of St. Thomas and St. Croix.

Mr. WIRTH. Yes; bought those islands as a group.

That gives you a brief idea of the history. All through the islands there are ruins of the early plantations. There are also Indian stone writings.

We have pictures here, which Mr. Boyer will show a little later, showing the general character of the island. It has a beautiful shoreline with white-sand beaches and much of the forest is coming back, including mahoganies, bay, limes, coconuts, and numerous other species of tropical trees. There are no poisonous snakes on the island.

Another interesting feature is the fish and shell life of the coral reefs around the island.

Senator JACKSON. What disturbs me, Mr. Wirth, just looking at this, and having spent a day at Caneel Bay on St. John when I was in the Virgin Islands a few years back, is simply this: What is so unique about it that it should be made a national park? That is No. 1. The second thing I would like to know is, What percentage of the total acreage in the Virgin Islands is involved in this transfer?

Mr. WIRTH. I would like to show you this map, if I may, and I will try to explain it in such a way that it will be recorded properly. As to the grandeur of the island, the pictures will show that. Mr. Boyer has quite a few here.

This is Cruz Bay. A considerable number of the people live at Cruz Bay.

Mr. BOYER. This is a picture of Cruz Bay.

Senator JACKSON. Caneel Bay is where they have the cottages?

Mr. BOYER. Yes, sir. This is Caneel Bay. This is the point where the cottages are.

Mr. WIRTH. We are recommending that the park not exceed 9,500 acres, of which not more than 50 would be on St. Thomas, which is principally for a dock and utility area and a parking place, and not to exceed a thousand acres of the surrounding rocks and cays, nearly all of which are uninhabited. The rest of St. John Island, which would be about one-third, is the land that is usable for agriculture and settlement, and would not be included in the proposed park. We would expect that the park would attract people to the island and that these lands outside the park would leave room for the building of accommodations to take care of the people rather than having to provide additional accommodations at Caneel Bay.

Senator JACKSON. Two-thirds of the island is involved in this proposal?

Mr. WIRTH. That is right.

Senator JACKSON. You have 50 acres over on the island of St. Thomas?

Mr. WIRTH. Yes; purely a jumping-off place—a place where we can have a utility area and dock and to permit parking. Perhaps less land will be required there.

Senator JACKSON. I agree it is a beautiful place, but I can take you up on some of the islands of San Juan that program just as distinctive beauty as this particular island. I do not really in my own mind understand what in particular stands out that makes it worthy of national park status.

Mr. WIRTH. The combination of tropical plant and animal life, the colorful channels between the islands, the fish and invertebrate life of the coral reefs, the beautiful beaches and superb scenic views as well as the historic and prehistoric structures—all are different from anything in any of the national parks at the present time. I have never seen anything that equals it.

Senator JACKSON. Not in any of the national parks, but in other islands in the Caribbean.

Mr. WIRTH. I do not know of any other that would exceed this, and I have been over to Puerto Rico and all the Virgin Islands that we have anything to do with.

Senator BIBLE. How many people would you estimate would visit there a year?

Mr. WIRTH. It would be hard to say how many would, but I would say that within the next 4 or 5 years there would be at least fifty or one hundred thousand people come down there.

Senator JACKSON. How many are visiting there now?

Mr. WIRTH. Practically none.

Senator JACKSON. The only way, Senator Bible, as I understand it, that you can get to the island—at least it was a while back—is by small motor launch from the island of St. Thomas. Is that correct, Mr. Boyer?

Mr. BOYER. Yes.

Senator JACKSON. It has been set up as rather an exclusive honeymoon isle. It is completely isolated, and has a very beautiful harbor at Caneel Bay. They have beautiful sand, and wonderful beaches and a lot of fine plant growth on the island, but I just wonder what makes it so particularly unique. We are talking about a national park. There are many beautiful places in the Western Hemisphere.

Mr. WIRTH. This picture, in color, will give you some idea of the kind of thing you have down there. I do not know where you see anything like that in Puerto Rico [indicating].

Senator JACKSON. Over on the island of St. Thomas there are a number of similar sites.

Mr. WIRTH. St. Thomas is all being developed. It is the center of population; whereas St. John is being made available for national park purposes, which would be putting the land to its best economic use.

Senator JACKSON. Can you leave these with the committee temporarily to be returned later?

Mr. BOYER. I can, but all those are not of the island. I would be delighted to leave this, but I just would like to point out that they are not all of St. John.

Senator JACKSON. Some of these are St. Thomas.

Mr. BOYER. Yes, and some are on San Juan.

Senator BIBLE. What would it cost to maintain this a year?

Mr. WIRTH. We estimate \$60,000 a year.

Senator JACKSON. How much money are we going to have to spend in improvements?

Mr. WIRTH. We estimate that the total amount of improvements, leaving these lands out for taking care of the people outside the park, would cost us over the period of the next 4 or 5 years about \$120,000.

Senator JACKSON. Would that be your master plan, the total?

Mr. WIRTH. Yes. We have not made a detailed plan, but we did make an estimate.

Senator JACKSON. \$120,000?

Mr. WIRTH. Yes.

Senator JACKSON. We have quite a time, as you know, with appropriations for the operation and maintenance of parks. I think both of us have had a little experience on that. I served on the House Appropriations Committee for a long time.

Mr. WIRTH. That is true.

Senator JACKSON. We have \$60,000 here for operation and maintenance. Every year that will be added on to the sum total.

Mr. WIRTH. I would like to point out a fact here. I was anticipating the possibility of the question of money and I made a few notes here. There have been certain surveys made, in which the committee will be interested. I maintain that the parks are set aside and preserved for human enjoyment. That is their main value.

However, there is a byproduct to the parks that we do not fully realize. Here is a research study of the Stanford Research Institute, Mountain States division, Phoenix, Ariz., from which I would like to read an excerpt, as follows:

Coconino County, in the heart of northern Arizona, has the greatest future potential for growth, barring the discovery of important mineral resources elsewhere. Its greatest resources are scenic and climatic, although timber and grazing lands are important for the lumber and livestock industry they support. The tourist industry accounts, directly or indirectly, for approximately 50 percent of the Coconino County's total income.

The economy of northern Arizona is dependent to a much greater extent upon tourist travel than is that of the southern counties, and northern Arizona's future growth and prosperity are largely dependent upon development of resources which attract out-of-State visitors. Some 35 percent of its retail sales are direct tourist expenditures, against less than 15 percent of retail sales attributed directly to tourists for the State as a whole.

Senator JACKSON. I agree with you, but that is like a grant-in-aid to the States. Secretary Humphrey does not get any of the income which you mention nor does it help to balance the Federal budget. We can account for it if the money came directly into the Park Service and into the Department of Interior, and I think we would be in much better shape, and I am completely in sympathy with what you say.

However, when we get up on the floor of the Senate and we have the Interior appropriation bill up, we find it a bit of a problem because here is an additional item for operation and maintenance, you see.

Mr. WIRTH. We are confronted with this everywhere we go, and the States realize the value of these areas. Here is a report on Yellowstone made in 1950 by the State of Wyoming.

Senator JACKSON. I have used the same argument in justifying my support of Olympic National Park, and I am in complete sympathy with you. The only problem that we have is when we get on the floor,

here is \$60,000 more and here is \$120,000 additional in the next 4 or 5 years for construction; and the problem that I have noticed, Senator Bible, when I was in the House especially, is this constant attrition of funds. We have to fight all the time to maintain and keep our parks in decent shape. Our roads and our trails, of existing parks, have been declining over a long period of time.

It is an argument that we have to face on the floor. I would not want you to think, Mr Wirth, because I asked adverse questions that that necessarily indicates my final point of view. I am here to try to get some information that might be helpful later.

Mr. WIRTH. I am glad that you are asking because I would like to get it in the record. They say that figures lie sometimes, and liars figure, and so forth and so on, but the Bureau of Internal Revenue now states that 28 cents out of every dollar that is spent goes in some form of taxes.

Here is this report in 1950 saying that at Yellowstone and vicinity the traveling public, there in that 1 year, spent \$18,996,000. If Internal Revenue's statement is correct, \$4,700,000 went into taxes of various kinds.

Senator JACKSON. Of course, a lot of this money is for local taxes.

Mr. WIRTH. But it creates an income value for the Virgin Islands, which is important, and will reduce the amount of money, I think, in the long run that Uncle Sam will have to give to help the islands. Nevertheless, I do not like to emphasize the money angle, since we are concerned with scenic and other recreational resources and their value to present and future generations keeping some of the native scenery that the good Lord blessed us with for public enjoyment.

To emphasize the size of the proposed park, I took the 9,500 acres and indicated on different national-park maps the relatively small amount of land we are talking about.

Senator JACKSON. Yes, but it is all relative. How many acres are there in the Virgin Islands group?

Mr. WIRTH. St. John is the smallest island. Do you know how many acres there are in St. Thomas and St. Croix?

Mr. ARNOLD. I believe there are approximately 70,000 acres.

Mr. FRENCH. Overall.

Senator JACKSON. The whole aggregate.

Mr. EDWARDS. A little over 85,000 acres for the whole aggregate of the American Virgin Islands.

Mr. WIRTH. I do want to say this, though, that St. John Island has practically no industry on it at the present time. There are 600 or 700 people living there. There is one Senator from the St. John district.

Senator JACKSON. How many people are there on the island of St. John?

Mr. WIRTH. Between 600 and 700 on the island of St. John.

Senator JACKSON. The total population of the Virgin Islands is about 30,000; is it not?

Mr. ARNOLD. 27,000.

Senator JACKSON. You see this involves 9,500 acres out of a total of 85,000. It is roughly one-ninth the area of the islands.

Mr. WIRTH. If you will notice from those pictures we showed you, there are no particularly good land use potentialities within the proposed park. It is rugged.

Senator JACKSON. As I recall the history of the island of St. John—you mentioned it in part—back in, I thought it was in the 1800's, they had this massacre that occurred on the island during a time that they were engaged in sugarcane production.

Mr. WIRTH. They had the island largely cleared. There were 38 plantations on the island at that time in 1733 when they had the uprising of the slaves.

Senator JACKSON. They were producing sugarcane?

Mr. WIRTH. Yes.

Senator JACKSON. And the production of sugarcane in that area was profitable at that time solely because of slave labor?

Mr. WIRTH. That is right.

Senator JACKSON. And with the elimination of slave labor, it was no longer economically feasible to produce sugarcane, and the last remaining sugarcane produced in the Virgin Island group was on the island of St. Croix? There is still some production, but it has declined, too, with the elimination of the rum business.

Mr. WIRTH. Here is a picture of one of the old plantation houses up in the woods. They lived well, the 38 planters there.

Senator JACKSON. Are you going to rehabilitate any of those old places?

Mr. WIRTH. No. We will have trails into certain of them and into the areas that had the old forts, to explain the history and how the people lived at that time.

Senator JACKSON. That is a part of the \$120,000 estimate of construction costs over a period of years, and it is a \$60,000 annual maintenance cost?

Mr. WIRTH. Yes. There is very limited transportation on the island and most likely the transportation on the island will consist of improvement of minor roads [indicating] that now exist, and trails.

Senator JACKSON. Is it intended that the island remain somewhat in its present capacity rather primitive, and restrict the traffic, ocean or water traffic, into the island?

Mr. WIRTH. We hope to get more traffic over the island and more people here [indicating] and spending their summers there or their winters there in visiting and using the beaches, but the part we have will be kept in its natural condition, which would be the attraction, and the area left out will be the part put to commercial use by the various business enterprises that would be developed in order to take care of the people that come over there.

In other words, we are leaving them out of Government control entirely as far as we are concerned, to develop their accommodations outside as we are doing in several of the parks. The Great Smoky Mountains is one of them. The Everglades is another one. We would leave business interests out of the park so they would not be under our supervision. In Yellowstone, because of its size, we always have had concessioners, and in Yosemite, also. In the proposed Virgin Islands National Park most of the development to take care of the people would be on the edge and on the outside of the park.

Senator JACKSON. Who would operate the concessions in this proposed park?

Mr. WIRTH. It would be operated similar to the way we are working with the Jackson Hole Preserve, Inc., in Grand Teton National

Park. They have a separate company that is incorporated and pays all the taxes, but any money the separate company makes goes to the Jackson Hole Preserve, Inc., for nonprofit, park purposes.

Senator JACKSON. In other words, the Rockefellers would have business interests there operated through this nonprofit corporation, and all earnings would be used for acquisition, maybe, of additional lands, but at least for a nonprofit objective? Is that correct?

Mr. BOYER. Definitely, yes, sir; absolutely.

Senator JACKSON. As I said earlier, I think it is wonderful what the Rockefeller family has done. I am completely familiar with what they have done in the past. I am sure, just for the record, it ought to be made clear that the Rockefeller interests have nothing to gain privately. I ask it just so the record is clear and no one can get up and say that this is a charitable contribution on one hand and a private venture on the other. The Rockefeller Corp., this nonprofit corporation that you referred to earlier, would be set up to assist in providing facilities either in or adjacent to the park to encourage people to come into the park?

Mr. WIRTH. The way they work it is this: The money is put in the Jackson Hole Preserve, Inc., which provides the improvements: the operation of the lodge is by a regular corporation that pays taxes, and any money that the operating company makes goes back to the Jackson Hole Preserve.

Senator JACKSON. Would it be a private corporation?

Mr. WIRTH. Yes. It would be a corporation controlled by the Jackson Hole Preserve, Inc. The reason that is done is to permit the operating company to pay all the taxes that the community or State would otherwise get for such operations.

Senator JACKSON. It would be a private corporation, not a nonprofit corporation, but the net earnings after payment of taxes would go to the nonprofit corporation, the Jackson Hole Preserve?

Mr. BOYER. Caneel Bay Plantation, Inc., which operates the resort facility at the present time, is a wholly owned subsidiary of Jackson Hole Preserve, Inc.; Jackson Hole Preserve, Inc., owns all the stock. Mr. Laurance Rockefeller purchased the stock but gave it all to Jackson Hole, Inc., as of January 10 of this year.

In other words, Mr. Rockefeller has no personal interest of any kind in this project.

Senator JACKSON. What is the name of the corporation?

Mr. BOYER. Caneel Bay Plantation, Inc.

Senator JACKSON. Is it set up as a private corporation?

Mr. BOYER. It is a private corporation; yes, sir.

Senator JACKSON. However, all of the capital stock of that company is, in turn, owned by the nonprofit corporation, the Jackson Hole Preserve, Inc.?

Mr. BOYER. Yes, sir.

Senator JACKSON. And the earnings, therefore, of the private corporation would inure to the benefit of the nonprofit corporation?

Mr. BOYER. Definitely.

Senator JACKSON. So that it is merely a business device to carry on the functions in that area so that the local government will have the benefit of taxes that would normally accrue to any private enterprise?

Mr. BOYER. Yes, sir.

Senator JACKSON. I mean that would normally accrue from a private enterprise to the island?

Mr. BOYER. Yes, sir.

Senator JACKSON. Otherwise, you could set it up as a nonprofit corporation, but what you are doing is trying to help the local government, assist them in taxes and so on?

Mr. BOYER. Yes, sir. It is the same arrangement which is employed in Jackson Hole at Grand Teton. As Director Wirth has said, the Grand Teton Lodge and Transportation Co. owns the Jackson Lake Lodge, which is the new hotel opening on June 12 of this year. It is a wholly owned subsidiary of Jackson Hole Preserve, Inc.

Senator JACKSON. We will have you as the next witness after Mr. Wirth to find out what the plans are in the way of development and so on from the standpoint of the Caneel Bay Co.

Mr. WIRTH. I do not have anything else to say, sir, except that the Governor of the Virgin Islands is in favor of the proposed park.

Senator JACKSON. Who is the present Governor?

Mr. WIRTH. Governor Alexander. He has been there 1 year now.

Mr. FRENCH. He took office a year ago in April.

Senator JACKSON. Is he the one from the Middle West?

Mr. FRENCH. Yes, the Des Moines, Iowa, contractor.

Mr. WIRTH. The member of the Virgin Islands Senate from St. John is also in favor of it, and, we have so been informed, the local newspaper on St. Croix and St. Thomas. They not only reported the news very accurately and favorably, but they also have written editorials in support of it, and I think it might be well, if I may, to incorporate those in your record. I will not take time to read them, but they are all very favorable.

(The news articles referred to follow:)

[From the Daily News, Charlotte Amalie, V. I., Saturday, November 20, 1954].

**L. S. ROCKEFELLER OFFERS UNITED STATES A VIRGIN ISLANDS PARK—HE SEEKS TO PRESERVE THE UNspoiled BEAUTY OF ST. JOHN 'PARADISE'—NO RESIDENT TO BE DISPLACED**

(By Morris Kaplan)

Laurence S. Rockefeller has acquired options to purchase about half of the scenic island of St. John in the Virgin Islands. The third son of John Rockefeller, Jr., affirmed yesterday reports that he would like eventually to have two-thirds of the island's 12,700 acres accepted as a national park.

Back from a 5-day examination of the green hills and white beaches of the Caribbean Isle, Mr. Rockefeller reported that Conrad Wirth, director of the National Park Service, had expressed interest in the project.

Mr. Wirth accompanied Mr. Rockefeller and Frank Stick, noted ichthyologist and conservationist of Kitty Hawk, N. C., on the trip to Caneel Bay Plantation, a 650-acre resort area bought by Mr. Rockefeller in 1952 from the Rhode Island Charities Trust.

Mr. Stick and two associates own 1,500 acres on the island.

The plan for a national park on St. John, the smallest of the three Virgin Islands bought by the United States from Denmark in 1917 for \$25 million, was first broached in 1939 by Harold A. Hubler, an officer of the Park Service, but the idea was tabled.

Mr. Rockefeller's interest was whetted by a trip he made 3 years ago in his 65-foot cabin cruiser, *Dauntless*, with his wife, the former Mary French, and friends. They had been voyaging in the Lesser Antilles and sailed into St. John from British-owned Antigua.

"I found the combination of mountains, beaches and sea unique in the Caribbean," Mr. Rockefeller said: "The unspoiled nature of the area appealed to me and I wish to preserve it against overdevelopment."

He mentioned the larger Virgin Island of St. Thomas and St. Croix, where, he said, commercial ventures and the tourist trade had increased. Long interested in the conservation of scenic areas, he said he was disturbed that the most beautiful areas of St. John might some day be altered so as to destroy their natural beauty.

He read the Hubler report and discussed it with Mr. Wirth. As a result of their trip, Mr. Wirth has reaffirmed the interest of the National Park Service, "but we have no assurances at all," Mr. Rockefeller cautioned.

A national park must be approved by an act of Congress.

While the project now is in the planning and development stage, Mr. Rockefeller reported that Mr. Wirth would report to Secretary of the Interior Douglas McKay. He said he had acquired through Jackson Hole Preserve, Inc., a number of options of St. John and would discuss plans informally next month with Mr. Wirth, Mr. McKay and Archie A. Alexander, Governor of the Virgin Islands.

#### ISLAND HAS ONLY 700 RESIDENTS

Should a national park be approved, Mr. Rockefeller said, it would not displace anyone, would allow for the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay, and would not in any way adversely affect the livelihood of the 700 persons on the island.

Of that number there are 350 Negroes and 50 whites, of whom 25 are major property owners, he reported. The taxes amount to \$7,500 annually, he said.

Mr. Rockefeller envisaged a plan whereby he would transfer ownership of the acreage acquired, including his Caneel Bay property, to Jackson Hole Preserve, Inc. This is an agency previously used by the Rockefeller family to create and expand such projects as the Grand Teton National Park, Wyo., the redwoods of California, and several of the country's national parks, including Acadia, Maine; Great Smoky Mountains, Tennessee-North Carolina, and Shenandoah, Va.

Mr. Rockefeller gave assurance that existing settlements would not be disturbed. His associates reported that at least 4,000 acres in the Cruz Bay and Coral Bay areas would not be included in the projected park, thus leaving 8,000 acres for conservation purposes.

#### MUCH WORK UNDERWAY

He has already spent a substantial sum, it was reported, in developing the Caneel Bay area and its hotel, now able to accommodate 48 guests. The hotel is being doubled in size, a new sewer system and powerplant are being installed as well as a water catchment and new employees' quarters.

The roads and docks are being enlarged and extensive landscaping of the shore is planned. Mr. Rockefeller is also restoring a sugar mill built in 1810.

The park project's cost will run "into the millions" but close associates of Mr. Rockefeller said it would be impossible to estimate the total cost.

St. John, one of the leeward islands in the Caribbean chain, is 1,442 miles southeast of New York and 40 miles east of Puerto Rico. Nine miles long and 5 miles wide, it is covered by bush and second growth timber, including such trees as mahogany, bay, coconut, ebony, tamarind, mango, and lime.

It rises abruptly from the sea, its highest elevation, 1,277 feet. The island is accessible only by boat, but nearby St. Thomas and St. Croix have airports.

#### "PARADISE," SAYS ROCKEFELLER

Mr. Hubler's report described St. John as "by far the most beautiful" of the Virgin Islands.

"The pure white sand of her north side beaches makes a perfect contrast between the green of her wooded hills and the turquoise waters washing her shores," he wrote.

Mr. Rockefeller yesterday agreed that it was "a paradise."

The passage between St. John and British Tortola takes its name from Sir Francis Drake or "El Draque," as the Spaniards called him. Sir Francis was the first to sail through its tortuous channels, in 1580.

Christopher Columbus, the first white man to see St. John, in 1493, christened it "The Eleven Thousand Virgins," Mr. Hubler reported. It was not settled until 1684. In 1687 the Danish West India and Guinea Co. laid claim into St. John,

but it was not until March 25, 1717, that the first permanent colony was established there.

Life went smoothly for 3,000 whites until November 23, 1733, when the 2,500 slaves revolted. French soldiers from the island of Martinique quelled the riot eventually, and carried off the Negroes to slavery.

With the abolition of slavery it became impossible to keep up the old estates, so the island reverted to bush, the white owners departed and for years the natives have eked out a meager existence from fishing and gathering bay leaf for bay rum.

St. John was well known in the days of piracy and buccaneering because of her excellent harbors. There are, of course, many tales of pirate treasure buried on the island.

Mr. Rockefeller, 44 years old, has long been associated with conservation organizations. He is a trustee and second vice president of the New York Zoological Society, trustee of the Conservation Foundation, director of the Hudson River Conservation Society, commissioner and secretary of the Palisades Interstate Park Commission, and president of Jackson Hole Preserve.

He is president of Rockefeller Brothers, Inc., an investment and research organization, and chairman of the board of Rockefeller Center, Inc., a post previously held by his brother, Nelson.

[From the Daily News, Charlotte Amalie, V. I., Monday, November 22, 1954]

#### NATURAL PARK FOR ST. JOHN

Laurence S. Rockefeller, owner of Caneel Bay and chairman of the board of Rockefeller Center, Inc., has taken option to purchase nearly half of the island of St. John which he plans to give to the Federal Government to establish a national park. Mr. Rockefeller's chief interest is the preservation of the scenic area of the island.

According to the plan as outlined it will not be necessary to relocate any of the residents nor would the development of the park hinder the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay. The work at present being done on the resort area of Caneel Bay is a good indication of the future envisioned by this great financier.

Mr. Rockefeller has long been associated with development of this kind throughout the United States. He is president of Rockefeller Brothers, Inc., an investment research organization, which has financed such projects as the Grand Teton National Park, Wyo.; the Red Woods of California; and several of the country's national parks including Arcadia, Mo.; Great Smoky Mountains, Tenn. and N. C., and Shenandoah in Virginia.

In recent years visitors to the islands have shown great concern over the fact that most of the natural beauty and scenic charm of St. Thomas and St. Croix are being destroyed. Many of these persons who spend several months each year in St. Thomas or St. Croix are finding the peace and quiet that they seek in the many resort areas of the islands, in St. John. It is this fact more than any other that prompts the present plan to insure that St. John's natural beauty might not be destroyed.

Some people might be misled into the belief that the residents in that island will be placed in a less favorable position by this development. As we see it, it is the most fortunate thing that has happened to St. John in several decades. The development of a natural park would bring new activity to the small island and improve the economic condition. That island will become one of the principal showplaces for tourists and should boost the tourist program to large proportions. This cultural development will also attract a better type of visitors to the island.

We hope that the administration and the legislature will cooperate fully in bringing about this most significant development for the benefit of the entire Virgin Islands.

[From the St. Croix Avis, St. Croix, V. I., U. S. A., Saturday, November 27, 1954]

#### ISLAND "PARADISE"

Laurence S. Rockefeller's announcement that he will offer much of St. John as a national park is perhaps the most significant news to come out of these shores in many a day. The importance of the news can be determined by the wide coverage given to it by the national press, led by the New York Times.

**STATEMENT OF HON. GEORGE W. MALONE, UNITED STATES  
SENATOR FROM THE STATE OF NEVADA**

Senator MALONE. Mr. Chairman, the purpose of your proposed amendment to the 1872 mining law is, according to its sponsors, to prevent:

1. Clearly invalid mining locations, unsupported by any semblance of discovery, and
2. Mining locations having mineral disclosures which might satisfy the basic requirement of discovery, but which were in fact made for a purpose other than mining.
3. To make it easier for the Federal bureaus to bring up for review claims and claimants which in their judgment includes land more valuable for another purpose.

That is the statement of the principal witness, Mr. Raymond B. Holbrook, an attorney employed by the United States Smelting, Refining & Mining Co. for 17 years, and who is the chairman of the public lands committee of the American Mining Congress. Mr. Holbrook was the nearest approach to a mining man who appeared for the bill.

**LEGITIMATE OBJECTIONS COVERED BY MINING LAWS AND DECISIONS**

The first purpose is amply covered by the present mining law as interpreted over the years by the Supreme Court of the United States. Both the public and the prospector are fully protected, with recourse to the courts.

The second and third are clearly an imposition on the rights of the prospector since they open the door for the first time in more than 80 years for a Government bureau employee to allege that the land is more valuable for another purpose than mining and bring the case before his own bureau where the only appeal is to a higher employee or official in that same bureau.

**CONGRESS COULD DESTROY INCENTIVE**

Since it is even conceivable that evidence might show that the value for other purposes might temporarily be greater than the immediate value of a small mining property, it is inconceivable that the Congress would allow a bureau official, in no way connected with mining, such as the Forest Service or the Bureau of Land Management, and having no firsthand knowledge of the industry, to be the complainant, judge, and jury.

The history of mining is clear that you must have prospects before you have small mines and you must have small mines before you can have big mines—and that it often requires many years before the larger bodies of ore can be developed, even after they are known to exist.

**FIRST LOCATOR SELDOM PROFITS**

History also shows that the property many change hands many times through the first locators “going broke” and either relinquishing the claim to another locator or selling out for what they can get because of their inability to continue working the property, or because

of lack of "assessment" work simply losing to another locator. Rarely does the first locator profit from the discovery.

There used to be a byword in the ranching business—that it was the third or fourth homesteader of a homestead that made it stick. The mining business is even tougher.

#### GOVERNMENT BUREAUS

The principal witness, Mr. Holbrook, further testified that—

We have had the pleasure of working with the Forest Service and the Bureau of Land Management and understand their position is that these problems could not be entirely met by effective administration of existing laws for the following reasons :

1. The available remedies are slow, expensive, and not conclusive; and
2. There is great difficulty in establishing the invalidity of a location, supported by discovery, on the basis that the location was made for a purpose other than mining.

The weight of evidence of the witnesses called—all but one holding some Government position—was that the Government bureaus should be given the clear power to determine the validity of a mining location within their own department.

This power in the hands of the bureau officials would destroy the prospector and reverse the Supreme Court decisions for more than 80 years.

They would also have the authority to determine whether or not the land is more valuable for another purpose than mining.

#### OBJECTIVE—LEASING SYSTEM

It is clear that the Government bureaus are still moving toward a leasing system which they have continually advocated for two decades.

#### DESTROY LAW INTENT AND COURT DECISION

The prospector can be moved under the 1872 law if he has not complied with it, which is the intent and the extent of the original law.

The Supreme Court decisions, for more than 80 years, have clarified and established the law.

It has been established that if the prospector has complied with the law in setting up his monuments, in filing with the county recorder, and has done the required "assessment" work, that a Government department cannot move him or interfere with his work by alleging that "a reasonably prudent man would not expend his money and his effort in the hopes of developing a mine" (Holbrook, p. 91, May 18, 1955).

The amended act opens the door for continual interference by Government officials.

It limits the locators' inherent rights prior to patent, since when patent issues there is no change in the fee simple ownership, and the timber, forage, and all other assets go to the patentee. It does not make sense to allow the Government to deplete his claim in accordance with their judgment before patent.

There may have been abuses under the law, but when investigated it will generally be found that the Government has not met its responsibilities under existing law and that the law itself or court decisions provide the remedy.

## PROSPECTOR ON THE DEFENSIVE

As it now stands, the Government must initiate any proceedings to prove the location invalid, which is exactly what was intended and must be maintained, under the proposed law the prospector will be on the defensive and will be continually harried and tormented by inexperienced and irresponsible Bureau officials.

## HEARINGS IN MINING AREAS

It is abundantly clear that hearings should be held in the mining areas of this Nation before any action is taken, since no real miners were heard and the mining associations of the several States were clearly intimidated through threats of more severe legislation unless they accepted the proposed legislation as written.

## LAST STAND OF SMALL CAPITAL

The present simple location system for acquiring prospecting ground for mining is the last stand for the man of small capital.

It requires no money, just a sack of beans and some coffee and many of them have been known to dispense with the coffee until they can show enough to acquire a grubstake from someone who is willing to gamble with them.

They can build a rock mound or stick up a stake and lodge the location notice on it, then set up the corners within 30 days and start the location work.

The ground is then his own as long as he does the required annual assessment work and files proof of it in the country recorder's office of his county.

It is not necessary to have a surveyor or an accurate placing of the corners of his property. If he inadvertently takes in too much territory then, when there is a conflict, which there will most certainly be when and if he makes a strike, he can only hold the 1,500 by 600 feet of the regulation mining claim.

## MINING IS A GAMBLE—NO PRUDENT MAN

Mining is a gamble. It is also a disease, which once acquired means that they will "hit" a mine or die broke. Where a very limited few develop a mine, thousands die broke, but it is the incentive of "striking it rich" that keeps them in the hills where the ore is to be found.

Probably 90 percent of the digging done by prospectors is on ground where no "prudent man" would dig—and this Nation can thank God that they have continued to dig on such ground, because most of the prospects developing into mines are discovered by these miners confirmed in the faith.

The testimony by Government witness, and witnesses inexperienced in the actual prospecting operation, was to the effect that many mining claims are located on ground where no "prudent man" would dig. Prospectors are not prudent men.

ONLY ONE MINING MAN HEARD

There was only one mining man at the hearing who testified and his testimony was emphatically against the bill unless modified, and he recommended that hearings be held in the mining areas before it was reported to the Senate floor. The witness was Mr. Robert S. Palmer, secretary-treasurer of the Colorado Mining Association, which is one of the largest and most important of such associations in this Nation.

NO PRECEDENT

Several witnesses have testified that a precedent for this proposed legislation was set in the passage of Public Law No. 250, 83d Congress, amending the 1872 Mining Act.

There could have been no precedent set in the previous legislation for this type of bill since it only dealt with coordinating the use of the same mining claims for different minerals—petroleum, uranium, and other minerals. The amended act provided that you could mine uranium on an oil claim but the petroleum producer had the priority and you could not interfere with him, and that you could develop and produce oil on a uranium claim but that you could not interfere with the operation of the prior locator.

PRECEDENT WOULD BE SET

It positively had nothing to do with timber or forage or sagebrush. It had absolutely nothing in common with Senate bill 1713, which does set a precedent for leasing ground for materials.

HEARINGS IN MINING AREAS

Certainly hearings should be held in the mining areas. Let the miners have a chance to help work it out.

CAN BE WORKED OUT

I believe that if this is done a satisfactory piece of legislation can be worked out that will benefit all concerned, and that will not curb the prospector, and that will not discourage independent investors and grubstakers interested in locating, developing, and producing minerals.

SHOULD BE CONFINED TO FOREST AREAS

If the legislation is to be voted on today as set up without hearings in the mining areas of the country, then its application should certainly be confined to the forest reserve areas where most of the testimony before the committee applied.

Senator ANDERSON. Thank you. The committee hearing will now stand in recess.

(Whereupon, at 2:10 p. m., the committee recessed subject to the call of the Chair.)

# VIRGIN ISLANDS NATIONAL PARK

THURSDAY, MAY 19, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON TERRITORIES AND  
INSULAR AFFAIRS OF THE COMMITTEE,  
ON INTERIOR AND INSULAR AFFAIRS,  
Washington, D. C.

The subcommittee met, pursuant to call, at 10:30 a. m., in room 224-A, Senate Office Building, Senator Henry M. Jackson, chairman of the subcommittee, presiding.

Present: Senators Henry M. Jackson, Washington (chairman of the subcommittee); and Alan Bible, Nevada.

Also present: Stewart French, chief counsel and staff director.

Senator JACKSON. The subcommittee will come to order.

We will consider first S. 1604, a bill introduced by the chairman at the request of the Department of the Interior to authorize the establishment of the Virgin Islands National Park.

I understand that the proposed park is not to exceed 9,500 acres. Of this total, up to 50 acres may be on the Island of St. Thomas, with the remainder on the Island of St. John or the smaller islands in the vicinity of St. John.

I understand that Mr. Laurance Rockefeller has already acquired over 5,000 acres on the Island of St. John for donation to the proposed national park. The remainder of the park area would be acquired with donated funds.

We are pleased to have as witnesses this morning Mr. Conrad Wirth, director of the National Park Service, and Mr. Allston Boyer, representing Mr. Rockefeller.

We will place a copy of S. 1604 in the record at this point, together with copies of the letter of transmittal from the Interior Department, and the favorable report of the Bureau of the Budget.

(The documents the inclusion of which was directed by the Chairman are as follows:)

[S. 1604, 84th Cong., 1st sess.]

A BILL To authorize the establishment of the Virgin Islands National Park, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That a portion of the Virgin Islands of the United States, containing outstanding scenic and other features of national significance, shall be established, as prescribed in section 2 hereof, as the "Virgin Islands National Park."

The national park shall be administered and preserved by the Secretary of the Interior in its natural condition for the public benefit and inspiration, in accordance with the laws governing the administration of the National Parks (16 U. S. C. 1, and the following).

SEC. 2. The Secretary of the Interior is hereby authorized, subject to the following conditions and limitations, to proceed in such manner as he shall find

to be necessary in the public interest to consummate the establishment of the Virgin Islands National Park:

(a) The acreage of the national park shall be limited to a total of not more than 9,500 acres of land area, such total to be comprised of not more than 50 acres on the Island of Saint Thomas, and not more than 9,450 additional acres to be comprised of portions of the Island of Saint John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park.

(b) Tentative exterior boundary lines, to include land not in excess of the aforesaid acreage limitations, may be selected for the park in order to establish the particular areas in which land may be acquired pursuant to this Act, such tentative boundaries to be selected and adjusted as may be necessary by the Secretary of the Interior.

(c) The Secretary, on behalf of the United States, is authorized to accept donations of real and personal property within the areas selected for the park until such time as the aforesaid total of 9,500 acres shall have been acquired for the park by the United States, and he may also accept donations of funds for the purposes of this Act.

(d) Funds made available for purposes of this Act may be used by the Secretary in such manner as he shall find to be in the public interest, in order to procure by purchase or otherwise, land or interests therein for the park.

(e) Any Federal properties situated within the areas selected for the park, upon agreement by the particular agency administering such properties that such properties should be made available for the park, may be transferred without further amortization to the Secretary by such agency for purposes of this Act.

(f) Establishment of the Virgin Islands National Park, in its initial phase, shall be and is hereby declared to be accomplished and effective for purposes of administration when a minimum acreage of not less than 5,000 acres in Federal ownership for purposes of this Act shall have been acquired by the United States in specific areas containing such acquired lands to be designated by the Secretary.

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

---

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY.  
Washington 25, D. C., March 17, 1955.

HON. RICHARD M. NIXON,  
*President of the Senate,*  
Washington, D. C.

MY DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill to authorize the establishment of the Virgin Islands National Park, and for other purposes. This would provide for the establishment of a national park of not to exceed 9,500 acres in extent. It would permit the acceptance of lands and funds that will be donated for the purpose. Mr. Laurance S. Rockefeller has already acquired over 5,000 acres on the Island of St. John for donation to the Government for the park. The remainder of the park area would be acquired with funds to be donated.

We shall appreciate the reference of this proposed bill to the appropriate committee for consideration. We recommend that it be enacted.

The purpose of the proposed park is to conserve for public benefit and enjoyment a portion of the Virgin Islands containing outstanding scenic and other features of national significance, educational value, and fine recreation possibilities. In addition, we believe that its establishment would materially help the Virgin Islands economy, through the tourist industry, to become more self-supporting.

The proposed park, limited to 9,500 acres in extent, would be comprised of not more than 50 acres on the Island of St. Thomas and not more than 9,450 additional acres to be comprised of portions of the Island of St. John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park.

St. John Island is a mountainous area, 9 miles long and approximately 5 miles wide, with a total area of 19.2 square miles. The highest peak is 1,277 feet.

above sea level. About 85 percent or more of the island is covered by bush and second-growth tropical forest. There is little arable land, the largest area being west of Coral Bay, at the eastern end of the island, which area would not be included in the park. The climate is subtropical and pleasant—the lowest temperature ever recorded being 69°, the highest 91°. Seven hundred and forty-six people were reported living on the island in 1950.

The scenic quality, plant life, and the setting of the island in the protected channels of the Virgin Islands are totally different from anything set apart in the United States or its Territories for national-park purposes. The plant and animal life of the island and of the surrounding waters are of exceptional interest and educational value. The proposed park presents fine recreation possibilities, including excellent sport fishing in the surrounding waters. Relics of the prehistoric Carib Indians are found on the island, as well as remnants of sugar mills and the plantations of the early historic period. The island in its picturesque surroundings is unquestionably of national-park caliber. The Nation will be fortunate indeed if Mr. Rockefeller's generous offer is accepted and the national park established. There has been favorable editorial comment and support for the proposal in the press in New York, the Virgin Islands, and elsewhere.

The proposed boundaries would include the finest portions of the island for park purposes and would exclude the settlements and agricultural lands required by the natives. The proposed park would not require elaborate development, since retention of the area's unspoiled charm would be a principal objective. We estimate that approximately \$60,000 would be required annually for its maintenance and operation.

The Bureau of the Budget has advised that there is no objection to the submission of this proposed legislation.

Sincerely yours,

ORME LEWIS,  
*Assistant Secretary of the Interior.*

**A BILL To authorize the establishment of the Virgin Islands National Park, and for other purposes**

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That a portion of the Virgin Islands of the United States, containing outstanding scenic and other features of national significance, shall be established, as prescribed in section 2 hereof, as the "Virgin Islands National Park."

The national park shall be administered and preserved by the Secretary of the Interior in its natural condition for the public benefit and inspiration, in accordance with the laws governing the administration of the National Parks (16 U. S. C. 1, and the following):

Sec. 2. The Secretary of the Interior is hereby authorized, subject to the following conditions and limitations, to proceed in such manner as he shall find to be necessary in the public interest to consummate the establishment of the Virgin Islands National Park:

(a) The acreage of the national park shall be limited to a total of not more than 9,500 acres of land area, such total to be comprised of not more than 50 acres on the Island of St. Thomas, and not more than 9,450 additional acres to be comprised of portions of the Island of St. John and such small islands, rocks, and cays not in excess of 1,000 acres in the general vicinity thereof as may be desirable for inclusion within the park;

(b) Tentative exterior boundary lines, to include land not in excess of the aforesaid acreage limitations, may be selected for the park in order to establish the particular areas in which land may be acquired pursuant to this Act, such tentative boundaries to be selected and adjusted as may be necessary by the Secretary of the Interior;

(c) The Secretary, on behalf of the United States, is authorized to accept donations of real and personal property within the areas selected for the park until such time as the aforesaid total of 9,500 acres shall have been acquired for the park by the United States, and he may also accept donations of funds for the purposes of this Act.

(d) Funds made available for purposes of this Act may be used by the Secretary in such manner as he shall find to be in the public interest, in order to procure by purchase or otherwise, land or interests therein for the park;

(e) Any Federal properties situated within the areas selected for the park, upon agreement by the particular agency administering such properties that

such properties should be made available for the park, may be transferred without further authorization to the Secretary by such agency for purposes of this Act;

(f) Establishment of the Virgin Islands National Park, in its initial phase, shall be and is hereby declared to be accomplished and effective for purposes of administration when a minimum acreage of not less than 5,000 acres in Federal ownership for purposes of this Act shall have been acquired by the United States in specific areas containing such acquired lands to be designated by the Secretary; and

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

---

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington, D. C., April 14, 1955.

HON. JAMES E. MURRAY.

*Chairman, Committee on Interior and Insular Affairs, United States Senate, Washington, D. C.*

MY DEAR MR. CHAIRMAN: This is in response to your request for the views of this Bureau on S. 1604, a bill to authorize the establishment of the Virgin Islands National Park, and for other purposes.

The bill authorizes a park of not to exceed 9,500 acres of land area. Of this total, not more than 50 acres may be on the island of St. Thomas, not more than 9,450 acres on the island of St. John, and not more than 1,000 acres on small islands, rocks, and cays in the general vicinity of St. John. The Secretary of the Interior is authorized to accept donations of real and personal property within the areas selected for the park, and also to accept donations of funds for park purposes. The park shall be considered established when a minimum of 5,000 acres have been acquired.

Mr. Laurence S. Rockefeller recently purchased over 5,000 acres on the island of St. John which he has offered to give to the United States for park purposes. Thus, if S. 1604 is enacted into law, the Government can acquire without cost sufficient lands to establish the park. The National Park Service estimates that annual cost of operation and maintenance will approximate \$60,000.

The greatest assets of the Virgin Islands are their scenic beauty and remarkably fine year-round climate. Exploitation of these assets through development of the tourist industry should materially improve the economic condition of the islands, and contribute to their eventual self-support. Establishment of a national park in the islands should make a major contribution to the development of a thriving tourist industry.

Accordingly, the Bureau of the Budget recommends that your committee give favorable consideration to this bill.

Sincerely yours,

DONALD R. BELCHER, *Assistant Director.*

Senator JACKSON. I am sorry, gentlemen, that we are in rather cramped quarters this morning. We are having another committee meeting in the other room, but as long as we can get some work done, I assume you do not mind. As a matter of fact, as far as I am concerned I enjoy it.

Mr. Wirth, do you care to make a statement?

**STATEMENTS OF CONRAD L. WIRTH, DIRECTOR, NATIONAL PARK SERVICE; WILLIAM ARNOLD, ASSISTANT DIRECTOR, OFFICE OF TERRITORIES, IN CHARGE OF ISLAND AFFAIRS; AND A. M. EDWARDS, ASSOCIATE SOLICITOR, DEPARTMENT OF THE INTERIOR**

Mr. WIRTH. I think in opening up, Mr. Chairman, I would like to sketch briefly the efforts that have been made in the past, a little bit about the park, some of the plans we have, the economic values, and what the people in the Virgin Islands think of it.

First, we had considered this park back in the thirties, and in 1939 we had a report made of the area and were proceeding to bring it to the attention of Congress with our recommendations. However, the war emergencies came along and that was never done.

Senator JACKSON. You say a study was made of it in 1939?

Mr. WIRTH. In 1938 and 1939 when we were operating the CCC program down there. I was down there at the time, and our man, Mr. Hubler, made a study for us. That laid dormant up until just a little over a year ago when Mr. Rockefeller had the same idea. A few years preceding that he had been on a cruise down there and had fallen in love with the island and bought Caneel Bay as a place to go to and make the place available for other visitors.

I met Mr. Rockefeller shortly after this idea occurred to him, and he was talking about it. He had read one of our earlier reports and found out that we had been interested in it. He wanted to know whether we were still interested. I told him we were as far as I knew, but I would not be in position to say definitely or make any recommendation on it until we had another study of the island, because so much time had elapsed since 1938, and I did not know exactly what conditions prevailed.

This study was made last year. In the meantime Mr. Rockefeller did go ahead and has bought about 5,000 acres with the idea that if the proposed park is authorized he would give everything that he has down there, including Caneel Bay. In order not to embarrass anybody, and knowing the full impact of national parks on land values and the local economy, he felt it would be wise to buy the land prior to park establishment. If the park is authorized, he would then make the donation. If it is not authorized, that would be something else. I want to make it clear, that his whole purpose is a gift to the public and that there is no personal profit involved.

Senator JACKSON. When did he start acquiring the land?

Mr. WIRTH. He acquired Caneel Bay about 3 years ago, and he started acquiring this land just last fall. He has now acquired about 5,000 acres of the proposed area.

His intention is to give everything that he has there. In fact, he has already transferred the title to the Jackson Hole Preserve, Inc., which is a nonprofit corporation organized under the laws of the State of New York for charitable, educational, and scientific purposes, including the purpose of restoring, protecting, and preserving for the benefit of the public the primitive grandeur and natural beauties of the landscape in areas notable for picturesque scenery, and particularly in the Jackson Hole area in the State of Wyoming, although the acquisitions by the corporation are not limited to Jackson Hole.

Senator JACKSON. How can they transfer it to a corporation for a purpose for which the corporation is not set up? That is a corporate entity set up for preserving land in the Jackson Hole National Monument, is it not?

Mr. WIRTH. No, sir. The corporation has that name, but its purposes are applicable anywhere in the United States. The corporation is acquiring the land on St. John Island. The money is given to the corporation and it acquires the land for the purpose of donating it to the Government if the proposed park is authorized.

I might say that through the years Mr. John D. Rockefeller, Jr., and now Mr. Laurance Rockefeller following his footsteps, have donated to the Government park purpose moneys, lands, improvements, and various other things amounting I believe to more than \$30 million.

For instance, in the Great Smokies he matched dollar for dollar the \$5 million raised by North Carolina and Tennessee.

Senator JACKSON. I know they have an outstanding record.

Mr. WIRTH. Everything he has down there, including Caneel Bay, is in the area to be transferred for the park if it is approved.

As to the island itself, it is an outstanding Caribbean island with only 700 people on it. I would like to tell you some facts about the island. It is located 1,400 miles southeast of New York and 50 miles east of Puerto Rico. I would like to point out that 1,400 miles is about half the distance between New York and San Francisco. Relatively, therefore, the proposed park is not as distant as many of the western parks.

As to the physical characteristics, the island of St. John is 19.2 square miles, or a little over 12,000 acres, about half the size of the District of Columbia. The highest point on the island is Bordeaux Mountain, 1,277 feet. Eighty-five percent of the island is covered with brush and second growth timber. There are only about three or four hundred acres of arable land, and that land is outside of the area we are proposing as the national park.

The lowest temperature down there ever recorded is 69, and the highest is 91. While you have a warm sun, you have cool evenings and nights. It is very delightful. It has about 50 inches of rainfall, mostly at night, and there is no clearly defined rainy season.

Perhaps one of the most interesting features is Coral Bay on the east side of the island, which has a beautiful harbor. The harbor is about a mile and a quarter across the mouth and about two and a half miles long.

As to the history, the island was apparently first sighted by Columbus in 1493. It was then inhabited by the Carib Indians, who probably came from South America. A German historian by the name of Oldendorp, records that the Indians were driven from the island in 1555 by Charles V of Spain.

The Virgin Islands were first settled in 1625 and St. John in 1684. Denmark claimed the island in 1687, but ownership was contested by Great Britain.

On March 25, 1717, the first permanent colony was established by the Danes at Coral Harbor on the east end of St. John, and they defied the British to drive them off. They had at that time 20 planters and 5 soldiers, and they built what is known as Fort Berg on the east end of the island. The ruins of the fort are still there.

Senator JACKSON. This is the Danish invasion you are talking about?

Mr. WIRTH. This is when the Danes took over the island, made the first permanent colony and defied the British to drive them off.

In 1733 there was a total of 38 planters on St. John and everything was apparently prosperous and gay, but there was slavery. On November 23, 1733, the slaves revolted, and the whites sought protection on what is now known as Caneel Bay Plantation. For about 4 months, the plantations of the island were pillaged, until they just ran rampant.

The French captured the slaves—some of whom killed themselves by jumping off the rocks. Slavery continued until 1848. Since the abolition of slavery, the economy of the island has deteriorated. Most of the island has now reverted to jungle.

The United States almost bought it in 1887, but the United States Senate refused to ratify a treaty that had been arranged by Secretary Seward and the Danish Government. In 1917 the United States bought St. John and certain other Virgin Islands.

Senator JACKSON. Bought it, together with the islands of St. Thomas and St. Croix.

Mr. WIRTH. Yes; bought those islands as a group.

That gives you a brief idea of the history. All through the islands there are ruins of the early plantations. There are also Indian stone writings.

We have pictures here, which Mr. Boyer will show a little later, showing the general character of the island. It has a beautiful shoreline with white-sand beaches and much of the forest is coming back, including mahoganies, bay, limes, coconuts, and numerous other species of tropical trees. There are no poisonous snakes on the island.

Another interesting feature is the fish and shell life of the coral reefs around the island.

Senator JACKSON. What disturbs me, Mr. Wirth, just looking at this, and having spent a day at Caneel Bay on St. John when I was in the Virgin Islands a few years back, is simply this: What is so unique about it that it should be made a national park? That is No. 1. The second thing I would like to know is, What percentage of the total acreage in the Virgin Islands is involved in this transfer?

Mr. WIRTH. I would like to show you this map, if I may, and I will try to explain it in such a way that it will be recorded properly. As to the grandeur of the island, the pictures will show that. Mr. Boyer has quite a few here.

This is Cruz Bay. A considerable number of the people live at Cruz Bay.

Mr. BOYER. This is a picture of Cruz Bay.

Senator JACKSON. Caneel Bay is where they have the cottages?

Mr. BOYER. Yes, sir. This is Caneel Bay. This is the point where the cottages are.

Mr. WIRTH. We are recommending that the park not exceed 9,500 acres, of which not more than 50 would be on St. Thomas, which is principally for a dock and utility area and a parking place, and not to exceed a thousand acres of the surrounding rocks and cays, nearly all of which are uninhabited. The rest of St. John Island, which would be about one-third, is the land that is usable for agriculture and settlement, and would not be included in the proposed park. We would expect that the park would attract people to the island and that these lands outside the park would leave room for the building of accommodations to take care of the people rather than having to provide additional accommodations at Caneel Bay.

Senator JACKSON. Two-thirds of the island is involved in this proposal?

Mr. WIRTH. That is right.

Senator JACKSON. You have 50 acres over on the island of St. Thomas?

Mr. WIRTH. Yes; purely a jumping-off place—a place where we can have a utility area and dock and to permit parking. Perhaps less land will be required there.

Senator JACKSON. I agree it is a beautiful place, but I can take you up on some of the islands of San Juan that program just as distinctive beauty as this particular island. I do not really in my own mind understand what in particular stands out that makes it worthy of national park status.

Mr. WIRTH. The combination of tropical plant and animal life, the colorful channels between the islands, the fish and invertebrate life of the coral reefs, the beautiful beaches and superb scenic views as well as the historic and prehistoric structures—all are different from anything in any of the national parks at the present time. I have never seen anything that equals it.

Senator JACKSON. Not in any of the national parks, but in other islands in the Caribbean.

Mr. WIRTH. I do not know of any other that would exceed this, and I have been over to Puerto Rico and all the Virgin Islands that we have anything to do with.

Senator BIBLE. How many people would you estimate would visit there a year?

Mr. WIRTH. It would be hard to say how many would, but I would say that within the next 4 or 5 years there would be at least fifty or one hundred thousand people come down there.

Senator JACKSON. How many are visiting there now?

Mr. WIRTH. Practically none.

Senator JACKSON. The only way, Senator Bible, as I understand it, that you can get to the island—at least it was a while back—is by small motor launch from the island of St. Thomas. Is that correct, Mr. Boyer?

Mr. BOYER. Yes.

Senator JACKSON. It has been set up as rather an exclusive honey-moon isle. It is completely isolated, and has a very beautiful harbor at Caneel Bay. They have beautiful sand, and wonderful beaches and a lot of fine plant growth on the island, but I just wonder what makes it so particularly unique. We are talking about a national park. There are many beautiful places in the Western Hemisphere.

Mr. WIRTH. This picture, in color, will give you some idea of the kind of thing you have down there. I do not know where you see anything like that in Puerto Rico [indicating].

Senator JACKSON. Over on the island of St. Thomas there are a number of similar sites.

Mr. WIRTH. St. Thomas is all being developed. It is the center of population; whereas St. John is being made available for national park purposes, which would be putting the land to its best economic use.

Senator JACKSON. Can you leave these with the committee temporarily to be returned later?

Mr. BOYER. I can, but all those are not of the island. I would be delighted to leave this, but I just would like to point out that they are not all of St. John.

Senator JACKSON. Some of these are St. Thomas.

Mr. BOYER. Yes, and some are on San Juan.

Senator BIBLE. What would it cost to maintain this a year?

Mr. WIRTH. We estimate \$60,000 a year.

Senator JACKSON. How much money are we going to have to spend in improvements?

Mr. WIRTH. We estimate that the total amount of improvements, leaving these lands out for taking care of the people outside the park, would cost us over the period of the next 4 or 5 years about \$120,000.

Senator JACKSON. Would that be your master plan, the total?

Mr. WIRTH. Yes. We have not made a detailed plan, but we did make an estimate.

Senator JACKSON. \$120,000?

Mr. WIRTH. Yes.

Senator JACKSON. We have quite a time, as you know, with appropriations for the operation and maintenance of parks. I think both of us have had a little experience on that. I served on the House Appropriations Committee for a long time.

Mr. WIRTH. That is true.

Senator JACKSON. We have \$60,000 here for operation and maintenance. Every year that will be added on to the sum total.

Mr. WIRTH. I would like to point out a fact here. I was anticipating the possibility of the question of money and I made a few notes here. There have been certain surveys made, in which the committee will be interested. I maintain that the parks are set aside and preserved for human enjoyment. That is their main value.

However, there is a byproduct to the parks that we do not fully realize. Here is a research study of the Stanford Research Institute, Mountain States division, Phoenix, Ariz., from which I would like to read an excerpt, as follows:

Coconino County, in the heart of northern Arizona, has the greatest future potential for growth, barring the discovery of important mineral resources elsewhere. Its greatest resources are scenic and climatic, although timber and grazing lands are important for the lumber and livestock industry they support. The tourist industry accounts, directly or indirectly, for approximately 50 percent of the Coconino County's total income.

The economy of northern Arizona is dependent to a much greater extent upon tourist travel than is that of the southern counties, and northern Arizona's future growth and prosperity are largely dependent upon development of resources which attract out-of-State visitors. Some 35 percent of its retail sales are direct tourist expenditures, against less than 15 percent of retail sales attributed directly to tourists for the State as a whole.

Senator JACKSON. I agree with you, but that is like a grant-in-aid to the States. Secretary Humphrey does not get any of the income which you mention nor does it help to balance the Federal budget. We can account for it if the money came directly into the Park Service and into the Department of Interior, and I think we would be in much better shape, and I am completely in sympathy with what you say.

However, when we get up on the floor of the Senate and we have the Interior appropriation bill up, we find it a bit of a problem because here is an additional item for operation and maintenance, you see.

Mr. WIRTH. We are confronted with this everywhere we go, and the States realize the value of these areas. Here is a report on Yellowstone made in 1950 by the State of Wyoming.

Senator JACKSON. I have used the same argument in justifying my support of Olympic National Park, and I am in complete sympathy with you. The only problem that we have is when we get on the floor,

here is \$60,000 more and here is \$120,000 additional in the next 4 or 5 years for construction; and the problem that I have noticed, Senator Bible, when I was in the House especially, is this constant attrition of funds. We have to fight all the time to maintain and keep our parks in decent shape. Our roads and our trails, of existing parks, have been declining over a long period of time.

It is an argument that we have to face on the floor. I would not want you to think, Mr Wirth, because I asked adverse questions that that necessarily indicates my final point of view. I am here to try to get some information that might be helpful later.

Mr. WIRTH. I am glad that you are asking because I would like to get it in the record. They say that figures lie sometimes, and liars figure, and so forth and so on, but the Bureau of Internal Revenue now states that 28 cents out of every dollar that is spent goes in some form of taxes.

Here is this report in 1950 saying that at Yellowstone and vicinity the traveling public, there in that 1 year, spent \$18,996,000. If Internal Revenue's statement is correct, \$4,700,000 went into taxes of various kinds.

Senator JACKSON. Of course, a lot of this money is for local taxes.

Mr. WIRTH. But it creates an income value for the Virgin Islands, which is important, and will reduce the amount of money, I think, in the long run that Uncle Sam will have to give to help the islands. Nevertheless, I do not like to emphasize the money angle, since we are concerned with scenic and other recreational resources and their value to present and future generations keeping some of the native scenery that the good Lord blessed us with for public enjoyment.

To emphasize the size of the proposed park, I took the 9,500 acres and indicated on different national-park maps the relatively small amount of land we are talking about.

Senator JACKSON. Yes, but it is all relative. How many acres are there in the Virgin Islands group?

Mr. WIRTH. St. John is the smallest island. Do you know how many acres there are in St. Thomas and St. Croix?

Mr. ARNOLD. I believe there are approximately 70,000 acres.

Mr. FRENCH. Overall.

Senator JACKSON. The whole aggregate.

Mr. EDWARDS. A little over 85,000 acres for the whole aggregate of the American Virgin Islands.

Mr. WIRTH. I do want to say this, though, that St. John Island has practically no industry on it at the present time. There are 600 or 700 people living there. There is one Senator from the St. John district.

Senator JACKSON. How many people are there on the island of St. John?

Mr. WIRTH. Between 600 and 700 on the island of St. John.

Senator JACKSON. The total population of the Virgin Islands about 30,000; is it not?

Mr. ARNOLD. 27,000.

Senator JACKSON. You see this involves 9,500 acres out of a total of 85,000. It is roughly one-ninth the area of the islands.

Mr. WIRTH. If you will notice from those pictures we showed you, there are no particularly good land use potentialities within the proposed park. It is rugged.

Senator JACKSON. As I recall the history of the island of St. John—you mentioned it in part—back in, I thought it was in the 1800's, they had this massacre that occurred on the island during a time that they were engaged in sugarcane production.

Mr. WIRTH. They had the island largely cleared. There were 38 plantations on the island at that time in 1733 when they had the uprising of the slaves.

Senator JACKSON. They were producing sugarcane?

Mr. WIRTH. Yes.

Senator JACKSON. And the production of sugarcane in that area was profitable at that time solely because of slave labor?

Mr. WIRTH. That is right.

Senator JACKSON. And with the elimination of slave labor, it was no longer economically feasible to produce sugarcane, and the last remaining sugarcane produced in the Virgin Island group was on the island of St. Croix? There is still some production, but it has declined, too, with the elimination of the rum business.

Mr. WIRTH. Here is a picture of one of the old plantation houses up in the woods. They lived well, the 38 planters there.

Senator JACKSON. Are you going to rehabilitate any of those old places?

Mr. WIRTH. No. We will have trails into certain of them and into the areas that had the old forts, to explain the history and how the people lived at that time.

Senator JACKSON. That is a part of the \$120,000 estimate of construction costs over a period of years, and it is a \$60,000 annual maintenance cost?

Mr. WIRTH. Yes. There is very limited transportation on the island and most likely the transportation on the island will consist of improvement of minor roads [indicating] that now exist, and trails.

Senator JACKSON. Is it intended that the island remain somewhat in its present capacity rather primitive, and restrict the traffic, ocean or water traffic, into the island?

Mr. WIRTH. We hope to get more traffic over the island and more people here [indicating] and spending their summers there or their winters there in visiting and using the beaches, but the part we have will be kept in its natural condition, which would be the attraction, and the area left out will be the part put to commercial use by the various business enterprises that would be developed in order to take care of the people that come over there.

In other words, we are leaving them out of Government control entirely as far as we are concerned, to develop their accommodations outside as we are doing in several of the parks. The Great Smoky Mountains is one of them. The Everglades is another one. We would leave business interests out of the park so they would not be under our supervision. In Yellowstone, because of its size, we always have had concessioners, and in Yosemite, also. In the proposed Virgin Islands National Park most of the development to take care of the people would be on the edge and on the outside of the park.

Senator JACKSON. Who would operate the concessions in this proposed park?

Mr. WIRTH. It would be operated similar to the way we are working with the Jackson Hole Preserve, Inc., in Grand Teton National

Park. They have a separate company that is incorporated and pays all the taxes, but any money the separate company makes goes to the Jackson Hole Preserve, Inc., for nonprofit, park purposes.

Senator JACKSON. In other words, the Rockefellers would have business interests there operated through this nonprofit corporation, and all earnings would be used for acquisition, maybe, of additional lands, but at least for a nonprofit objective? Is that correct?

Mr. BOYER. Definitely, yes, sir; absolutely.

Senator JACKSON. As I said earlier, I think it is wonderful what the Rockefeller family has done. I am completely familiar with what they have done in the past. I am sure, just for the record, it ought to be made clear that the Rockefeller interests have nothing to gain privately. I ask it just so the record is clear and no one can get up and say that this is a charitable contribution on one hand and a private venture on the other. The Rockefeller Corp., this nonprofit corporation that you referred to earlier, would be set up to assist in providing facilities either in or adjacent to the park to encourage people to come into the park?

Mr. WIRTH. The way they work it is this: The money is put in the Jackson Hole Preserve, Inc., which provides the improvements: the operation of the lodge is by a regular corporation that pays taxes, and any money that the operating company makes goes back to the Jackson Hole Preserve.

Senator JACKSON. Would it be a private corporation?

Mr. WIRTH. Yes. It would be a corporation controlled by the Jackson Hole Preserve, Inc. The reason that is done is to permit the operating company to pay all the taxes that the community or State would otherwise get for such operations.

Senator JACKSON. It would be a private corporation, not a nonprofit corporation, but the net earnings after payment of taxes would go to the nonprofit corporation, the Jackson Hole Preserve?

Mr. BOYER. Caneel Bay Plantation, Inc., which operates the resort facility at the present time, is a wholly owned subsidiary of Jackson Hole Preserve, Inc.; Jackson Hole Preserve, Inc., owns all the stock. Mr. Laurance Rockefeller purchased the stock but gave it all to Jackson Hole, Inc., as of January 10 of this year.

In other words, Mr. Rockefeller has no personal interest of any kind in this project.

Senator JACKSON. What is the name of the corporation?

Mr. BOYER. Caneel Bay Plantation, Inc.

Senator JACKSON. Is it set up as a private corporation?

Mr. BOYER. It is a private corporation; yes, sir.

Senator JACKSON. However, all of the capital stock of that company is, in turn, owned by the nonprofit corporation, the Jackson Hole Preserve, Inc.?

Mr. BOYER. Yes, sir.

Senator JACKSON. And the earnings, therefore, of the private corporation would inure to the benefit of the nonprofit corporation?

Mr. BOYER. Definitely.

Senator JACKSON. So that it is merely a business device to carry on the functions in that area so that the local government will have the benefit of taxes that would normally accrue to any private enterprise?

Mr. BOYER. Yes, sir.

Senator JACKSON. I mean that would normally accrue from a private enterprise to the island?

Mr. BOYER. Yes, sir.

Senator JACKSON. Otherwise, you could set it up as a nonprofit corporation, but what you are doing is trying to help the local government, assist them in taxes and so on?

Mr. BOYER. Yes, sir. It is the same arrangement which is employed in Jackson Hole at Grand Teton. As Director Wirth has said, the Grand Teton Lodge and Transportation Co. owns the Jackson Lake Lodge, which is the new hotel opening on June 12 of this year. It is a wholly owned subsidiary of Jackson Hole Preserve, Inc.

Senator JACKSON. We will have you as the next witness after Mr. Wirth to find out what the plans are in the way of development and so on from the standpoint of the Caneel Bay Co.

Mr. WIRTH. I do not have anything else to say, sir, except that the Governor of the Virgin Islands is in favor of the proposed park.

Senator JACKSON. Who is the present Governor?

Mr. WIRTH. Governor Alexander. He has been there 1 year now.

Mr. FRENCH. He took office a year ago in April.

Senator JACKSON. Is he the one from the Middle West?

Mr. FRENCH. Yes, the Des Moines, Iowa, contractor.

Mr. WIRTH. The member of the Virgin Islands Senate from St. John is also in favor of it, and, we have so been informed, the local newspaper on St. Croix and St. Thomas. They not only reported the news very accurately and favorably, but they also have written editorials in support of it, and I think it might be well, if I may, to incorporate those in your record. I will not take time to read them, but they are all very favorable.

(The news articles referred to follow: )

[From the Daily News, Charlotte Amalie, V. I., Saturday, November 20, 1954].

**L. S. ROCKEFELLER OFFERS UNITED STATES A VIRGIN ISLANDS PARK—HE SEEKS TO PRESERVE THE UNSPOILED BEAUTY OF ST. JOHN 'PARADISE'—NO RESIDENT TO BE DISPLACED**

(By Morris Kaplan)

Laurence S. Rockefeller has acquired options to purchase about half of the scenic island of St. John in the Virgin Islands. The third son of John Rockefeller, Jr., affirmed yesterday reports that he would like eventually to have two-thirds of the island's 12,700 acres accepted as a national park.

Back from a 5-day examination of the green hills and white beaches of the Caribbean isle, Mr. Rockefeller reported that Conrad Wirth, director of the National Park Service, had expressed interest in the project.

Mr. Wirth accompanied Mr. Rockefeller and Frank Stick, noted ichthyologist and conservationist of Kitty Hawk, N. C., on the trip to Caneel Bay Plantation, a 650-acre resort area bought by Mr. Rockefeller in 1952 from the Rhode Island Charities Trust.

Mr. Stick and two associates own 1,500 acres on the island.

The plan for a national park on St. John, the smallest of the three Virgin Islands bought by the United States from Denmark in 1917 for \$25 million, was first broached in 1939 by Harold A. Hubler, an officer of the Park Service, but the idea was tabled.

Mr. Rockefeller's interest was whetted by a trip he made 3 years ago in his 65-foot cabin cruiser, *Dauntless*, with his wife, the former Mary French, and friends. They had been voyaging in the Lesser Antilles and sailed into St. John from British-owned Antigua.

"I found the combination of mountains, beaches and sea unique in the Caribbean," Mr. Rockefeller said: "The unspoiled nature of the area appealed to me and I wish to preserve it against overdevelopment."

He mentioned the larger Virgin Island of St. Thomas and St. Croix, where, he said, commercial ventures and the tourist trade had increased. Long interested in the conservation of scenic areas, he said he was disturbed that the most beautiful areas of St. John might some day be altered so as to destroy their natural beauty.

He read the Hubler report and discussed it with Mr. Wirth. As a result of their trip, Mr. Wirth has reaffirmed the interest of the National Park Service, "but we have no assurances at all," Mr. Rockefeller cautioned.

A national park must be approved by an act of Congress.

While the project now is in the planning and development stage, Mr. Rockefeller reported that Mr. Wirth would report to Secretary of the Interior Douglas McKay. He said he had acquired through Jackson Hole Preserve, Inc., a number of options of St. John and would discuss plans informally next month with Mr. Wirth, Mr. McKay and Archie A. Alexander, Governor of the Virgin Islands.

#### ISLAND HAS ONLY 700 RESIDENTS

Should a national park be approved, Mr. Rockefeller said, it would not displace anyone, would allow for the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay, and would not in any way adversely affect the livelihood of the 700 persons on the island.

Of that number there are 350 Negroes and 50 whites, of whom 25 are major property owners, he reported. The taxes amount to \$7,500 annually, he said.

Mr. Rockefeller envisaged a plan whereby he would transfer ownership of the acreage acquired, including his Caneel Bay property, to Jackson Hole Preserve, Inc. This is an agency previously used by the Rockefeller family to create and expand such projects as the Grand Teton National Park, Wyo., the redwoods of California, and several of the country's national parks, including Acadia, Maine; Great Smoky Mountains, Tennessee-North Carolina, and Shenandoah, Va.

Mr. Rockefeller gave assurance that existing settlements would not be disturbed. His associates reported that at least 4,000 acres in the Cruz Bay and Coral Bay areas would not be included in the projected park, thus leaving 8,000 acres for conservation purposes.

#### MUCH WORK UNDERWAY

He has already spent a substantial sum, it was reported, in developing the Caneel Bay area and its hotel, now able to accommodate 48 guests. The hotel is being doubled in size, a new sewer system and powerplant are being installed as well as a water catchment and new employees' quarters.

The roads and docks are being enlarged and extensive landscaping of the shore is planned. Mr. Rockefeller is also restoring a sugar mill built in 1810.

The park project's cost will run "into the millions" but close associates of Mr. Rockefeller said it would be impossible to estimate the total cost.

St. John, one of the leeward islands in the Caribbean chain, is 1,442 miles southeast of New York and 40 miles east of Puerto Rico. Nine miles long and 5 miles wide, it is covered by bush and second growth timber, including such trees as mahogany, bay, coconut, ebony, tamarind, mango, and lime.

It rises abruptly from the sea, its highest elevation, 1,277 feet. The island is accessible only by boat, but nearby St. Thomas and St. Croix have airports.

#### "PARADISE," SAYS ROCKEFELLER

Mr. Hubler's report described St. John as "by far the most beautiful" of the Virgin Islands.

"The pure white sand of her north side beaches makes a perfect contrast between the green of her wooded hills and the turquoise waters washing her shores," he wrote.

Mr. Rockefeller yesterday agreed that it was "a paradise."

The passage between St. John and British Tortola takes its name from Sir Francis Drake or "El Drague," as the Spaniards called him. Sir Francis was the first to sail through its tortuous channels, in 1580.

Christopher Columbus, the first white man to see St. John, in 1493, christened it "The Eleven Thousand Virgins," Mr. Hubler reported. It was not settled until 1684. In 1687 the Danish West India and Guinea Co. laid claim into St. John

but it was not until March 25, 1717, that the first permanent colony was established there.

Life went smoothly for 3,000 whites until November 23, 1733, when the 2,500 slaves revolted. French soldiers from the island of Martinique quelled the riot eventually, and carried off the Negroes to slavery.

With the abolition of slavery it became impossible to keep up the old estates, so the island reverted to bush, the white owners departed and for years the natives have eked out a meager existence from fishing and gathering bay leaf for bay rum.

St. John was well known in the days of piracy and buccaneering because of her excellent harbors. There are, of course, many tales of pirate treasure buried on the island.

Mr. Rockefeller, 44 years old, has long been associated with conservation organizations. He is a trustee and second vice president of the New York Zoological Society, trustee of the Conservation Foundation, director of the Hudson River Conservation Society, commissioner and secretary of the Palisades Interstate Park Commission, and president of Jackson Hole Preserve.

He is president of Rockefeller Brothers, Inc., an investment and research organization, and chairman of the board of Rockefeller Center, Inc., a post previously held by his brother, Nelson.

---

[From the Daily News, Charlotte Amalie, V. I., Monday, November 22, 1954]

#### NATURAL PARK FOR ST. JOHN

Laurence S. Rockefeller, owner of Caneel Bay and chairman of the board of Rockefeller Center, Inc., has taken option to purchase nearly half of the island of St. John which he plans to give to the Federal Government to establish a national park. Mr. Rockefeller's chief interest is the preservation of the scenic area of the island.

According to the plan as outlined it will not be necessary to relocate any of the residents nor would the development of the park hinder the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay. The work at present being done on the resort area of Caneel Bay is a good indication of the future envisioned by this great financier.

Mr. Rockefeller has long been associated with development of this kind throughout the United States. He is president of Rockefeller Brothers, Inc., an investment research organization, which has financed such projects as the Grand Teton National Park, Wyo.; the Red Woods of California; and several of the country's national parks including Arcadia, Mo.; Great Smoky Mountains, Tenn. and N. C., and Shenandoah in Virginia.

In recent years visitors to the islands have shown great concern over the fact that most of the natural beauty and scenic charm of St. Thomas and St. Croix are being destroyed. Many of these persons who spend several months each year in St. Thomas or St. Croix are finding the peace and quiet that they seek in the many resort areas of the islands, in St. John. It is this fact more than any other that prompts the present plan to insure that St. John's natural beauty might not be destroyed.

Some people might be misled into the belief that the residents in that island will be placed in a less favorable position by this development. As we see it, it is the most fortunate thing that has happened to St. John in several decades. The development of a natural park would bring new activity to the small island and improve the economic condition. That island will become one of the principal showplaces for tourists and should boost the tourist program to large proportions. This cultural development will also attract a better type of visitors to the island.

We hope that the administration and the legislature will cooperate fully in bringing about this most significant development for the benefit of the entire Virgin Islands.

[From the St. Croix Avis, St. Croix, V. I., U. S. A., Saturday, November 27, 1954]

#### ISLAND "PARADISE"

Laurence S. Rockefeller's announcement that he will offer much of St. John as a national park is perhaps the most significant news to come out of these shores in many a day. The importance of the news can be determined by the wide coverage given to it by the national press, led by the New York Times.

such properties should be made available for the park, may be transferred without further authorization to the Secretary by such agency for purposes of this Act;

(f) Establishment of the Virgin Islands National Park, in its initial phase, shall be and is hereby declared to be accomplished and effective for purposes of administration when a minimum acreage of not less than 5,000 acres in Federal ownership for purposes of this Act shall have been acquired by the United States in specific areas containing such acquired lands to be designated by the Secretary; and

(g) Notice of the establishment of the park as authorized and prescribed by this Act shall be published in the Federal Register.

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington, D. C., April 14, 1955.

HON. JAMES E. MURRAY,

*Chairman, Committee on Interior and Insular Affairs, United States Senate, Washington, D. C.*

MY DEAR MR. CHAIRMAN: This is in response to your request for the views of this Bureau on S. 1604, a bill to authorize the establishment of the Virgin Islands National Park, and for other purposes.

The bill authorizes a park of not to exceed 9,500 acres of land area. Of this total, not more than 50 acres may be on the island of St. Thomas, not more than 9,450 acres on the island of St. John, and not more than 1,000 acres on small islands, rocks, and cays in the general vicinity of St. John. The Secretary of the Interior is authorized to accept donations of real and personal property within the areas selected for the park, and also to accept donations of funds for park purposes. The park shall be considered established when a minimum of 5,000 acres have been acquired.

Mr. Laurence S. Rockefeller recently purchased over 5,000 acres on the island of St. John which he has offered to give to the United States for park purposes. Thus, if S. 1604 is enacted into law, the Government can acquire without cost sufficient lands to establish the park. The National Park Service estimates that annual cost of operation and maintenance will approximate \$60,000.

The greatest assets of the Virgin Islands are their scenic beauty and remarkably fine year-round climate. Exploitation of these assets through development of the tourist industry should materially improve the economic condition of the islands, an contribute to their eventual self-support. Establishment of a national park in the islands should make a major contribution to the development of a thriving tourist industry.

Accordingly, the Bureau of the Budget recommends that your committee give favorable consideration to this bill.

Sincerely yours,

DONALD R. BELCHER, *Assistant Director.*

Senator JACKSON. I am sorry, gentlemen, that we are in rather cramped quarters this morning. We are having another committee meeting in the other room, but as long as we can get some work done, I assume you do not mind. As a matter of fact, as far as I am concerned, I enjoy it.

Mr. Wirth, do you care to make a statement?

**STATEMENTS OF CONRAD L. WIRTH, DIRECTOR, NATIONAL PARK SERVICE; WILLIAM ARNOLD, ASSISTANT DIRECTOR, OFFICE OF TERRITORIES, IN CHARGE OF ISLAND AFFAIRS; AND A. M. EDWARDS, ASSOCIATE SOLICITOR, DEPARTMENT OF THE INTERIOR**

Mr. WIRTH. I think in opening up, Mr. Chairman, I would like to sketch briefly the efforts that have been made in the past, a little bit about the park, some of the plans we have, the economic values, and what the people in the Virgin Islands think of it.

First, we had considered this park back in the thirties, and in 1939 we had a report made of the area and were proceeding to bring it to the attention of Congress with our recommendations. However, the war emergencies came along and that was never done.

Senator JACKSON. You say a study was made of it in 1939?

Mr. WIRTH. In 1938 and 1939 when we were operating the CCC program down there. I was down there at the time, and our man, Mr. Hubler, made a study for us. That laid dormant up until just a little over a year ago when Mr. Rockefeller had the same idea. A few years preceding that he had been on a cruise down there and had fallen in love with the island and bought Caneel Bay as a place to go to and make the place available for other visitors.

I met Mr. Rockefeller shortly after this idea occurred to him, and he was talking about it. He had read one of our earlier reports and found out that we had been interested in it. He wanted to know whether we were still interested. I told him we were as far as I knew, but I would not be in position to say definitely or make any recommendation on it until we had another study of the island, because so much time had elapsed since 1938, and I did not know exactly what conditions prevailed.

This study was made last year. In the meantime Mr. Rockefeller did go ahead and has bought about 5,000 acres with the idea that if the proposed park is authorized he would give everything that he has down there, including Caneel Bay. In order not to embarrass anybody, and knowing the full impact of national parks on land values and the local economy, he felt it would be wise to buy the land prior to park establishment. If the park is authorized, he would then make the donation. If it is not authorized, that would be something else. I want to make it clear, that his whole purpose is a gift to the public and that there is no personal profit involved.

Senator JACKSON. When did he start acquiring the land?

Mr. WIRTH. He acquired Caneel Bay about 3 years ago, and he started acquiring this land just last fall. He has now acquired about 5,000 acres of the proposed area.

His intention is to give everything that he has there. In fact, he has already transferred the title to the Jackson Hole Preserve, Inc., which is a nonprofit corporation organized under the laws of the State of New York for charitable, educational, and scientific purposes, including the purpose of restoring, protecting, and preserving for the benefit of the public the primitive grandeur and natural beauties of the landscape in areas notable for picturesque scenery, and particularly in the Jackson Hole area in the State of Wyoming, although the acquisitions by the corporation are not limited to Jackson Hole.

Senator JACKSON. How can they transfer it to a corporation for a purpose for which the corporation is not set up? That is a corporate entity set up for preserving land in the Jackson Hole National Monument, is it not?

Mr. WIRTH. No, sir. The corporation has that name, but its purposes are applicable anywhere in the United States. The corporation is acquiring the land on St. John Island. The money is given to the corporation and it acquires the land for the purpose of donating it to the Government if the proposed park is authorized.

I might say that through the years Mr. John D. Rockefeller, Jr., and now Mr. Laurance Rockefeller following his footsteps, have donated to the Government park purpose moneys, lands, improvements, and various other things amounting I believe to more than \$30 million.

For instance, in the Great Smokies he matched dollar for dollar the \$5 million raised by North Carolina and Tennessee.

Senator JACKSON. I know they have an outstanding record.

Mr. WIRTH. Everything he has down there, including Caneel Bay, is in the area to be transferred for the park if it is approved.

As to the island itself, it is an outstanding Caribbean island with only 700 people on it. I would like to tell you some facts about the island. It is located 1,400 miles southeast of New York and 50 miles east of Puerto Rico. I would like to point out that 1,400 miles is about half the distance between New York and San Francisco. Relatively, therefore, the proposed park is not as distant as many of the western parks.

As to the physical characteristics, the island of St. John is 19.2 square miles, or a little over 12,000 acres, about half the size of the District of Columbia. The highest point on the island is Bordeaux Mountain, 1,277 feet. Eighty-five percent of the island is covered with brush and second growth timber. There are only about three or four hundred acres of arable land, and that land is outside of the area we are proposing as the national park.

The lowest temperature down there ever recorded is 69, and the highest is 91. While you have a warm sun, you have cool evenings and nights. It is very delightful. It has about 50 inches of rainfall, mostly at night, and there is no clearly defined rainy season.

Perhaps one of the most interesting features is Coral Bay on the east side of the island, which has a beautiful harbor. The harbor is about a mile and a quarter across the mouth and about two and a half miles long.

As to the history, the island was apparently first sighted by Columbus in 1493. It was then inhabited by the Carib Indians, who probably came from South America. A German historian by the name of Oldendorp, records that the Indians were driven from the island in 1555 by Charles V of Spain.

The Virgin Islands were first settled in 1625 and St. John in 1684. Denmark claimed the island in 1687, but ownership was contested by Great Britain.

On March 25, 1717, the first permanent colony was established by the Danes at Coral Harbor on the east end of St. John, and they defied the British to drive them off. They had at that time 20 planters and 5 soldiers, and they built what is known as Fort Berg on the east end of the island. The ruins of the fort are still there.

Senator JACKSON. This is the Danish invasion you are talking about?

Mr. WIRTH. This is when the Danes took over the island, made the first permanent colony and defied the British to drive them off.

In 1733 there was a total of 38 planters on St. John and everything was apparently prosperous and gay, but there was slavery. On November 23, 1733, the slaves revolted, and the whites sought protection on what is now known as Caneel Bay Plantation. For about 4 months, the plantations of the island were pillaged, until they just ran rampant.

The French captured the slaves—some of whom killed themselves by jumping off the rocks. Slavery continued until 1848. Since the abolition of slavery, the economy of the island has deteriorated. Most of the island has now reverted to jungle.

The United States almost bought it in 1887, but the United States Senate refused to ratify a treaty that had been arranged by Secretary Seward and the Danish Government. In 1917 the United States bought St. John and certain other Virgin Islands.

Senator JACKSON. Bought it, together with the islands of St. Thomas and St. Croix.

Mr. WIRTH. Yes; bought those islands as a group.

That gives you a brief idea of the history. All through the islands there are ruins of the early plantations. There are also Indian stone writings.

We have pictures here, which Mr. Boyer will show a little later, showing the general character of the island. It has a beautiful shoreline with white-sand beaches and much of the forest is coming back, including mahoganies, bay, limes, coconuts, and numerous other species of tropical trees. There are no poisonous snakes on the island.

Another interesting feature is the fish and shell life of the coral reefs around the island.

Senator JACKSON. What disturbs me, Mr. Wirth, just looking at this, and having spent a day at Caneel Bay on St. John when I was in the Virgin Islands a few years back, is simply this: What is so unique about it that it should be made a national park? That is No. 1. The second thing I would like to know is, What percentage of the total acreage in the Virgin Islands is involved in this transfer?

Mr. WIRTH. I would like to show you this map, if I may, and I will try to explain it in such a way that it will be recorded properly. As to the grandeur of the island, the pictures will show that. Mr. Boyer has quite a few here.

This is Cruz Bay. A considerable number of the people live at Cruz Bay.

Mr. BOYER. This is a picture of Cruz Bay.

Senator JACKSON. Caneel Bay is where they have the cottages?

Mr. BOYER. Yes, sir. This is Caneel Bay. This is the point where the cottages are.

Mr. WIRTH. We are recommending that the park not exceed 9,500 acres, of which not more than 50 would be on St. Thomas, which is principally for a dock and utility area and a parking place, and not to exceed a thousand acres of the surrounding rocks and cays, nearly all of which are uninhabited. The rest of St. John Island, which would be about one-third, is the land that is usable for agriculture and settlement, and would not be included in the proposed park. We would expect that the park would attract people to the island and that these lands outside the park would leave room for the building of accommodations to take care of the people rather than having to provide additional accommodations at Caneel Bay.

Senator JACKSON. Two-thirds of the island is involved in this proposal?

Mr. WIRTH. That is right.

Senator JACKSON. You have 50 acres over on the island of St. Thomas?

Mr. WIRTH. Yes; purely a jumping-off place—a place where we can have a utility area and dock and to permit parking. Perhaps less land will be required there.

Senator JACKSON. I agree it is a beautiful place, but I can take you up on some of the islands of San Juan that program just as distinctive beauty as this particular island. I do not really in my own mind understand what in particular stands out that makes it worthy of national park status.

Mr. WIRTH. The combination of tropical plant and animal life, the colorful channels between the islands, the fish and invertebrate life of the coral reefs, the beautiful beaches and superb scenic views as well as the historic and prehistoric structures—all are different from anything in any of the national parks at the present time. I have never seen anything that equals it.

Senator JACKSON. Not in any of the national parks, but in other islands in the Caribbean.

Mr. WIRTH. I do not know of any other that would exceed this, and I have been over to Puerto Rico and all the Virgin Islands that we have anything to do with.

Senator BIBLE. How many people would you estimate would visit there a year?

Mr. WIRTH. It would be hard to say how many would, but I would say that within the next 4 or 5 years there would be at least fifty or one hundred thousand people come down there.

Senator JACKSON. How many are visiting there now?

Mr. WIRTH. Practically none.

Senator JACKSON. The only way, Senator Bible, as I understand it, that you can get to the island—at least it was a while back—is by small motor launch from the island of St. Thomas. Is that correct, Mr. Boyer?

Mr. BOYER. Yes.

Senator JACKSON. It has been set up as rather an exclusive honeymoon isle. It is completely isolated, and has a very beautiful harbor at Caneel Bay. They have beautiful sand, and wonderful beaches and a lot of fine plant growth on the island, but I just wonder what makes it so particularly unique. We are talking about a national park. There are many beautiful places in the Western Hemisphere.

Mr. WIRTH. This picture, in color, will give you some idea of the kind of thing you have down there. I do not know where you see anything like that in Puerto Rico [indicating].

Senator JACKSON. Over on the island of St. Thomas there are a number of similar sites.

Mr. WIRTH. St. Thomas is all being developed. It is the center of population; whereas St. John is being made available for national park purposes, which would be putting the land to its best economic use.

Senator JACKSON. Can you leave these with the committee temporarily to be returned later?

Mr. BOYER. I can, but all those are not of the island. I would be delighted to leave this, but I just would like to point out that they are not all of St. John.

Senator JACKSON. Some of these are St. Thomas.

Mr. BOYER. Yes, and some are on San Juan.

Senator BIBLE. What would it cost to maintain this a year?

Mr. WIRTH. We estimate \$60,000 a year.

Senator JACKSON. How much money are we going to have to spend in improvements?

Mr. WIRTH. We estimate that the total amount of improvements, leaving these lands out for taking care of the people outside the park, would cost us over the period of the next 4 or 5 years about \$120,000.

Senator JACKSON. Would that be your master plan, the total?

Mr. WIRTH. Yes. We have not made a detailed plan, but we did make an estimate.

Senator JACKSON. \$120,000?

Mr. WIRTH. Yes.

Senator JACKSON. We have quite a time, as you know, with appropriations for the operation and maintenance of parks. I think both of us have had a little experience on that. I served on the House Appropriations Committee for a long time.

Mr. WIRTH. That is true.

Senator JACKSON. We have \$60,000 here for operation and maintenance. Every year that will be added on to the sum total.

Mr. WIRTH. I would like to point out a fact here. I was anticipating the possibility of the question of money and I made a few notes here. There have been certain surveys made, in which the committee will be interested. I maintain that the parks are set aside and preserved for human enjoyment. That is their main value.

However, there is a byproduct to the parks that we do not fully realize. Here is a research study of the Stanford Research Institute, Mountain States division, Phoenix, Ariz., from which I would like to read an excerpt, as follows:

Coconino County, in the heart of northern Arizona, has the greatest future potential for growth, barring the discovery of important mineral resources elsewhere. Its greatest resources are scenic and climatic, although timber and grazing lands are important for the lumber and livestock industry they support. The tourist industry accounts, directly or indirectly, for approximately 50 percent of the Coconino County's total income.

The economy of northern Arizona is dependent to a much greater extent upon tourist travel than is that of the southern counties, and northern Arizona's future growth and prosperity are largely dependent upon development of resources which attract out-of-State visitors. Some 35 percent of its retail sales are direct tourist expenditures, against less than 15 percent of retail sales attributed directly to tourists for the State as a whole.

Senator JACKSON. I agree with you, but that is like a grant-in-aid to the States. Secretary Humphrey does not get any of the income which you mention nor does it help to balance the Federal budget. We can account for it if the money came directly into the Park Service and into the Department of Interior, and I think we would be in much better shape, and I am completely in sympathy with what you say.

However, when we get up on the floor of the Senate and we have the Interior appropriation bill up, we find it a bit of a problem because here is an additional item for operation and maintenance, you see.

Mr. WIRTH. We are confronted with this everywhere we go, and the States realize the value of these areas. Here is a report on Yellowstone made in 1950 by the State of Wyoming.

Senator JACKSON. I have used the same argument in justifying my support of Olympic National Park, and I am in complete sympathy with you. The only problem that we have is when we get on the floor,

here is \$60,000 more and here is \$120,000 additional in the next 4 or 5 years for construction; and the problem that I have noticed, Senator Bible, when I was in the House especially, is this constant attrition of funds. We have to fight all the time to maintain and keep our parks in decent shape. Our roads and our trails, of existing parks, have been declining over a long period of time.

It is an argument that we have to face on the floor. I would not want you to think, Mr Wirth, because I asked adverse questions that that necessarily indicates my final point of view. I am here to try to get some information that might be helpful later.

Mr. WIRTH. I am glad that you are asking because I would like to get it in the record. They say that figures lie sometimes, and liars figure, and so forth and so on, but the Bureau of Internal Revenue now states that 28 cents out of every dollar that is spent goes in some form of taxes.

Here is this report in 1950 saying that at Yellowstone and vicinity the traveling public, there in that 1 year, spent \$18,996,000. If Internal Revenue's statement is correct, \$4,700,000 went into taxes of various kinds.

Senator JACKSON. Of course, a lot of this money is for local taxes.

Mr. WIRTH. But it creates an income value for the Virgin Islands, which is important, and will reduce the amount of money, I think, in the long run that Uncle Sam will have to give to help the islands. Nevertheless, I do not like to emphasize the money angle, since we are concerned with scenic and other recreational resources and their value to present and future generations keeping some of the native scenery that the good Lord blessed us with for public enjoyment.

To emphasize the size of the proposed park, I took the 9,500 acres and indicated on different national-park maps the relatively small amount of land we are talking about.

Senator JACKSON. Yes, but it is all relative. How many acres are there in the Virgin Islands group?

Mr. WIRTH. St. John is the smallest island. Do you know how many acres there are in St. Thomas and St. Croix?

Mr. ARNOLD. I believe there are approximately 70,000 acres.

Mr. FRENCH. Overall.

Senator JACKSON. The whole aggregate.

Mr. EDWARDS. A little over 85,000 acres for the whole aggregate of the American Virgin Islands.

Mr. WIRTH. I do want to say this, though, that St. John Island has practically no industry on it at the present time. There are 600 or 700 people living there. There is one Senator from the St. John district.

Senator JACKSON. How many people are there on the island of St. John?

Mr. WIRTH. Between 600 and 700 on the island of St. John.

Senator JACKSON. The total population of the Virgin Islands is about 30,000; is it not?

Mr. ARNOLD. 27,000.

Senator JACKSON. You see this involves 9,500 acres out of a total of 85,000. It is roughly one-ninth the area of the islands.

Mr. WIRTH. If you will notice from those pictures we showed you, there are no particularly good land use potentialities within the proposed park. It is rugged.

Senator JACKSON. As I recall the history of the island of St. John—you mentioned it in part—back in, I thought it was in the 1800's, they had this massacre that occurred on the island during a time that they were engaged in sugarcane production.

Mr. WIRTH. They had the island largely cleared. There were 38 plantations on the island at that time in 1733 when they had the uprising of the slaves.

Senator JACKSON. They were producing sugarcane?

Mr. WIRTH. Yes.

Senator JACKSON. And the production of sugarcane in that area was profitable at that time solely because of slave labor?

Mr. WIRTH. That is right.

Senator JACKSON. And with the elimination of slave labor, it was no longer economically feasible to produce sugarcane, and the last remaining sugarcane produced in the Virgin Island group was on the island of St. Croix? There is still some production, but it has declined, too, with the elimination of the rum business.

Mr. WIRTH. Here is a picture of one of the old plantation houses up in the woods. They lived well, the 38 planters there.

Senator JACKSON. Are you going to rehabilitate any of those old places?

Mr. WIRTH. No. We will have trails into certain of them and into the areas that had the old forts, to explain the history and how the people lived at that time.

Senator JACKSON. That is a part of the \$120,000 estimate of construction costs over a period of years, and it is a \$60,000 annual maintenance cost?

Mr. WIRTH. Yes. There is very limited transportation on the island and most likely the transportation on the island will consist of improvement of minor roads [indicating] that now exist, and trails.

Senator JACKSON. Is it intended that the island remain somewhat in its present capacity rather primitive, and restrict the traffic, ocean or water traffic, into the island?

Mr. WIRTH. We hope to get more traffic over the island and more people here [indicating] and spending their summers there or their winters there in visiting and using the beaches, but the part we have will be kept in its natural condition, which would be the attraction, and the area left out will be the part put to commercial use by the various business enterprises that would be developed in order to take care of the people that come over there.

In other words, we are leaving them out of Government control entirely as far as we are concerned, to develop their accommodations outside as we are doing in several of the parks. The Great Smoky Mountains is one of them. The Everglades is another one. We would leave business interests out of the park so they would not be under our supervision. In Yellowstone, because of its size, we always have had concessioners, and in Yosemite, also. In the proposed Virgin Islands National Park most of the development to take care of the people would be on the edge and on the outside of the park.

Senator JACKSON. Who would operate the concessions in this proposed park?

Mr. WIRTH. It would be operated similar to the way we are working with the Jackson Hole Preserve, Inc., in Grand Teton National

Park. They have a separate company that is incorporated and pays all the taxes, but any money the separate company makes goes to the Jackson Hole Preserve, Inc., for nonprofit, park purposes.

Senator JACKSON. In other words, the Rockefellers would have business interests there operated through this nonprofit corporation, and all earnings would be used for acquisition, maybe, of additional lands, but at least for a nonprofit objective? Is that correct?

Mr. BOYER. Definitely, yes, sir; absolutely.

Senator JACKSON. As I said earlier, I think it is wonderful what the Rockefeller family has done. I am completely familiar with what they have done in the past. I am sure, just for the record, it ought to be made clear that the Rockefeller interests have nothing to gain privately. I ask it just so the record is clear and no one can get up and say that this is a charitable contribution on one hand and a private venture on the other. The Rockefeller Corp., this nonprofit corporation that you referred to earlier, would be set up to assist in providing facilities either in or adjacent to the park to encourage people to come into the park?

Mr. WIRTH. The way they work it is this: The money is put in the Jackson Hole Preserve, Inc., which provides the improvements; the operation of the lodge is by a regular corporation that pays taxes, and any money that the operating company makes goes back to the Jackson Hole Preserve.

Senator JACKSON. Would it be a private corporation?

Mr. WIRTH. Yes. It would be a corporation controlled by the Jackson Hole Preserve, Inc. The reason that is done is to permit the operating company to pay all the taxes that the community or State would otherwise get for such operations.

Senator JACKSON. It would be a private corporation, not a nonprofit corporation, but the net earnings after payment of taxes would go to the nonprofit corporation, the Jackson Hole Preserve?

Mr. BOYER. Caneel Bay Plantation, Inc., which operates the resort facility at the present time, is a wholly owned subsidiary of Jackson Hole Preserve, Inc.; Jackson Hole Preserve, Inc., owns all the stock. Mr. Laurance Rockefeller purchased the stock but gave it all to Jackson Hole, Inc., as of January 10 of this year.

In other words, Mr. Rockefeller has no personal interest of any kind in this project.

Senator JACKSON. What is the name of the corporation?

Mr. BOYER. Caneel Bay Plantation, Inc.

Senator JACKSON. Is it set up as a private corporation?

Mr. BOYER. It is a private corporation; yes, sir.

Senator JACKSON. However, all of the capital stock of that company is, in turn, owned by the nonprofit corporation, the Jackson Hole Preserve, Inc.?

Mr. BOYER. Yes, sir.

Senator JACKSON. And the earnings, therefore, of the private corporation would inure to the benefit of the nonprofit corporation?

Mr. BOYER. Definitely.

Senator JACKSON. So that it is merely a business device to carry on the functions in that area so that the local government will have the benefit of taxes that would normally accrue to any private enterprise?

Mr. BOYER. Yes, sir.

Senator JACKSON. I mean that would normally accrue from a private enterprise to the island?

Mr. BOYER. Yes, sir.

Senator JACKSON. Otherwise, you could set it up as a nonprofit corporation, but what you are doing is trying to help the local government, assist them in taxes and so on?

Mr. BOYER. Yes, sir. It is the same arrangement which is employed in Jackson Hole at Grand Teton. As Director Wirth has said, the Grand Teton Lodge and Transportation Co. owns the Jackson Lake Lodge, which is the new hotel opening on June 12 of this year. It is a wholly owned subsidiary of Jackson Hole Preserve, Inc.

Senator JACKSON. We will have you as the next witness after Mr. Wirth to find out what the plans are in the way of development and so on from the standpoint of the Caneel Bay Co.

Mr. WIRTH. I do not have anything else to say, sir, except that the Governor of the Virgin Islands is in favor of the proposed park.

Senator JACKSON. Who is the present Governor?

Mr. WIRTH. Governor Alexander. He has been there 1 year now.

Mr. FRENCH. He took office a year ago in April.

Senator JACKSON. Is he the one from the Middle West?

Mr. FRENCH. Yes, the Des Moines, Iowa, contractor.

Mr. WIRTH. The member of the Virgin Islands Senate from St. John is also in favor of it, and, we have so been informed, the local newspaper on St. Croix and St. Thomas. They not only reported the news very accurately and favorably, but they also have written editorials in support of it, and I think it might be well, if I may, to incorporate those in your record. I will not take time to read them, but they are all very favorable.

(The news articles referred to follow:)

[From the Daily News, Charlotte Amalie, V. I., Saturday, November 20, 1954].

**L. S. ROCKEFELLER OFFERS UNITED STATES A VIRGIN ISLANDS PARK—HE SEEKS TO PRESERVE THE UNSPOILED BEAUTY OF ST. JOHN 'PARADISE'—NO RESIDENT TO BE DISPLACED**

(By Morris Kaplan)

Laurence S. Rockefeller has acquired options to purchase about half of the scenic island of St. John in the Virgin Islands. The third son of John Rockefeller, Jr., affirmed yesterday reports that he would like eventually to have two-thirds of the island's 12,700 acres accepted as a national park.

Back from a 5-day examination of the green hills and white beaches of the Caribbean isle, Mr. Rockefeller reported that Conrad Wirth, director of the National Park Service, had expressed interest in the project.

Mr. Wirth accompanied Mr. Rockefeller and Frank Stick, noted ichthyologist and conservationist of Kitty Hawk, N. C., on the trip to Caneel Bay Plantation, a 650-acre resort area bought by Mr. Rockefeller in 1952 from the Rhode Island Charities Trust.

Mr. Stick and two associates own 1,500 acres on the island.

The plan for a national park on St. John, the smallest of the three Virgin Islands bought by the United States from Denmark in 1917 for \$25 million, was first broached in 1939 by Harold A. Hubler, an officer of the Park Service, but the idea was tabled.

Mr. Rockefeller's interest was whetted by a trip he made 3 years ago in his 65-foot cabin cruiser, *Dauntless*, with his wife, the former Mary French, and friends. They had been voyaging in the Lesser Antilles and sailed into St. John from British-owned Antigua.

"I found the combination of mountains, beaches and sea unique in the Caribbean," Mr. Rockefeller said: "The unspoiled nature of the area appealed to me and I wish to preserve it against overdevelopment."

He mentioned the larger Virgin Island of St. Thomas and St. Croix, where, he said, commercial ventures and the tourist trade had increased. Long interested in the conservation of scenic areas, he said he was disturbed that the most beautiful areas of St. John might some day be altered so as to destroy their natural beauty.

He read the Hubler report and discussed it with Mr. Wirth. As a result of their trip, Mr. Wirth has reaffirmed the interest of the National Park Service, "but we have no assurances at all," Mr. Rockefeller cautioned.

A national park must be approved by an act of Congress.

While the project now is in the planning and development stage, Mr. Rockefeller reported that Mr. Wirth would report to Secretary of the Interior Douglas McKay. He said he had acquired through Jackson Hole Preserve, Inc., a number of options of St. John and would discuss plans informally next month with Mr. Wirth, Mr. McKay and Archie A. Alexander, Governor of the Virgin Islands.

#### ISLAND HAS ONLY 700 RESIDENTS

Should a national park be approved, Mr. Rockefeller said, it would not displace anyone, would allow for the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay, and would not in any way adversely affect the livelihood of the 700 persons on the island.

Of that number there are 350 Negroes and 50 whites, of whom 25 are major property owners, he reported. The taxes amount to \$7,500 annually, he said.

Mr. Rockefeller envisaged a plan whereby he would transfer ownership of the acreage acquired, including his Caneel Bay property, to Jackson Hole Preserve, Inc. This is an agency previously used by the Rockefeller family to create and expand such projects as the Grand Teton National Park, Wyo., the redwoods of California, and several of the country's national parks, including Acadia, Maine; Great Smoky Mountains, Tennessee-North Carolina, and Shenandoah, Va.

Mr. Rockefeller gave assurance that existing settlements would not be disturbed. His associates reported that at least 4,000 acres in the Cruz Bay and Coral Bay areas would not be included in the projected park, thus leaving 8,000 acres for conservation purposes.

#### MUCH WORK UNDERWAY

He has already spent a substantial sum, it was reported, in developing the Caneel Bay area and its hotel, now able to accommodate 48 guests. The hotel is being doubled in size, a new sewer system and powerplant are being installed as well as a water catchment and new employees' quarters.

The roads and docks are being enlarged and extensive landscaping of the shore is planned. Mr. Rockefeller is also restoring a sugar mill built in 1810.

The park project's cost will run "into the millions" but close associates of Mr. Rockefeller said it would be impossible to estimate the total cost.

St. John, one of the leeward islands in the Caribbean chain, is 1,442 miles southeast of New York and 40 miles east of Puerto Rico. Nine miles long and 5 miles wide, it is covered by bush and second growth timber, including such trees as mahogany, bay, coconut, ebony, tamarind, mango, and lime.

It rises abruptly from the sea, its highest elevation, 1,277 feet. The island is accessible only by boat, but nearby St. Thomas and St. Croix have airports.

#### "PARADISE," SAYS ROCKEFELLER

Mr. Hubler's report described St. John as "by far the most beautiful" of the Virgin Islands.

"The pure white sand of her north side beaches makes a perfect contrast between the green of her wooded hills and the turquoise waters washing her shores," he wrote.

Mr. Rockefeller yesterday agreed that it was "a paradise."

The passage between St. John and British Tortola takes its name from Sir Francis Drake or "El Draque," as the Spaniards called him. Sir Francis was the first to sail through its tortuous channels, in 1580.

Christopher Columbus, the first white man to see St. John, in 1493, christened it "The Eleven Thousand Virgins," Mr. Hubler reported. It was not settled until 1684. In 1687 the Danish West India and Guinea Co. laid claim into St. John.

but it was not until March 25, 1717, that the first permanent colony was established there.

Life went smoothly for 3,000 whites until November 23, 1733, when the 2,500 slaves revolted. French soldiers from the island of Martinique quelled the riot eventually, and carried off the Negroes to slavery.

With the abolition of slavery it became impossible to keep up the old estates, so the island reverted to bush, the white owners departed and for years the natives have eked out a meager existence from fishing and gathering bay leaf for bay rum.

St. John was well known in the days of piracy and buccaneering because of her excellent harbors. There are, of course, many tales of pirate treasure buried on the island.

Mr. Rockefeller, 44 years old, has long been associated with conservation organizations. He is a trustee and second vice president of the New York Zoological Society, trustee of the Conservation Foundation, director of the Hudson River Conservation Society, commissioner and secretary of the Palisades Interstate Park Commission, and president of Jackson Hole Preserve.

He is president of Rockefeller Brothers, Inc., an investment and research organization, and chairman of the board of Rockefeller Center, Inc., a post previously held by his brother, Nelson.

---

[From the Daily News, Charlotte Amalie, V. I., Monday, November 22, 1954]

#### NATURAL PARK FOR ST. JOHN

Laurence S. Rockefeller, owner of Caneel Bay and chairman of the board of Rockefeller Center, Inc., has taken option to purchase nearly half of the island of St. John which he plans to give to the Federal Government to establish a national park. Mr. Rockefeller's chief interest is the preservation of the scenic area of the island.

According to the plan as outlined it will not be necessary to relocate any of the residents nor would the development of the park hinder the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay. The work at present being done on the resort area of Caneel Bay is a good indication of the future envisioned by this great financier.

Mr. Rockefeller has long been associated with development of this kind throughout the United States. He is president of Rockefeller Brothers, Inc., an investment research organization, which has financed such projects as the Grand Teton National Park, Wyo.; the Red Woods of California; and several of the country's national parks including Arcadia, Mo.; Great Smoky Mountains, Tenn. and N. C., and Shenandoah in Virginia.

In recent years visitors to the islands have shown great concern over the fact that most of the natural beauty and scenic charm of St. Thomas and St. Croix are being destroyed. Many of these persons who spend several months each year in St. Thomas or St. Croix are finding the peace and quiet that they seek in the many resort areas of the islands, in St. John. It is this fact more than any other that prompts the present plan to insure that St. John's natural beauty might not be destroyed.

Some people might be misled into the belief that the residents in that island will be placed in a less favorable position by this development. As we see it, it is the most fortunate thing that has happened to St. John in several decades. The development of a natural park would bring new activity to the small island and improve the economic condition. That island will become one of the principal showplaces for tourists and should boost the tourist program to large proportions. This cultural development will also attract a better type of visitors to the island.

We hope that the administration and the legislature will cooperate fully in bringing about this most significant development for the benefit of the entire Virgin Islands.

[From the St. Croix Avis, St. Croix, V. I., U. S. A., Saturday, November 27, 1954]

#### ISLAND "PARADISE"

Laurence S. Rockefeller's announcement that he will offer much of St. John as a national park is perhaps the most significant news to come out of these shores in many a day. The importance of the news can be determined by the wide coverage given to it by the national press, led by the New York Times.

There are at least two very good reasons why this project of Mr. Rockefeller is extremely important to the Virgin Islands as a whole. While plans are still in the making and many steps have to be taken with respect to the project, it is a virtual certainty that after the remainder of the land is acquired and the way cleared through the Governor and Secretary of the Interior, Congress will pass the bill.

First, such natural beauty as St. John has deserves to be preserved. We venture to say that the natural, unspoiled beauty of St. John is unmatched anywhere in the world, and the term "paradise" is therefore most appropriate as a description of it. Said Mr. Rockefeller, "The unspoiled nature of the area appealed to me, and I wish to preserve it against overdevelopment."

Second, with much of St. John as a national park, the fame and fortunes of these islands will rise. The National Park Service will no doubt carry out the proper program of development, and with that come employment and development to highlight what will be necessary. National parks are sources of great attraction, and St. John would be no exception.

These islands are, indeed, grateful to Mr. Rockefeller, whose purchase of much of the island will make possible the park project. And along with him go words of gratitude to Conrad Wirth, director of the National Park Service, and Frank Stick, noted conservationist. Mention must also be made of the initial idea thrown out by Harold A. Hubler, who in 1939 envisioned the possibility of St. John as a national park.

There is every justification for optimism and faith in the future; that men of vision and means will make their contribution to the enhancement and development of these islands in ways which will not only increase their resources but heighten that sense of gratification which comes only from the fulfillment of dreams and the satisfaction of a job well done.

---

[From the Daily News, Charlotte Amalie, V. I., Monday, April 4, 1955]

**BILL AUTHORIZES 9,500 ACRES FOR VIRGIN ISLANDS NATIONAL PARK—50 ACRES IN ST. THOMAS, 1,000 ACRES IN SMALL ISLANDS, CAYS**

A bill introduced in the Senate by Senator Jackson authorizes the establishment of a national park in the Virgin Islands containing outstanding scenic and other features of national significance. The acreage of the park would be limited to 9,500 and comprised of not more than 50 acres in St. Thomas and 9,450 acres on the island of St. John including such rocks and cays not in excess of 1,000 acres in the general vicinity that may be desirable for inclusion within the park. This will constitute three-fourths of St. John which has approximately 12,000 acres.

The Secretary, on behalf of the United States would be authorized to accept donations of real and personal property within the areas selected for the park until the total acreage has been acquired.

Establishment of the park in its initial phase will be declared to be accomplished and effective when a minimum acreage of 5,000 is in Federal ownership.

The bill also transfers any Federal properties within the areas selected for the park without further authorization to the Secretary of the Interior by the agency now in possession of it.

Plans for a national park in the Virgin Islands which had been under consideration for several years were completed recently when Laurence Rockefeller, owner of Caneel Bay, concluded purchase of several thousand acres of land in the sparsely populated island to give to the Federal Government as a nucleus for a park because of the scenic value. The bill before the Senate is intended to complete this effort and provide the Virgin Islands with a park for the public benefit and inspiration, in accordance with the laws governing the administration of the national park.

Senator JACKSON. Who is unfavorable?

Mr. WIRTH. I do not know.

Senator JACKSON. Locally?

Mr. WIRTH. There are some people. We never get 100 percent, but I have not had any correspondence from them and do not know. I might say that this had pretty wide coverage in the United States, and I have also copies of the articles from the papers.

They cover such papers as the New York Times, the Herald Tribune, the Christian Science Monitor, New York Mirror, the Norfolk Pilot, the Philadelphia Inquirer, the Lincoln State Journal, the Hartford Courier, and the Cincinnati Enquirer. I think that covers my presentation, sir, unless there are some questions.

Senator JACKSON. Last year in the new organic act that we passed for the Virgin Islands, I think we made all the income from internal-revenue taxes and income-taxes available to the islands government on a matching basis. Would they have enough money to take care of a park on an annual maintenance basis?

Mr. WIRTH. The Territory?

Senator JACKSON. Yes.

Mr. WIRTH. Oh, no.

Senator JACKSON. Is anyone here from the Department who can indicate the financial balance sheet of the islands?

Mr. FRENCH. William Arnold is here.

Senator BIBLE. I was just going to ask whether you have any comparable national parks outside of continental United States, just for my own information.

Mr. WIRTH. Yes.

Senator BIBLE. I am very well aware of Lake Mead National Park. If they all worked out as well as that, it would be splendid.

Mr. WIRTH. We have in Hawaii the Hawaii National Park.

Senator JACKSON. You mean the volcano?

Mr. WIRTH. The volcano. There are 2 extinct volcanoes and 2 active ones. Then, of course, we have Mount McKinley in Alaska, and the Katmai and Glacier Bay in Alaska, and Sitka in Alaska. The last three I named are national monuments, but they are operated on the same basis.

Senator BIBLE. What type of interest do you develop in the public in those national parks? In the islands, for instance, how many people visit there annually?

Mr. WIRTH. I did not bring that. We have a complete tabulation on visitation, and I can insert that in the record for the territorial islands.

Senator BIBLE. I thought it might be helpful in developing the public use of a national park.

Mr. WIRTH. Yes.

Senator JACKSON. Yes, we will ask them to put that in the record.

Mr. WIRTH. We will put that in the record.

(This information together with other material submitted by the National Park Service is as follows:)

DEPARTMENT OF THE INTERIOR,  
NATIONAL PARK SERVICE,  
Washington, D. C., May 24, 1955.

HON. HENRY M. JACKSON,

*Chairman, Senate Subcommittee on Territories and Insular Affairs,  
United States Senate, Washington, D. C.*

MY DEAR SENATOR JACKSON: As a part of the record of the hearing you held May 19 on S. 1604, a bill to authorize the establishment of the Virgin Islands National Park, and for other purposes, you asked that I provide certain additional information, which is herewith presented.

1. Why the Service considers the proposed national park eligible for national park status?

The Virgin Islands, situated in the Torrid Zone are characterized by climate, scenery, and plant and animal life distinctly different from that of the conti-

mental United States. Of the American Virgin Islands, St. John Island, and its surrounding rocks and cays are the most primitive and unspoiled. St. John is a mountainous island, from many points of which spectacular views may be had of the other Virgin Islands and the colorful waters of the Caribbean. It has numerous white sand beaches fringed with native palms and other tropical plants. More than 260 species of native woody plants have been identified on this relatively small island, of which 154 are trees, 72 are shrubs, 26 are woody vines, and 8 are cacti. Many of these species are not native to the continental United States and some of the plant and animal species are found only on St. John and neighboring islands in the Caribbean. No comparable tropical area has yet been given protection as a national park or monument. The island and surrounding cays also possess prehistoric pictographs and numerous ruins of the Danish colonial period, dating back to the early 18th century, some of which exhibit fine architectural qualities.

The unusual combination of scenic qualities, objects of scientific and historic interest, which also have educational value, and the outstanding recreational potentialities of St. John Island, are considered to be worthy of national park status by the National Park Service, which became interested in the preservation of the island 20 years ago; by the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments, which is established by law to advise the Secretary of the Interior, and by others who have traveled widely. A copy of the Advisory Board's resolution of April 20, 1955, is enclosed. Mr. Laurance Rockefeller, who has offered to acquire and donate approximately two-thirds of St. John Island for national park purposes, selected this island as the area of greatest natural beauty and interest after having cruised in the Caribbean at intervals for several years. The late Senator Butler, in his 1950 report on the Virgin Islands, referred to the Caneel Bay plantation on St. John Island, which Mr. Rockefeller proposes to donate, as " \* \* surely one of the undiscovered tourist meccas in the Western Hemisphere."

The acceptance of this generous offer will make it possible to preserve a uniquely beautiful and interesting island, the present character of which otherwise will surely be destroyed, and will make it possible in the future for citizens of average means to see and enjoy the kind of tropical island that heretofore has been accessible primarily to people of greater means.

2. Area of proposed park and total area of Virgin Islands: Total land area of St. Thomas, St. John, and St. Croix Islands, 85,120 acres. Total area of proposed Virgin Islands National Park, 9,500 acres. The proposed park would be about one-ninth of the total area of the islands.

3. Number of people who visited the Virgin Islands in 1954, 103,867.

4. Visitors to Territorial and Commonwealth national parks in 1954: Hawaii National Park, 444,551; Mount McKinley National Park, Alaska, 4,999; San Juan national historic site, San Juan, P. R., 39,983.

5. Estimated annual operation and maintenance costs and capital investments for first 5 years.

There is enclosed a listing of the estimated fund requirements for the proposed Virgin Islands National Park. This does not include an item specifically for possible buildings of a utility nature which may become desirable at the eastern end of St. Thomas Island. Since, in the foreseeable future practically all travel to and from the proposed national park will be by boat from the eastern end of St. Thomas Island, it is thought that need might arise in the future for utility and passenger facilities. It is not probable, however, that such facilities would be needed during the first 5 years of the park, and we have not, therefore, made any plans for them nor included an estimate of cost.

I believe this covers the points on which you requested further information. If additional information is required, please let me know.

Sincerely yours,

CONRAD L. WIRTH, *Director.*

#### ESTABLISHMENT OF THE VIRGIN ISLANDS NATIONAL PARK

The Advisory Board on National Parks, Historic Sites, Buildings, and Monuments has reviewed the reports of the National Park Service on the proposal to establish the Virgin Islands National Park, on St. John Island, in the Territory of the Virgin Islands. The Board believes that the scenic quality, plantlife, and the setting of St. John Island in the protected channels of the Virgin Islands are totally different from anything set apart in the United States or its Territories

for national park purposes, and that it well qualifies for national park status. The Board recommends its approval and urges its establishment as a national park.

Approved: April 20, 1955.

C. G. WOODBURY, *Secretary*.

*Estimated fund requirements—Proposed Virgin Islands National Park*

ANNUAL OPERATING NEEDS

**Management and protection:**

Superintendent, GS-11-----	\$5,940
Chief ranger, GS-9-----	5,060
Naturalist, GS-9-----	5,060
Ranger, GS-7-----	4,205
Administrative aid, GS-6-----	3,795
Clerk-stenographer, GS-4 (2)-----	6,350

Permanent positions (7)-----	30,410
Territorial differential (25 percent)-----	7,003

Total, personal services-----	38,013
General expenses, including travel, communications, supplies, materials, etc-----	9,000

Total management and protection-----	47,013
--------------------------------------	--------

**Maintenance and rehabilitation:**

Temporary and seasonal labor-----	6,000
General expenses-----	6,987

Total maintenance and rehabilitation-----	12,987
---	--------

Total annual operating needs-----	60,000
-----------------------------------	--------

*Capital investments*

[Needed in first 5 years after park establishment]

<b>Trails</b> -----	\$10,000
---------------------	----------

About 150 miles of low-grade roads and trails, will require clearing of bush and trees, and bringing up to standards suitable for pedestrian and saddlehorse travel.

<b>Roads</b> -----	50,000
--------------------	--------

Rehabilitation of about 18 miles of roads to a low-grade standard for automobile traffic. A few jeeps and 4-wheel drive trucks are on the island. Only those roads along the east, west, and north-western shores of the island, and the so-called Centerline Road running from Cruz Bay on the west to Coral Harbor on the east, would be proposed for automobile use.

<b>Buildings and structures</b> -----	25,000
---------------------------------------	--------

It is believed that park headquarters could be provided in existing buildings at the Caneel Bay locality at the west end of the island; however, a ranger station should be provided at another location such as at Reef Bay on the south. It is estimated that such a station, in addition to trailside shelters, comfort stations, repair of docks, etc.

<b>Sewage, light, water, and communications</b> -----	20,000
---	--------

Power can probably be purchased at the west end of the island; however, some utilities would be required in other portions of the island, such as a gasoline powered electric generating system; wells or reservoirs and water system lines; septic tanks and sewage disposal fields; and some radio or telephone communication facilities.

*Capital investments—Continued*

Archeological surveys and salvage----- \$15,000

The island abounds in archaeological values, many of which should be salvaged before they are irreparably damaged or destroyed as a result of a large volume of public use. The salvaged artifacts would provide the primary features of a museum collection. It is estimated that surveys to determine and record archaeological sites and other data of scientific interest, and to salvage those materials most likely to be otherwise lost.

Total, initial capital investment needs----- 120,000

Mr. WIRTH. I might say that we expect a big influx of travel at Mount McKinley as soon as the road is completed in to Mount McKinley. Of course, in the last few years down in Hawaii we have had a tremendous influx due to the eruptions, and that has really taxed our facilities to the limit.

Senator BIBLE. Do you recall what the travel was to Hawaii?

Mr. WIRTH. No.

Senator BIBLE. I would be very happy to have you do that.

Mr. WIRTH. I will do that.

Mr. EDWARDS. I want to make a correction on the total acreage. It is 85,120 in the 3 major islands.

Senator JACKSON. That is about one-ninth, roughly. The population is 27,000?

Mr. EDWARDS. It is between 26,000 and 27,000.

Senator JACKSON. I was going to ask Mr. Arnold now about the revenue situation in the islands under the new act.

Mr. ARNOLD. I might say that the Government comptroller certified to the collection of \$2,026,207 for the fiscal year 1954.

Senator JACKSON. Revenue that was taken in?

Mr. ARNOLD. Revenues from all sources.

Senator JACKSON. In the islands?

Mr. ARNOLD. In the islands.

Senator JACKSON. Under the new act?

Mr. ARNOLD. Well, sir, the new act provides that that money will be matched from Internal Revenue collections derived from products of the Virgin Islands, which is rum primarily. Each dollar of local revenue certified by the Comptroller will be matched from these collections.

Senator JACKSON. But the \$2 million is what they collected locally?

Mr. ARNOLD. That is correct.

Senator JACKSON. And that will be matched by the Federal Government from the other revenue sources, making a total of \$4 million?

Mr. ARNOLD. Yes, sir.

Senator JACKSON. What is their budget?

Mr. ARNOLD. That is a rather complicated thing at the present time because of the fact that we are going through a reorganization period. There are three budgets. The first two are for general administration, using local revenues and matching funds, and a third one for what we call special projects approved by the Secretary of the Interior. The general administration budget for next year will be approximately the same amount as this \$2,026,000 plus the matching Internal Revenue funds, which would bring your total to about \$4,050,000 for general administration.

Senator JACKSON. So the aggregate budget will about equal the income?

Mr. ARNOLD. Except for the fact that there is some money left over from the Internal Revenue funds which are also given them for the first 2 years for emergency and special projects, amounting to about \$2½ million.

Senator JOHNSON. We spent a little money in 1951. We made available funds for a new hospital and a new school right in the town of Charlotte Amalie on the island of St. Thomas.

Mr. ARNOLD. Yes. That is a Virgin Islands public-works program which has now come to an end and the Territorial government will now be responsible for such.

Senator JACKSON. We gave them a pretty heavy capital investment with which to carry on.

Mr. ARNOLD. About \$11 million.

Senator JACKSON. Taking care of this basic requirement. They had a boondoggling project on the harbor that was established. It was about as lush as anybody could ask for, whereas they had a health and a school problem that needed immediate attention, and I think we saved a lot of money on that trip.

Mr. ARNOLD. Eleven million dollars was the total of the program which ran for about 7 years. That includes hospitals and schools primarily.

Senator JACKSON. They are in pretty good shape now, are they not? As far as schools and hospitals are concerned?

Mr. ARNOLD. That is right.

Senator JACKSON. They have a housing problem, and so on, that may be rather difficult.

Mr. ARNOLD. In addition to that money, up until the present time, that is, up until the new organic act came into effect, Congress had to every year appropriate about three-quarters of a million dollars to make up the deficits down there in general administration.

Senator JACKSON. I am quite familiar with that. We were subsidizing it, and the rum business went flat, and that is what threw them out of balance as far as the economy is concerned, when the rum business terminated. I think the great future for those islands, from what little I have seen of them, would seem to be in the tourist business.

Mr. ARNOLD. That is what we think, too.

Senator JACKSON. That is their most valuable asset, and a pretty valuable asset in this day and age, I guess.

Mr. WIRTH. May I enter in the record here, sir, a matter which I neglected? The real property tax assessment for the land under consideration in the park would not exceed \$6,300 as compared with the total revenues of over \$2 million.

Senator JACKSON. How much is that?

Mr. WIRTH. \$6,277.36.

Senator JACKSON. That is the present tax rate on the land in question?

Mr. WIRTH. The land in question; yes. I daresay that, with the establishment of the park, the remaining land on the island would absorb that in very quick order.

Senator JACKSON. By increased valuation?

Mr. WIRTH. Yes, sir.

Senator JACKSON. Mr. Arnold, would you want to testify next, or should Mr. Boyer testify at this point?

Mr. ARNOLD. I would not have anything to add, Mr. Chairman.

Senator JACKSON. All right. Mr. Boyer, suppose you identify yourself again for the record.

### **STATEMENT OF ALLSTON BOYER, REPRESENTING LAURANCE ROCKEFELLER**

Mr. BOYER. Allston Boyer, vice president of Colonial Williamsburg, Inc., representative of Rockefeller interests in conservation and restoration projects for about 20 years.

Mr. Senator, I would like very much to supplement what Director Wirth has said about this area in answer to your question as to why should this be a national park. I know that these views reflect Mr. Rockefeller's own thinking, namely that the island of St. John is without any question the most beautiful island in the Caribbean.

Every winter for 6 years he has cruised around the area. It is his belief that the island of St. John has the most superb beaches and views of any place he has ever seen. That prompted his initial interest in it. I would like to show you some pictures of St. John. I do not think that you see beaches like that anywhere.

Senator JACKSON. I want to confirm that the beach at Caneel Bay is wonderful. I was in swimming one day there. It is indeed a beautiful beach. There is not any question about it. It is a beautiful harbor.

Mr. BOYER. The other side of the island which perhaps you did not see, Senator, is shown in these panoramic views, which are absolutely superb.

There is much to see on horseback trips on the paths which Director Wirth mentioned—old Indian rock inscriptions of which there are a number on the island, most interesting examples of the bygone age. There are old sugar mill ruins, forts, and old gun emplacements.

Senator JACKSON. Are they across from Caneel Bay?

Mr. BOYER. In Coral Bay. Speaking as someone who has been engaged in similar activity for a great many years in Williamsburg, I say that the whole island presents unique opportunities for restoration and exhibits of unusual public interest.

Senator JACKSON. I think it is important that we document the record on this question of unique features of the island because I think that is quite important as far as designation of this area as a national park. Do you agree, Senator Bible?

Senator BIBLE. Yes, I do.

Mr. BOYER. It is not only a most unique place, Senator, but it is inevitable that unless it is saved, it will be ruined, as I believe St. Thomas has been ruined.

Senator JACKSON. You mean by commercialization?

Mr. BOYER. By commercialism. These beautiful hills and countryside will be scarred by subdivisions and by hotels with neon signs, as has happened in the harbor of Charlotte Amalie.

Senator JACKSON. What will prevent commercialized interests from moving in, in the nonpark area of the island, the remaining one-third?

Mr. BOYER. Nothing, Senator, but by saving those significant areas that Director Wirth has mentioned, you will save the important and interesting parts.

In other words, the developments here in Cruz Bay and Coral Bay provide opportunities for commercial interests without ruining the heart of the land—the beaches and the mountains from which there are superb views such as from Bordeaux Mountain, of Coral Bay. It is a uniquely beautiful and interesting area. There are unique waterfalls with interesting Indian rock inscriptions particularly at Reef Bay.

Senator JACKSON. What is the forest situation on the island? What is the native, what is indigenous?

Mr. BOYER. Timber?

Senator JACKSON. You mentioned something about mahogany.

Mr. WIRTH. It has mahogany, bay trees, and many other species of tropical plants. I have a complete list of the material here.

Senator JACKSON. I think it would be helpful, Mr. Wirth—we do not have to do it right now—if we had a bill of particulars, a brief, setting out the basic considerations that are involved in this proposal and why it fits in the pattern of a national park. We ought to have that spelled out. I think the record should be made because we can run into a lot of difficulty on this thing. I do not think we want to start jumping off the deep end before we have a complete and adequate record.

(The information referred to follows:)

See Wirth letter of May 24, 1955, p. 17.

Mr. BOYER. I would also like to support your own views, Senator. Since tourism is the main industry of this area which is owned by the United States, a national park in this area can do more to focus the attention of the Nation on the tourism and vacation aspects of the area than any other single thing.

I would like to support that by mentioning the great interest by the press in this proposed national park. Not only did the story break on the front page of the New York Times, but the Saturday Evening Post is preparing an article on the proposed park. It is scheduled to come out later this year. The National Geographic is also preparing an article and Life magazine has expressed an interest.

In other words, it is something that is of national interest and focuses the attention of the people on the area.

Senator JACKSON. Could we have copies of those advance articles, together with an article that I read about 4 years ago—I think it was in Holiday magazine—on the Island of St. John, which was one of your best ones, if you could get that?

Mr. BOYER. Yes, sir.

Senator JACKSON. Holiday magazine dedicated a greater part of their issue in 1951 to the Virgin Islands. I think it would be helpful to have that available for the committee, together with the articles that you mentioned are coming out.

He mentioned the larger Virgin Island of St. Thomas and St. Croix, where, he said, commercial ventures and the tourist trade had increased. Long interested in the conservation of scenic areas, he said he was disturbed that the most beautiful areas of St. John might some day be altered so as to destroy their natural beauty.

He read the Hubler report and discussed it with Mr. Wirth. As a result of their trip, Mr. Wirth has reaffirmed the interest of the National Park Service, "but we have no assurances at all," Mr. Rockefeller cautioned.

A national park must be approved by an act of Congress.

While the project now is in the planning and development stage, Mr. Rockefeller reported that Mr. Wirth would report to Secretary of the Interior Douglas McKay. He said he had acquired through Jackson Hole Preserve, Inc., a number of options of St. John and would discuss plans informally next month with Mr. Wirth, Mr. McKay and Archie A. Alexander, Governor of the Virgin Islands.

#### ISLAND HAS ONLY 700 RESIDENTS

Should a national park be approved, Mr. Rockefeller said, it would not displace anyone, would allow for the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay, and would not in any way adversely affect the livelihood of the 700 persons on the island.

Of that number there are 350 Negroes and 50 whites, of whom 25 are major property owners, he reported. The taxes amount to \$7,500 annually, he said.

Mr. Rockefeller envisaged a plan whereby he would transfer ownership of the acreage acquired, including his Caneel Bay property, to Jackson Hole Preserve, Inc. This is an agency previously used by the Rockefeller family to create and expand such projects as the Grand Teton National Park, Wyo., the redwoods of California, and several of the country's national parks, including Acadia, Maine; Great Smoky Mountains, Tennessee-North Carolina, and Shenandoah, Va.

Mr. Rockefeller gave assurance that existing settlements would not be disturbed. His associates reported that at least 4,000 acres in the Cruz Bay and Coral Bay areas would not be included in the projected park, thus leaving 8,000 acres for conservation purposes.

#### MUCH WORK UNDERWAY

He has already spent a substantial sum, it was reported, in developing the Caneel Bay area and its hotel, now able to accommodate 48 guests. The hotel is being doubled in size, a new sewer system and powerplant are being installed as well as a water catchment and new employees' quarters.

The roads and docks are being enlarged and extensive landscaping of the shore is planned. Mr. Rockefeller is also restoring a sugar mill built in 1810.

The park project's cost will run "into the millions" but close associates of Mr. Rockefeller said it would be impossible to estimate the total cost.

St. John, one of the leeward islands in the Caribbean chain, is 1,442 miles southeast of New York and 40 miles east of Puerto Rico. Nine miles long and 5 miles wide, it is covered by bush and second growth timber, including such trees as mahogany, bay, coconut, ebony, tamarind, mango, and lime.

It rises abruptly from the sea, its highest elevation, 1,277 feet. The island is accessible only by boat, but nearby St. Thomas and St. Croix have airports.

#### "PARADISE," SAYS ROCKEFELLER

Mr. Hubler's report described St. John as "by far the most beautiful" of the Virgin Islands.

"The pure white sand of her north side beaches makes a perfect contrast between the green of her wooded hills and the turquoise waters washing her shores," he wrote.

Mr. Rockefeller yesterday agreed that it was "a paradise."

The passage between St. John and British Tortola takes its name from Sir Francis Drake or "El Draque," as the Spaniards called him. Sir Francis was the first to sail through its tortuous channels, in 1580.

Christopher Columbus, the first white man to see St. John, in 1493, christened it "The Eleven Thousand Virgins," Mr. Hubler reported. It was not settled until 1684. In 1687 the Danish West India and Guinea Co. laid claim into St. John,

but it was not until March 25, 1717, that the first permanent colony was established there.

Life went smoothly for 3,000 whites until November 23, 1733, when the 2,500 slaves revolted. French soldiers from the island of Martinique quelled the riot eventually, and carried off the Negroes to slavery.

With the abolition of slavery it became impossible to keep up the old estates, so the island reverted to bush, the white owners departed and for years the natives have eked out a meager existence from fishing and gathering bay leaf for bay rum.

St. John was well known in the days of piracy and buccaneering because of her excellent harbors. There are, of course, many tales of pirate treasure buried on the island.

Mr. Rockefeller, 44 years old, has long been associated with conservation organizations. He is a trustee and second vice president of the New York Zoological Society, trustee of the Conservation Foundation, director of the Hudson River Conservation Society, commissioner and secretary of the Palisades Interstate Park Commission, and president of Jackson Hole Preserve.

He is president of Rockefeller Brothers, Inc., an investment and research organization, and chairman of the board of Rockefeller Center, Inc., a post previously held by his brother, Nelson.

---

[From the Daily News, Charlotte Amalie, V. I., Monday, November 22, 1954]

#### NATURAL PARK FOR ST. JOHN

Laurence S. Rockefeller, owner of Caneel Bay and chairman of the board of Rockefeller Center, Inc., has taken option to purchase nearly half of the island of St. John which he plans to give to the Federal Government to establish a national park. Mr. Rockefeller's chief interest is the preservation of the scenic area of the island.

According to the plan as outlined it will not be necessary to relocate any of the residents nor would the development of the park hinder the natural expansion and economic development of the settlement areas of Coral Bay and Cruz Bay. The work at present being done on the resort area of Caneel Bay is a good indication of the future envisioned by this great financier.

Mr. Rockefeller has long been associated with development of this kind throughout the United States. He is president of Rockefeller Brothers, Inc., an investment research organization, which has financed such projects as the Grand Teton National Park, Wyo.; the Red Woods of California; and several of the country's national parks including Arcadia, Mo.; Great Smoky Mountains, Tenn. and N. C., and Shenandoah in Virginia.

In recent years visitors to the islands have shown great concern over the fact that most of the natural beauty and scenic charm of St. Thomas and St. Croix are being destroyed. Many of these persons who spend several months each year in St. Thomas or St. Croix are finding the peace and quiet that they seek in the many resort areas of the islands, in St. John. It is this fact more than any other that prompts the present plan to insure that St. John's natural beauty might not be destroyed.

Some people might be misled into the belief that the residents in that island will be placed in a less favorable position by this development. As we see it, it is the most fortunate thing that has happened to St. John in several decades. The development of a natural park would bring new activity to the small island and improve the economic condition. That island will become one of the principal showplaces for tourists and should boost the tourist program to large proportions. This cultural development will also attract a better type of visitors to the island.

We hope that the administration and the legislature will cooperate fully in bringing about this most significant development for the benefit of the entire Virgin Islands.

[From the St. Croix Avis, St. Croix, V. I., U. S. A., Saturday, November 27, 1954]

#### ISLAND "PARADISE"

Laurence S. Rockefeller's announcement that he will offer much of St. John as a national park is perhaps the most significant news to come out of these shores in many a day. The importance of the news can be determined by the wide coverage given to it by the national press, led by the New York Times.

There are at least two very good reasons why this project of Mr. Rockefeller is extremely important to the Virgin Islands as a whole. While plans are still in the making and many steps have to be taken with respect to the project, it is a virtual certainty that after the remainder of the land is acquired and the way cleared through the Governor and Secretary of the Interior, Congress will pass the bill.

First, such natural beauty as St. John has deserves to be preserved. We venture to say that the natural, unspoiled beauty of St. John is unmatched anywhere in the world, and the term "paradise" is therefore most appropriate as a description of it. Said Mr. Rockefeller, "The unspoiled nature of the area appealed to me, and I wish to preserve it against overdevelopment."

Second, with much of St. John as a national park, the fame and fortunes of these islands will rise. The National Park Service will no doubt carry out the proper program of development, and with that come employment and development to highlight what will be necessary. National parks are sources of great attraction, and St. John would be no exception.

These islands are, indeed, grateful to Mr. Rockefeller, whose purchase of much of the island will make possible the park project. And along with him go words of gratitude to Conrad Wirth, director of the National Park Service, and Frank Stick, noted conservationist. Mention must also be made of the initial idea thrown out by Harold A. Hubler, who in 1939 envisioned the possibility of St. John as a national park.

There is every justification for optimism and faith in the future; that men of vision and means will make their contribution to the enhancement and development of these islands in ways which will not only increase their resources but heighten that sense of gratification which comes only from the fulfillment of dreams and the satisfaction of a job well done.

---

[From the Daily News, Charlotte Amalie, V. I., Monday, April 4, 1955]

**BILL AUTHORIZES 9,500 ACRES FOR VIRGIN ISLANDS NATIONAL PARK—50 ACRES IN ST. THOMAS, 1,000 ACRES IN SMALL ISLANDS, CAYS**

A bill introduced in the Senate by Senator Jackson authorizes the establishment of a national park in the Virgin Islands containing outstanding scenic and other features of national significance. The acreage of the park would be limited to 9,500 and comprised of not more than 50 acres in St. Thomas and 9,450 acres on the island of St. John including such rocks and cays not in excess of 1,000 acres in the general vicinity that may be desirable for inclusion within the park. This will constitute three-fourths of St. John which has approximately 12,000 acres.

The Secretary, on behalf of the United States would be authorized to accept donations of real and personal property within the areas selected for the park until the total acreage has been acquired.

Establishment of the park in its initial phase will be declared to be accomplished and effective when a minimum acreage of 5,000 is in Federal ownership.

The bill also transfers any Federal properties within the areas selected for the park without further authorization to the Secretary of the Interior by the agency now in possession of it.

Plans for a national park in the Virgin Islands which had been under consideration for several years were completed recently when Laurence Rockefeller, owner of Caneel Bay, concluded purchase of several thousand acres of land in the sparsely populated island to give to the Federal Government as a nucleus for a park because of the scenic value. The bill before the Senate is intended to complete this effort and provide the Virgin Islands with a park for the public benefit and inspiration, in accordance with the laws governing the administration of the national park.

Senator JACKSON. Who is unfavorable?

Mr. WIRTH. I do not know.

Senator JACKSON. Locally?

Mr. WIRTH. There are some people. We never get 100 percent, but I have not had any correspondence from them and do not know. I might say that this had pretty wide coverage in the United States, and I have also copies of the articles from the papers.

They cover such papers as the New York Times, the Herald Tribune, the Christian Science Monitor, New York Mirror, the Norfolk Pilot, the Philadelphia Inquirer, the Lincoln State Journal, the Hartford Courier, and the Cincinnati Enquirer. I think that covers my presentation, sir, unless there are some questions.

Senator JACKSON. Last year in the new organic act that we passed for the Virgin Islands, I think we made all the income from internal-revenue taxes and income-taxes available to the islands government on a matching basis. Would they have enough money to take care of a park on an annual maintenance basis?

Mr. WIRTH. The Territory?

Senator JACKSON. Yes.

Mr. WIRTH. Oh, no.

Senator JACKSON. Is anyone here from the Department who can indicate the financial balance sheet of the islands?

Mr. FRENCH. William Arnold is here.

Senator BIBLE. I was just going to ask whether you have any comparable national parks outside of continental United States, just for my own information.

Mr. WIRTH. Yes.

Senator BIBLE. I am very well aware of Lake Mead National Park. If they all worked out as well as that, it would be splendid.

Mr. WIRTH. We have in Hawaii the Hawaii National Park.

Senator JACKSON. You mean the volcano?

Mr. WIRTH. The volcano. There are 2 extinct volcanoes and 2 active ones. Then, of course, we have Mount McKinley in Alaska, and the Katmai and Glacier Bay in Alaska, and Sitka in Alaska. The last three I named are national monuments, but they are operated on the same basis.

Senator BIBLE. What type of interest do you develop in the public in those national parks? In the islands, for instance, how many people visit there annually?

Mr. WIRTH. I did not bring that. We have a complete tabulation on visitation, and I can insert that in the record for the territorial islands.

Senator BIBLE. I thought it might be helpful in developing the public use of a national park.

Mr. WIRTH. Yes.

Senator JACKSON. Yes, we will ask them to put that in the record.

Mr. WIRTH. We will put that in the record.

(This information together with other material submitted by the National Park Service is as follows:)

DEPARTMENT OF THE INTERIOR,  
NATIONAL PARK SERVICE,  
Washington, D. C., May 24, 1955.

HON. HENRY M. JACKSON,

*Chairman, Senate Subcommittee on Territories and Insular Affairs,  
United States Senate, Washington, D. C.*

MY DEAR SENATOR JACKSON: As a part of the record of the hearing you held May 19 on S. 1604, a bill to authorize the establishment of the Virgin Islands National Park, and for other purposes, you asked that I provide certain additional information, which is herewith presented.

1. Why the Service considers the proposed national park eligible for national park status?

The Virgin Islands, situated in the Torrid Zone are characterized by climate, scenery, and plant and animal life distinctly different from that of the conti-

mental United States. Of the American Virgin Islands, St. John Island, and its surrounding rocks and cays are the most primitive and unspoiled. St. John is a mountainous island, from many points of which spectacular views may be had of the other Virgin Islands and the colorful waters of the Caribbean. It has numerous white sand beaches fringed with native palms and other tropical plants. More than 260 species of native woody plants have been identified on this relatively small island, of which 154 are trees, 72 are shrubs, 26 are woody vines, and 8 are cacti. Many of these species are not native to the continental United States and some of the plant and animal species are found only on St. John and neighboring islands in the Caribbean. No comparable tropical area has yet been given protection as a national park or monument. The island and surrounding cays also possess prehistoric pictographs and numerous ruins of the Danish colonial period, dating back to the early 18th century, some of which exhibit fine architectural qualities.

The unusual combination of scenic qualities, objects of scientific and historic interest, which also have educational value, and the outstanding recreational potentialities of St. John Island, are considered to be worthy of national park status by the National Park Service, which became interested in the preservation of the island 20 years ago; by the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments, which is established by law to advise the Secretary of the Interior, and by others who have traveled widely. A copy of the Advisory Board's resolution of April 20, 1955, is enclosed. Mr. Laurance Rockefeller, who has offered to acquire and donate approximately two-thirds of St. John Island for national park purposes, selected this island as the area of greatest natural beauty and interest after having cruised in the Caribbean at intervals for several years. The late Senator Butler, in his 1950 report on the Virgin Islands, referred to the Caneel Bay plantation on St. John Island, which Mr. Rockefeller proposes to donate, as " \* \* \* surely one of the undiscovered tourist meccas in the Western Hemisphere."

The acceptance of this generous offer will make it possible to preserve a uniquely beautiful and interesting island, the present character of which otherwise will surely be destroyed, and will make it possible in the future for citizens of average means to see and enjoy the kind of tropical island that heretofore has been accessible primarily to people of greater means.

2. Area of proposed park and total area of Virgin Islands: Total land area of St. Thomas, St. John, and St. Croix Islands, 85,120 acres. Total area of proposed Virgin Islands National Park, 9,500 acres. The proposed park would be about one-ninth of the total area of the islands.

3. Number of people who visited the Virgin Islands in 1954, 103,867.

4. Visitors to Territorial and Commonwealth national parks in 1954: Hawaii National Park, 444,551; Mount McKinley National Park, Alaska, 4,999; San Juan national historic site, San Juan, P. R., 39,983.

5. Estimated annual operation and maintenance costs and capital investments for first 5 years.

There is enclosed a listing of the estimated fund requirements for the proposed Virgin Islands National Park. This does not include an item specifically for possible buildings of a utility nature which may become desirable at the eastern end of St. Thomas Island. Since, in the foreseeable future practically all travel to and from the proposed national park will be by boat from the eastern end of St. Thomas Island, it is thought that need might arise in the future for utility and passenger facilities. It is not probable, however, that such facilities would be needed during the first 5 years of the park, and we have not, therefore, made any plans for them nor included an estimate of cost.

I believe this covers the points on which you requested further information. If additional information is required, please let me know.

Sincerely yours,

CONRAD L. WIRTH, *Director.*

#### ESTABLISHMENT OF THE VIRGIN ISLANDS NATIONAL PARK

The Advisory Board on National Parks, Historic Sites, Buildings, and Monuments has reviewed the reports of the National Park Service on the proposal to establish the Virgin Islands National Park, on St. John Island, in the Territory of the Virgin Islands. The Board believes that the scenic quality, plantlife, and the setting of St. John Island in the protected channels of the Virgin Islands are totally different from anything set apart in the United States or its Territories

for national park purposes, and that it well qualifies for national park status. The Board recommends its approval and urges its establishment as a national park.

Approved: April 20, 1955.

C. G. WOODBURY, *Secretary.*

*Estimated fund requirements—Proposed Virgin Islands National Park*

ANNUAL OPERATING NEEDS

<b>Management and protection:</b>	
Superintendent, GS-11-----	\$5,940
Chief ranger, GS-9-----	5,060
Naturalist, GS-9-----	5,060
Ranger, GS-7-----	4,205
Administrative aid, GS-6-----	3,795
Clerk-stenographer, GS-4 (2)-----	6,350
Permanent positions (7)-----	30,410
Territorial differential (25 percent)-----	7,603
Total, personal services-----	38,013
General expenses, including travel, communications, supplies, materials, etc-----	9,000
Total management and protection-----	47,013
<b>Maintenance and rehabilitation:</b>	
Temporary and seasonal labor-----	6,000
General expenses-----	6,987
Total maintenance and rehabilitation-----	12,987
Total annual operating needs-----	60,000

*Capital investments*

[Needed in first 5 years after park establishment]

<b>Trails-----</b>	<b>\$10,000</b>
About 150 miles of low-grade roads and trails, will require clearing of bush and trees, and bringing up to standards suitable for pedestrian and saddlehorse travel.	
<b>Roads-----</b>	<b>50,000</b>
Rehabilitation of about 18 miles of roads to a low-grade standard for automobile traffic. A few jeeps and 4-wheel drive trucks are on the island. Only those roads along the east, west, and north-western shores of the island, and the so-called Centerline Road running from Cruz Bay on the west to Coral Harbor on the east, would be proposed for automobile use.	
<b>Buildings and structures-----</b>	<b>25,000</b>
It is believed that park headquarters could be provided in existing buildings at the Caneel Bay locality at the west end of the island; however, a ranger station should be provided at another location such as at Reef Bay on the south. It is estimated that such a station, in addition to trailside shelters, comfort stations, repair of docks, etc.	
<b>Sewage, light, water, and communications-----</b>	<b>20,000</b>
Power can probably be purchased at the west end of the island; however, some utilities would be required in other portions of the island, such as a gasoline powered electric generating system; wells or reservoirs and water system lines; septic tanks and sewage disposal fields; and some radio or telephone communication facilities.	

*Capital investments—Continued*

Archeological surveys and salvage----- \$15, 000

The island abounds in archaeological values, many of which should be salvaged before they are irreparably damaged or destroyed as a result of a large volume of public use. The salvaged artifacts would provide the primary features of a museum collection. It is estimated that surveys to determine and record archaeological sites and other data of scientific interest, and to salvage those materials most likely to be otherwise lost.

Total, initial capital investment needs----- 120, 000

Mr. WIRTH. I might say that we expect a big influx of travel at Mount McKinley as soon as the road is completed in to Mount McKinley. Of course, in the last few years down in Hawaii we have had a tremendous influx due to the eruptions, and that has really taxed our facilities to the limit.

Senator BIBLE. Do you recall what the travel was to Hawaii?

Mr. WIRTH. No.

Senator BIBLE. I would be very happy to have you do that.

Mr. WIRTH. I will do that.

Mr. EDWARDS. I want to make a correction on the total acreage. It is 85,120 in the 3 major islands.

Senator JACKSON. That is about one-ninth, roughly. The population is 27,000?

Mr. EDWARDS. It is between 26,000 and 27,000.

Senator JACKSON. I was going to ask Mr. Arnold now about the revenue situation in the islands under the new act.

Mr. ARNOLD. I might say that the Government comptroller certified to the collection of \$2,026,207 for the fiscal year 1954.

Senator JACKSON. Revenue that was taken in?

Mr. ARNOLD. Revenues from all sources.

Senator JACKSON. In the islands?

Mr. ARNOLD. In the islands.

Senator JACKSON. Under the new act?

Mr. ARNOLD. Well, sir, the new act provides that that money will be matched from Internal Revenue collections derived from products of the Virgin Islands, which is rum primarily. Each dollar of local revenue certified by the Comptroller will be matched from these collections.

Senator JACKSON. But the \$2 million is what they collected locally?

Mr. ARNOLD. That is correct.

Senator JACKSON. And that will be matched by the Federal Government from the other revenue sources, making a total of \$4 million?

Mr. ARNOLD. Yes, sir.

Senator JACKSON. What is their budget?

Mr. ARNOLD. That is a rather complicated thing at the present time because of the fact that we are going through a reorganization period. There are three budgets. The first two are for general administration, using local revenues and matching funds, and a third one for what we call special projects approved by the Secretary of the Interior. The general administration budget for next year will be approximately the same amount as this \$2,026,000 plus the matching Internal Revenue funds, which would bring your total to about \$4,050,000 for general administration.

Senator JACKSON. So the aggregate budget will about equal the income?

Mr. ARNOLD. Except for the fact that there is some money left over from the Internal Revenue funds which are also given them for the first 2 years for emergency and special projects, amounting to about \$2½ million.

Senator JOHNSON. We spent a little money in 1951. We made available funds for a new hospital and a new school right in the town of Charlotte Amalie on the island of St. Thomas.

Mr. ARNOLD. Yes. That is a Virgin Islands public-works program which has now come to an end and the Territorial government will now be responsible for such.

Senator JACKSON. We gave them a pretty heavy capital investment with which to carry on.

Mr. ARNOLD. About \$11 million.

Senator JACKSON. Taking care of this basic requirement. They had a boondoggling project on the harbor that was established. It was about as lush as anybody could ask for, whereas they had a health and a school problem that needed immediate attention, and I think we saved a lot of money on that trip.

Mr. ARNOLD. Eleven million dollars was the total of the program which ran for about 7 years. That includes hospitals and schools primarily.

Senator JACKSON. They are in pretty good shape now, are they not? As far as schools and hospitals are concerned?

Mr. ARNOLD. That is right.

Senator JACKSON. They have a housing problem, and so on, that may be rather difficult.

Mr. ARNOLD. In addition to that money, up until the present time, that is, up until the new organic act came into effect, Congress had to every year appropriate about three-quarters of a million dollars to make up the deficits down there in general administration.

Senator JACKSON. I am quite familiar with that. We were subsidizing it, and the rum business went flat, and that is what threw them out of balance as far as the economy is concerned, when the rum business terminated. I think the great future for those islands, from what little I have seen of them, would seem to be in the tourist business.

Mr. ARNOLD. That is what we think, too.

Senator JACKSON. That is their most valuable asset, and a pretty valuable asset in this day and age, I guess.

Mr. WIRTH. May I enter in the record here, sir, a matter which I neglected? The real property tax assessment for the land under consideration in the park would not exceed \$6,300 as compared with the total revenues of over \$2 million.

Senator JACKSON. How much is that?

Mr. WIRTH. \$6,277.36.

Senator JACKSON. That is the present tax rate on the land in question?

Mr. WIRTH. The land in question; yes. I daresay that, with the establishment of the park, the remaining land on the island would absorb that in very quick order.

Senator JACKSON. By increased valuation?

Mr. WIRTH. Yes, sir.

Senator JACKSON. Mr. Arnold, would you want to testify next, or should Mr. Boyer testify at this point?

Mr. ARNOLD. I would not have anything to add, Mr. Chairman.

Senator JACKSON. All right. Mr. Boyer, suppose you identify yourself again for the record.

### **STATEMENT OF ALLSTON BOYER, REPRESENTING LAURANCE ROCKEFELLER**

Mr. BOYER. Allston Boyer, vice president of Colonial Williamsburg, Inc., representative of Rockefeller interests in conservation and restoration projects for about 20 years.

Mr. Senator, I would like very much to supplement what Director Wirth has said about this area in answer to your question as to why should this be a national park. I know that these views reflect Mr. Rockefeller's own thinking, namely that the island of St. John is without any question the most beautiful island in the Caribbean.

Every winter for 6 years he has cruised around the area. It is his belief that the island of St. John has the most superb beaches and views of any place he has ever seen. That prompted his initial interest in it. I would like to show you some pictures of St. John. I do not think that you see beaches like that anywhere.

Senator JACKSON. I want to confirm that the beach at Caneel Bay is wonderful. I was in swimming one day there. It is indeed a beautiful beach. There is not any question about it. It is a beautiful harbor.

Mr. BOYER. The other side of the island which perhaps you did not see, Senator, is shown in these panoramic views, which are absolutely superb.

There is much to see on horseback trips on the paths which Director Wirth mentioned—old Indian rock inscriptions of which there are a number on the island, most interesting examples of the bygone age. There are old sugar mill ruins, forts, and old gun emplacements.

Senator JACKSON. Are they across from Caneel Bay?

Mr. BOYER. In Coral Bay. Speaking as someone who has been engaged in similar activity for a great many years in Williamsburg, I say that the whole island presents unique opportunities for restoration and exhibits of unusual public interest.

Senator JACKSON. I think it is important that we document the record on this question of unique features of the island because I think that is quite important as far as designation of this area as a national park. Do you agree, Senator Bible?

Senator BIBLE. Yes, I do.

Mr. BOYER. It is not only a most unique place, Senator, but it is inevitable that unless it is saved, it will be ruined, as I believe St. Thomas has been ruined.

Senator JACKSON. You mean by commercialization?

Mr. BOYER. By commercialism. These beautiful hills and countryside will be scarred by subdivisions and by hotels with neon signs, as has happened in the harbor of Charlotte Amalie.

Senator JACKSON. What will prevent commercialized interests from moving in, in the nonpark area of the island, the remaining one-third?

Mr. BOYER. Nothing, Senator, but by saving those significant areas that Director Wirth has mentioned, you will save the important and interesting parts.

In other words, the developments here in Cruz Bay and Coral Bay provide opportunities for commercial interests without ruining the heart of the land—the beaches and the mountains from which there are superb views such as from Bordeaux Mountain, of Coral Bay. It is a uniquely beautiful and interesting area. There are unique waterfalls with interesting Indian rock inscriptions particularly at Reef Bay.

Senator JACKSON. What is the forest situation on the island? What is the native, what is indigenous?

Mr. BOYER. Timber?

Senator JACKSON. You mentioned something about mahogany.

Mr. WIRTH. It has mahogany, bay trees, and many other species of tropical plants. I have a complete list of the material here.

Senator JACKSON. I think it would be helpful, Mr. Wirth—we do not have to do it right now—if we had a bill of particulars, a brief, setting out the basic considerations that are involved in this proposal and why it fits in the pattern of a national park. We ought to have that spelled out. I think the record should be made because we can run into a lot of difficulty on this thing. I do not think we want to start jumping off the deep end before we have a complete and adequate record.

(The information referred to follows:)

See Wirth letter of May 24, 1955, p. 17.

Mr. BOYER. I would also like to support your own views, Senator. Since tourism is the main industry of this area which is owned by the United States, a national park in this area can do more to focus the attention of the Nation on the tourism and vacation aspects of the area than any other single thing.

I would like to support that by mentioning the great interest by the press in this proposed national park. Not only did the story break on the front page of the New York Times, but the Saturday Evening Post is preparing an article on the proposed park. It is scheduled to come out later this year. The National Geographic is also preparing an article and Life magazine has expressed an interest.

In other words, it is something that is of national interest and focuses the attention of the people on the area.

Senator JACKSON. Could we have copies of those advance articles, together with an article that I read about 4 years ago—I think it was in Holiday magazine—on the Island of St. John, which was one of your best ones, if you could get that?

Mr. BOYER. Yes, sir.

Senator JACKSON. Holiday magazine dedicated a greater part of their issue in 1951 to the Virgin Islands. I think it would be helpful to have that available for the committee, together with the articles that you mentioned are coming out.

(The Holiday article is as follows:)

[From the February 1951 issue of *Holiday* magazine]

### THE HOPEFUL VIRGINS

*These tranquil, colorful isles in the expanding tourist paradise of the Caribbean offer bright new vistas of sun and pleasure to the visitor from the north*

By William A. Krauss

When you say island, you imply (and I infer) a lot of water. And the smaller the island, the larger the awareness, naturally, of the water. In the Virgin Islands of the United States of America, which are very small islands indeed, water—is the impressive and predominant fact. Not much land, plenty of water—the Atlantic Ocean on the north, Caribbean Sea on the south.

Christopher Columbus discovered these islands on his second westward venture. Because his line was gold and spices, he glanced briefly and hurried away. No evidences of the Great Khan here. So he assumed, rightly in his day, that the islands weren't worth much. But that was before the invention of tourism, which, like pirate-pants beachwear for girls, could not have been predicted in 1493.

They compare, these 68 pinpoint West Indian islands and cays, with the larger Caribbees—Cuba, say—as a 14-foot sailboat compares with the *Queen Elizabeth*. In Cuba or on the *Queen* you can escape the sea (if, peculiarly, you want to) by heading into the mountains or into the bar. But on St. Thomas, St. John, and St. Croix—the principal American Virgins, a thousand miles east of Havana, 1,400 miles southeast of New York—the sea is always somewhere in sight. And in the manner of marooned sailors looking for succor, the Virgins keep a constant watch for travelers on the horizon.

Travelers mean cash income. The Virgin Islands' homegrown specialties of sea and scenery can't be eaten or exported. The high hope is that some day, some day soon, so many tourists will arrive to regard the wonderful views in situ that dollars will flow all around, and everybody—all 30,000 of population—will be chockful of wheat-flour bread. That day is not quite yet. "But that day's coming," almost everybody says. They can make a good case for optimism.

Take Jack Jouett, retired colonel of the United States Army, onetime aviation adviser to the Republic of China. He's seen the world pretty much from one end to the other. Nothing pins him to any particular spot, he could live anywhere he pleased, this side of the Iron Curtain. It pleases him to live in St. Thomas. I'd met the colonel one place and another through the years, and when I heard he'd settled in St. Thomas, I wondered why. Recently I took occasion to find out.

"Mainly," the colonel said, "because here a man can belong. He can take pride. He can belong to the islands and the islands belong to him. Flag, soil, sea, and citizens—all American. Live out your lifetime in Cuba, Haiti, China, and you're still a foreigner. I'm tired of being a foreign devil. I've come home."

He owns a neat, small house on the very steep hillside overlooking the harbor of Charlotte Amalie. Grows flowers and keeps a boat and sails to out islands whenever the idea hits him. He's put a little money in a little business and belongs to the chamber of commerce and goes to his office in khaki shorts. Everybody says "Good morning, Colonel;" nobody throws rocks. The colonel's a member of the community.

So of course he, too, talks about tourists and shares in the optimism. "Twelve or thirteen thousand visitors last winter," he said. "That just about equals three-quarters of the permanent population of St. Thomas, but it's not enough. Cruise-ship tourists flit too fast. We need more accommodations for people who'll linger awhile. We're building those accommodations right now."

### THE SIMPLE LIFE

Not the colonel nor anybody else conceives of the Virgin Islands as competition for the plush resort of the earth. Gambling is rather generally disapproved, no swank casino is on the books to lure the late-night crowd. True, there's a law permitting divorce proceedings fast and easy, after 6 weeks of residence, which matches Reno; but to date the influx of disillusioned wives has been only a trickle. Solid elements of the community aren't sure they approve. For the long pull they prefer to attract average John Citizen and his wife, the middle-class couple

with a plain, unfauciful urge to relax in the sun and absorb the views. Hence St. Thomians mention most frequently and with main pride their unplowed and uncrowded scenery. It is, in point of fact, very good scenery. It is soft, peaceful, tractable, well-mannered *buena vista*, seducing the eye gently with bosomy hills and, in every direction, the multicolored sea. It is scenery out of a child's paint-box, sketched in miniature, gay; only by remote and forgotten geology is it related to the violence of Puerto Rico's unmanageable mountains, some 40 miles to the west.

There's a hilltop road on St. Thomas, second in size among the Virgins, that gives you the next best thing to a bird's-eye panorama. In the south, 40 miles off, pearl-gray St. Croix, largest Virgin, looks like a sleeping whale. In between repose a few chunks of expatriate Maine coast established unassailably in perpetual summer. Then if you step a piece along the road and peer eastward, you hit a whole jackpot of Virgins—American group first and, swimming away to the horizon, the British group. If you have with you a copy of the United States Coast and Geodetic Survey Sailing Chart No. 905 you can intone their somewhat singing names: Mingo, Congo, Grass, Lovango, Frenchman, Guano, Thatch, Tortola—and Tobago and Little Tobago, too, and, more prosaic, Jost Vandyke, Hans, Lollik, Little Hans, with St. John, which is larger than the Bermudas but smallest of the main American Virgins, dominating the scene.

Beautiful islands, gracious to look upon, airy; with a dozen superior beaches and at least another score sufficiently theatrical to fulfill an advertising executive's conception of tropical paradise; fair roster of coco palms, white smother of surf on a thousand coral reefs, year-round temperatures from 69 degrees to 91 degrees F. But paradise with (if you're a born islander) reservations. Uncertain rainfall. Almost no land that isn't tilted like a baby Alp. Almost no topsoil that an Iowa farmer would bother to turn.

The American islands, which if pushed together like the pieces of a seaborne jigsaw puzzle, would comprise 132.9 square miles, or about the area of Philadelphia, have been called a "poorhouse" (by Herbert Hoover, who will never be forgiven for the ugly word). The term is relative. Once, a long time back, Frenchmen, Dutchmen, Englishmen, and Danes planted a wealth of sugar to the very crests by use of slave labor and arduous, impermanent terracing, but that was when sugar prices flew higher than a kite in a hurricane and nobody had heard of the steam grinder. Today, stopped cold by the competition of larger and more productive Antillean regions, only a few thousand Virgin Island acres are devoted to cane. The latest survey reported that vegetables and field crops occupied exactly 465 acres in a total land area of 85,120 acres—one-half of 1 percent.

Terrific poorhouse, then, by Palm Beach standards, underprivileged by Miami standards, but the British Virgin Islander, sitting a few miles away on the other side of a highly artificial international boundary with an annual percapita income of \$65, thinks the St. Thomian, \$230 or thereabouts, is rich. He isn't, of course; yet the level of sanitation in St. Thomas is high, malaria is rare, education expenditure runs better than \$70 per pupil. Inhabitants of a number of Caribbean communities (say Guadeloupe and St. Lucia for a starter) would, if plumped down on the main street of the Virgins' capital city, consider themselves in a field of clover. Automobiles dashing busily; real glass windows; everybody sporting shoes and store clothes, slick plastic raincoats in pastel colors to guard the delicate people against a shower.

Still, the islands are poor. Père Labat, that peripatetic French priest who wrote *Neuveau Voyage aux Îles de l'Amérique*, visited St. Thomas in 1707 and noted: "Provisions are always dear, money being plentiful, and strangers generally arrive in affluence."

The strangers still arrive in fair affluence. Whisky, cigarettes, and Danish silver are cheap, no Federal tax, but most common necessities cost more than in the United States by reason of high freight rates and high wharfage fees. Yet there remain as assets the high-class vistas, the sweet climate, the sea, the beaches; and everybody talks about hotels, whether old, new, or remodeled.

#### BRIDEGROOM UNCLE SAM

Among the new hotels are the Virgin Isle and the Flamboyant. The former, built at a cost of around \$3 million, was deliberately planned to be plushy with per-day costs ranging from \$15 to \$50. In addition to a kidney-shaped swimming pool, the hotel has a Foolish Virgin Bar whose featured drink is the Frozen Virgin. The Flamboyant is less expensive and, of course, less spectacular.

None of the Virgins had oil in their lamps when the bridgeroom Uncle Sam arrived. An opulent era of coaling and provisioning ships had been knocked on the head by oil and refrigeration; there had been the old-time sugar prosperity and, even further back, handsome traffic with sea robbers. But all the great days had faded. In 1917 the United States, seeking more armor around the Panama Canal, bought St. Thomas, St. John, and St. Croix, plus a miscellany of cays and coral humps, from Denmark for \$25 million, the fanciest price ever paid by Washington for any Territorial acquisition—\$295 an acre, as against 2 cents for Alaska (Stalin should catch the lunthead who sold it), 27 cents for the Philippines, and \$35.83 an acre for the Canal Zone. Fifty years earlier the Danes had offered the islands for \$7,500,000, but the United States Senate wouldn't bite. Uncle Sam did not attempt to buy the British Virgin Islands which, poor, too, and just as pretty, are geographically and ethnically an integral part of the archipelago.

The whole lot of islands on both sides of the international line—they add up to about a hundred if you count them at low tide—were discovered by Columbus just after the holy day of St. Ursula and the 11,000 British maidens who, on the lower Rhine, met glorious death in defense of their virginity along about A. D. 238 or 283 or 451. This commemoration of the martyrs was but a perfunctory tipping of the hat. Hispaniola, Cuba, Puerto Rico, and Mexico occupied the attention of Spain. Then, in 1643, the English and Dutch colonized St. Croix; 28 years later Denmark, anxious to share in 17th century colonial and slave-trading boom, took possession of unoccupied St. Thomas.

The jockeying began. The history of the Virgin Islands adheres painstakingly to the Caribbean pattern of blood in the streets. At St. Croix the English ejected the Dutch, were themselves thrown out by the Spaniards, who were defeated by the French. Denmark bought the island from France, but twice thereafter the English seized it, and seized St. Thomas, too, and soon lost them both. In 1733 a slave insurrection put St. John—Denmark's by right of uncontested occupation—to the torch; at St. Croix, where in the heyday 350 planters owned 30,000 slaves, 3 bloody revolts spread destruction and ultimately, in 1848, won the Negroes their freedom in a ruined island. St. Thomas was, at one season and another, notorious as a hangout for the most sanguinary of freebooters. It is recorded that you could get murder done for the price of a modest dinner without wine.

Today violence is dead as Jack Spaniard, and the departed cutthroats of the Main have been gilded and haloed in the image of Errol Flynn. Hotels are quaintly named Blackbeard and Buccaneer; Drunk Bay, Ginmill Hill, and Jugbottom Point celebrate vanished thirsts; you can buy pants in a shop that advertises buried treasure. But behind the facade of this cherished piratical conceit the Virgins are, and for generations have been, peaceful to the point of somnolence. Tranquillity is one of the permissible generalizations about the group.

Though rising from the sea within plain sight of each other if the day is clear (and it usually is), the islands are in many ways quite astonishingly unlike. It follows that they must be looked at one by one.

Most travelers enter the Virgins at Charlotte Amalie, seat of government, chief commercial center, the only town on St. Thomas. Like many another West Indian community, this place of 15,000 people climbs up spectacular hills—hills dubbed Foretop, Maintop, and Mizzentop in sailing days, and a fourth called Bluebeard after a pretty legend that a wife murderer once occupied a tower at the top of it. Streets tumble in swift cascades down to a spacious bay which, in sunlight, makes a shining ruffled cloth of almost inadmissible colors and accounts in largest part for the capital's charm. Red roofs, meandering stairways, and a few fine old solid houses as heavy and honest as the Danish import-export barons who built them contribute additional flavor.

It must be remembered that the St. Thomian is an American citizen—and dresses accordingly. His best-read book is the mail-order catalog. Not for him the checkerboard breeches and flour-sack shirts of the Haitian peasant; not for his wife the bright scarves of Martinique's women. The residents of St. Thomas, 91 percent Negro, are an earnest, literate people, given to no picture-post-card foolishness. They subscribe to a bit of witchcraft called *obeah* and can read an evil omen in the eccentric behavior of a bat or domestic duck; but they wear watches on their wrists more often than flowers in their hair.

If this seems to sadden the casual traveler in search of the primitive, mention is quickly made of a neighboring island. St. John, 2 miles abeam the easternmost tip of St. Thomas, is a tall island of timbered wilderness, possessing

exquisite beaches and almost no population—maybe 700 Negroes and 9 or 10 white folks in an area of 19.2 square miles.

I first saw St. John in a chalky, windy dawn years ago from the deck of a small sailboat pitching in a bad sea. There was then no other transportation, nor any boardinghouse, good or bad. For want of a bed I slept in a blanket on a beach called Francis Bay and ate beef out of a tin. Today St. John, served by motor launches, an hour's travel from Charlotte Amalie, provides an attractive paradox—least developed of the American islands, still uncommercial as the angles, it nevertheless offers in Caneel Bay Plantation the kind of self-contained resort most travelers have in mind when they retreat from snow. Seven screened and furnished cottages, adequately separated for privacy, have been constructed on the seaside property of an 18th Century sugar estate, each staffed with a cook who is also a maid and, if you demands aren't too exotic, bartender. You rent the cottage, the cook is thrown in; you buy your food (and bottles) at a well-stocked central commissary—and that's it. No larger problems. No taxis to hire. You walk barefoot across the lawn and fall into the healing sea. If one beach palls, you try another; beaches unlimited.

#### THE TOURIST TOPIC

This Caneel Bay haven, which I stress because it has no duplicate in the Virgins, is not inexpensive. A cottage for two is \$125 weekly, for six \$200. The food, which is very good, costs accordingly. So the clientele tends to run to Saltonstalls and Cabots.

At this writing, Caneel Bay can minister to 23 guests at top, with more facilities being built. Around the shore at Trunk Bay, where the sand is as fine as it could be and the marine gardens astonishing and bright, Mrs. Paul Boulton's guest house makes room less lavishly for another 10. In addition to a small inn (8 people—outside plumbing), occasionally several of 6 or 7 cottages stand available at \$85 to \$150 a month or thereabouts in Cruz Bay, the sleeping hamlet which is St. John's administrative headquarters. And that's approximately the total of beds for rent on St. John; not many.

The tourist development of the island is inevitably a topic over the third rum-and-water on Lind Webber's gallery at Caneel, on Mrs. Boulton's eagle perch of a veranda at Trunk. The possibilities, everybody agrees, are enormous. Look: magnificent sea everywhere, sheltered beaches gentle as a sleeping babe, wide-open beaches where the combers will spin you like a pin wheel, Sir Francis Drake Channel for a sailing ground, Robinson Crusoe cays to visit for a day's picnicking, plus high hills to climb where no one's climbed in 50 years, almost virgin forest, photogenic 18th century ruins, fine woody lonely trails to ride. \* \* \*

"Picture a roulette casino, beau idéal, under the palms at Denis Bay. Fancy a 300-room Grand Hotel Ritz-Majestic along the sand at Hawk's Nest Bay, striped awning, room service, a la carte menu a mile long, fresh orchestra weekly from New York, beach cabafias, yacht basin, everything air conditioned, all the sun-browned ladies in their clothes from Saks Fifth Avenue." Mrs. Boulton says breathlessly, hitching up her dungarees. And grimacing horribly.

Everybody groans.

Nobody who lives there or often goes there wants St. John to change. They don't agree that the true native, the fisherman and farmer, the black man born in St. John, would be happier shining shoes in a Miami Beach economy. There's no juke box on St. John. Old hands will go behind the barricades with rifles the day somebody tries to introduce one.

Meanwhile, St. John dozes in the sun beside the very clean sea and there's nothing for the visitor to do. Except swim, walk in those hills, ride those trails. Maybe try a little fishing. Watch the sun go down like a slow explosion behind islands that march away westward. That's about all. Nothing much to do. Or everything to do. The nights are very quiet and the stars scrape the hilltops.

On St. Croix the pace is a notch swifter. More people, more intensive agriculture. But St. Croix falls far short of the commercial drive of Charlotte Amalie. This is a place of good roads, pretty trees, and old families, white and colored: of tame hills and long views across valleys with the distant appearance of well-tended gardens. The main town, Christiansted, hugs a shallow harbor caught behind beautiful and dangerous reefs. The streets are broad, clean, quiet. Dominating the business center is an admirable old Danish clock tower, now falling into disrepair, on which the four clock faces rarely agree—as if to underscore the point that on St. Croix, time doesn't matter. A few shops display a

modest freight of garments and gadgets from Guatemala, France, England, China, Siam, Haiti, Mexico, Denmark—several even show grass hats of local manufacture. But you have to ask; nothing is thrust at you.

Margaret, who is my wife, and I were met by an old friend at the ex-military airport on the flat south shore. "Lee," we said, "it's nice to see you. Tell us about St. Croix."

"It is comely and full of coco palms," Lee said. "There was some unrest a while back when a. c. electric power replaced d. c. power, because a good many people reasonably supposed that a. c. was American current, possibly inferior to d. c., or Danish current. Now that's straightened out and everything's serene again."

"What else?" we asked.

"Sometimes a yacht arrives," Lee said. "Then for a few days there are new faces at the cocktail parties. With or without the new faces there are the cocktail 'What else?' parties. The typical St. Croix Martini is very dry."

#### THE DANISH DREAM

"Christiansted's fort was built by the Danes in 1839. It is quaint, has notably thick walls, and would be as useful as a lard barrel for defense today. Aside from the fort, we have a leprosarium with 28 inmates. A private residence named Bjerget is representative of the good houses built before the American purchase: high ceilings, graceful rooms, and a generous garden. The palace of the Danish Governor-General is treasured as a souvenir of the dignity of empire."

"We were told in St. Thomas that there's a young woman here who was offered \$20,000 by another woman for her husband. Can this be true?"

"I have merely heard the rumor," Lee said.

"May we have a look at the husband? After we've seen the Governor-General's palace, of course."

St. Croix in colonial times created the richest sugar and cotton plantations in the Danish West Indies. Ruins of cane-grinding windmill towers squat sorrowfully on a hundred slopes, like mausoleums of dead planters, like untended monuments to the follies of slavery and sugar-profiteering. The names of the old estates are sometimes romantic and sometimes wry: Adventure, Prosperity, Paradise, Profit, and Wheel of Fortune. A man named Jacob Boffron called his place Betsy's Jewel, and there were also Judith's Fancy, Betty's Hope, and Whim. New Love estate, watered by Love Gut (gut means brook in the Virgins), came to be called, later on, Lower Love. Work and Rest says something about the character of General Kriegs-Commissair Lucas von Beverhoudt, who owned it. Barrenspot and Stonyground were presumably less happy holdings than Blessing. The estate name Slob of Laurence Bodkin is much cherished by today's residents, who have not pursued the etymology too far.

#### JOHN BULL'S ISLANDS

From St. Croix to St. Thomas is a 25-minute flight, with scheduled daily service. No such fancy connection is available for the lonely out islands that lie north and east of St. John—the British Virgins which Uncle Sam ignored. Unless you own a seaplane, or are improvident enough to charter one, you go to the British Virgins by sail or motorboat.

Tortola is the big island, 10 to 12 miles long, larger than St. John and only a narrow look away across the watery international boundary of Sir Francis Drake Channel, which the buccaneers called the Virgins Gangway. Thirty-five more islands and islets make up the total British land area of 67 square miles, inhabited by 6,500 colored subjects of the King and enough white settlers for 6 or 8 tables of bridge. With the exception of Anegada, which is all beach and a raised coral reef, the islands are steep and rugged, running up to 1,780 feet. The soil, where it's not sand, is among the stoniest in the world. Chief activity of the native inhabitants is cattle raising for the St. Thomas market; chief activity of the government is the issuance of postage stamps for collectors abroad. The postage stamps are dignified, subdued in their coloring, and rarely used by local people, not many of whom have anybody to write to. The prosperous distant past of sugar and slaves has left no evidence beyond a few ruins.

Road Town, on Tortola, capital of the British Islands, their single settlement bigger than a crossroads, is a place of casual and thoughtless composure, with a drowsy present and promised no future more glowing than survival if ever the great and noisy cities of the earth go up in smoke. It has tin roofs, 769

inhabitants, a prim white hospital, red-flowering hibiscus hedges, privies at the sea's edge, Government House, and a bar with cold beer. For the traveler's comfort there is a 3-room inn called Mrs. Jennings' Boardinghouse; the beds are parenthetical but immaculate, and the plumbing—most uncommon—is indoors.

Tortolians would like the United States to annex their island, but feel there's a better chance of collecting 25 million American dollars some day as indemnity for loss of the city of Philadelphia.

The claim is admittedly vague. But Mr. Howard R. Penn, a Negro leader of commerce close to Road Town's jetty, thinks it's high time the Tortola Penns hire a lawyer. Because, don't you remember that Quaker William Penn was, by the British Crown, granted a chunk of the Western World, including the land on which Philadelphia stands? Good; William died in 1718 and the title passed to several sons. The sons begot sons, and two of these—the local story goes—sailed south to Tortola, then an important Quaker settlement; lived there, and died there. Their sons and grandsons, according to the tale, married into substantial island families, and today there's a numerous clan of Tortola Penns, none of whose forebears cut in on cash settlements for hereditary rights to Pennsylvania. "I can exactly remember my grandfather," Mr. Howard R. Penn said to me. "He was almost white. He thought we really should take steps about Philadelphia."

I agreed with Mr. Penn that Philadelphia would be nice to own.

You can get to Road Town from Charlotte Amalie in 3 hours aboard a 50-foot launch named *Islander*, Capt. Austin Pickering. The captain is a fat and immensely cheerful dark brown man bred to the local sea; there's scarcely a reef in the Virgin Bank that he doesn't know blindfolded. The fare to Road Town is \$1, with a comfortable seat and no better traveler's bargain in the islands. Unless its Captain Pickering's run from Tortola to Virgin Gorda, about 12 miles farther east, twice a month. For this the charge is 30 cents.

We took off for Virgin Gorda—the Fat Virgin the island that approximately resembles a pneumatic young woman flat on her back on a couch of sea—one Saturday morning precisely at 5. It was raining. When the sun came up all the little islands north and south wore capes of cloud. We passed Dead Chest, shaped like a coffin, which Robert Louis Stevenson called Dead Man's Chest ("Yo-ho-ho and a bottle of rum"); passed Salt and Beef, Cooper and Ginger, and sighted the cays that are happily named George Dog, Great Dog, and West Dog, with Cockroach close beside. Then Virgin Gorda loomed, and Captain Pickering swung *Islander* through an invisible break in a boiling reef and we were inside a sheltered cove.

Oliver Leonard came out in a beaten-up rowboat and paddled us to the beach. I waded the last few feet; Margaret was carried up on the sand by Vanrhynne Edison O'Neal. Coleridge Waters came to shake hands and offer us the use of his private beach; Irving O'Neal, cousin to Vanrhynne, suggested we have coffee at his sister-in-law's house near by. If we'd been an official party from Downing Street there could not have been larger hospitality.

#### COLERIDGE CAVE

The island comprises 13 square miles of superb white beaches, sandy flatland, and angular high hills swept by Atlantic winds. Its population totals 500, as nearly as anyone can tell; no white man lives there now, but two centuries ago English plantations flourished briefly and once the Spaniards made a halfhearted settlement. Virgin (pronounced Wirgen) Gorda gets along without a resident doctor, but schooling is available for the children. No roads, of course—no automobiles—but cart tracks where they're needed; no town at all, but simple small houses scattered within shouting distance across the valleys; no inn, but a dozen gracious families who'll make you a bed; no electricity, but 3 kerosene refrigerators, in one of which American canned beer is maintained at near-freezing temperature by Howard O'Neal, a merchant with broad vision.

"We don't have it so bad," Vanrhynne Edison O'Neal said over the morning coffee. "Anyway, we're not crowded."

In Oliver Leonard's rowboat, we went with Vanhyne and Oliver to look at Coleridge Waters' private shore. This is the show place—the Niagara Falls, the Mont Blanc, the Pyramids—of Virgin Gorda. Nobody knows exactly what happened long ago at Coleridge Waters' beach, but certainly nobody would care to have been there when it happened. Enormous granite blocks bigger than houses are heaped inland and at water's edge in wildest confusion, tossed

there by some violent action of nature. Beneath 70-foot boulders propped one upon another, the sea finds its way to form beaches in great awesome caverns that seem sure to tumble if you speak aloud. So you do not speak aloud: you whisper, as in a cathedral. The light is dim blue and the water clear as glass above brilliant sand. I've seen nothing more impressive anywhere in the West Indies.

Though in a somewhat different way, Louis Bigelow's lizard's head on Guana Island gives you almost as big a jolt.

You do not accept the lizard. You sail around the western point of White Bay on Guana, just north of Tortola, and the lizard comes in sight against the sky and you deny it. Unless, you say to yourself, Gutzon Borglum once voyaged this way. The head, shaped massively in stone, projects above the sea from a lofty promontory; the cold reptilian eyes are on that instant, closed, but the beast seems about to breathe.

Louis Bigelow of Massachusetts found Guana—named in Spanish times for the lizard, the iguana—some 15 years ago. He'd been in Russia making movies for an educational foundation; he'd met, in Moscow, a girl named Beth Gillis, of Minneapolis, secretary to Walter Duranty of the New York Times. In the bleakness of Russian evenings Beth and Louis warmed themselves with talk of sun and sea and coral sand, of an uninhabited small island. That began it. The Bigelows, highly practical, studied maps. They made a trip into the South Pacific, discovered nothing that satisfied them. Then one day Louis sailed around the eastern end of Tortola and sighted Guana. Sun and sea and coral sand, and uninhabited.

Guana is small, perhaps only a mile and a half in greatest breadth, shaped rather like a sleeping turtle with a long tail pointing northwestward. White Bay makes a broad half moon of protected mooring ground caught between spurs of the green hills that lift steeply higher than 800 feet. Beth and Louis moved in with a tent. On an airy ridge they built with their own hands a thick-walled stone house on the foundations of a 1740 Quaker plantation house. Louis hammered a boat together. He brought in cattle and a few sheep and goats and turned them loose to multiply on the land. Beth made a garden. And then they added to the house, and Beth took time out to have two babies.

#### TREASURE TROVE

The Bigelows have constructed a self-contained small world, and made themselves a job to boot. Guana is operated today as a private club, for a few well-heeled northerners who sail down in winter to fish and swim.

You slip into the St. Thomas dream of pirate treasure if you stay awhile in the Virgins. One evening not long ago, as Louis composed a sunset tonic of rum and lime on his terrace, I asked about Norman Island, south of Tortola.

"There's a place called Treasure Point——"

"Yes," Louis said. "I've seen it. Story is that there was a treasure, but it's been lifted, long ago."

"Something could have been overlooked," I said.

"Not likely. Still, who knows? We might sail over and dig up a million dollars. After you've gone, of course."

I looked down on the quiet twilight sea funneling westward past all the verdant-seeming little islands, and I tasted the good daiquiri that Louis had made; peaceful end of an unhurried day; and so inevitably it occurred to me to ask, "What would you do with a million if you found it?"

"I don't know," Louis said.

"I know," Beth said. "We'd buy a pair of fancy cowboy boots for Bill to wear when he's riding his burro. And maybe a spangled shirt for Kim. And go right on living on Guana Island."

"Sure," Louis said. "That's it."

Except for the few windmill towers, the unobtrusive ruins decently overgrown by bush, souvenirs of heartbreak and the scarlet accumulations of history do not, in the Virgins, assault the traveler, as in so much of the world. There were never, of course, great battles or ineradicable scars; no eloquence in stone or glass recalls a time much before yesterday morning; the great names have not been many. Alexander Hamilton clerked in St. Croix. The impressionist painter Pissarro was born on St. Thomas. William Thornton left Tortola to design the Capitol in Washington. And from Little Jost Vandyke, John Coakley Lettsom went abroad 2 centuries ago to become the most distin-

guished London physician of his day. His monument, more enduring than the windmills, is four lines of doggerel:

*I, John Lettsom,  
Blisters, bleeds and sweats 'em.  
If, after that, they please to die;  
I, John Lettsom.*

Great men leave islands behind them. But there are always good men who stay. There are in Charlotte Amalie, today, men like Morris De Castro in government, like Antonio Jarvis, the writer and schoolmaster, working selflessly (and with very little praise) toward goals of dignity and education. Existing so precariously on the whim of tourists, the American Virgins may wish that there was some easier way of life; but they're not given up the struggle.

Senator JACKSON. Is it certain that all of the land involved in the proposed area of the park is of nonuse nature—that is, it cannot be used for farming or any other purpose in the island at the present time?

Mr. WIRTH. Within the park?

Senator JACKSON. Yes.

Mr. WIRTH. We are leaving out all the agricultural land. In 1 or 2 places there may be, in connection with a house, a little sidehill garden and also maybe a few little open places for grazing, but the commercial part of it is in the area being left out.

Senator JACKSON. What about mineral development?

Mr. WIRTH. There is no mineral development there that we know of or have heard of. I might add here—you asked about the plants—that there are more than 260 species of native woody plants in St. John, of which 154 are trees—this is in 1925—72 shrubs, 26 woody vines, and 8 cacti, and we could give you a partial list of just what they are.

Mr. BOYER. With the advent of jet transportation, Senator, it will be as though these islands were towed to the vicinity of Bermuda. I can leave New York, which I am going to do on Sunday, at 6:30 in the morning, and I will be swimming at Caneel Bay that afternoon. In other words, it is a very accessible place.

Senator JACKSON. You are not going by jet, though.

Mr. BOYER. No; but as soon as we go by jet, it will be even faster.

Mr. WIRTH. You are going by coach plane?

Mr. BOYER. Yes; to San Juan and then over Culebra to St. Thomas and to St. John by boat. The government runs a boat to Cruz Bay from St. Thomas.

Mr. EDWARDS. It is operated by the Virgin Islands government. It is an old Coast Guard boat.

Senator JACKSON. The Coast Guard took us over in 1951.

Mr. EDWARDS. They are specially arranged trips.

Mr. BOYER. They probably have more boats now than were there when you were there, and it is only 4 miles away, so it is very accessible to St. Thomas. The fact that it is an island does not mean that it is inaccessible.

Senator JACKSON. What is the power situation on the island? Is it all diesel-power stations?

Mr. BOYER. Power to date has always been provided on an individual basis.

Senator JACKSON. Local units?

Mr. BOYER. Caneel Bay Plantation, Inc., is in the process of negotiating a contract with VICORP—Mr. Edwards is handling the

details—whereby public power will be brought to St. John from St. Thomas. What is making it possible is the Caneel Bay Corp. guaranteed payments for power for 10 years.

In other words, we are committing ourselves to an expenditure of \$250,000 in order to bring power to the island. We will not be the sole beneficiary. The entire island will benefit.

Senator JACKSON. How many people will that take care of?

Mr. BOYER. It will take care of any foreseeable power demand of the island.

Senator JACKSON. Do you build transmission lines?

Mr. BOYER. An underwater transmission line, a submarine cable from St. Thomas.

Senator JACKSON. Then you have the problem of distribution lines over on the island. Your main power station will be, of course, in St. Thomas?

Mr. BOYER. Yes, sir.

Senator JACKSON. You will buy from existing establishments?

Mr. BOYER. Yes, sir.

Senator JACKSON. You will build your own distribution system?

Mr. BOYER. We will within the area, and VICORP—the Virgin Islands Corporation, which is a Federal corporation—will build its own distribution lines on the island for other customers.

Senator BIBLE. I was just wondering if you had any idea how many people visit the Virgin Islands at the present time.

Mr. BOYER. I really do not know, but I would say that 50,000 to 100,000 a year would be a fair estimate.

Senator BIBLE. As of now?

Mr. BOYER. I believe so. I really am not sure. However, I know it is growing and will continue to grow, because it is such a beautiful and interesting place.

Senator BIBLE. Thank you.

Senator JACKSON. Any further questions?

Senator BIBLE. That is all, Mr. Chairman. Thank you.

Mr. BOYER. To give you an indication of the traffic, I might say that 35 cruise boats which carry anywhere from 500 to 8,500 people stopped in St. Thomas last winter.

Senator JACKSON. One of the main problems in these islands is water; is that right?

Mr. BOYER. Yes, sir.

Senator JACKSON. And they have these catch basins all over the island?

Mr. BOYER. Yes, sir.

Senator JACKSON. What is the situation as to the water supply on St. John? Will you have an adequate supply for the projected needs?

Mr. BOYER. In order to provide adequate water for the Caneel Bay Plantation, which will be the largest hotel operation, we are in the process of building a water catchment basin at a cost of \$195,000.

Senator JACKSON. Could you supply for the record a statement of your projected development plans for the island or future development program? I mean, what do you contemplate building in the way of hotel facilities and other types of accommodations?

Mr. BOYER. I can only speak at the moment on the plans for Caneel Bay. We are so busy with that at the moment, Senator, that we have

not had a chance to think much about any expansion. However, the facilities at the Caneel Bay Plantation will take care of approximately 200 people a day. We will have 100 rooms. Now we are building 50 rooms, and we hope to expand it to 100.

Senator JACKSON. Building another unit?

Mr. BOYER. Yes; more cottages and more beach-front units.

Senator JACKSON. What will that investment amount to?

Mr. BOYER. That investment at Caneel Bay Plantation will be in excess of \$2½ million.

Senator JACKSON. \$2½ million?

Mr. BOYER. Yes.

Senator JACKSON. When do you expect to complete that program?

Mr. BOYER. January 1 of next year.

Senator JACKSON. You will?

Mr. BOYER. Yes, sir.

Senator JACKSON. That is amazing. How far along are you now? Is most of it being undertaken this year?

Mr. BOYER. Oh, yes, sir. We have a large construction outfit at work on the plantation at present. It has been closed for a year, and the construction is in its most active phase now.

Senator JACKSON. Will the rates be such that a variety of the American community can go there?

Mr. BOYER. Yes, sir; they will. It is not our desire at all to have the highest rates.

Senator JACKSON. Do you know approximately what you expect the rates to be?

Mr. BOYER. Yes, sir.

Senator JACKSON. I do not want to hold you to them. I mean a tentative estimate.

Mr. BOYER. They will be in the vicinity of \$15 to \$22 a day per person with all meals.

Senator JACKSON. That is the American plan?

Mr. BOYER. American plan.

Senator JACKSON. \$15 to \$22?

Mr. BOYER. Yes.

Senator JACKSON. What is it without the food?

Mr. BOYER. Since there are so few eating places on the island, it does not make much sense to provide a European plan, although I could break it down. You can figure that meals cost about \$10 a day.

Senator JACKSON. It did not occur to me that there might not be an alternative. The only alternative would be a lunch basket; would it not? Or K-rations, or something?

Mr. BOYER. We hope eventually to provide much lower cost facilities, such as fishing camps.

Senator BIBLE. Mr. Chairman, it occurs to me that Senator Butler's 1953 report, which I understand was drafted by our committee counsel, Stewart French, at Senator Butler's direction, is helpful on the point that I was asking Mr. Boyer I would to read a paragraph into the record. I think it will do quite a bit in clearing questions of tourism. This is on page 3 of the Virgin Islands Report:

The large part of this highly gratifying economic development is the result of increased tourist activity in the Virgin Islands. For 1952-53, the Virgin Islands Tourist Development Board reports that tourist revenues were \$6,440,446 as contrasted with \$1,989,046 in 1949-50, the year of my last previous visit (see

p. 127 below). This is a rise of well over 300 percent. During the 1952-53 season, some 126,284 persons visited the islands, contrasted with 36,280 4 years ago. Twenty large cruise ships visited St. Thomas in 1953 as against 12 in 1952 and 7 in 1951.

I think that is helpful.

Mr. BOYER. Yes. That is more than I thought.

Senator BIBLE. You underestimated.

Mr. BOYER. Yes.

Senator JACKSON. There is not any doubt but that the Virgin Islands offer a unique opportunity in the way of tourist development. I think it is about the main economic attraction of the islands. There is practically no industry there, and the main economic activity of the group is centered on the island of St. Croix.

With the decline of the rum business for one reason or another, if the island were to survive on the basis of its sugar production, it would be a pretty desperate operation. They are exporting a small amount of sugar now, I believe; are they not?

Mr. EDWARDS. The quota is 12,000 tons, and we are asking that it be increased to 15,000, and we just disposed of the rum factory.

Senator JACKSON. There is limitation as to the expansion?

Mr. EDWARDS. Very limited.

Mr. WIRTH. I might add to the report, in answer to the earlier question about agriculture in this same report, that Senator Bible referred to here. St. John has a total of 12,160 acres. 318 is cropland and 56 acres is land in cultivation, and clear pasture, 1,204. Then the rest is classified as wood and brush lands.

Senator JACKSON. You might either state briefly or supply for the record what you are going to do with these 50 acres over on the island of St. Thomas.

Mr. WIRTH. All right, sir. I could tell you briefly here. We have put on it a maximum of 50 acres. The purpose is to have what we might call our entrance to the park area from there and have a suitable dock and parking area and places for the buses or transportation to load and unload people on the boats going over to St. Croix.

Senator JACKSON. Is that a part of this \$120,000?

Mr. WIRTH. Yes, sir.

Senator JACKSON. It is not in addition to?

Mr. WIRTH. No. I think it is an addition to, but I do not think that will be exactly our total expenditure.

Senator JACKSON. I think it would be well if we would get a breakdown on the O. and M. and the projected construction program.

Mr. WIRTH. We have that.

Senator JACKSON. Supply it for the record. We do not need to go into it now.

Mr. WIRTH. All right, sir.

(The information referred to appears on p. 17.)

Senator JACKSON. Are there any other statements?

That will conclude the hearing this morning. The subcommittee will defer action on this until the other members have had an opportunity to go over it. I do not believe that it is wise to take hasty action. It is better to have a full and complete record before this subcommittee acts, and I would like to give the other members of the subcommittee an opportunity to go into this matter and to have their views and comments.

I will direct that certain other articles which have been supplied to the committee, and a letter from Fred Packard of the National Parks Association, also appear in the record.

(The articles and letter to which the chairman referred above are as follows:)

[Article to appear in the July-September 1955 issue of National Parks magazine]

#### PROPOSED VIRGIN ISLANDS NATIONAL PARK

(By Harold Hubler, Superintendent, San Juan National Historic Site, Puerto Rico)

Before World War II, the National Park Service was interested in the park potentialities of the American Virgin Islands. I was then stationed in the islands and I made a study and report. Particular attention was centered on the island of St. John, which is 50 miles east of Puerto Rico, some 1,442 miles southwest of New York City, and 900 miles southeast of Miami. There was no question in my mind as to the parklike qualities of St. John Island, but war had broken out in Europe and the idea was necessarily deferred.

In 1954, Mr. Laurance Rockefeller, who owns the Caneel Bay Estate on St. John Island, found the old report and became intensely interested in the possibilities of creating a Virgin Islands National Park. The next time he saw Director Conrad L. Wirth of the National Park Service, which was at Jackson Hole, Wyo., he discussed the Virgin Islands proposal with him, and it was decided that I should return to the island and make a second study to see whether the national park qualities which I had reported on before the war were still intact. As a consequence, it was my pleasure and privilege to return to St. John, after having been away for some 15 years, to look over familiar scenes. Mr. Rockefeller and some of his associates and Mr. Wirth came down to St. John Island and we spent several days of intensive reconnaissance and analysis of the proposed park project.

St. John Island is the most beautiful and undisturbed of the three United States-owned Virgin Islands. Its setting, in the colorful and calm channels of the island archipelago, its different and unusual scenic quality, plant life, and history are quite unlike any other reserve now included in our national park system. The plant and animal life of the area and the surrounding waters are of exceptional interest and educational value. It is a colorful, tropical island under the American flag, rich in historic, scientific, and recreation interests. Modern transportation methods have made it conveniently accessible. Opportunities exist for pleasant, year-round vacations.

The Carib Indians, originally from South America, left their marks on the island in the form of stone picture writings. Columbus sailed the waters in the region during his second voyage to the West Indies, and Sir Francis Drake piloted his ships close to its shores. Later, pirates found shelter in its many protected harbors. There are bush-covered remains of old 18th century forts and batteries that played important roles in the island's settlement. Extensive and rather elaborate estates were constructed in the early 18th century, when the island flourished on the production of sugar. Picturesque ruins of these estates are still in evidence.

St. John is a small island containing only 19.2 square miles of land. It is 9 miles long and nearly 5 miles wide at its widest point and rises abruptly from the sea to an elevation of 1,277 feet at the top of Bordeaux Mountain. At the present time, 85 percent or more of the acreage is covered with tropical vegetation and second-growth trees. The forest contains a large number of species not found on continental United States. It is also unique even in the Caribbean area.

Of scientific and educational interest are the Carib inscriptions or petroglyphs located at the water falls in the Reef Bay area. Here, archeological research was carried on by Theodore DeBooy, in 1916 and 1917. He states that the petroglyphs were made in pre-Columbian days and that many of the inscriptions have already been obliterated by weathering. Even so, there are, at the present time, distinct figures remaining on the rocks at the waterfalls and also on Congo Cay and Carvel Rock, off St. John, to the northwest.

Facts of scientific interest are offered not only to the archeologist, but to the biologist as well. Dr. Whitehouse of the University of Toronto found several rare species of dragonflies on the island. Ichthyologists have an unusual oppor-

tunity to study fish and other forms of marine life. Especially interesting are those forms inhabiting the coral reefs.

Botanists will find much of interest in the tropical and unusually rich, diversified plant life. According to the Scientific Survey of Puerto Rico and the Virgin Islands, by N. L. Britton, more than 260 species of native woody plants were specifically reported for St. John, of which 154 were trees, 72 shrubs, 26 woody species, and 8 cacti. Much of the colorful plant life is of interest to laymen, too, including orchids growing in their native habitat at the waterfalls area at Reef Bay. Camelburg Peak and the Bordeaux Mountain areas also are sites where many unusual species of plants grow. Since most of the island has been reverting to jungle for many decades, the flora shows considerable advancement in a natural succession toward its original condition.

Practically all of the St. John Island beaches abound in shells of many kinds, the most beautiful being the king and queen conch shells.

To become completely acquainted with the charm of the island, it is best to travel either by horseback or on foot. It is possible on most of the existing trails to plan a trip that will include both mountain scenery and seaside beauty, without retracing any of the route. Hikers and horseback riders do not find either of these activities uncomfortably hot under the tropical sun, because of the abundant shade and the constant blowing of the trade winds that give the island its equable climate. Perhaps the present park qualities and quiet atmosphere could best be preserved in the proposed park by confining auto traffic to Centerline Road and the more heavily traveled seashore drives along the east and northwest shores. Since there is no need for speed, roads should be kept as simple as possible. Trails should be maintained for horseback riding and hiking.

Boating possibilities appear to be unlimited. The many landlocked harbors and sheltered coves offer ample anchorage, and winds and tides are ideal for sailing most of the year.

Swimming from white sandy beaches is one of the most popular sports of the island, and there are ideal spots for picnicking along the roads and trails.

Aqua-lung enthusiasts find the sea around the island a treasure house for their underwater forays. The use of glass-bottomed boats would provide a means of introducing visitors to the marine world, hidden among the many reefs and rocks.

St. John possesses features and remains which tell the interesting and colorful story of the settlement of the Caribbean Islands and life as it existed from the time of the Carib Indian occupancy, throughout the second voyage of Columbus, down to the present time.

The proposed park would comprise a major part of the island of St. John, omitting the settled areas and arable land, and including certain nearby small islands and cays. Preservation of the Carib stone picture writings, the old forts, the estate ruins and other features of historic and scientific interest, as well as the uniquely scenic qualities, would be accomplished by establishment of the proposed Virgin Islands National Park.

NOTE.—Two bills, H. R. 5299 and S. 1604, to establish the Virgin Islands National Park, are being considered by Congress, and hearings already have been held.—*Editor*.

#### PRIMEVAL AREAS

Laurence S. Rockefeller has purchased and is offering to the United States Government half of an island in the Caribbean to be used as a national park and wildlife refuge. We presume the Government will accept the gift and keep the land for the enjoyment of the people when they can get to it.

More and more it seems areas, generally small, are being set aside to be kept in their primeval purity and beauty. Some areas have been set aside in this State to be used as State parks. If they are "developed" to any extent they will lose some of their attraction. We should like to see most of them left just as nature presents them.

We wish we could get one or more small areas within 15 or 20 miles of Ada to be owned by individuals and dedicated to public use or put in the ownership of the city. The areas need not be large: 75 or 100 acres. Wildlife would be left and protected. The only time a gun would be permitted would be to kill stray cats that happen to take up in the forests. Dogs should not be permitted in the area at any time. It would be nice to have water, but no manmade lake

should be constructed. It would be nice if some beavers would come and build dams, but man should not put an ax or hoe or bulldozer into use. Even the snakes should not be molested.

Such an area would be enjoyable for any person who likes nature as it used to be and will not be long hereabout unless action is taken soon.

---

#### A PRINCELY OFFER

Laurance S. Rockefeller's proposal that his family interests buy something like 8,000 acres on the beautiful island of St. John in the Virgins is a measure of change in social thinking. Mr. Rockefeller believes St. John to be one of the loveliest of unspoiled scenic islands yet remaining. He wishes to make of it a national park, where all may enjoy themselves.

A generation ago, a multimillionaire, admiring such a location, would, no doubt, have acquired it for himself, or, at best, earmarked it for an exclusive club of his friends.

Today a Rockefeller wishes it forever dedicated to popular uses. That is the kind of social democracy, distinctly not Marxian, that is steadily on the march in this country. Congress would do well to accept Mr. Rockefeller's offer on behalf of all the people.

---

[From the State Journal Lincoln, Nebr., November 24, 1954]

#### ON THE USES OF WEALTH

[From the Christian Science Monitor]

Laurance S. Rockefeller has purchased half of a particularly scenic island of the Virgin group in the Caribbean and is offering it to the United States for a national park and wildlife refuge.

This is not the first time Rockefeller philanthropy has taken the direction of helping to preserve an area of unspoiled wilderness or great natural beauty "as a public park or pleasuring ground for the benefit and enjoyment of the people"—to quote the quaint phraseology of the act of 1872 setting aside Yellowstone. Only last year the Rockefeller family let it be known that it was undertaking to aid in the expansion of Grant Teton National Park to the extent of \$6 million.

Add this to such things as the Rockefeller and Ford Foundations, the Carnegie Endowments and other similar funds, and it does not take much argument to establish the thesis that great concentrations of wealth in individual or family hands can be a blessing to society.

It would take enormous expense and effort to collect such sums from many small givers. And it can take a long time to educate the public to an active appreciation of some of the pioneering projects which a few wealthy men have made possible.

But such a thesis could be pushed too far, of course. It would lead to an assumption that a society which fostered great accumulations of wealth in a few hands would be the best society. History does not bear that out. So much depends on what kind of hands. It is probably sounder over the long run to have a nation's wealth widely distributed at a moderate level.

The American economy has been moving toward such broad distribution. So theorizing beyond a point becomes a bit academic. Which shouldn't prevent us, notwithstanding, from voicing appreciation when great private fortunes are used with so much enlightenment.

---

[From the Courant, Hartford, Conn., November 26, 1954]

#### A DREAM ISLAND IN THE CARIBBEAN

One of the privileges of Americans is taking pleasure in the beauties of nature as preserved in our national parks. From Maine's Acadia National Park on Mount Desert Island, they stretch south and west across the country, with Yellowstone, Yosemite, and the Grand Canyon as what may seem the ultimate in curiosity and breathtaking grandeur.

Now there is the possibility that another national park, the gift of Laurance Rockefeller, may be developed on the island of St. John in the Virgin Islands. A trip to the Caribbean Sea with the prospect of visiting rock carvings made long ago by the Carib Indians, tropical plants, ancient sugar mills restored to bring back the primitive culture of slave-plantation days, would be what may seem to many an ideal vacation trip. Above all, there are the blue trade-wind skies, the green mountains and white sands, and the incredibly clear sea.

This is a project that has been in the minds of the national-park officials for nearly 15 years. The park would be a big one, as Mr. Rockefeller has obtained options on 12,700 acres. They include a 650-acre resort area with beach accommodations for tourists, a central dining hall, and vacation facilities for boating and fishing in the Caribbean.

If the plan goes through, Laurance Rockefeller will be offering his fellow Americans a vacation spot as well worth seeing as Williamsburg, Va., developed by his father, John D. Rockefeller, Jr. Although St. John Island is not so vitally linked to the tradition of historic America, yet in its way it will remind visitors of their seafaring ancestors, who roamed the Caribbean in their home-built vessels, trading tobacco and hides for the precious sugar and molasses that made more palatable the staple New England breakfast of the famous hasty pudding.

Laurance Rockefeller calls St. John's "a dream island." There are many Americans who will dream happily of an island vacation if the Government accepts the gift, and puts the project through.

---

[From the *Virginian-Pilot*, Norfolk, Va., November 20, 1954]

#### CARIBBEAN PARADISE REGAINED?

President Hoover was returning from a Caribbean cruise aboard the battleship *Arizona* when he issued an ill-starred statement about the Virgin Islands. The time was April 11, 1931, and the Nation was in the grip of depression. The headlines quoted Mr. Hoover as saying that when the United States purchased the Virgin Islands from Denmark in 1917 \$25 million was paid for "an effective poorhouse."

The Nation was tired of "the depression" and weary of prohibition. In North America and in South America Mr. Hoover was criticized for his indiscreet faux pas. Latin Americans said the United States created the poorhouse in the islands it purchased from Denmark as a coaling station, when it enacted national prohibition. In North America it was pointed out that the President had chosen a poor time to say of any American-owned Territory that there seemed "no hope of economic rehabilitation."

There was hope. National prohibition was repealed. In 1939 Harold A. Hubler of the National Park Service visited the Virgin Islands. He was so impressed with their beauty that he wrote a report proposing that a national park be established on St. John, the smallest of the three islands of the group bought by the United States. The idea was filed in the archives of the National Park Service. Now Laurance S. Rockefeller, the third son of John D. Rockefeller, Jr., has acquired options to purchase about half of the scenic island. By donating an estate he already owns there, he may eventually be in possession of about two-thirds of the island, which he would like Congress to accept and dedicate as a national park.

Mr. Rockefeller, long interested in conservation, thinks a park in the Virgin Islands would be a national step in that direction. It really would be a hemisphere stride. St. John was described by early visitors as a "paradise." Once having discovered its beauty, many American tourists would journey on to South America. Time and fortune and vision may work some magic on the snow-white beaches of an old coaling station.

---

[From the *Inquirer*, Philadelphia, Pa., November 21, 1954].

#### ANOTHER NATIONAL PARK

Laurance Rockefeller's efforts to acquire some two-thirds of St. John Island in the Virgin Islands which he proposes to turn over to the United States as a national park are in a fine American tradition and should receive whole-hearted

support. The island of St. John is one of the few unspoiled spots in the Caribbean and could be a priceless treasure if preserved in its natural state.

Unfortunately the National Park Service has been permitted to deteriorate over the past decade and a half to the point where it may have difficulty accepting the gift. Bernard DeVoto has repeatedly insisted in *Harpers* magazine that the only way to prevent complete despoilment of the natural beauties of Grand Canyon, Yellowstone National Park, and others is to close them to the public.

That seems an extreme view and undoubtedly is intolerable to most people. Yet if Congress persists in holding back even the equivalent of the small fees now charged visitors for the parks' upkeep something in this nature will have to be done. With private interests seeking constantly, on the one hand, to encroach on the public preserves and neglect taking a yearly toll on the other, our national park system apparently is headed for destruction. It must be saved.

[From the Observer Dispatch, Utica, N. Y., November 22, 1954]

### TO KEEP ISLAND NATURAL

Laurance S. Rockefeller wants to give two-thirds of the Island of St. John in the Virgin Islands to the United States National Park Service.

The island is 9 miles long and 5 miles wide and speaking of it, Mr. Rockefeller said, "I found the combination of mountains, beaches, and the sea unique in the Caribbean. The unspoiled nature of the area appealed to me and I wish to preserve it against overdevelopment."

That is what the people of the State of New York sought when they put into the State's constitution the declaration their lands in the Adirondacks shall be kept forever wild. They have had a hard time keeping them that way and here's hoping it won't be so difficult for Mr. Rockefeller with St. John.

Whether his valuable offer will be accepted depends upon Interior Secretary McKay and Congress. The Virgin Islands were purchased in 1917 from Denmark for \$25 million.

The Rockefellers who have launched many sorts of projects beneficial to the Nation have rescued numbers of areas from despoilation, including the Grand Teton National Park, Wyo.; the Jackson Hole Preserve; Acadia, Maine; Great Smoky Mountains, Tenn.-N. C.; and Shenandoah, Va.

St. John is described as the most beautiful of the Virgin Islands—a paradise.

[From the Mirror, New York, N. Y., December 12, 1954]

### LAURANCE S. ROCKEFELLER: PLAN FOR A PARADISE

For the past 5 years Laurance Spelman Rockefeller has been spending his winter vacations cruising around the Caribbean islands. About 3 years ago, he and wife, Mary, and a few friends stopped for lunch at St. John, smallest of the three Virgin Islands which the United States bought from Denmark in 1917 for \$25,000,000. The place they stopped at is called Madam Boulon, a little resort with 40 "pillows," hotel language which means it can sleep 40 people.

"It looked very good and I couldn't forget it," Rockefeller said recently in his offices at Radio City. "We returned the following winter to the same place."

He bought about half the island after his second trip, and fell so in love with its beauty he now wants to share it with all of us. He hopes to get about two-thirds of the 9 by 5-mile island and give it to America for a national park.

"I just started out to preserve a limited area, as a business," he said, "and develop a unique resort for people who work hard and want peace and loveliness on their vacations. But it developed into a larger concept of a national park so all America could preserve it forever. The resort will be nonprofit now."

St. John is ideal in every respect: Unmatched loveliness. Beautiful beaches and mountains. Lush with its own fruit and vegetables. Little or no humidity. Temperatures that never go below 70 or above 90.

Plans, maps, and models of the area and project litter his office. In his excited efforts to make it a national park, Rockefeller learned that in 1939, a member of the National Park Service had written a glowing report of St. John recommending it for the same purpose. Last month he spent 5 days inspecting the island with Frank Stick, famous conservationist of Kitty Hawk, N. C., and Conrad Wirth, Director of the National Park Service.

"Bot of them were very impressed," Rockefeller said, "and now we hope to talk to the Secretary of the Interior about the whole plan, and we pray he'll approve the idea and recommend it to Congress."

## LESSONS OF WEALTH

He's 44, a lean, energetic man, square-jawed, and tenacious. Married to Mary French in 1934, they have three daughters and a son. The third son of John Davison Rockefeller, Jr., he had to learn early, just as his four brothers did, that wealth was not an invitation to indulgence but a deep responsibility. Business and philanthropy were matters of careful and considered judgment.

Early, even as a kid, Laurance Rockefeller developed a passion for machines, gadgets, and planes. His desk is crowded with plane models. All the Rockefeller boys never felt they had enough allowance, and did something about it. Laurance and Nelson ran errands, shined shoes, hoed gardens, raised rabbits to sell to laboratories, and killed flies at 10 cents a 100. Laurance went to Lincoln School at Columbia for his elementary and high-school work and then to Princeton.

"Where I majored in philosophy," he said, "I took every philosophy course the university gave. I'm the practical type."

He's far from impractical. He holds the family seat on the New York Stock Exchange. Always a bug on civil aviation, he and Eddie Rickenbacker started Eastern Air Lines, and he's still a director. He backed a skillful, but unorganized engineer named J. S. McDonnell, and the plane company they formed produced one of the first American jets, and the first to take off from a carrier.

## ALWAYS THE FUTURE

During the war he was a lieutenant commander in the Navy's Bureau of Aeronautics, serving in plane production. After the war he became president of Rockefeller Bros., Inc., an investment and research outfit which explores the needs for venture capital in such fields as housing, aviation, and electronics. And among other efforts he's now chairman of the board of Rockefeller Center. An astute, ambitious man, he once measured a business deal this way:

"Just commonsense, if you stop to think of it," and then added: "Maybe commonsense is so rare because so few people stop to think."

His plan for a paradise on St. John is commonsense, too. A construction team is already on the island with planners and engineers. To keep the noise and bustle away from the vacationists, fuel docks, warehouses, and power plants, the dynamics of a town, are being built over a hill at least a mile away from the resort. Sewers and even hot water are being installed. The old sugar mills and plantation once there are being restored to their original charm.

"And the hotel resort itself will be expanded from 40 to 90 pillows," Rockefeller said. "With a top limit of 100."

There are no phones. But there are fishing, bathing, sailing, cruising, mountain climbing, and skin-diving. And the rates are the same as any other Caribbean resort like St. Thomas or St. Croix. By hard work he hopes to get it opened by December 1955, and welcome the first group of tourists who like little noise, uncomplicated living and simple beauty.

"The whole idea is to keep its beauty simple and unspoiled," he said. "But you know simplicity can be a very expensive thing."

---

[From the Herald Tribune, New York, N. Y., November 20, 1954]

## L. S. ROCKEFELLER GIVES DETAILS OF ISLAND OFFER

(By Robert S. Bird)

Poring over charts and photographs, Laurance S. Rockefeller explained in his office at Rockefeller Center yesterday why he wants to give to the Nation for a national park a sizable chunk of island paradise which he has acquired in the Caribbean Sea.

Mr. Rockefeller, the third son of John D. Rockefeller, Jr., is offering about one-half of the island of St. John in the Virgin Islands to the Government for a national park.

He returned from an inspection tour of the place a few days ago, and talked yesterday as a man who had fallen in love with a dream island of such incomparable beauty, climate, and many-sided interest that he felt the Nation should preserve it forever.

## 15-YEAR-OLD REPORT

He was not the first to feel that this particular island should be incorporated into the national-park system, however, for he had on his desk an enthusiastic 15-year-old report by a national-park official who had visited the place and studied it before World War II.

St. John, according to both Mr. Rockefeller and the earlier park recommendation report, is a mountainous island covered with exotic tropical trees and shrubs, rimmed by perfect beaches of whitest sand laved by turquoise seas, rich in early colonial ruins. It possesses valuable rock carvings of the little-known Carib Indian aborigines who occupied the island when Columbus discovered it, and is surrounded by nearly 100 small islands advantageous for fishing, skin-diving, boating, and water sports of all kinds.

## NINE MILES BY FIVE

One of the Leeward Islands of the Caribbean chain, it is separated from St. Thomas Island on the west by a rough but narrow body of water and from nearby British islands by Sir Francis Drake Channel. It is 9 miles long and about 5 miles wide. Mr. Rockefeller now has options on about one-half of its 12,700 acres, including a 650-acre resort area which would be the nucleus of a park development if Congress should accept the gift offer.

"Our hope is to restore some of the old sugar mills which still stand from the days of the great slave plantations, and to recreate some of that ancient plantation atmosphere," Mr. Rockefeller said. "We have an ideal site of about 9 acres where a fine planting could be made of sugarcane, bay trees, and other plants and shrubs which were of economic importance in those early days.

"I think tourists would be most interested in seeing these unusual trees and plants, and perhaps some of the processes that were used in the primitive mills of the slave area.

"The existing facilities for a beach colony—bungalows and dining-hall facilities—could be extended indefinitely to provide for the needs of tourists who might come here for fishing, boating, skin-diving, swimming, and all the recreations of a tropical island.

"St. John's is unique in its climate. It is so small that it escapes the humidity that makes all the larger islands uncomfortable. In fact, last week we measured the humidity and found it to be only 8 percent.

"The island will soon be only a few hours away from New York and other large cities on the mainland, and there are no better cruising waters in the Caribbean than around it and its tiny offshore islands."

## CLEAR WATERS

As a place for skin-diving, the waters of the island are almost perfect, according to Mr. Rockefeller, for even the deepest channels are so clear that coral bottoms and their rich marine life are clearly visible. The trails into the mountains offer vistas of breathtaking beauty, and the countryside is replete with exotic plants, many of them of rare botanical interest. There are no wild animals on the island and no poisonous snakes.

The history of the island, which is interesting enough in itself, becomes all the more so on a visit because much remains of ruins from its early settlement days.

It was first settled permanently by the Danish West India and Guinea Co. in 1717, when 20 planters and 5 soldiers landed at Coral Bay on the east end of the island. By 1721, 38 planters had taken up estates, and the place was gay and prosperous.

But in 1733, 2,500 slaves revolted against the white planters and overseers, and the island was plunged in bloody turmoil for months until French soldiers from the island of Martinique arrived and quelled the riot.

The place has historical pirate associations, and has a small native population. Many primitive customs survive to offer much interest to the tourist.

One of the persons who went on the inspection trip sponsored by Mr. Rockefeller last week was Conrad Wirth, director of the National Park Service, who was deeply impressed with the place, according to Mr. Rockefeller. Mr. Wirth will make a report to the Secretary of the Interior, who will decide whether or not to recommend acceptance of the Rockefeller gift by the Government.

[From the Herald Tribune, New York, N. Y., November 22, 1954]

### MR. ROCKEFELLER'S FINE OFFER

The island of St. John appears from every account to be an incomparable spot of bliss and beauty. This is the bit of paradise in the Virgin Islands that has won the heart of Mr. Laurance S. Rockefeller so completely that he wants to give a large part of St. John to the American people for a national park. Such magnanimity is inspiring; Mr. Rockefeller has made a splendid proposal. Having fallen in love with St. John, he wants the entire Nation to share in the delight.

It is easy to understand why this island excites ecstasy. There are green mountains, white beaches, and seas of the purest turquoise. The place is unspoiled; it has a history that goes back to Columbus. Once there were great plantations on St. John; the ruins of earlier civilization are fascinating. The island, 9 miles by 5, is covered with trees in tropical richness and ringed by beaches of extraordinary beauty. The climate is practically perfect; St. John offers everything that the tourist could wish for.

There is every reason that St. John should be preserved for the enjoyment of the Nation. Such regions of felicity, where nature's enchantments are so uniquely combined, are only too rare. It is to be hoped that the Department of the Interior will make an enthusiastic recommendation to Congress and that Mr. Rockefeller's offer will be quickly accepted with a vote of thanks from all the people.

---

NATIONAL PARKS ASSOCIATION,  
Washington, D. C., April 28, 1955.

Senator JAMES E. MURRAY,

*Chairman, Senate Committee on Interior and Insular Affairs,  
United States Senate, Washington, D. C.*

DEAR SENATOR MURRAY: The National Parks Association wholeheartedly endorses S. 1604, to establish the Virgin Islands National Park, and urges that it be enacted as promptly as possible.

We have had opportunity to investigate this project thoroughly and have studied photographs of the natural and historic features of St. John Island. We

are convinced that the area is fully qualified for national park status, and would be a valuable addition to the national park system. Not only is it beautiful and unusual, but it offers excellent opportunity for types of recreation not available elsewhere in the national park system, that can be enjoyed by the public without any impairment of the natural character of the park.

Mr. Rockefeller and the National Park Service have prepared plans that represent the ideal for development of a national park. While appropriate administrative and other buildings will be within the park, most of the accommodations and facilities for the public will be located in already developed areas outside the park boundaries. This will benefit both the park and local enterprise.

The intention to provide a marine museum on the island is admirable, because there are few such facilities in the United States. The opportunities for aqua-lung exploration of the vast underwater wilderness around the island should be an attraction to the public, and add to the significance of the museum.

It is to be noted that the local sentiment appears to be entirely in favor of the establishment of this national park.

We invite your attention to the desirability of your committee's action on this legislation as soon as possible, so we will not run the risk of being caught in the pressure of business that inevitably develops during the end of a session of Congress. If hearings are called, we should appreciate an opportunity to express our support of this legislation, and request this letter be made a part of the official record.

Yours sincerely,

FRED M. PACKARD,  
*Executive Secretary.*

Thank you very much.

(Whereupon, at 11:50 a. m., the subcommittee recessed.)

# RELIEF OF DESERT LAND ENTRYMEN IN ARIZONA

FRIDAY, MAY 27, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION  
OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
Washington, D. C.

The subcommittee met, pursuant to call, at 10 a. m., in room 224, Senate Office Building, Hon. Clinton P. Anderson (chairman of the subcommittee) presiding.

Present: Senator Anderson (presiding).

Present also: Senator Goldwater.

Present also: Goodrich W. Lineweaver, staff member for reclamation; Elmer K. Nelson, consulting engineer; and N. D. McSherry, assistant chief clerk.

Senator ANDERSON. The committee will be in order.

The bill we have under consideration is S. 1177.

(The bill referred to follows):

[S. 1177, 84th Cong., 1st sess.]

A BILL For the relief of desert land entrymen whose entries are dependent upon percolating waters for reclamation

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the requirement of section 1 of the Desert Land Act of March 3, 1877 (19 Stat. 377), that the right to the use of water by a desert land entryman "shall depend upon bona fide prior appropriation" shall be waived in the case of all desert land entries which have heretofore been allowed and are subsisting on the effective date of this Act, which are dependent upon percolating waters for their reclamation, and which are situated in States under the laws of which the percolating waters upon which the entries are dependent are not subject to the doctrine of prior appropriation*

Senator ANDERSON. We will put in the record, following the text of S. 1177, the letter of April 12 from Donald R. Belcher, Assistant Director of the Bureau of the Budget, the letter of April 15 from Orme Lewis, Acting Secretary of Interior to Senator Murray, and the opinion of the Acting Solicitor of the Department. There are a number of definitions in the opinion dealing with the validity of desert land application entries in Arizona which it seems to me ought all go in the record. Therefore, we will incorporate all of these documents in the record at this point.

## REPORTS OF BUDGET AND DEPARTMENT OF THE INTERIOR

(Reports of the Bureau of the Budget and the Department of the Interior are as follows:)

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., April 12, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington 25, D. C.*

MY DEAR MR. CHAIRMAN: Reference is made to your request for the views of the Bureau of the Budget with respect to S. 1177, for the relief of desert land entrymen whose entries are dependent upon percolating waters for reclamation.

The Desert Land Act of March 3, 1877 (43 U. S. C. 321), requires that the right of desert land entrymen to the use of water for reclaiming their entries "shall depend upon bona fide prior appropriation." S. 1177 would waive this requirement in the case of desert land entries which have heretofore been allowed and are subsisting on the date of enactment of the bill, which are dependent upon percolating waters for their reclamation, and which are situated in States where percolating waters upon which the entries are dependent are not subject to the doctrine of prior appropriation.

Although the bill is written on a general basis, it is our understanding that the bill is directed at a problem which arose in Arizona as a result of a recent decision by the supreme court of that State. That decision has the effect of preventing certain desert land entries from going to patent. The circumstances are described in greater detail in the report which the Department of the Interior is making to your committee. Since the entries were applied for in good faith and the entrymen have apparently made expenditures and performed work with a view to securing patent to the entries, it would appear fair to provide relief to these entrymen.

This Bureau would have no objection to the enactment of S. 1177.

Sincerely yours,

DONALD R. BELCHER,  
*Assistant Director.*

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C., April 15, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington 25, D. C.*

MY DEAR SENATOR MURRAY: This is in reply to your request for the views of this Department on S. 1177, a bill for the relief of desert land entrymen whose entries are dependent upon percolating waters for reclamation.

I recommend that S. 1177 be enacted.

Section 1 of the Desert Land Act of March 3, 1877 (43 U. S. C., 1952 ed., sec. 321), requires that the right of desert land entrymen to the use of water for reclaiming their entries "shall depend upon bona fide prior appropriation." S. 1177, if enacted, would waive this requirement in the case of all desert land entries which have heretofore been allowed and are subsisting on the effective date of the statute, which are dependent upon percolating waters for their reclamation, and which are situated in States under the laws of which the percolating waters upon which the entries are dependent are not subject to the doctrine of prior appropriation.

During the past year, a question has arisen in the Department with respect to the meaning of this provision of the Desert Land Act and its effect upon desert land entries in the State of Arizona which are dependent for irrigation upon percolating waters, i. e., underground water which does not flow in a well-defined channel with banks. The question arose primarily as a result of a recent decision by the Supreme Court of Arizona with respect to the law of the State governing percolating waters. In that decision, *Bristor v. Cheatham* (75 Ariz. 227, 255 P. 2d 173), decided on March 14, 1953, the Arizona court held that percolating waters in that State are not subject to the doctrine of prior appropriation but are subject only to the doctrine of reasonable use.

The Bristor decision raised the question whether desert land entries for lands in Arizona could be allowed or patented where such entries are dependent on percolating waters for reclamation. The question was referred to the Acting Solicitor of the Department who has rendered an opinion holding that such entries cannot be allowed or patented under the Desert Land Act since the right of the entrymen or the applicants for entry to use percolating waters does not depend

upon prior appropriation. A copy of the Acting Solicitor's opinion, M-36263, dated February 23, 1955, is attached. It discusses the problem in detail.

According to the Bureau of Land Management of this Department, there are approximately 158 desert land entries in Arizona which have been allowed and are currently subsisting but which are dependent on percolating waters for reclamation. The entries were applied for in good faith and the entrymen have apparently made expenditures and performed work with a view to securing patents to the entries. In many cases the expenditures have been substantial. However, under the law as set forth in the Acting Solicitor's opinion, the entries cannot go to patent so long as the percolating waters on which they are dependent are not subject to appropriation. This means that in time, as the statutory life of the entries expires, the entrymen will lose the fruits of their labor and expenditures. Immediately, because of this prospect, the entrymen are uncertain as to whether to proceed with their work on the entries.

In these circumstances, it seems only fair and equitable that the entrymen should be allowed to perfect their entries regardless of the requirement in the Desert Land Act that they have a water right dependent upon prior appropriation. S. 1177 would accomplish this purpose. It would simply waive in the case of these entries the requirement that the right to use of water depends on prior appropriation. In all other respects, such as reclamation and expenditures, the entrymen would remain subject to the requirements of the Desert Land Act.

The problem under consideration has so far arisen only in Arizona. S. 1177, however, has been drawn on a general basis and would thus take care of any similar problem in other States to which the Desert Land Act applies.

It should be noted that the bill applies only to existing entries which have been allowed. The bill will not permit future desert land entries to be made in Arizona which are dependent on percolating waters. Whether broader legislation should be enacted is a matter on which the Department takes no position at this time. The Department's immediate concern is in affording relief to existing entrymen who have an immediate problem on their hands, and the Department urges that such relief be granted without delay.

The Bureau of the Budget has advised that there is no objection to the submission of this report to the committee.

Sincerely yours,

ORME LEWIS,  
*Acting Secretary of the Interior.*

#### ACTING SOLICITOR'S OPINION

(The opinion of the Acting Solicitor is as follows:)

M-36263

FEBRUARY 23, 1955.

#### VALIDITY OF DESERT LAND APPLICATIONS AND ENTRIES IN ARIZONA DEPENDENT ON PERCOLATING WATER FOR RECLAMATION

##### *Desert land entry: Water right*

When Congress provided in the Desert Land Act that the right to use of water by the entryman "shall depend upon bona fide prior appropriation," Congress used the words "prior appropriation" as words of art having reference to the well-established doctrine of prior appropriation then obtaining in the Western States and Territories.

##### *Desert land entry: Water right*

Whether water is subject to prior appropriation as required in the Desert Land Act is a matter governed by State law.

##### *Water and water rights: State laws*

Under the second opinion of the Arizona Supreme Court in the case of *Bristol v. Cheatham*, percolating waters are not subject to the doctrine of prior appropriation but only to the doctrine of reasonable use.

##### *Desert land entry: Water right*

Applications for desert land entries in Arizona cannot be allowed, and allowed desert land entries in that State cannot be patented, where the entries are dependent upon percolating waters for reclamation.

M-36263

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SOLICITOR,  
Washington 25, D. C., February 23, 1955.

## Memorandum.

To: Director, Bureau of Land Management.

From: Acting Solicitor.

Subject: Validity of desert land applications and entries in Arizona dependent on percolating water for reclamation.

You have requested my opinion as to whether, in view of the decision by the Supreme Court of Arizona in the case of *Bristor v. Cheatham* (75 Ariz. 227, 255 P. 2d 173 (1953)), applications for desert land entries in that State can be allowed or allowed desert land entries in that State can be patented where reclamation of the entry depends upon percolating water.

As the term "percolating water" is used in your request and this opinion, it means underground water which does not comprise or is not part of an underground stream which has a well-defined channel and banks and a current.

Section 1 of the Desert Land Act of March 3, 1877 (43 U. S. C., 1952 ed., sec. 321), provides in part as follows:

"\* \* \* it shall be lawful for any citizen of the United States \* \* \* to file a declaration \* \* \* that he intends to reclaim a tract of desert land \* \* \* by conducting water upon the same \* \* \*: *Provided, however,* That the right to the use of water by the person so conducting the same \* \* \* shall depend upon bona fide prior appropriation: \* \* \* and all surplus water over and above such actual appropriation and use, together with the water of all, lakes, rivers and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes subject to existing rights" (19 Stat. 377).

The answer to your question depends upon the interpretation to be given to the specific portion of the quotation from the act which requires that "the right to the use of water by the person so conducting the same \* \* \* shall depend upon bona fide prior appropriation."

In *California-Oregon Power Co. v. Beaver Portland Cement Co.* (295 U. S. 142. (1935)), the United States Supreme Court held that a homestead patent issued in 1885 for land bordering on a stream did not carry with it the common law riparian right to have the stream flow by the land in its accustomed channel without substantial diminution. This holding was based on the Court's interpretation of the provision of section 1 of the Desert Land Act following the clause just quoted and beginning with "and all surplus water," etc. Although the Court was not directly concerned with the clause under consideration here, it discussed at length the background of the Desert Land Act and made a number of statements which are very illuminating with respect to the point at issue. The more significant statements follow:

"For many years prior to the passage of the act of July 26, 1866 \* \* \* the right to use of waters for mining and other beneficial purposes in California and the arid region generally was fixed and regulated by local rules and customs. The first appropriator of water for a beneficial use was uniformly recognized as having the better right to the extent of his actual use. The common law with respect to riparian rights was not considered applicable, or, if so, only to a limited degree. \* \* \* The rule generally recognized throughout the States and Territories of the arid region was that the acquisition of water by prior appropriation for a beneficial use was entitled to protection \* \* \*" (p. 154). [Emphasis added.]

"That body [the Congress] thoroughly understood that an enforcement of the common-law rule, by greatly retarding if not forbidding the diversion of waters from their accustomed channels, would disastrously affect the policy of dividing the public domain into small holdings and effecting their distribution among innumerable settlers. In respect of the area embraced by the desert-land States, with the exception of a comparatively narrow strip along the Pacific seaboard, it had become evident to Congress, as it had to the inhabitants, that the future growth and well-being of the entire region depended upon a complete adherence to the rule of appropriation for a beneficial use as the exclusive criterion of the right to the use of water" (p. 157). [Emphasis added.]

"In the light of the foregoing considerations, the Desert Land Act was passed, and in their light it must now be construed" (p. 158).

These extracts from the Power Co. case leave little doubt that the rule of prior appropriation was a well-established doctrine of water law in the Western States and Territories at the time the Desert Land Act was passed and that, when

Congress provided in the act that the right to use of water by a desert land entryman "shall depend upon bona fide prior appropriation," Congress used the words "prior appropriation" as words of art having a clear and precise meaning.

The question then presents itself whether the right to appropriate water for the reclaiming of a desert land entry is a matter governed by State law or Federal law. The *Power Co.* case provides the answer. The Court stated in that case:

"As the owner of the public domain, the Government possessed the power to dispose of land and water thereon together, or to dispose of them separately. \* \* \* The fair construction of the provision now under review<sup>1</sup> is that Congress intended to establish the rule that for the future the land should be patented separately; and that all nonnavigable waters thereon should be reserved for the use of the public under the laws of the States and Territories named" (p. 162). [Emphasis added.]

"Nothing we have said is meant to suggest that the [Desert Land] act, as we construe it, has the effect of curtaining the power of the States affected to legislate in respect of waters and water rights as they deem wise in the public interest. What we hold is that following the act of 1877, if not before, all nonnavigable waters then a part of the public domain became publicijuris, subject to the plenary control of the designated States, including those since created out of the Territories named, with the right in each to determine for itself, to what extent the rule of appropriation or the common-law rule in respect of riparian rights should obtain. \* \* \* The Desert Land Act does not bind or purport to bind the States to any policy. It simply recognizes and gives sanction, insofar as the United States and its future grantees are concerned, to the State and local doctrine of appropriation, and seeks to remove what otherwise might be an impediment to its full and successful operation" (pp. 163-164). [Emphasis added.]

It is clear, then, that whether a desert land entry in Arizona can be based upon percolating water depends upon whether, under the law of Arizona, percolating water is subject to the doctrine of prior appropriation.

This question was settled only relatively recently in the case of *Bristor v. Cheatham*, supra. To appreciate the full significance of that case, a brief consideration of the history of the Arizona law on percolating water is necessary. The first pronouncement by the Arizona Supreme Court on the subject of percolating water apparently was in the case of *Howard v. Perrin* (76 Pac. 460 (1904), aff'd 200 U. S. 71 (1906)). In that case, the court stated that percolating water, as distinguished from water in an underground stream, belonged to the owner of the soil and was not subject to appropriation by another.

In *Maricopa County Municipal Water Conservation District No. 1 et al. v. Southwest Cotton Co. et al.* (4 P. 2d 369 (1931)), the Arizona court decided to treat the subject of underground water as a matter of first impression. In a lengthy opinion, the court concluded that "our holding in *Howard v. Perrin*, supra, that percolating subterranean waters were not subject to appropriation, was and still is the law of Arizona" (4 P. 2d, at p. 376).

Then came the case of *Bristor v. Cheatham*. This was an action by the plaintiffs to restrain the defendants from diverting water which the plaintiffs were pumping from domestic wells on their property. The plaintiffs alleged as a first count that the defendants had sunk a number of large wells on defendants' property to a common source of underground water underlying the lands of both and were pumping and conveying the water 3 miles distant to reclaim other land owned by the defendants, and that this withdrawal of water was drying plaintiffs' wells. In a second count, the plaintiffs alleged that the waters from which their wells were supplied were taken from an underground stream. The action was dismissed on both counts by the lower court.

When the case came before the Supreme Court of Arizona, the court first held on January 12, 1952, that its ruling in *Howard v. Perrin* was dictum and contrary to the Desert Land Act; it overruled that case and held that percolating waters are subject to the doctrine of prior appropriation (*Bristor v. Cheatham*, 240 P. 2d 185). A rehearing was granted, following which the court reversed itself on March 14, 1953 (255 P. 2d 173). The court said:

"The State of Arizona through its legislature has adopted its policy and local doctrine to the effect that ground waters are not subject to appropriation. It seems the only answer, therefore, is that a prior right to the use of ground waters cannot now be acquired and never could have been acquired under the law of prior appropriation. We hold, therefore, that such waters are not subject to any law of appropriation" (255 P. 2d, at p. 177). [Emphasis added.]

<sup>1</sup> The clause in sec. 1 of the act commencing with "and all surplus water," etc.

The court went on to hold that the owner of land overlying percolating water has a right to use the water subject to the doctrine of reasonable use, as distinguished from the doctrine of correlative rights. Under the latter doctrine, a landowner would be limited to his proportionate share of the percolating water underlying his land and the lands of his neighbors. Under the doctrine of reasonable use, a landowner may use, without any liability to an adjoining user, as much of the percolating water as he can reasonably put to a beneficial use on his land even though it exceeds his proportionate share of the water. See 55 A. L. R. 1385 and 109 A. L. R. 395.

It is plain from the two opinions in the *Bristor* case that the doctrine of prior appropriation is diametrically opposed to the doctrine of reasonable use. Under the first doctrine, a prior appropriator acquires a legal right to a definite quantity of water which cannot be diverted by any subsequent appropriator even though the latter could put the water to a beneficial use. Under the second doctrine, a prior user of water acquires no right to the quantity of water used. Any subsequent user of water, by drilling a larger well or installing a more powerful pump, can, without liability, drain him dry so long as the water is put to a beneficial use by the subsequent user.

I find it impossible therefore to interpret the clause in the Desert Land Act which requires that "the right to the use of water \* \* \* shall depend upon bona fide prior appropriation" as encompassing the doctrine of reasonable use as set forth in the second *Bristor* opinion.

The Department's regulations do not sanction the allowance or patenting of a desert land entry which depends upon percolating water which is subject only to the doctrine of reasonable use. The pertinent regulation currently in effect (43 CFR 232.13; 19 F. R. 9084), which has been unchanged since its adoption on May 18, 1916 (Circular 474, 45 L. D. 345, 351), provides in part as follows:

"Sec. 232.13 *Evidence of water rights required with application.* No desert-land application will be allowed unless accompanied by evidence satisfactorily showing either that the intending entryman has already acquired by appropriation, purchase, or contract a right to the permanent use of sufficient water to irrigate and reclaim all of the irrigable portion of the land sought, or that he has initiated and prosecuted, as far as then possible, appropriate steps looking to the acquisition of such a right. \* \* \* All applications not accompanied by the evidence above indicated will be rejected."

The requirement in the regulation is clear that an applicant must acquire, or take steps to acquire, a legal right to the permanent use of sufficient water to reclaim his entry. The same requirement is stated in the regulation dealing with the submission of final proof (43 CFR 232.32; 19 M. R. 9086).

As we have seen, a landowner has no legal assurance of a permanent supply of water under the doctrine of reasonable use. His "right" to use percolating water, unlike the right of a prior appropriator, is always subject to diminution or abrogation by a subsequent user of the water.

It is my opinion, therefore, upon the basis of the Desert Land Act and the second opinion of the Supreme Court of Arizona in *Bristor v. Cheatham*, that an application for a desert land entry on land in Arizona cannot be allowed, and that a patent cannot be issued for such an entry which has been allowed, where the entry is dependent upon percolating water for reclamation.

J. REVEL ARMSTRONG,  
*Acting Solicitor.*

Senator ANDERSON. I have a letter from Senator Hayden on this bill which I will insert in the record at this point:

UNITED STATES SENATE,  
COMMITTEE ON APPROPRIATIONS,  
May 27, 1955.

Hon. CLINTON P. ANDERSON,  
*Committee on Interior and Insular Affairs,*  
*United States Senate, Washington 25, D. C.*

DEAR SENATOR ANDERSON: This morning your subcommittee will have testimony on my bill (S. 1177) for the relief of desert land entrymen whose entries are dependent upon percolating waters for reclamation. I appreciate your invitation to me to present testimony in favor of this measure, and regret that the necessity of presiding at an appropriation hearing prevents my appearance. I have asked my administrative assistant to attend in my stead.

As you know, S. 1177 will benefit a maximum of 158 desert land entrymen who have performed in good faith everything that is required of them to secure patents

to public land in Arizona under the Desert Land Act of 1877. Before patents could issue, however, the Solicitor of the Department of the Interior held that patents could not issue for the reason that a decision of the Supreme Court of Arizona in 1953 (*Bristor v. Cheatham*, 240 P. 2d 185) held that in Arizona percolating waters are not subject to the doctrine of prior appropriation. The Solicitor, on the basis of this court decision, and the provision of the Desert Land Act that the right to use of water by a desert land entryman "shall depend upon a bona fide prior appropriation," reached the conclusion set forth in his opinion.

The entrymen affected by this bill have expended sizable sums in perfecting their entries, and completed all requirements before issuance of the Solicitor's opinion. Therefore, it seems to me that fairness and equity dictate the issuance of patents to them. I sincerely urge your subcommittee and the full Committee on Interior and Insular Affairs to approve S. 1177.

With best regards, I am,  
Yours very sincerely,

CARL HAYDEN.

Senator ANDERSON. Senator Goldwater, do you wish to make a statement?

#### **STATEMENT OF HON. BARRY GOLDWATER, UNITED STATES SENATOR FROM THE STATE OF ARIZONA**

Senator GOLDWATER. This is Senator Hayden's bill. I am co-sponsor with him. Senator Hayden's administrative assistant, Paul Eaton, is here and would like to testify on the bill.

#### **STATEMENT OF PAUL EATON, ADMINISTRATIVE ASSISTANT TO SENATOR HAYDEN**

Mr. EATON. My name is Paul R. Eaton, administrative assistant to Senator Hayden. The Senator and Senator Goldwater introduced this bill as a relief bill. On February 23, the Solicitor of the Department of the Interior in a memorandum opinion, which is on governing the Bureau of Land Management and the Department, determined that desert land entries in Arizona under the Desert Land Act of 1877 could not be allowed if they were dependent upon percolating water because the Desert Land Act requires the bona fide prior appropriation of water which the Supreme Court of Arizona has said is not applicable to percolating water, water not in defined underground channels.

There are a maximum of about 158 desert land entries affected by this bill. They are all land entries which had been approved right up to the point of patenting at the time the Solicitor's opinion was rendered and before the land entrymen knew that this opinion would be given or would be effective. So the purpose of the bill is merely to take care of those people who have complied with all the requirements of the desert land law, and the Department at that time felt they had complied. It will not effect any entry which had not proceeded to the point of allowance at the time of the Solicitor's opinion. The act says "at the time of enactment," which is really synonymous because none are being allowed now. Actually, no further action has been taken on any desert land entries that are dependent upon percolating water for their reclamation.

Senator ANDERSON. They would have to divert water from a stream or drill a well of some kind?

Mr. EATON. That is correct.

Senator ANDERSON. Are these people doing either one of those things?

Mr. EATON. All are affected, as I understand it, are lands that are dependent upon well water.

Senator ANDERSON. There is no question about the right of a person to have a desert entry when he himself develops well water?

Mr. EATON. Yes; apparently if that water is not taken from a defined underground channel. If it is what they describe as percolating water, not within a defined channel, the supreme court in Arizona—now, I am getting where I should not be in a legal matter—has determined in the famous Arizona case of *Bristor v. Cheatham* that you cannot acquire a bona fide right to underground percolating water.

Senator ANDERSON. Can anyone tell me the difference between percolating water and ditch water?

Senator GOLDWATER. There is quite a difference.

Senator ANDERSON. There must be.

Senator GOLDWATER. All of our underground waters are considered percolating waters. The only difference is that it comes up instead of flowing horizontally. That is one of the confusing acts of 1877, because when the act was passed underground water was considered to be a stream and had the same rights as a surface stream. In Arizona, while our hydrographers tell us there is no such a thing as percolating water, the supreme court says it is percolating water. The case mentioned by Mr. Eaton is the case that created this confusion out there.

Senator ANDERSON. There are how many of these?

Mr. EATON. A maximum of 158, Mr. Chairman. There may be a few less than that. The State office of the Bureau of Land Management has furnished that number and has qualified it by saying that there may be a few which they were not able to tell us about at the time we requested information that will be dependent upon surface water. I do not know where it would be.

Senator ANDERSON. How much land is involved in this?

Mr. EATON. It is usually 320 acres per entry, so it would be 158 times that as a maximum.

Senator ANDERSON. Fifty thousand acres at the most?

Mr. EATON. I believe that is right, sir.

Senator ANDERSON. What will they pay the Government for that land?

Mr. EATON. A total of \$1.25 per acre when patent issues. In addition there is an improvement requirement of a minimum of \$1 per year per acre from the time they make their entry and begin improving upon it until it is allowed. I believe it is 4 years, but I am not certain about that figure.

Senator ANDERSON. Where is that land located?

Mr. EATON. It is not in any one area, sir; it is scattered in the valleys in central and southern Arizona.

Senator ANDERSON. In other words, will it be worth \$500 an acre when they get through with it?

Mr. EATON. I do not know. It will be worth quite a bit per acre if their underground water holds out so that they have what would be a permanent supply.

Senator ANDERSON. I am trying to find out what type of land that is. A lot of that Arizona land has been selling as high as \$1,000 an acre and a great deal at \$500 an acre. I am trying to find out whether

we are dealing with 50,000 acres worth \$500 or \$1,000 an acre, or \$100 an acre.

Senator GOLDWATER. Mr. Chairman, this is just an estimate. As an overall average, after the improvement costs have been paid and the deep well has been put in, this land should be worth something between four and five hundred dollars an acre. The land could go to \$1,000 an acre today only with high productivity of cotton, which we have no chance of out there as you know under the existing law. I would say four to five hundred dollars would be a pretty fair price for this. That would probably give the developer, if he wanted to sell it for speculative purposes, a profit of \$100 to \$150 an acre.

Senator ANDERSON. But we are dealing with something in the neighborhood \$25 million in this.

Senator GOLDWATER. Not that high.

Senator ANDERSON. Fifty thousand acres at \$500 an acre is \$25 million.

Senator GOLDWATER. Yes, if it all could be developed. There is a lot of that desert entry land that is not developed and probably will not be developed because the people that have it do not have the money to put down wells. It costs today from twenty to fifty thousand dollars, and employing grading and other equipment to improve it.

Senator ANDERSON. The original purpose of the desert entry was by flowing water or by diverting water from some place and putting it upon land. I know, I had a desert entry. I would have loved to have pumped it, but I lost mine because we were not able to take the water from the stream we thought we could take it out of. We had 10,000 acres to develop, and we lost whatever we put in the project because it was not regarded as proper to pump it.

Mr. EATON. That is somewhat the situation these people are going to find themselves in, except that before allowance of these land entries the Geological Survey and other hydrographers have been there and have determined that there is water available at least for the irrigable acreage within the entry. All the 320 acres on each entry is not necessarily irrigable, and usually a portion of it is not.

Senator ANDERSON. Anyway, the matter here has been carefully briefed and can be studied. I assume the staff will give it some study.

Do you have any further statements, Senator Goldwater?

Senator GOLDWATER. No, sir. I have a statement I would like to submit for the record and also the memorandum from the Solicitor to the Director of the Bureau of Land Management on this subject. I would like that to be made a part of the record.

(The memorandum referred to appears on p. 4.)

(The statement referred to by Senator Goldwater follows:)

#### FACTUAL DATA

Section 1 of the Desert Land Act of March 3, 1877 (43 U. S. C., 1952 ed., sec. 321), requires that the right of desert land entrymen to the use of water for reclaiming their entries "shall depend upon bona fide prior appropriation." During the past year, a question has arisen in the Department with respect to the meaning of this provision and its effect upon desert land entries in the State of Arizona which are dependent for irrigation upon percolating waters; i. e., underground water which does not flow in a well-defined channel with banks. The question arose primarily as a result of a recent decision by the Supreme Court of Arizona with respect to the law of the State governing percolating waters. In that decision, *Bristor v. Cheatham* (75 Ariz. 227, 255 P. 2d 173), decided on March 14,

1953, the Arizona court held that percolating waters in that State are not subject to the doctrine of prior appropriation but are subject only to the doctrine of reasonable use.

The *Bristor* decision raised the question whether desert land entries for lands in Arizona could be allowed or patented where such entries are dependent on percolating waters for reclamation. The question was referred to the Acting Solicitor of the Department who has rendered an opinion holding that such entries cannot be allowed or patented under the Desert Land Act since the right of the entrymen or the applicants for entry to use percolating waters does not depend upon prior appropriation. A copy of the Acting Solicitor's opinion M-36263, February 23, 1955, is attached. It discusses the problem in detail.

According to the Bureau of Land Management of this Department, there are approximately 160 desert land entries in Arizona which have been allowed and are currently subsisting but which are dependent on percolating waters for reclamation. The entries were applied for in good faith and the entrymen have apparently made expenditures and performed work with a view to securing patents to the entries. In many cases the expenditures have been substantial. However, under the law as set forth in the Acting Solicitor's opinion, the entries cannot go to patent so long as the percolating waters on which they are dependent are not subject to appropriation. This means that in time, as the statutory life of the entries expires, the entrymen will lose the fruits of their labor and expenditures. Immediately, because of this prospect, the entrymen are uncertain as to whether to proceed with their work on the entries.

In these circumstances, it seems only fair and equitable that the entrymen should be allowed to perfect their entries regardless of the requirement in the Desert Land Act that they have a water right dependent upon prior appropriation. The proposed bill would accomplish this purpose. It would simply waive in the case of these entries the requirement that the right to use of water depend on prior appropriation. In all other respects, such as reclamation and expenditures, the entrymen would remain subject to the requirements of the Desert Land Act.

Although the problem under consideration has arisen only in Arizona, the proposed bill has been drawn on a general basis to take care of any similar problem in other States to which the Desert Land Act applies.

It should be noted that the proposed bill applies only to existing entries which have been allowed. The bill will not permit future desert land entries to be made in Arizona which are dependent on percolating waters. Whether broader legislation should be enacted is a matter on which the Department takes no position at this time. The Department's immediate concern is in affording relief to existing entrymen who have an immediate problem on their hands. The Department, therefore, suggests that changes toward broadening the bill should not be made if they will have the effect of delaying or impeding the passage of the legislation.

Senator GOLDWATER. I would like to call the chairman's attention to the fact that several States might ultimately be affected by this decision. In North and South Dakota, the question is moot in these States because there have been no applications. They do not have the prior appropriation doctrine on underground percolating water. In Montana there is no prior appropriation doctrine. In Colorado the presumption is that all underground water is stream. The prior appropriation applies to underground streams, and this applies to Arizona.

In California the question is presently before the legislature. Two thousand applications are being held up. In Oregon, west of the Cascades, there is no prior appropriation. East of the Cascades, prior appropriation is recognized.

That is all I have, Mr. Chairman.

Mr. Chairman, I might say Mr. Wooley is here with some of his staff if you have some questions on this.

Senator ANDERSON. What is the attitude of Land Management? ]

**STATEMENT OF EDWARD WOOLEY, DIRECTOR, BUREAU OF  
LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR**

Mr. WOOLEY. We are in favor of this bill, Senator. We have been issuing patents out there where people have qualified for patents, and these 158 desert land entries have been allowed with the assumption they would be able to qualify. With this decision it is doubtful that they could. It is almost a foregone conclusion that they could not.

Senator ANDERSON. Then why would you issue a patent?

Mr. WOOLEY. We have assumed up until the time of the Supreme Court decision and the Solicitor's opinion was made that Arizona was the same as other States. Appropriation of water was permitted and that they were given the proper length of time to develop that water.

Senator ANDERSON. But you would not allow a desert entry in New Mexico for pumping?

Mr. WOOLEY. Yes, sir; we allow desert entries for pumping.

Senator ANDERSON. When?

Mr. WOOLEY. I might ask Mr. Hochmuth if we have allowed some.

**STATEMENT OF HAROLD D. HOCHMUTH**

Mr. HOCHMUTH. Yes, sir; in areas that are noncritical.

Senator ANDERSON. What are noncritical?

Mr. WOOLEY. The State engineer tells us in New Mexico which are the areas and issues the necessary permits, and we then act.

Senator ANDERSON. What is a critical area?

Mr. WOOLEY. That is an area declared by the State engineer that the ground water is fully appropriated already or is being overpumped.

Senator GOLDWATER. I might say we follow that same practice in Arizona.

Mr. HOCHMUTH. But the New Mexico law is quite clear as to a doctrine of prior appropriation, as I understand it. The Arizona law we thought was until the supreme court decision.

Senator ANDERSON. Then do I understand that in the area around Deming, N. Mex., you are granting desert entries?

Mr. HOCHMUTH. I am trying to search my memory, Senator. I might say it is declared by critical ground water by the State engineer of New Mexico, in which case we cannot allow desert entries because the State engineer will not give those people a permit to drill.

Senator ANDERSON. The Rio Grande is also critical?

Mr. HOCHMUTH. I cannot answer that.

Mr. WOOLEY. I would like to point out that in my own State of Idaho in the last 4 years there has been approximately half a million acres developed from ground water irrigation. It is not a problem up there because percolating waters are allowed for desert entries. This law is particularly slanted toward Arizona and not to other States, as far as we can determine.

Senator ANDERSON. But it is your testimony that the same situation that stops the desert entryman from getting his land in Arizona permits him to have it in Idaho. The law of Idaho is such that he can do exactly the same thing in Idaho and get his land that he is seeking to do in Arizona where he cannot get it?

Mr. WOOLEY. Yes, sir. The difference is in the State law.

Mr. HOCHMUTH. May I say something, Mr. Chairman?

Senator ANDERSON. Yes.

Mr. HOCHMUTH. This bill here only takes care of the persons who have been permitted to go on the land and exercise the right of desert-land entry. It does not take care of those 700 applications we have before the Bureau now that we have not allowed to go on the land yet. They will have to be rejected because the State law of Arizona does not permit us to allow those. But these people have made extensive improvements. I understand that some have gone as high as \$50,000 or \$100,000 for one tract. The bill only takes care of those which we have already permitted to enter.

Senator ANDERSON. Do I understand, then, that if this law is passed it will be limited to 158 and you will not issue any more?

Mr. HOCHMUTH. We are rejecting the others right now because the law does not permit us to do so.

Senator ANDERSON. Then you can answer my question directly. You will not grant any more than this 158?

Mr. HOCHMUTH. That is correct. We will not grant any more until either other legislation is passed or the State law is changed.

Senator ANDERSON. These people who are involved in this have been permitted by you to go on the land?

Mr. HOCHMUTH. Yes, sir.

Senator ANDERSON. Then having been permitted to go on the land, they have made improvements?

Mr. HOCHMUTH. Yes, sir.

Senator ANDERSON. In some cases, substantial improvements?

Mr. HOCHMUTH. Yes, sir.

Senator ANDERSON. Therefore, it is a hardship matter and not just a matter of granting somebody a right that might not otherwise have any interest in this at all?

Mr. HOCHMUTH. That is correct. I will go on to add to that that they still must meet with the other requirements of the Desert Land Act which means the expenditure of certain sums.

Senator ANDERSON. You do not mind spending \$4 an acre to get something worth \$500. That is fairly evident. If they have made an application in good faith and you allowed them to go on there, they could not anticipate the decision of the Arizona Supreme Court.

Mr. HOCHMUTH. That is a correct statement.

Mr. EATON. As a matter of fact, this decision is a reversal of the decision that the supreme court in the same case had given 1 year before.

Senator ANDERSON. When was this decision handed down?

Mr. EATON. In 1953 is the last one. There are two decisions; the first one was in 1952 and the second one on a rehearing was in 1953. It is exactly opposite from the 1952 decision. So they actually had something to go on for that period, at least as of 1952.

Senator GOLDWATER. I have an additional statement in the form of a letter from Mr. Armstrong to Senator Hayden explaining some of the western laws regarding the situation, which should go in the record, please.

Senator ANDERSON. Very well.

(The material referred to follows):

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SOLICITOR,  
Washington, D. C. May 24, 1955.

HON. CARL HAYDEN,  
United States Senate, Washington, D. C.

MY DEAR SENATOR HAYDEN: Further reference is made to your letter of April 5 requesting our comments on Mr. Coker's letter to you of March 30, concerning the water rights showing required for an entry of public lands in Arizona under the desert land law (43 U. S. C., sec. 321, et seq.).

Solicitor's opinion M-36263, a copy of which is enclosed, stated that where such entry would be dependent upon percolating water for reclamation, an application for entry or patent under the desert land law cannot be allowed. Under the desert land law, the right to use water on public land depends upon bona fide prior appropriation under the state law. The applicant must show he has acquired or will acquire by appropriation, purchase, or contract a right to the permanent use of sufficient water to irrigate and reclaim the public lands (43 CFR 232.13 and 232.32). The recent decision of the Supreme Court of Arizona in *Bristor v. Cheatham* (255 P. (2d) 173 (1953)) held that rights to percolating waters in Arizona cannot be acquired under the law of prior appropriation. That decision declares the law of the State with respect to this question. The applicant clearly cannot meet the requirements of the desert land law, therefore, if his entry depends on percolating water in Arizona.

Mr. Coker states in his letter that this Department has in the past interpreted the desert land law as permitting the showing of a water right dependent upon percolating waters. He finds evidence of such an interpretation from a Government annual proof form which gives credit toward meeting the requirements of the desert land law for expenditures made to construct windmills, pumps, and irrigation wells. The annual proof form does indicate acceptable types of improvement expenditures, but does not show what an applicant must prove with respect to his legal right to a definite quantity of water. No decision of this Department has been found holding that a desert land entry dependent on percolating waters may be allowed in a State which does not recognize appropriation of such waters. Our opinion M-36263, it should be noted, did not state that ground water obtained from wells in Arizona could never be used as the basis for an acceptable water right showing. Ground water is defined as including water in the ground, that is, under the surface (Selected Problems in the Law of Water Rights in the West, U. S. Department of Agriculture, Miscellaneous Publication No. 418, 1942, at p. 24). In Arizona, as in almost every other Western State, water in defined channels of underground streams is subject to prior appropriation and therefore can be used to establish a showing of the water right needed under the desert land laws.

There is little doubt that at the time of the enactment of the Desert Land Act on March 3, 1877, the doctrine of appropriation was well recognized. See *California Oregon Power Co. v. Beaver Portland Co.* (295 U. S. 142, 154 (1935)). The recognition of "prior appropriation" in the Desert Land Act, moreover, does not limit the doctrine to surface water.

Mr. Coker's statement that the "laws in the Western States in 1916 or thereabouts, will disclose that none of them had any provisions in their code for the appropriation of ground or percolating water" is not entirely accurate. Section 4169, Revised Statutes 1901, Arizona authorized prior appropriation of "any of the unappropriated waters" in the territory. This section was carried over into Revised Statutes 1913, section 5337. In 1919, it was definitely provided that ground water in definite underground channel was subject to appropriation (Arizona Code Annotated 1939, 75-101). The 1919 act confirmed the law of Arizona recognized prior to and after 1916, as indicated by the case cited by Mr. Coker of *Howard v. Perrin* (76 Pac. 460, 462 (1904)) upheld by the United States Supreme Court (200 U. S. 71 (1905)), and reaffirmed by *Maricopa County Municipal Water Conservation District No. 1 v. Southwest Cotton Co.*, (39 Arizona 65, 4 P. (2d) 369, 376 (1931)). The decisions of the State courts, of course, are declarative of the law of the State, (*Bristor v. Cheatham*, 255 P. (2d) 173, 175 (1953)).

In 1899, Idaho enacted a law providing that the right to the use of subterranean waters may be acquired by appropriation, (Idaho Code, 1948, sec. 42-103). In 1913, the Nevada statute provided that "all sources of water supply within the boundaries of the State, whether above or beneath the surface of the grounds" may be appropriated as provided in the act, (Nev. Comp. Laws, 1929, secs. 7890 and 7891). In 1915 a statute provided that "all underground waters, save and except percolating water" were subject to appropriation, (Nev. Sess. Laws

1915, sec. 1, ch. 210, p. 323). A Utah statute in 1903 (Utah Comp. Laws, 1907, sec. 1288-18) made water flowing above or under the ground in known or defined channels public property. The appropriation doctrine was held applicable in Utah to such water, (*Whitmore v. Utah Fuel Co.* 73 Pac. 764, 767 (1903)).

Mr. Coker also suggests amending the Desert Land Act to "settle the question as to the use of irrigation well or percolating waters for the reclamation of desert lands, whether the States have passed any ground-water legislation or not." Whether Federal legislation, even as to percolating water, is necessary or desirable is an important consideration. The State of Arizona can make such provision as it thinks wise for the acquisition of rights to percolating water on public or other lands in the State. There are decided advantages to the present provisions of the desert land law which assure the acquisition by the applicant of the supply of water necessary for desert land entry, and leave up to the State the method of such acquisition. This letter, of course, attempts only to clarify the problem raised, and is not intended to indicate what views this Department might express on a specific bill if the Department were called upon to report on such legislation.

Sincerely yours,

J. REUEL ARMSTRONG, *Solicitor.*

Mr. EATON. Senator Hayden said that he is sorry he could not be here today. He had four subcommittee hearings today. He could get out of three of them but not the fourth, so he sent to you the letter you have incorporated in the record.

Senator ANDERSON. Thank you.

(Whereupon the committee adjourned.)

FRIDAY, MAY 27, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE OF THE COMMITTEE ON  
IRRIGATION AND RECLAMATION OF THE  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
Washington, D. C.

The subcommittee met, pursuant to call, at 10 a. m., in room 224, Senate Office Building, Hon. Clinton P. Anderson (chairman of the subcommittee) presiding.

Present: Senator Anderson.

Present also: Senator Goldwater.

Present also: Goodrich W. Lineweaver, committee assistant for reclamation; Elmer K. Nelson, consulting engineer; and N. D. McSherry, assistant chief clerk.

Senator ANDERSON. The committee will be in order.

The bill we have under consideration is S. 1574.

(The bill referred to follows:)

[S. 1574, 84th Cong., 1st sess.]

**A BILL** To provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, for the purposes of aiding in the development for beneficial use of the water resources of streams of the United States for irrigation, hydroelectric power development incidental to the Federal reclamation program, and to aid in the repayment of irrigation costs beyond the ability of water users to repay, the Secretary of the Interior shall, with respect to any hydroelectric power facility owned by the United States—

(i) which is or will be benefited by the construction, operation, and maintenance of any reservoir or other water-use facility owned by a party other than the United States; and

(ii) the marketing of power from which is within his administrative jurisdiction,

report annually to the Congress the value of the hydroelectric power benefits which he finds have been or will be realized by the Federal facility during the year in question, the portion of the costs of the non-Federal facility which he finds to be properly chargeable to the furnishing of those benefits, and his recommendation with respect to the reasonable and equitable amount that should be paid by the United States to the owner of the non-Federal facility in the circumstances, which amount shall not exceed the value of the benefits found to be realized or the costs found to be properly chargeable, whichever is the smaller.

(b) A like report shall be made by the head of any other department or agency of the United States with respect to any hydroelectric power project the marketing of power from which is within the administrative jurisdiction of that department or agency.

(c) It is the intent of the Congress that there shall be paid annually to the owners of reservoirs and other water-use facilities the construction, operation, or maintenance of which benefit Federal hydroelectric power projects a reasonable and equitable amount for the hydroelectric power benefits so realized, and there are authorized to be appropriated such sums as may be required to make pay-

ments to the owners of non-Federal facilities in the amounts found, as the case may be, by the Secretary of the Interior or by the head of any other Department or agency to be reasonable and equitable and reported, as hereinbefore provided, to the Congress.

SEC. 2. The Secretary of the Interior shall, with respect to any hydroelectric power project owned by the United States—

(i) which is or will be benefited by the construction, operation, and maintenance of any reservoir or other water-use facility owned by the United States which is within his administrative jurisdiction; and

(ii) the marketing of power from which is within his administrative jurisdiction,

report annually to the Congress the value of the hydroelectric power benefits which have been or will be realized by the first such facility from the second during the year in question and the portion of the costs of the second facility which is properly chargeable to the furnishing of those benefits, and there shall be credited on the books of the Treasury to the accounts of the second facility and debited from the accounts of the first facility that amount which the Secretary finds to be reasonable and equitable in the circumstances, which amount shall not exceed the value of the hydroelectric power benefits found to be realized or the costs found to be properly chargeable, whichever is smaller.

(b) Like findings shall be made by the head of any other Department or agency of the United States with respect to any two projects which are within its administrative jurisdiction as aforesaid, and a like credit and debit shall be made on the books of the Treasury in each such case.

(c) Whenever one hydroelectric power project which is owned by the United States is or will be benefited by the construction, operation, and maintenance of another reservoir or water-use facility which is owned by the United States but administrative jurisdiction over the marketing of power from the first is in a different Department or agency of the United States than that which has administrative jurisdiction over the second, the heads of the two Departments or agencies shall make the finding with respect to benefits realized, costs incurred, and amounts reasonably and equitably to be credited and debited to the accounts of the two projects, and their joint conclusion with respect to the amounts to be credited and debited shall, upon being reported to the Congress, have the same effect as a conclusion of the Secretary of the Interior under subsection (a) of this section.

SEC. 3. (a) Whenever the Secretary of the Interior has reason to believe that a hydroelectric power project owned by a party other than the United States is or will be benefited by the construction, operation, or maintenance of any reservoir or water-use facility which is owned by the United States and which is within his administrative jurisdiction, he shall determine and fix a reasonable and equitable charge to be paid annually by the owner of the facility benefited to the United States. The annual charge hereunder shall be not more than—

(i) such part of the fixed costs of the Federal facility furnishing the benefit plus such part of its operation and maintenance costs as the Secretary shall find proper; or

(ii) the value of the benefits realized, whichever is less.

All charges collected hereunder shall constitute revenues of the Federal project providing the benefit, and such revenues shall be disposed of in accordance with the provisions of law applicable thereto.

(b) Like notification shall be given by the head of any other department or agency of the United States in the case of benefits which he has reason to believe are or will be realized by a non-Federal hydroelectric power project from a Federal reservoir or water-use facility which is within his administrative jurisdiction.

SEC. 4. Whenever any hydroelectric power project owned by a party other than the United States is or will be benefited by the construction, operation, or maintenance of a reservoir or water-use facility which is owned by another party, said party being other than the United States, the Secretary of the Interior shall, upon request of the owner of the second facility or on its own motion, after notice and opportunity for hearing, determine and fix a reasonable and equitable charge to be paid annually by the owner of the facility benefited to the owner of the benefiting facility. The annual charge hereunder shall be not more than—

(i) such part of the fixed costs of the facility furnishing the benefit plus such part of its operation and maintenance costs as the Secretary shall find proper; or

(ii) the value of the benefits received, whichever is less.

SEC. 5. (a) Annual charges assessed under the provisions of sections 3 and 4 of this Act may be readjusted by the Secretary, after notice and opportunity for

hearing, at periods of not less than five years or at any time that changed conditions may warrant.

(b) The Secretary of the Interior is authorized, with respect to projects which are within his administrative jurisdiction, to enter into contracts with the owner of any hydroelectric power project, reservoir, or other water-use facility whereby, in consideration of hydroelectric power benefits to be realized by the United States from the construction, operation, or maintenance of any non-Federal reservoir or water-use facility or in consideration of the benefits to be realized by any non-Federal hydroelectric project from the construction, operation, or maintenance of any Federal reservoir or water-use facility, the owner thereof or the United States, as the case may be, agrees to pay to the other party each year a sum certain or fixed by formula. No such contract shall obligate the United States to pay an amount greater than—

(i) the hydroelectric power benefits expected to be realized by the United States from the construction, operation, or maintenance of the non-Federal facility; or

(ii) the portion of the expected costs of the non-Federal facility which are properly chargeable to the furnishing of those benefits, whichever is less.

The head or any other department or agency of the United States is authorized, with respect to projects which are within its administrative jurisdiction and subject to the conditions hereinbefore set out, to enter into like contracts. Each such contract shall be reported to the Congress and shall, during the period during which it is in force, obviate any other reporting requirements set forth in this Act.

SEC. 6. All parties affected by any determination made under sections 2, 3, 4, or 5 of this Act (except an agency of the United States in an instance where the cost of operating the Federal facility involved is financed by direct appropriations) shall bear a reasonable share of the cost to the Secretary of making the determination, and all such parties shall pay their share of such cost, as fixed by the Secretary, into the Treasury of the United States for credit to miscellaneous receipts.

SEC. 7. This Act shall be effective six months after the date of its enactment or at the beginning of the fiscal year immediately following its enactment, whichever occurs later.

SEC. 8. Appropriations necessary to discharge the obligations of the United States in accordance with the Secretary's reports are hereby authorized.

SEC. 9. All Acts or parts of Acts inconsistent herewith are hereby repealed or modified as the case may be.

Senator ANDERSON. Senator Jackson said he would like to have the committee meeting postponed on this. We will go on with the witnesses we have and then adjourn, and any witness he may desire to bring in we will bring in subsequently.

I thought that Mr. Gatchell, of the Federal Power Commission, could testify, but Senator Goldwater, do you have a statement?

## STATEMENT OF HON. BARRY M. GOLDWATER, UNITED STATES SENATOR FROM THE STATE OF ARIZONA

Senator GOLDWATER. I have a very brief statement on this, Mr. Chairman.

S. 1574 introduced by me by request is designed to carry out a twofold purpose:

(1) To standardize the payments for headwater benefits to downstream power facilities; and

(2) To promote a more efficient and coordinated maximum use of a watershed for power and related purposes, which is in the interest of sound conservation.

The present law recognizes the principle of payments for headwater benefits, in requiring payments for any stored water which is beneficially used by a power facility lower down on the stream. The sole exception in the present law is that the Federal Government does

not pay for benefits in increased power generation which it receives from non-Federal storage, public or private, although it requires such payments to be made for any benefits received from a Federal installation.

S. 1574 would merely correct what appears to me to be an inequity in existing law and would remedy this inequity and provide that the Federal Government would make payments for benefits received from stored water on the same basis as the law now requires non-Federal projects, public or private, to do.

If all projects on a river recognize the principle of headwater benefits and pay on an equal basis, it will promote wisest use of this most important natural resource. The use of stored water will be coordinated so that maximum integrated utilization of the water is achieved.

The principle embodied in S. 1574 was recognized as sound by President Truman's Water Policy Committee in its report and has been recommended by the Federal Power Commission for several years.

President Eisenhower has recommended the legislation both in his 1955 and 1956 budget message. In 1956 the President said as follows:

In order to establish equity between the Federal Government and other interests, I recommended in my 1955 budget message enactment of legislation to provide that the Federal Government make payments to non-Federal owners of water resources projects when Federal hydroelectric power developments benefit from these projects. Payments are now required from other licensees deriving such benefits and I see no reason why the Federal Government should be exempted. I hope the Congress will amend the Federal Power Act during the session to require such Federal payments.

I am advised that the Federal Power Commission and the Department of the Interior have recommended to this committee certain amendatory language. I am certainly not against anything that will get this job done. My interest is in effecting a change in the law to carry out the objectives above enumerated, and any approach which this committee may feel is the best way to correct the present shortcoming of the law meets with my approval.

Senator ANDERSON. Thank you, Senator.

Mr. Gatchell.

#### **STATEMENT OF WILLARD W. GATCHELL, GENERAL COUNSEL, FEDERAL POWER COMMISSION**

MR. GATCHELL. Mr. Chairman and members of the committee, in response to your request, the Federal Power Commission has sent over this morning Messrs. W. R. Farley, Chief of the Commission's Division of Licensed Projects; John C. Mason, Assistant General Counsel; and myself. My name is Willard W. Gatchell, and I am General Counsel for the Commission.

The bill S. 1574 would provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom. A report of the Federal Power Commission on the bill was sent to Senator Murray, chairman of the committee, under date of May 5, 1955, and recommended that in lieu of the proposal in the bill a new section 31 be added to the Federal Power Act in lieu of the present section 10 (f) of the act.

Mr. Chairman, would it be appropriate to ask that the report be incorporated in the record at this place?

Senator ANDERSON. Yes, the report will be incorporated in the record at this point.

(The report referred to together with the reports of the Department of the Interior and the Bureau of the Budget follow:)

**FEDERAL POWER COMMISSION REPORT ON S. 1574, 84TH CONGRESS, A BILL TO PROVIDE FOR PAYMENTS BY THE SECRETARY OF THE INTERIOR TO OWNERS OF NON-FEDERAL WATER-USE FACILITIES FOR HYDROELECTRIC POWER BENEFITS REALIZED BY THE UNITED STATES THEREFROM, AND FOR OTHER PURPOSES**

This bill provides that in those cases where any hydroelectric power facility owned by the United States is benefited by the construction and operation of any reservoir by another party (State, municipality, person or private corporation), the United States shall pay to the other party an annual charge not to exceed the value of the benefits realized or a portion of the costs of the non-Federal facility furnishing the benefits. Recommendation as to the amount of such charge is to be made to the Congress by the Secretary of the Interior, or other agency head having administrative jurisdiction of the marketing of the power from the Federal hydroelectric facility.

Section 3 of the bill provides for similar annual payments with respect to payments to the United States by another party where any water-use facility owned by the United States benefits a hydroelectric power project owned by another party. The Secretary of the Interior, or other agency head having administrative jurisdiction over the Federal water-use facility, is directed to fix the charge. Provision is also made for debits and credits on the books of the Treasury Department between different Federal agencies on account of the benefits realized by a federally owned hydroelectric power project from the construction or operation of a federally owned water-use facility.

Section 4 of the bill provides that the Secretary of the Interior shall fix annual payments to be made between parties other than the United States where the water-use facility of one party benefits a hydroelectric power project of the other party.

Section 10 (f) of the Federal Power Act (16 U. S. C. 803 (f)) provides that when licensees are benefited by reservoirs or other headwater improvements constructed by other parties, including the United States, they shall reimburse the owner of the improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission may deem equitable. By the third paragraph of section 10 (f) (which was added in 1935) the requirement for payments for headwater benefits was imposed upon nonlicensees under certain circumstances.

It thus appears that the bill would attempt to provide for the same sharing of headwater improvement costs as provided by Congress in section 10 (f) of the Federal Power Act. However, the bill would not accomplish this objective by amending the Federal Power Act but, in effect would repeal section 10 (f) of the Federal Power Act and transfer to the Secretary of the Interior the authority to determine charges to be paid and to assess them against the proper parties, instead of working through the Federal Power Commission as at present.

This arrangement would be extremely awkward, with the Commission having jurisdiction over new licensees for other purposes and over existing licensees for this and all other purposes, and the Secretary of the Interior having jurisdiction for this limited purpose over some licensees but not having a basis for making the jurisdictional determinations inherent in the proposal or for determining the benefits received. Also the bill could not apply even in this respect to outstanding licenses under the Federal Power Act for those licenses may be amended only with the mutual consent of each licensee and the Commission.

Moreover the bill raises some procedural questions which have already been settled by Congress in the Federal Power Act; namely, the manner in which parties may apply for and secure and have reviewed a determination of the headwater benefits received and the costs to be shared. In order to provide a fully effective means of administering this bill, corresponding provisions would have to be enacted providing for notices, hearings, rehearings, court review, and enforcement of determination orders.

The Commission is in complete agreement with the substantive proposal of the bill to provide for annual payments for headwater benefits received by non-

Federal power developments and for similar annual payments by the United States which in like manner receives benefits at federally owned power projects. The Commission has so recommended and again urges that section 10 (f) of the Federal Power Act be amended accordingly. It does not recommend passage of this bill but recommends in lieu thereof that the entire bill be stricken after the enacting clause and that language somewhat along the lines of the attached substitute be enacted in lieu thereof.

FEDERAL POWER COMMISSION,  
By JEROME K. KUYKENDALL, *Chairman*.

#### SUBSTITUTE SECTION 31 OF FEDERAL POWER ACT

The Federal Power Commission recommends that the bill S. 1574 be stricken after the enacting clause and that the following be substituted in lieu thereof:

That subsection (f) of Section 10 of the Federal Power Act (16 U. S. C., sec. 803 (f)) is hereby repealed.

SEC. 2. That the following new section be added to the Federal Power Act:

"SEC. 31. (a) Whenever any hydroelectric power project owned by non-Federal interests is or will be benefited by the construction, operation, or maintenance of any reservoir or other water-use facility, the Commission, after notice to the owner or owners of any project so benefited, and after opportunity for hearing, shall determine and fix a reasonable and equitable annual charge to be paid to the owner of such facility furnishing such benefits, including the United States if it be the owner of the facility providing the benefit. The annual charges hereunder shall be such part of the fixed costs of the facility furnishing the benefit plus such part of the annual operating and maintenance costs of such facility, including land rentals and similar charges, as the Commission may deem equitable: *Provided*, That such annual charges shall not exceed the value of the benefits realized or received.

"(b) Whenever any hydroelectric power project owned by the United States is or will be benefited by the construction, operation, or maintenance of any reservoir or other water-use facility, the Commission, after notice to the Federal agency operating the project so benefited and the Federal agency or owner of the facility furnishing the benefit, and after opportunity for hearing, shall determine and fix a reasonable and equitable annual charge to be paid to the owner of such facility furnishing such benefits, such charge to be determined as provided in the preceding paragraph: *Provided*, That payments shall be required for benefits furnished by one Federal facility to another only if the cost of operating one of said facilities is payable from a revolving fund, and the cost of operating the other is payable from some other fund or direct appropriation: *Provided further*, That where no payment is required, the charges determined shall nevertheless be considered as an expense of the facility receiving the benefit and as accrued revenue of the other facility, with an appropriate equal adjustment in the repayable Government capital invested in each such facility.

"(c) Annual charges assessed hereunder may be readjusted by the Commission at periods of not less than five years after notice and opportunity for hearing or readjusted at any time by the Commission as changed conditions may warrant after notice and opportunity for hearing.

"(d) All charges collected for the benefits provided by any facility owned by the United States shall constitute revenues of the facility providing the benefit and such revenues shall be disposed of in accordance with any provisions of law applicable thereto.

"(e) All parties affected by any determination hereunder (except any agency of the United States in each instance where the cost of operating the facility involved is financed by direct appropriations) shall bear a reasonable share of the cost to the Commission of making the determination, and all such parties shall pay their share of such cost, as fixed by the Commission, into the Treasury of the United States for credit to miscellaneous receipts: *Provided*, That for those Federal facilities where payment into the Treasury is not required by this paragraph, the reasonable share of the cost as fixed by the Commission shall nevertheless be considered as an expense of the facility involved.

"(f) Appropriations or other funds available for operation of the facility concerned shall be available to pay the annual or other charges that may be assessed against the United States pursuant to the provisions of this section.

"(g) No party receiving a notice under subsections (a) or (b) of this section shall be required to pay annual charges under this section for benefits received prior to the enactment of this section or be required to pay annual charges under

this section for benefits received more than five years prior to the date on which the Commission gives notice to such party as provided in subsections (a) and (b) hereof; nor shall any party receiving a notice under subsection (a) of this section be required to pay to any non-Federal interest annual charges under this section if it is paying or is required to pay similar annual charges under State law."

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C., May 17, 1955.

Hon. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,  
United States Senate, Washington 25, D. C.*

MY DEAR SENATOR MURRAY: A report from this Department has been requested on S. 1574, a bill to provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom, and for other purposes.

This bill, if enacted, would provide for compensation to be made by owners of hydroelectric facilities to the owners of other water-use facilities by the construction, operation, or maintenance of which the hydroelectric facilities are benefited. Sections 1, 2, 3, 4, and 5 of the bill spell out the procedure and standards to be followed in four classes of cases:

(1) Those in which a Federal hydroelectric facility is benefited by a non-Federal water-use facility (secs. 1 and 5);

(2) Those in which one Federal hydroelectric facility is benefited by another Federal water-use facility (sec. 2);

(3) Those in which a non-Federal hydroelectric facility is benefited by a Federal water-use facility (secs. 3 and 5); and

(4) Those in which one non-Federal hydroelectric facility is benefited by another non-Federal water-use facility (sec. 4).

The bill, in effect, apparently intends to elaborate on and, in some respects, to modify and expand section 10, subsection (f), of the Federal Power Act (16 U. S. C. 803 (f)). This subsection reads, in pertinent part, thus:

"\* \* \* whenever any licensee \* \* \* is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the [Federal Power] Commission shall require as a condition of the license that the licensee so benefited shall reimburse the owners of such reservoir or other improvements for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission may deem equitable. \* \* \*

"Whenever such reservoir or other improvement is constructed by the United States the Commission shall assess similar charges against any licensee directly benefited thereby, and any amount so assessed shall be paid into the Treasury of the United States, to be reserved and appropriated as a part of the special fund for headwater improvements \* \* \*.

"Whenever any power project not under license is benefited by the construction work of a licensee or permittee, the United States or any agency thereof, the Commission \* \* \* shall determine and fix a reasonable and equitable annual charge to be paid to the licensee or permittee on account of such benefits, or to the United States if it be the owner of such headwater improvement."

The Department of the Interior agrees in principle with the purposes of S. 1574. It recommends, however, that for its text there be substituted the text of S. 3434, 83d Congress. A copy of our report of June 2, 1954, to the Committee on Interstate and Foreign Commerce recommending enactment of that bill is attached for your information.

The Bureau of the Budget has advised that there would be no objection to the submission of this report to your committee.

Sincerely yours,

FRED G. AANDAHL,  
*Assistant Secretary of the Interior.*

## HEADWATER BENEFITS

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington 25, D. C., June 2, 1954.

HON. JOHN W. BRICKER,  
*Chairman, Committee on Interstate and Foreign Commerce,*  
*United States Senate, Washington 25, D. C.*

MY DEAR SENATOR BRICKER: This is in response to your letter of May 24, 1954, requesting the comments of this Department on S. 3434, a bill to amend section 10 (f) of the Federal Power Act to provide that charges shall be paid by Federal power projects which are benefited by stream improvements constructed by other parties, the payment to be determined in the same manner as for charges to be paid by non-Federal interests, and for other purposes.

The Department favors enactment of this bill.

Careful consideration has been given by the Department to the provisions of this bill and to the general problem of computing and assessing benefit charges as among water resources projects. The Department is currently cooperating with the Federal Power Commission in its investigations to determine headwater benefits accruing to licensed projects from the Grand Coulee, Albeni Falls, and Hungry Horse projects in the Columbia Basin and the Canyon Ferry project in the Missouri River Basin.

One of the principal objectives of the bill is to provide that benefit charges be assessed on Federal power projects which are benefited by other stream improvements owned by non-Federal interests. The Department fully agrees with this objective. As the President stated in his 1955 budget message it is only equitable that this be done. If non-Federal interests are assessed for payment of benefits received from federally owned projects, they should be compensated when their projects in turn provide benefits to federally owned projects.

An earlier version of this bill in draft form has been reviewed by the Department which suggested certain perfecting amendments. The language of S. 3434 adequately takes account of the suggestions of this Department and we have no further comments or suggestions.

The Bureau of the Budget has advised that there is no objection to the submission of this report to the committee.

Sincerely yours,

RALPH A. TUDOR,  
*Acting Secretary of the Interior,*

EXECUTIVE OFFICE OF THE PRESIDENT,  
BUREAU OF THE BUDGET,  
Washington 25, D. C., May 12, 1955.

HON. JAMES E. MURRAY,  
*Chairman, Committee on Interior and Insular Affairs,*  
*United States Senate, Washington, D. C.*

MY DEAR MR. CHAIRMAN: This will acknowledge your request of March 29, 1955, for the views of the Bureau of the Budget on S. 1574, a bill to provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom, and for other purposes.

The President has recommended in his budget messages both this year and last year that legislation be enacted to provide that the Federal Government make payments to non-Federal owners of water resources projects when Federal hydroelectric power developments benefit from these projects. The Federal Power Commission has reported on S. 1574 to your committee, recommending that such legislation take the form of a substitute draft bill submitted with its report rather than S. 1574 as introduced. The Bureau of the Budget concurs in this recommendation.

Accordingly, you are advised that enactment of S. 1574, if amended as recommended by the Federal Power Commission, would be in accord with the program of the President.

Sincerely yours,

DONALD R. BELCHER *Assistant Director.*

Mr. GATCHELL. On May 12, Assistant Budget Director Donald R. Belcher stated the concurrence of the Budget Bureau in the recommendations of the Commission and advised that the enactment of the

bill, if amended as proposed by the Federal Power Commission, would be in accord with the program of the President.

In his budget message for the fiscal year ending June 30, 1956, President Eisenhower recommended the enactment of legislation along these lines. He said:

In order to establish equity between the Federal Government and other interests, I recommended in my 1955 budget message enactment of legislation to provide that the Federal Government make payments to non-Federal owners of water resources projects when Federal hydroelectric power developments benefit from these projects. Payments are now required from other licensees deriving such benefits and I see no reason why the Federal Government should be exempted. I hope the Congress will amend the Federal Power Act during this session to require such Federal payments (p. M67).

A similar recommendation was made by President Eisenhower in his budget message submitted in January of last year for the fiscal year ending June 30, 1955.

The essential purpose of the bill is sound, and the recommendation of the Federal Power Commission for amendment of the bill is only to enable its real purpose to be more effectively carried out under the framework of existing legislation. The payment for river improvements is always a problem. Congress has followed the policy heretofore of requiring that those consumers served by federally constructed powerplants shall bear all of the power costs. The only exception to this policy is the subject of this bill, and that exception involves the sharing of costs of headwater improvements which benefit lower powerplants.

When a Federal powerplant receives water that has been stored at an upstream development and the Federal plant can utilize that water for generating power, there is no provision at present for the reimbursement of the owner of the upper storage reservoir for any of the costs of his reservoir, notwithstanding the benefits derived by the lower powerplant. If the benefits are received by a powerplant owned by a State, municipality, or privately owned power company, section 10 (f) of the Federal Power Act requires reimbursement of a party of the costs of the upper storage reservoir. This bill would remove the exception, thereby placing all power consumers on an equal footing. In other words, the bill merely provides that all power consumers, whether served by Federal or by non-Federal powerplants, are to share in the headwater reservoir costs where power benefits are received from storage so provided.

It will be seen that this is not a charge for the water but a sharing of the costs of facilities which make the water available when it can be utilized.

Senator ANDERSON. Thank you.

Did you want to have some statement by Mr. Farley and Mr. Mason?

Mr. GATCHELL. No, sir. They are here if you have some questions. Mr. Farley is an engineer and Mr. Mason is a lawyer.

Senator ANDERSON. How does it change the present law?

Mr. GATCHELL. It changes the present law in one respect only, and that is, it makes it possible for those private power sources, States, and municipalities who develop headwater reservoirs, to be reimbursed for a part of their cost where a benefit is conferred upon a Federal powerplant. The benefits, of course, would be received by the

Federal powerplant in any event. But if it is possible to share these costs, it makes headwater storage reservoirs that might not otherwise be economically feasible, feasible, by sharing the cost.

Senator ANDERSON. And the Federal Power Commission has been in favor of this for quite a while?

Mr. GATCHELL. Yes, sir.

Senator ANDERSON. And the Office of the President?

Mr. GATCHELL. Yes, sir. President Truman's Water Resources Committee so recommended, as Senator Goldwater remarked.

Senator ANDERSON. Are there other witnesses?

**STATEMENT OF IRVIN HOFF, ADMINISTRATIVE ASSISTANT TO  
SENATOR MAGNUSON**

Mr. HOFF. Senator, Senator Magnuson would like to testify on this and suggests, if possible, for him to appear when you resume.

Senator ANDERSON. We will recess this hearing and resume and ask Senator Magnuson and Senator Jackson to testify at a later date.

(Thereupon, the subcommittee recessed the hearing on S. 1574 subject to call of the chairman.)

## HEADWATER BENEFITS

---

WEDNESDAY, JUNE 29, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION  
OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met at 11:15 a. m., pursuant to call, in room 224, Senate Office Building, Hon. W. Kerr Scott presiding.

Present: Senators W. Kerr Scott, North Carolina; Alan Bible, Nevada; Henry Dworshak, Idaho.

Also present: Senator Wayne Morse.

Present also: Goodrich W. Lineweaver, professional staff, and N. D. McSherry, assistant chief clerk.

Senator Scott. The subcommittee will come to order. The hearing today is on S. 1574, a bill to provide for payments by the Secretary of the Interior to owners of non-Federal water use facilities for hydro-electric power benefits realized by the United States therefrom, and for other purposes, is a continuation of hearings opened on May 27, at which time reports from the Department of the Interior, the Federal Power Commission, and the Bureau of the Budget were presented.

The three reports agreed on an amendment to the bill, which would place the responsibility for carrying out the provisions of the measure under the Federal Power Commission instead of the Secretary of the Interior.

Mr. Gatchell, general counsel for the Federal Power Commission, testified on the bill, as did Senator Goldwater, the sponsor, by request, of the measure. The amendment proposed by the Federal Power Commission and concurred in by the Secretary of the Interior and the Bureau of the Budget, was agreeable to Senator Goldwater.

Senator Anderson, chairman of the Subcommittee on Irrigation and Reclamation, is compelled to be in New York today, and I have been designated to hold the adjourned hearing in his absence.

I understand that additional testimony may be taken from Mr. Gatchell and other officials of the Federal Power Commission as to the workings or operations of the proposed law in the event it is passed by the Congress.

There will also be testimony from witnesses who represent interests opposed to the bill. The major purpose of this hearing today is to complete the record so that it may be submitted to the Subcommittee on Irrigation and Reclamation for consideration, along with the proposed amendment.

Senator Gore of Tennessee has requested an opportunity to appear, but he was called out of the city today to attend a funeral. He had been advised that the record will be held open for him to make a statement in person or to submit his views in writing.

The record, therefore, will be kept open in order to give Senator Gore or other witnesses opportunities to present their views. (See p. 71.)

Because of his familiarity with this measure, I am requesting Mr. Lineweaver to assist me in the examination of witnesses.

The bill S. 1574 was inserted in the record of the hearing on May 27 together with the recommended amendment by the Federal Power Commission, and the reports of the Department of the Interior and the Bureau of the Budget.

Mr. LINEWEAVER. Mr. Chairman, the first witness is W. W. Gatchell. Mr. Gatchell, do you have any further statement that you would like to make before we ask you questions?

#### STATEMENT OF W. W. GATCHELL, GENERAL COUNSEL, FEDERAL POWER COMMISSION

Mr. GATCHELL. Mr. Chairman and members of the committee, we have received several inquiries with respect to certain features of this proposed amendment which the Commission suggests, which have been brought to the attention of the committee, and if I may just comment upon those briefly, it may be of assistance, and that is our only hope.

We want to answer any inquiries that you may have.

Mr. Farley, who is in our Bureau of Power in charge of the Division of Licensed Projects, having to do with hydroelectric projects, is here and Mr. Mason, assistant general counsel, is with me as well.

So if we can answer any of your questions, we will be glad to do so.

Now, it has been suggested that there have been no benefits paid to the Federal Government under the present section 10 (f) of the Federal Power Act; that is not quite so. In the first place, the Federal reservoir projects which have conferred benefits are those projects which have been constructed fairly recently.

The Grand Coulee project, which is one of the largest in the country and on the Columbia River, was completed in 1941 and no non-Federal projects could receive benefits from that reservoir until the Rock Island project was enlarged, and that was not enlarged until 1953. Promptly upon its enlargement, we undertook the investigation to determine what headwater benefits had been received at Rock Island from the storage at Grand Coulee.

In due time there will be an assessment of those benefits, of the charges due under the Federal Power Act and would be due under this bill as it would be amended.

In addition, the Government's Allatoona project went into operation in 1950 and the Federal Power Commission in 1952 started an investigation of this project and some downstream powerplants owned by the Alabama Power Co. These plants are the Lay, Mitchell, and Jordan Dam projects on the Coosa River. This was a rather complex case and the Commission did assess benefits for the years 1950, 1951, and 1952 and those charges were paid to the United States. The Commission is in process of assessing similar benefit charges for the years 1953 and 1954. As those charges are ascertained and the amount is determined by the Commission, they will also be paid by the Alabama Power Co. to the Federal Government for the benefits received from the Allatoona project.

So that actually there have been benefits that have been paid. Now, the changes will increase in dollar amount as these reservoir projects, principally in the Columbia River area, come into operation and confer greater benefits upon the present and future constructed projects owned by non-Federal interests.

Under the Federal Power Act, these payments must be made by a State or municipal or private power company developer holding a license under the Federal Power Act, whether the benefits are conferred by a Federal project or a non-Federal interest. In that connection, Mr. Chairman, if I might just mention this fact: At no time that I am aware of have the general taxpayers been called upon to make payments for Federal power projects or of Federal power operations, nor would this bill provide for any payment by the general taxpayer.

All Federal power costs are presumed to be paid under the criteria laid down by Congress, are presumed to be paid by the consumers who receive power from Federal projects—that is, those who buy the power are supposed to pay the power costs.

This bill, under the amendment proposed by the Commission, would simply say that those who receive power from Federal power projects and pay for that power shall pay all of the power costs for the power which they receive. Exactly the same formula, the same criteria, the same standard would be applied as are applied to non-Federal power consumers who, of course, must pay for all of their power project costs and that is the only way they operate.

Further, I might point out that the Federal Power Commission has been most zealous in its regulation of utilities to see that they do not earn excessive profits; that the licensee is not permitted to earn an excessive profit.

Furthermore, under the Federal Power Act, any excessive profit that might accidentally be earned by a power company must be used to reduce the net investment in that power project so that in the event that the United States should seek to acquire the licensed project at the end of the license period, the acquisition price to which the licensee must agree when he first takes the license, the acquisition price will be determined under a formula which takes into account the profit that that plant has earned. Therefore, the United States would receive the benefit from paying a reduced cost at the time that it acquired any privately owned dam under license.

Now, if I might mention one dam which has been referred to, and that is the proposed Libby Dam, which is a very large storage and flood-control project and a multipurpose power project. That dam would only be feasible if the power produced at lower projects is taken into account and I do not care whether it is built by the Federal Government or by a State or municipal agency, or by a privately owned power company. It is only feasible if the power costs are prorated throughout the area where the benefits are received.

The at-site power output at the Libby project would not support the investment that would be desirable at that place and yet it should be constructed on a comprehensive basis.

One of the keynotes to the Federal Power Act is that the water resources of the United States which belong to the people and are the property of the people should be developed in the most comprehensive

manner. It makes no difference under the Federal Power Act whether the construction is by the Federal Government or State or municipal group or private power company. The criteria is that those benefits are to be received from the way that will give the greatest benefit to the widest number of people.

If the stream is not developed in a most comprehensive manner, it is a loss to the Government and the Federal Power Act looks to comprehensive development. So that I suggest, in considering the Libby project it should be considered in the same way that other developments are considered by Congress and by the Commission, namely, to utilize those water resources for the widest public good.

If I might mention another project that has been referred to, and that is the John Day project. There are already in existence and in operation storage reservoirs which will benefit the John Day project far in excess of the headwater benefits which might be conferred if additional projects proposed in that Columbia River system are constructed.

There are no storage reservoir projects that I know of that are proposed for the Salmon River but there are some proposed for the Snake and the Clearwater Rivers, and if they are constructed, the benefits which they will confer upon the John Day project will not be as large as the benefits which would be conferred by the existing reservoir facilities. Therefore, I suggest that the John Day project is one in which the headwater benefits do play a fairly important part.

I do not mean to cover all of the points that have been raised with me by different members of the committee and Members of the Senate, but these points that I have referred to seem to me to cover some of the things that have been raised.

If you have some further questions, I will be glad to do whatever we can.

Mr. LINEWEAVER. Mr. Chairman, several questions have been handled to me to clarify section 31 (g) of the proposed amendment which reads:

No party receiving a notice under subsection (a) or (b) of this section shall be required to pay annual charges under this section for benefits received prior to the enactment of this section or be required to pay annual charges under this section for benefits received more than 5 years prior to the date on which the Commission gives notice to such party as provided in subsections (a) and (b) hereof; nor shall any party receiving a notice under subsection (a) of this section be required to pay to any non-Federal interest annual charges under this section if it is paying or is required to pay similar annual charges under State law.

Now, the question with respect to that, Mr. Gatchell, is this: First, does this mean that moneys due the Government from utilities for past upstream storage are forgiven by this proposed legislation?

Mr. GATCHELL. It does not relate in any respect to the forgiveness of payments that would be due to the Federal Government. No State can and no State has assessed benefit charges against a Federal power development, but, where there is a non-Federal project that would be subject to payment to the United States of headwater benefits under the Federal Power Act or under this amendment, paragraph (g), those payments would be made to the Federal Government. They would be made under paragraph (g) as they would be made under section 10 (f) of the Federal Power Act.

However, in the State of Wisconsin, the State does assess headwater benefit charges on the Flambeau and Wisconsin Rivers where there

are two series of very effective reservoir storage projects. Those projects are made feasible only by the payments from power development down below. It is to avoid the duplication that would arise from assessing similar benefit charges under the Federal Power Act that we put in this paragraph (g).

Mr. LINEWEAVER. I assume that your explanation there obviates the necessity for these questions, but I will read them into the record since they were handed to me.

If so, if the first question had been answered in the affirmative, how long have these benefits been accruing and unassessed and owing to the Government?

Mr. GATCHELL. In the first place, Mr. Lineweaver, the first question could not be answered in the affirmative because this amendment, or paragraph (g) particularly, does not call for any waiver of the charges due to the Federal Government.

Secondly, as I said before, the benefits received by non-Federal interests from Federal reservoirs are of fairly recent origin. The Commission's appropriations have been severely limited in recent years and we do not have as large a staff to put on this work as we would like to have, so we have had to proceed very slowly in doing the work.

We have, however, already assessed some benefits which have been paid to the Federal Government and have nearly concluded our studies on others and will proceed to do that as rapidly as we can.

The payments to the Federal Government will be made completely in accordance with the statute, even if this bill is passed.

Mr. LINEWEAVER. Let me ask you this: Have you any assurance that you will be better financed in the future than you have in the past?

Mr. GATCHELL. The present appropriation gives us some additional funds for licensed project work and one of the things on which we are spending that additional money is to provide additional staff to take care of headwater benefit work.

Mr. LINEWEAVER. Another question. Can you estimate how many millions of dollars now due the United States from utilities under the present law would thus be forgiven or "given away"?

Mr. GATCHELL. The answer is none.

Mr. LINEWEAVER. The other question I wanted to ask, Mr. Gatchell, in the original bill as introduced and referred to this committee, there was reference in that bill to this, that one of the purposes is to aid the repayment of cost beyond the ability of water users to repay.

Undoubtedly, when the committee goes to considering this amendment, that question will come up as to whether or not the Federal Power Commission or the Department of Interior gave any consideration, or the Bureau of the Budget, to that phase of the original bill which has been eliminated by this proposed amendment.

Mr. GATCHELL. Yes. The answer to your question is that we did give consideration to rendering assistance to irrigation development in connection with Federal projects, multipurpose projects, and that is something which must be taken into account.

Congress has followed the practice in the past, however, of limiting Federal power costs and Federal power reimbursement strictly to the power phases, and in deciding that you want to use some of the power revenues for the purposes of reimbursing your irrigation costs is a matter for Congress to decide. That policy is one that calls for many considerations and the Federal Power Commission in its report deals

manner. It makes no difference under the Federal Power Act whether the construction is by the Federal Government or State or municipal group or private power company. The criteria is that those benefits are to be received from the way that will give the greatest benefit to the widest number of people.

If the stream is not developed in a most comprehensive manner, it is a loss to the Government and the Federal Power Act looks to comprehensive development. So that I suggest, in considering the Libby project it should be considered in the same way that other developments are considered by Congress and by the Commission, namely, to utilize those water resources for the widest public good.

If I might mention another project that has been referred to, and that is the John Day project. There are already in existence and in operation storage reservoirs which will benefit the John Day project far in excess of the headwater benefits which might be conferred if additional projects proposed in that Columbia River system are constructed.

There are no storage reservoir projects that I know of that are proposed for the Salmon River but there are some proposed for the Snake and the Clearwater Rivers, and if they are constructed, the benefits which they will confer upon the John Day project will not be as large as the benefits which would be conferred by the existing reservoir facilities. Therefore, I suggest that the John Day project is one in which the headwater benefits do play a fairly important part.

I do not mean to cover all of the points that have been raised with me by different members of the committee and Members of the Senate, but these points that I have referred to seem to me to cover some of the things that have been raised.

If you have some further questions, I will be glad to do whatever we can.

Mr. LINEWEAVER. Mr. Chairman, several questions have been handed to me to clarify section 31 (g) of the proposed amendment which reads:

No party receiving a notice under subsection (a) or (b) of this section shall be required to pay annual charges under this section for benefits received prior to the enactment of this section or be required to pay annual charges under this section for benefits received more than 5 years prior to the date on which the Commission gives notice to such party as provided in subsections (a) and (b) hereof; nor shall any party receiving a notice under subsection (a) of this section be required to pay to any non-Federal interest annual charges under this section if it is paying or is required to pay similar annual charges under State law.

Now, the question with respect to that, Mr. Gatchell, is this: First, does this mean that moneys due the Government from utilities for past upstream storage are forgiven by this proposed legislation?

Mr. GATCHELL. It does not relate in any respect to the forgiveness of payments that would be due to the Federal Government. No State can and no State has assessed benefit charges against a Federal power development, but, where there is a non-Federal project that would be subject to payment to the United States of headwater benefits under the Federal Power Act or under this amendment, paragraph (g), those payments would be made to the Federal Government. They would be made under paragraph (g) as they would be made under section 10 (f) of the Federal Power Act.

However, in the State of Wisconsin, the State does assess headwater benefit charges on the Flambeau and Wisconsin Rivers where there

are two series of very effective reservoir storage projects. Those projects are made feasible only by the payments from power development down below. It is to avoid the duplication that would arise from assessing similar benefit charges under the Federal Power Act that we put in this paragraph (g).

Mr. LINEWEAVER. I assume that your explanation there obviates the necessity for these questions, but I will read them into the record since they were handed to me.

If so, if the first question had been answered in the affirmative, how long have these benefits been accruing and unassessed and owing to the Government?

Mr. GATCHELL. In the first place, Mr. Lineweaver, the first question could not be answered in the affirmative because this amendment, or paragraph (g) particularly, does not call for any waiver of the charges due to the Federal Government.

Secondly, as I said before, the benefits received by non-Federal interests from Federal reservoirs are of fairly recent origin. The Commission's appropriations have been severely limited in recent years and we do not have as large a staff to put on this work as we would like to have, so we have had to proceed very slowly in doing the work.

We have, however, already assessed some benefits which have been paid to the Federal Government and have nearly concluded our studies on others and will proceed to do that as rapidly as we can.

The payments to the Federal Government will be made completely in accordance with the statute, even if this bill is passed.

Mr. LINEWEAVER. Let me ask you this: Have you any assurance that you will be better financed in the future than you have in the past?

Mr. GATCHELL. The present appropriation gives us some additional funds for licensed project work and one of the things on which we are spending that additional money is to provide additional staff to take care of headwater benefit work.

Mr. LINEWEAVER. Another question. Can you estimate how many millions of dollars now due the United States from utilities under the present law would thus be forgiven or "given away"?

Mr. GATCHELL. The answer is none.

Mr. LINEWEAVER. The other question I wanted to ask, Mr. Gatchell, in the original bill as introduced and referred to this committee, there was reference in that bill to this, that one of the purposes is to aid the repayment of cost beyond the ability of water users to repay.

Undoubtedly, when the committee goes to considering this amendment, that question will come up as to whether or not the Federal Power Commission or the Department of Interior gave any consideration, or the Bureau of the Budget, to that phase of the original bill which has been eliminated by this proposed amendment.

Mr. GATCHELL. Yes. The answer to your question is that we did give consideration to rendering assistance to irrigation development in connection with Federal projects, multipurpose projects, and that is something which must be taken into account.

Congress has followed the practice in the past, however, of limiting Federal power costs and Federal power reimbursement strictly to the power phases, and in deciding that you want to use some of the power revenues for the purposes of reimbursing your irrigation costs is a matter for Congress to decide. That policy is one that calls for many considerations and the Federal Power Commission in its report deals

strictly with the power cost and does not deal with the subsidization of irrigation in any respect.

Mr. LINEWEAVER. In other words, the Federal Power Commission is sticking to its knitting?

Mr. GATCHELL. Yes, sir; that is what seemed to us to be desirable. Section 17 of the Federal Power Act calls for an allocation of the receipts received from licensees. There are certain charges that the Commission is required to make and when these charges are paid into the Commission, section 17 of the Federal Power Act calls for the allocation of those receipts to various purposes. I might call your attention to the fact that "50 per centum of the charges arising from licenses hereunder for the occupancy and use of public lands and national forests shall be paid in to, reserved, and appropriated as a part of the reclamation fund created by the Act of Congress known as the Reclamation Act, approved June 17, 1902."

So that Congress itself has set up what shall go into the reclamation fund from payments made under licenses.

Mr. LINEWEAVER. Mr. Gatchell, will you please explain the purpose and effect of the provision in section 31 (g) which reads as follows:

No party receiving a notice under subsections (a) or (b) of this section shall be required to pay annual charges under this section for benefits received prior to the enactment of this section or be required to pay annual charges under this section for benefits received more than five years prior to the date on which the Commission gives notice to such party as provided in subsections in (a) and (b) hereof;

Mr. GATCHELL. The first part of the provision you have just read is inserted to insure that headwater benefit determinations for the years preceding enactment of the proposed amendment would continue to be made under the provisions of the present statute, namely section 10 (f) of the Federal Power Act. The purpose of the second part of the quoted provision providing that annual charges shall not be required for benefits received more than 5 years prior to the date the Commission gives its notice is to insure that headwater benefit payments will be determined within a reasonable time after the benefits are actually received. This would be desirable from an accounting and tax standpoint since a headwater benefit payment should be included in the operating expenses during the year in which the benefit is received and a licensee paying such a charge would probably have difficulty in claiming the amount of the charge on a year-to-year basis prior to the time the determination of such charge is made by the Commission. In the absence of such a provision it would be possible to delay the making of the determination with respect to a particular project for 10 or 15 years after which time the Commission could retroactively fix the charge for the entire period.

The Commission does not believe that there should be undue delay in making the determination with respect to any project. However, after the determination is made with respect to the initial period of operation the charges would be paid on a year-to-year basis without a further determination until such time as the annual charge is adjusted as provided in section 31 (c).

Mr. LINEWEAVER. Will you tell me the purpose of the provision in section 31 (g) which reads:

nor shall any party receiving a notice under subsection (a) of this section be required to pay to any non-Federal interest annual charges under this section if it is paying or is required to pay similar annual charges under State law.

Mr. GATCHELL. The purpose of that provision is to permit the States to fix headwater benefit charges due between non-Federal developers in those States having laws similar to the Federal law requiring headwater benefit payments. Whether the payments are fixed under State law or under Federal law such payments encourage comprehensive development of the Nation's water resources. However, I would like to point out that the provision in question would not permit any State to fix any payments where a Federal hydroelectric project is receiving benefits, and the Commission would be the only agency to determine what payments are to be made by any Federal agency to any non-Federal interest providing the benefits.

An example of a situation where this provision would be applicable involves the Chippewa, Flambeau, and Wisconsin Rivers where for years about 20 reservoirs have been releasing water for the benefit of about 25 powerplants located downstream. The State of Wisconsin has, since about 1907, fixed semiannually the charges to be paid for those benefits. This provision would prevent duplication of effort and possible conflicts between the State agencies involved and the Federal Power Commission with respect to headwater benefit charges, and would not adversely affect any Federal interest.

Mr. GATCHELL. I would like to have the Commission's report on S. 1574 made a part of the record this hearing, Mr. Chairman, if that has not been done.

Senator SCOTT. Without objection, that will be done.

(The report referred to has been previously included.)

Senator SCOTT. Senator MORSE, since you want to get away, we will be glad to hear from you at this time.

#### STATEMENT OF HON. WAYNE MORSE, UNITED STATES SENATOR FROM THE STATE OF OREGON

Senator MORSE. You are very kind, Mr. Chairman.

Mr. Chairman and gentlemen of the committee, S. 1574, the so-called downstream benefit bill, would have the taxpayers foot the bill for the "partnership" dams proposed by the administration and the private utilities.

Supposedly, partnership is designed to relieve the Federal Government and the taxpayers of great portions of the cost of multipurpose dams. That is the major argument for turning over the revenue-producing power features of multipurpose projects. Yet this bill would shift the burden, or an appreciable part of it, back upon the taxpayers while the revenues from power would be handed over to the private utilities.

A measure of this type was first proposed by President Eisenhower in his 1955 budget message. He said:

Under the Federal Power Act, licensees of hydroelectric projects which benefit from headwater impoundments of other projects, either public or private, must make annual payments to the upstream developer in accordance with benefits received. The Federal Government is not required to make similar payments when Federal projects derive such benefits. In simple equity, this should be done. I recommend enactment of legislation which would require such Federal payment.

Since its enactment in 1920 the Federal Power Act has provided that non-Federal dam owners would pay the United States for downstream benefits conferred by the orderly release of waters from Federal dams.

What the President did not say in his budget message is that not 1 cent of revenue has been received by the United States Treasury under this 35-year-old law. What, then, is the "equity" which he advocates? What is the inequality that must be balanced off? It is nonexistent.

Early attempts to apply the law were abandoned because the cost of administration would have been greater than revenues. But in recent years downstream benefits from Government dams has been greatly increased.

As an example, water stored and released from Hungry Horse has increased the power output of Washington Water Power's Cabinet Gorge Dam. It has yet to pay anything for the substantial benefits received.

The policy of the 1920 law is sound. Private utilities should pay for the increased power capacity conferred by upstream Government dams. They sell that additional power at a profit. I am advised that they sell it at a greater profit than power they generate themselves because it costs the utilities less to produce.

As I said in a statement on a similar bill last year:

The philosophy of this proposal is certainly novel. Our streams are the common heritage of all the people. When a license is issued to a non-Federal agency or a private utility it is conferred because it is deemed that the public convenience and necessity will be served and because the utility desires to invest funds and make a profit. It should be borne in mind that the utility is using community property for which it does not pay and often has the benefit of the Government's power to condemn property for a public use.

It makes sense that when the United States builds and operates a dam that increases the efficiency of downstream non-Federal dams the downstream beneficiary should compensate the Federal Government if it is feasible to compute the payment.

The reverse does not follow. The non-Federal user is, in the first instances, employing water in streams that belong to the citizenry at large. Private utility power dams are not designed to improve the streams in order to create downstream benefits. That is an incidental byproduct of their operation.

It would be strange to exact payment from the taxpayers to compensate utilities for such incidental improvements of resources that belong to all of the people.

The purpose of this bill is clearly revealed in an article in the Wall Street Journal. Now listen to the report of the Wall Street Journal on August 24, 1954, on the views of the president of the Pacific Northwest Power Corp., the combine that proposes almost all of the partnership projects in the Columbia River Basin. This is what the Wall Street Journal reports that he said:

\* \* \* two fundamental questions must be settled before the company could proceed to build the dam, a downstream benefit act of Congress, to standardize assessments of costs to downstream dams for benefits from upstream water storage, and a decision whether the Federal Government is willing to advance funds for flood-control features of the dams.

This proposal would have the taxpayers pay for incidental downstream benefits from so-called partnership dams. In that fashion the taxpayers would foot the bill for the partnership scheme which is supposed to save the taxpayers money.

The sad thing is that some of the partnership projects which are proposed and conditioned upon this scheme are poor substitutes for more effective storage projects like the high Hells Canyon Dam.

Under this proposal Libby Dam, a multipurpose power and storage for flood control project, would be made feasible as a partnership project, at higher power costs to consumers.

As further indication of the interrelationship of this bill and partnership, I would cite the John Day Dam partnership bill, H. R. 5789.

In the section on computation of costs, it is provided that the net of downstream benefits received and conferred would be paid or received. The fact is that at the John Day project at this time and until there is upstream storage on the Snake, Salmon, or Clearwater Rivers, downstream benefits received or conferred would be negligible. Yet, the John Day partnership bill seeks to establish a downstream benefit payment precedent.

This is a bad bill. It is the cornerstone of the so-called partnership scheme under which the private utilities would be permitted, no, paid, for taking over multipurpose storage dam sites. It is a double giveaway. The private utilities would not only receive the revenue potential of the dam sites which should be developed in the public interest; they would be paid to enable them to do so.

I close by saying, Mr. Chairman and members of the committee, that I think in those instances where a license to a private utility is justified to build a dam on the people's streams that the private utilities should be limited to that dam site and that the private utility should not expect to collect tribute from the Federal Government for any so-called downstream benefit that may flow from the storage of the people's water behind a dam built by a private utility when that dam was built in order to provide power to serve the customers of the private utility, and when they get that license from the Federal Government they get, in my judgment, all they are entitled to out of the people's water.

I yield for questions.

Senator SCOTT. Thank you very much, Senator.

Senator MORSE. Thank you, gentlemen.

Senator SCOTT. Senator Dworshak?

Senator DWORSHAK. Mr. Chairman, I just wanted to make the observation that Senator Goldwater is the author of S. 1574 and is out of the city today, but is represented at the hearing by a member of his staff.

I presume that he might have testified were he present.

Mr. LINEWEAVER. At the hearing on May 27, Senator Dworshak, Senator Goldwater expressed himself as in favor of the amendment proposed by the Federal Power Commission and concurred in by the Department of Interior and the Bureau of the Budget.

Senator DWORSHAK. Mr. Gatchell. I was wondering whether you had followed the proposals inherent in the proposed partnership plan which has been advocated by the Department of Interior.

Mr. GATCHELL. Senator Dworshak, our proposals here are in line with the basic principles upon which the Federal Power Act is established, namely, the licensing of non-Federal interests to construct those water resources which can be constructed within the comprehensive plans which are suitable. The partnership proposal is merely an adaptation of the plan and it seems to me that this amendment is in harmony with it only in the fact that it would equalize the payment of power costs so that all power consumers would bear their fair share of it.

This is not one where the Commission is opposing Federal development because that Commission has recommended Federal power development at many sites.

Senator DWORSHAK. Jointly with Federal agencies?

Mr. GATCHELL. Yes, sir; some jointly and some where the United States—it was recommending that the United States undertake the development alone. It supported the Coosa River development in the last Congress. It also supported the Priest Rapids bill, under which Grant County is constructing under a Federal license.

Those partnership proposals where the Federal Government does have some interest seem to me to be essentially sound in that they utilize non-Federal agencies to accomplish the full and complete utilization of water.

Senator DWORSHAK. You prefer to have a general formula outlined by a specific law to govern all of these joint developments or do you think it is feasible to have the specific details affecting a particular partnership development contained in the authorization of that project?

Mr. GATCHELL. Senator, I was not authorized by the Federal Power Commission to pass on that question because we had not had it before. Heretofore Congress has dealt with the projects on a system basis, river-system basis.

Senator DWORSHAK. Individual basis?

Mr. GATCHELL. Individual basis.

Senator DWORSHAK. Those have been quite limited?

Mr. GATCHELL. They have been except that you have, for example, in the 1944 Flood Control Act laid down certain principles which were followed in subsequent bills.

I think the Coosa River bill is a good example of the partnership approach where the full resources can be utilized for the benefit of all the public.

Senator DWORSHAK. Who participated in that?

Mr. GATCHELL. The Coosa River bill was supported by all but 1 member of the House delegation from Alabama and by the 2 Senators.

Senator DWORSHAK. Who participated in the venture?

Mr. GATCHELL. The Alabama Power Co. Certain navigation works will be constructed by them and navigation benefits will be borne by the power costs in that. The Federal Government is engaging in navigation improvement downstream from the power development.

Senator DWORSHAK. Have they arrived at a mutually satisfactory distribution of the costs and benefits in that particular instance?

Mr. GATCHELL. No dispute at all, Senator. The costs the power company should assume have been assumed by them and the Federal costs likewise have been assumed by the United States without any question.

Senator DWORSHAK. You think that we should have a basic law that would apply equally to developments under the Bureau of Reclamation and under the Army Engineer Corps or under other Federal agencies?

Mr. GATCHELL. Senator, I do not mean to encroach on the responsibilities the Commission has assigned to me. That is a policy question.

Senator DWORSHAK. I should not have asked it.

Mr. LINEWEAVER. Thank you, Mr. Gatchell.

Mr. GATCHELL. Thank you, gentlemen.

(Senator Goldwater subsequently submitted the following supplemental statement for the record:)

## ADDITIONAL STATEMENT OF SENATOR BARRY GOLDWATER ON S. 1574

Because I was in my home State of Arizona on June 29, I was unable to attend the hearings on S. 1574, but I would like to answer a few of the misconceptions brought out in some of the testimony at that hearing.

No taxpayer will have to pay anything in taxes to anyone as a result of this proposed legislation. The only purpose of this bill is to equalize the costs of improving the stream for greater output of electricity among all who receive benefits from such improvements. Certainly, if it is a recognized principle that is sound, the Federal Government should be willing to abide by that principle. To do otherwise would mean that one segment of our people is paying a part of the power bill for another segment. People buying electricity from a non-Federal agency, either public or private, should not be required to subsidize the power bill of someone buying electricity from the Federal Government. The Federal Government should treat all of its citizens alike and not shower favors on one group merely because it buys power from the Federal Government. They should be required to pay at least the cost of producing the power they buy, and a part of that cost is the benefit derived from headwater storage by non-Federal projects.

If the payments for such benefits are not recognized, it will be impossible to coordinate the release of storage among various projects on a river to fully utilize the maximum flow.

The Federal Government has not undertaken to furnish power to all of its citizens, nor do I think it should. Power which it does have for sale is incidental to its primary functions of flood control, navigation, and reclamation; and, as such, any power benefits received by non-Federal construction should be paid for by the users of such power. To do so will not increase the cost of Federal power materially. I have been advised that the application of my legislation in the Columbia River Basin will change the cost of federally generated power in that area less than one-hundredth of 1 mill per kilowatt-hour, which is a very insignificant amount.

Some criticism has been leveled at the fact that the private power companies of the United States make a profit. Is that bad? The greatness of our country and its economic ability has been due to our incentive system of capitalism. All utilities are subject to one form or another of regulation of their rates by either some State or Federal agency, and any payments received for headwater benefits would have to be reflected in their rate structures. This legislation only proposes to take the "windfall" subsidies now enjoyed by special groups receiving Federal power and to equalize them so that all United States citizens pay, but pay only for what they receive—no more and no less. No windfall profits will accrue to anyone by reason of the principle embodied in my legislation, but rather the consumers of one area will not be able to pass off to the consumers of another area a part of their electric bill.

Mr. LINEWEAVER. Mr. Chairman, next we have Mr. Angus McDonald. Mr. McDonald has an engagement and I agreed to put him on at this time. He said it would take about 5 minutes.

Senator SCOTT. Proceed.

**STATEMENT OF ANGUS McDONALD, ASSISTANT LEGISLATIVE SECRETARY, NATIONAL FARMERS UNION**

Mr. McDONALD. Mr. Chairman and members of the committee, my name is Angus McDonald. I am assistant legislative secretary of the National Farmers Union. I have a brief summary statement here which I believe I will be able to read in less than 5 minutes.

We are appearing here in opposition to S. 1574, which would authorize the Secretary of the Interior to report annually to the Congress the value of hydroelectric power benefits which he finds have been realized by a Federal facility because of an asset, non-Federal facility.

The Secretary is further authorized to cause the amount of the benefits to be credited on the books of the United States Treasury to the accounts of the non-federal facility.

This proposal, it seems to us, is a roundabout method of getting the hands of the private power groups into the Federal Treasury. We see no reason why the Federal Government which has generously awarded dam sites to private groups should have to pay for benefits it receives indirectly from the private installation.

Private power companies have found the building of hydroelectric dams and the sale of electricity a highly profitable business. That is the reason that they generally oppose the authorization of Federal power projects and the distribution of resulting power to consumers at low cost. The only exception, as far as we know, to the opposition of private power groups to Federal power programs or projects is in areas where the cost of the dam is relatively high.

Private power groups have been generously subsidized by the United States Government, according to the Rural Electric Co-operative Association which has made a study of the Federal tax amortization program. These benefits amount to a total of about \$3 billion.

Now it appears the private utilities want additional subsidies and benefits at the expense of the people of the United States who own the navigable rivers of the United States.

I refer to a statement of Kinsey M. Robinson, president of the Pacific Northwest Power Co., published in the Wall Street Journal, August 24, 1954.

The Pacific Northwest Power Co. is a joint enterprise of Washington Water Power Co., which Mr. Robinson also heads; Montana Power Co., Pacific Power & Light Co., and Portland General Electric Co.

In the article Mr. Robinson disclosed the reasons for delay in the private power development of Bruces Eddy on the North Fork and Penny Cliffs on the Middle Fork of the Clearwater River. He apparently referred to S. 3434, which was not acted on by the 83d Congress. Although this bill varies somewhat from the legislation considered here, the principle of requiring the Federal Government to subsidize private power development also applies.

Mr. Robinson said that before his company built these 2 projects that 2 fundamental questions must be settled before the company could proceed to build the dams, "a downstream benefit act of Congress," and I quote:

\* \* \* to standardize assessment of costs to downstream dams for benefits from upstream water storage, and a decision whether the Federal Government is willing to advance funds for flood control features of the dams.

Much has been said in the press, in the Congress, and other places regarding the subsidies received by rural electric cooperatives and consumers of power distributed by Federal power projects and programs.

We believe that the elimination of subsidies in the rural electrification program and in other programs amounts to little or nothing. It certainly is insignificant compared to the vast benefits which farmers, distributors of electric appliances, and manufacturers of other equipment have received because of the program.

We do not object to private power companies being in the business of selling electric power. We do not object to their making a fair return of profit, but we do object to their reaching their hands into the United States Treasury and levying a tax on every American citizen to the extent that they would be subsidized by this legislation.

We oppose this bill not only because it is an unnecessary subsidy which would be paid to those who are already reaping profits as a result of privileges granted by State and Federal authorities but because it would encourage others to come to Washington for hand-outs, in addition to subsidies ensuing from the rapid tax amortization program.

We, therefore, respectfully urge this committee to turn down the proposal whether it is in the form of this bill or in the form of S. 3434, 83d Congress.

Mr. LINEWEAVER. Mr. Chairman, for your information I should say that a similar bill to the substitute amendment offered by the Federal Power Commission was before the Senate Committee on Interstate and Foreign Commerce last year and was not reported out. Hearings were held before a subcommittee.

Senator SCOTT. Thank you very much.

Mr. McDONALD. Thank you, gentlemen.

Mr. LINEWEAVER. Next we have Mr. Irvin Hoff, representing Senators Magnuson and Jackson.

**STATEMENT OF HON. WARREN G. MAGNUSON, A UNITED STATES SENATOR FROM THE STATE OF WASHINGTON, AND HON. HENRY M. JACKSON, A UNITED STATES SENATOR FROM THE STATE OF WASHINGTON, BY IRVIN HOFF, ADMINISTRATIVE ASSISTANT TO SENATOR MAGNUSON**

Mr. HOFF. Mr. Chairman, Senator Magnuson and Senator Jackson both have conflicting engagements this morning and could not be here. They asked me to read into the record, if I may, a joint statement from them.

On March 28 Senator Goldwater introduced S. 1574, the so-called headwaters benefits bill. In essence, the bill proposes that the Federal Government make payments to non-Federal licensees who, in building improvements upstream, may create benefits to downstream plants constructed by the Federal Government.

The bill is identical in intent to S. 3434 of the 83d Congress, introduced on May 11, 1954, by Senator Bricker. The 1954 version of the headwater benefits legislation proposed to amend section 10 (f) of the Federal Power Act to accomplish the objective. In consequence, that bill was referred to the Committee on Interstate and Foreign Commerce, which, under the Reorganization Act, has jurisdiction over the Federal Power Commission and the statutes under which it operates.

S. 1574 was referred to this committee, the Committee on Interior and Insular Affairs, because it proposed to transfer to the Secretary of the Interior the administration of the headwater benefits problems, determinations and payments.

I call the committee's attention to the several reports you have received from the departments and agencies who have an interest in this legislation. You have reports from the Department of Interior, Bureau of Budget, and the Federal Power Commission. All of these reports recommend that S. 1574 be amended to bring it into conformity with S. 3434 of the 83d Congress.

The report of the Federal Power Commission suggests the precise language which should be used as a substitute for the present content of S. 1574. An examination of the language recommended by the Federal Power Commission discloses that the amendment suggested is identical, word for word, with S. 3434 which, I remind you again, was an amendment to section 10 (f) of the Federal Power Act and in the 83d Congress was referred to the Interstate and Foreign Commerce Committee.

Before I get into the merits of the legislation itself, I call the committee's attention to a further fact which may be of substantial importance.

Section 10 (f) of the Federal Power Act, as now written, stipulates that if a licensee is benefited by headwater improvements constructed by another licensee or the United States, and I quote:

The Commission shall require as a condition of the license, that the licensee so benefited shall reimburse the owner of such reservoir or other improvements for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission may deem equitable.

In computing the annual payments under present law therefore, the Commission is directed to take into account interest, maintenance and depreciation on the headwater improvement. The act states:

The proportion of such charges to be paid by any licensee shall be determined by the Commission.

In S. 3434 of the 83d Congress and in the identical language the Federal Power Commission recommends in its report on S. 1574, there is a change in the provision I have just quoted, a change in the enumeration of the items which the Commission may take into account in determining the payments for headwater benefits. The new language reads, and I quote:

The annual charge, hereunder shall be such part of the fixed cost or the facility furnishing the benefit, plus such part of the annual operating and maintenance cost of such facility, including land rental and similar charges, as the Commission may deem equitable.

Thus we see that section 10 (f), as it stands today, authorizes the computation of annual charges for interest, maintenance and depreciation. The new language includes fixed costs of the facility, annual operating costs, maintenance cost, land rentals and similar charges.

There has been no testimony, Mr. Chairman, as to what effect this new language would have on the annual payments for headwater benefits. The old language says nothing about land rentals and, instead of "fixed costs," speaks of interest and depreciation.

I think this committee and the Congress and all parties at interest should know precisely what this new language means and how it would affect annual payments by beneficiaries of headwater benefits. Let me explain why this may be important and why it should be clarified.

The Federal Power Commission has estimated what the headwater benefit payments would be on the Columbia River under certain circumstances which will prevail in 1959. It is my understanding that these computations were made pursuant to the language now contained in section 10 (f).

Here is a schedule of payments four licensees would make to the Federal Government under conditions prevailing in 1959, payments

for benefits received from upstream storage constructed by the United States:

Montana Power Co. would pay \$220,000.

Washington Water Power Co. would pay \$100,000.

Puget Sound Power & Light Co. and the Chelan County PUD would pay \$75,000.

Pend Oreille County PUD would pay \$40,000.

The total payment to the United States would be \$435,000; that is an estimated figure.

Section 10 (f) of the Federal Power Act, as it stands today, obligates the four licensees I have mentioned to pay these estimated sums. Now, if the proposed amendment to section 10 (f) is enacted, the one you have under consideration, the Federal Government would be required to make payments to these or any other licenses for benefits the United States projects may receive from headwater improvements.

The Commission estimates that the United States would pay approximately \$300,000, \$141,000 to Washington Water Power and \$159,000 to Montana Power Co.

Under the present law these two companies are obligated to pay \$320,000 to the Federal Government. If this amendment is approved, the United States would pay back to the companies approximately \$300,000. The question is whether these computations will be raised and, if so, how much, by the language, I have already referred to.

How much would the payments be increased if you take into account the annual operating charges, land rentals, and fixed costs?

Perhaps, Mr. Chairman, the changes would not be significant. Certainly, however, this committee and the Congress ought to know before any legislation is passed.

In order to understand this legislation more fully, Senator Jackson and I addressed a letter to the chairman of the Federal Power Commission on June 8 in which we asked 20 questions.

On Friday, June 10, we received from the Commission responses to our inquiry.

I think it would be helpful to the record of these proceedings if our letter and the material we obtained were made a part of these hearings. I submit for the record, Mr. Chairman, a copy of our June 8 letter and the response, with the request that the data be inserted immediately following our remarks.

A part of the information the 2 Senators requested, if I may interpolate, Mr. Chairman, includes the exact computations the Federal Power Commission made in determining the headwater costs and payments that the 2 Senators have just mentioned. Both thought it would be helpful to have that material in the record as a part of the legislative history.

Mr. LINEWEAVER. This additional information, is that applied under the proposed bill?

Mr. HOFF. It is applied under section 10 (f) as it now stands. Neither in the hearings last year nor, to the best of my knowledge, in the hearings to date is there any legislative history as to how these computations were made and, recognizing that members of the Commission change, it might be helpful to have in the record of these hearings the history.

Mr. LINEWEAVER. Is it the view of Senator Magnuson and Senator Jackson that the Federal Power Commission should be asked to make a new estimate?

Mr. HOFF. That is right, under this new language that is proposed.

Mr. LINEWEAVER. Did you ask him?

Mr. HOFF. No; I did not.

Now I turn to the merits of the bill itself, with the reminder to the committee that we are not talking about the text of S. 1574, but rather about the amendment which the agencies at interest have submitted as a substitute.

Section 10 (f) of the Federal Power Act was approved June 10, 1920. It was amended August 26, 1935, but the 1953 amendment did not alter the basic principle of the section.

Thirty-three years later, in its 33d annual report, the annual report for fiscal 1953, the Federal Power Commission first recommended the amendment we are now considering.

The new administration took office on January 29, 1953. A new Chairman of the Federal Power Commission assumed duties on May 18, 1953, and the report proposing that the Federal Government pay headwaters benefits was issued January 6, 1954.

This brief summary of the history of the section and the action of the Federal Power Commission is important. For 33 years the Congress and the Commission had adhered to the principle that private or non-Federal public entities, who receive permission to construct a project on a public stream should make payments to the public for any benefits they might receive from an investment upstream by the Federal Government.

Neither the Commission nor the Congress, during that 33 years, considered it fair or equitable that the people pay private or non-Federal licensees for benefits the United States might receive from headwater improvement. This is understandable because in most cases a private company or a non-Federal public body pays nothing or practically nothing, for the use of a public resource. It was considered proper, however, that a private company should make payments for benefits it might receive from Federal development of a public resource.

Proponents of this bill argue that if it is fair for the Federal Government to require payments for benefits it confers upon downstream licensees, the converse should likewise be true. I submit, however, that the cases are not on all fours.

The rivers of this Nation are public property, the people own these resources. A non-Federal licensee obtains permission through the Federal Power Commission to use a public resource. The licensee does not own the resource. His project is on the stream or on the river by permission of the people, by permission of the owners.

A license to use a public resource, a license to construct a dam on a public stream, is a valuable asset. The license gives a private company or the non-Federal public agency an opportunity to develop hydroelectric power, to sell that power, and, in the case of a private company, to make substantial profits on it.

In most cases, the only thing the people get from the use of their resource are the benefits they might receive at downstream plants from the headwater improvements constructed by such licensee.

Let me demonstrate with a specific example which I draw from my own section of the country. In 1930, the Montana Power Co. obtained a license to construct Kerr Dam. As a condition of the license, and pursuant to the requirements of the Federal Power Act,

the company provided 1,100,000 acre-feet of storage in the project. It is important to remember that the Federal Power Act stipulates that the licensee must submit plans for its project that will get the maximum potential from the resource.

The Federal Power Commission has stated to Senator Jackson and me that the 1,100,000 feet of storage was necessary and was required from the Montana Power Co. to the end that Kerr Dam would operate efficiently, effectively and would obtain the maximum potential from the stream.

Had the company refused to construct a project with this storage feature in it, the Federal Power Commission would have refused a license, likewise the company itself would not have had the most efficient plant from its own self-interest point of view.

As I said before, the company obtained its license in 1930 and constructed a powerplant with 1,100,000 acre-feet of storage behind it. At that time there was no Grand Coulee Dam downstream, there was no Bonneville Dam, there was no the Dalles Dam, there was no McNary Dam, there was no Chief Joseph Dam downstream. Likewise, there was no Albeni Falls and no Hungry Horse Dam upstream.

All these Federal projects I have mentioned were merely gleams in the eyes of a few farsighted pioneers in the field of public resource development.

At that time the company made its investment, it did so with the knowledge that section 10 (f) was on the books. It knew that it would have to pay the Federal Government a reasonable charge for any benefits that might subsequently be developed through Federal investment upstream from the site of Kerr Dam.

It knew also that it, the Montana Power Co., would not receive payments from the Federal Government from any benefits its 1,100,000 acre-feet of storage might subsequently confer upon Federal projects that might be built downstream. In other words, the company knew what it was doing.

It made its investment under conditions and in accordance with statutes then prevailing. The company and its stockholders must have considered it a "good deal"; otherwise, Kerr Dam would never have been built.

As events unfolded, it now develops that the company is obligated under section 10 (f) to make payments to the Federal Government for benefits it receives from upstream storage constructed by the people.

As I said earlier, the Federal Power Commission calculates that by 1959 the annual charge to the company will be \$220,000. This company, and others in like circumstances, now come to the Congress requesting a change in rules. I do not blame them, but neither am I convinced that a change in rules is warranted.

If the rules are changed, the Federal Government will pay to the company in 1959 \$159,000, on an estimated basis.

This \$159,000 constitutes a windfall to the company. It is a yearly payment that was never included in the company's calculations back in 1930. If the payment is authorized through this amendment, it means that the people are giving the company \$159,000 a year that the company never expected to get at the time it constructed Kerr Dam. In a way, it is like paying rent on your own house.

The company is using a public resource. It is making a profit on that use. Its million acre-feet of storage will benefit downstream plants but those benefits are incidental to the main operation of the company's plant. Those benefits constitute practically the only payment the people will receive for the use of their resource.

In 1951 the Washington Power Co. obtained a license to build a dam at Cabinet Gorge, received a license to use a public resource at that point. The dam was completed in 1952, thus the company applied for its license and completed the dam long before the Federal Power Commission recommended the change in ground rules we now have before us.

The company made its investment subject to the conditions on headwater benefits contained in section 10 (f). The company went into the deal with its eyes open, it knew it would receive benefits from upstream storage constructed by the Federal Government. It knew it would have to pay something for those benefits. Nonetheless, the company considered Cabinet Gorge a sound business proposition.

The Federal Power Commission estimates that the Washington Water Power Co. will pay in the year 1959 an annual charge of \$100,000 to Uncle Sam.

If this legislation is enacted the company will receive back from Uncle Sam \$141,000 as an annual payment in that same year. This, too, would become a windfall, which the company could not have foreseen at the time it constructed its plant.

That \$141,000 was not included in the company's calculations. It would constitute a payment by the people to the company for benefits conferred on downstream Federal plants that are created as incidental to the operation at Cabinet Gorge.

Now, Mr. Chairman, proponents argue that Uncle Sam should make payments to upstream licensees in order to be fair to all consumers. Before we accept this argument in toto, let us examine the value of the headwaters benefits, to the two companies I have mentioned, in relation to the payments they will make.

The release of water from Hungry Horse and Albeni Falls Dams will create additional kilowatts at downstream plants owned by the Montana Power Co. and Washington Water Power Co.

According to the figures supplied me by the Federal Power Commission, 377 million kilowatt-hours will be added to the Montana Power Co.'s project and 176 million kilowatt-hours to the Washington Water Power Co.'s plants. These kilowatts will cost the 2 companies, respectively, 0.58 mill and 0.57 mill per kilowatt-hour, based on the \$220,000 payment and the \$100,000 payment I have already mentioned. Those are cheap kilowatts.

By way of comparison, let us see what the kilowatts created at their own plants cost these companies.

On this I have two sets of figures: First, the cost per kilowatt-hour to the companies in terms of the value of the dollar at the time they made their investment, and, second, the cost per kilowatt in terms of the 1955 dollar.

The cost per kilowatt-hour at Kerr Dam, in terms of the 1930 dollar, is 2.11 mills and, in terms of 1955 dollars, 3.57 mills. The cost of the new kilowatts that will be added by the Federal upstream improvements, you will remember, was 0.58 mill. Thus the original cost to

the company was approximately 350 percent more than the added kilowatts will cost. In terms of 1955 dollars, the original cost of kilowatts to the company would be approximately 600 percent more.

The company sells its power at about 8.2 mills per kilowatt-hour. This is 1,500 percent more than the new kilowatts will cost the company at site.

For the Washington Water Power Co., the kilowatts added by the headwaters improvements will cost 0.57 mills per kilowatt-hour, based on \$100,000 payment, estimated as the annual charge in 1959.

The cost per kilowatt-hour of energy created by the company's own investment in terms of 1951 dollars is 5.92 mills. The cost adjusted to 1955 dollars would be 6.33 mills.

Thus the kilowatts created by the company's own investment are approximately 1,000 percent higher than the cost of them of the added kilowatts, in terms of 1951 dollars, and about 1,100 percent higher in terms of 1955 dollars.

The company sells its power for approximately 9 mills, which is about 1,600 percent more than the new kilowatts will cost.

I mention these figures, Mr. Chairman, to indicate that the two companies and their customers will benefit substantially from the headwater improvement, even though collectively they make annual payments of \$320,000. The companies and their customers will benefit substantially without any change in the ground rules.

Obviously they will benefit more if the ground rules were changed to require \$300,000 payment to them from Uncle Sam. The new kilowatts they are getting, however, are costing them far, far less than would be the case if they had to install new capacity starting from scratch.

There is another aspect I want to discuss under this general heading of "Treating the Customers Alike."

It is obvious from the figures I have just cited that the two companies will make ample profits on the sale of the power created from Uncle Sam's headwater improvements. It is obvious, too, that the company could sell these new kilowatts for far less than they are charging for those they develop at their own plants, and still make a profit.

Now, let us assume that this bill were enacted and Uncle Sam makes to these companies an annual payment of \$300,000. What would happen to the \$300,000? Would that be passed on to the consumer in terms of lower rates, or would it go to the stockholders, or would it be utilized to improve the service the companies are rendering?

My guess is that it would go to the stockholders, at least until such time as the public service commissions of the three States involved might have an opportunity to consider this additional income in a rate case.

It is possible, of course, that the public service commission might deny an application for an increase of rates after taking into consideration this additional income. I doubt very much, however, that either the Montana, the Washington, or the Idaho Public Service Commission would require the company to reduce their rates sufficiently to pass this windfall on to the customers.

In summary S. 1574, as introduced, does not have the support of the departments and agencies at interest. They have recommended

that the language of S. 3434 of the 83d Congress be substituted. S. 3434 was referred to the Interstate and Foreign Commerce Committee because it amends section 10 (f) of the Federal Power Act.

In my judgment, there is little or no substance to the argument that the people should be required to pay for headwater benefits, merely because the present act requires that non-Federal licensees make annual payments to the people for headwater benefits created by Federal investments.

It is the people's resource that constitutes the basic asset. It is the use of the people's resource that provides the opportunity for profit. You do not pay rent on your own house.

The kilowatts created at the plants of non-Federal licensees in the Columbia River system will cost less than 0.6 mills per kilowatt-hour. The kilowatts created at the 2 privately owned plants I have mentioned cost from 350 to 1,000 percent more than those created by Federal headwaters improvements. This difference constitutes a substantial contribution to the licensees involved and to their customers.

An additional contribution to them of \$300,000 per year is a windfall that they did not expect at the time they made their investment. It is improbable that that windfall would be passed on to the customers in terms of lower rates.

Mr. Chairman, I have used examples from the Pacific Northwest to illustrate the point, but I think the weight of my argument applies countrywide.

Senator SCOTT. Thank you very much.

Mr. HOFF. Thank you, gentlemen.

(The information previously referred to follows:)

JUNE 8, 1955.

Re Headwaters Benefits Bill (S. 1574) (S. 3434, 83d Cong.)

Mr. JEROME K. KUYKENDALL,  
*Chairman, Federal Power Commission,*  
*Washington, D. C.*

DEAR MR. CHAIRMAN: We are seeking some additional information relative to the so-called headquarters benefits bill. It appears likely, as of this writing, that further hearings will be held on S. 1574 early next week. In consequence we will deeply appreciate your getting to us the information requested herein by Friday afternoon of this week—either on a formal or informal basis.

At our request the General Counsel of the Commission, Mr. Gatchell, was good enough to come up to the office to discuss S. 1574 with members of the staff. He left with us certain data which we would like to recount as a basis for making this additional request readily understandable.

Mr. Gatchell stated that as of 1959, when most of the Federal dams now under construction on the Columbia will be completed, the following annual charges against licensees for benefits from Federal headwater improvements will be assessable:

From Montana Power Co.....	\$220, 000
From Washington Water Power Co.....	100, 000
From Puget Sound Power & Light Co. and Chelan County PUD.....	75, 000
From Pend Oreille County PUD.....	40, 000
<b>Total.....</b>	<b>435, 000</b>

In addition Mr. Gatchell stated that during this same year (1959)—if S. 1574 or similar legislation were enacted, the average annual charges to be paid by the Federal Government would approximate \$300,000 to the licensees above mentioned.

With these facts before you, we come to the additional information we feel we need to understand fully the implications of the headwaters benefits bill.

We would like the following information for each of the licensees in the above schedule: Montana Power Co., Washington Water Power Co., Puget Sound Power & Light Co., and Chelan County PUD, and Pend Oreille County PUD:

1. On what date was license issued?
  2. On what date was the dam completed?
  3. What was the total cost of the project?
  4. What would the total cost have been in 1955 dollars?
  5. What was the installed capacity?
  6. How many generators and of what size went into each of the dams?
  7. How much firm power is generated? How much secondary or peaking power?
  8. Approximately what was the capital cost in 1955 dollars per kilowatt from installed capacity?
  9. Approximately what is the average rate per kilowatt-year received by these licensees for sale of power on a kilowatt-year basis and on a kilowatt-hour basis?
  10. How many additional kilowatts will the Federal headwater improvements produce at the dam or dams of each of the licensees above mentioned?
  11. What will be the cost to the licensee of these kilowatts, assuming annual charges listed earlier?
  12. How does the cost of the additional kilowatts produced by Federal headwater benefits compare with the original cost of kilowatts produced at the dams for each of the licensees? (Give us this figure, both in terms of the dollars prevailing at the time the dam was constructed and in terms of 1955 dollars.)
  13. What Federal dams downstream had been completed or were under construction at the time each of the licensees obtained its license?
  14. What Federal dams upstream, with storage capacity, were completed or under construction at the time each licensee obtained its license?
  15. How much storage capacity, if any, did the Federal Power Commission require the licensee to install at its dam or dams?
  16. Was this storage capacity required by the Federal Power Commission of the licensee in order to get the maximum out of this site and for the efficient operation of the licensee's own at site powerplant?
  17. Would you supply us with the computations you made in determining the downstream benefits that would accrue to each of the licensees from the storage at Hungry Horse and Albeni Falls? (We want to see the actual interest, depreciation and reservoir maintenance costs you used as the basis for determining the annual charge each licensee was to make and we want to know what portion these costs are of the total cost of Albeni Falls and Hungry Horse.)
  18. How much of the \$300,000 annual charges against the United States for benefits for headwater improvements would be paid to Washington Water Power Co.? How much to Montana Power & Light?
  19. In which of its annual reports did the Commission first recommend that section 10F of the act be amended to provide for payment by the United States for benefits received from headwater improvements? Who was chairman at the time?
  20. Will you list for us each subsequent annual report of the Commission containing this recommendation and who was chairman in each case?
- As we said earlier, hearings will probably be reopened on S. 1574 by the middle of next week at the latest. We therefore need the above information by Friday if possible, in order that we may analyze the data and work them into our testimony as judgment dictates.

Thanks and kindest personal regards.

Sincerely,

WARREN G. MAGNUSON,  
United States Senator.  
HENRY M. JACKSON,  
United States Senator.

## HEADWATER BENEFITS

FEDERAL POWER COMMISSION,  
*Washington 25, June 10, 1955.*

Re Headwater Benefit Bill (S 1574, 84th Cong.) (S. 3434, 83d Cong.)

HON. WARREN G. MAGNUSON,

HON. HENRY M. JACKSON,

*United States Senate,*

*Washington 25, D. C.*

DEAR SENATORS MAGNUSON AND JACKSON: I am inclosing herewith 7 attachments containing data and information in answer to the 20 questions contained in your letter of June 8, 1955, concerning the so-called headwater benefit bills designated above.

The amounts (\$435,000 and \$300,000) previously furnished to you by Mr. Gatchell and mentioned in your letter are necessarily based on preliminary data, studies, and estimates. These amounts will be subject to change, either up or down, after further study and investigation is made, based upon actual operations over a period of time of all the projects involved, some of which are not now in operation.

The data supplied in answer to questions 10 through 12, as well as 17 and 18, are likewise of a preliminary nature subject to change upon further study after all the projects are completed.

The attachments have of necessity been assembled rather hurriedly but we have attempted to answer fully the questions presented. However, should you find that additional information is needed, we will be glad to furnish it to you.

Sincerely yours,

JEROME K. KUYKENDALL, *Chairman.*

Columbia River Basin non-Federal plants benefiting from existing Federal headwater improvements

REPLIES TO QUESTIONS 13 AND 14 IN LETTER OF SENATORS MAGNUSON AND JACKSON, DATED JUNE 8, 1955

No. 13. Downstream Federal dams completed or under construction at time license was issued.

Kerr: None.

Thompson Falls: Albeni Falls, Grand Coulee, Chief Joseph, McNary, and Bonneville.

Cabinet Gorge: Albeni Falls, Grand Coulee, Chief Joseph, McNary, and Bonneville.

Box Canyon: Grand Coulee, Chief Joseph, McNary, and Bonneville.

Rock Island: None.

No. 14. Upstream Federal Dams (with storage capacity) completed or under construction at time license was issued.

Kerr: None.

Thompson Falls: Hungry Horse.

Cabinet Gorge: Hungry Horse.

Box Canyon: Hungry Horse and Albeni Falls.

Rock Island: None.

REPLIES TO QUESTIONS 15 AND 16 IN LETTER OF SENATORS MAGNUSON AND JACKSON, DATED 6/8/55

No. 15. Storage capacity which the Federal Power Commission required the licensee to install at its dams.

The licenses require storage capacities as follows:

	<i>Acres-feet</i>
Kerr (Project No. 5).....	1, 100, 000
Lake Chelan (Project No. 637).....	676, 000

Others have essentially pondage only.

No. 16. Was above storage required to get maximum out of sites and for the efficient operation of licensee's own plants. Yes.

No. 17. See attached study dated November 5, 1954, and in particular (1) pages 13 and 14 for interest, maintenance, and depreciation costs for Hungry Horse, Albeni Falls, and Grand Coulee Reservoirs; (2) pages 17 and 18 for downstream benefits received and headwater benefits costs assessed resulting from headwater benefits received from Hungry Horse, Albeni Falls, and Grand Coulee Reservoirs; and (3) page 22 (last page) for a summary of headwater benefits costs.

SAN FRANCISCO REGIONAL OFFICE, FEDERAL POWER COMMISSION HEADWATER BENEFIT STUDY IN THE MATTER OF DOCKET E-6384

ENERGY METHOD

*Résumé of method*

In this method of apportioning the annual costs of headwater improvements providing benefits to downstream plants,  $J_s$ , the at site percent of total annual cost is obtained by taking the total annual energy at site (12 months) less the energy at site from upstream storage releases in the storage control period, and dividing by this same difference, plus the energy at all downstream plants due to the storage releases at the upstream storage project in the storage control period.  $J_D$ , the downstream percent of the total annual cost is distributed to the downstream plants on the basis of the energy produced at the downstream plants from the storage releases at the upstream storage project during the storage control period.

In terms of nomenclature being used by the task force,  $J_s$  and  $J_D$  are expressed as follows:

$$J_s = \frac{(E_s - E_{su})}{(E_s - E_{su}) + E_{SD}}$$

$$J_D = J - J_s$$

$E_s$  is the total "at site" energy at a storage project plant from natural flow and from storage releases at site and upstream during the year (12 months).

$E_{su}$  is the "at site" energy at a storage project plant from upstream storage releases during the storage control period.

$E_{sd}$  is the energy at all downstream plants from storage releases at an upstream storage project during the storage control period.

#### *Details of method*

In this method the apportionment of the Federal Power Act section 10 (f) annual costs of storage is based on energy, without any specific allocation to capacity at site. The hydroelectric energy figures used are taken from studies by the Bonneville Power Administration furnished to the task force on headwater benefits with Mr. Steven's letters of December 15 and 30, 1953, and a subsequent modification affecting the Spokane River plants furnished with Mr. Steven's letter of January 27, 1954. The energy studies supplied by Bonneville Power Administration include a dry, a median, and a wet year. Long-term averages were computed for this study on the basis of a 47-year period of stream-flow measurements having 12 dry, 25 median, and 10 wet years, and are given in table 1.

The average energy at the storage sites includes energy from natural flow for a 12-month period and from stored water for the storage control period. At downstream run-of-river plants the energy produced by storage releases from each upstream reservoir is shown separately, and is for the storage control period only.

To avoid a double charge at storage reservoirs which derive energy from natural flow, from at site stored water, and from upstream stored water it was considered necessary to deduct the energy from upstream stored water before making the cost apportionment. This deduction is made in table 4, column 3. The remaining energy at site and at downstream plants, table 4, column 4, establishes the basis for prorating the annual cost of the storage reservoir. Two studies are presented, one for 1954-55 system conditions and one for 1958-59 system conditions and the results may be averaged to obtain estimated yearly payments for the period 1955-59.

The capital costs used for Grand Coulee, Hungry Horse, and Albeni Falls are shown in table 2. These Federal costs are based on data supplied by the Army and Bureau of Reclamation and on decisions made by the task force on headwater benefits. Costs for the privately owned plants are based on data supplied by the companies for costs included in accounts 320 and 322. Members of the task force have pointed out that these accounts do not include access roads, general purpose facilities, or facilities for visitors, and these items have been eliminated, as far as possible, from the costs of Federal projects. It is realized of course, that these costs are not final and will have to be revised, and agreed upon later.

Annual costs of storage reservoirs are computed on the following assumptions:

- (1) Interest rates are 6 percent for private projects and 2.5 percent for Federal projects.
- (2) Life of projects for computing depreciation, will not be over 100 years.
- (3) Depreciation is computed on a sinking-fund basis.

Maintenance costs are estimated by the operating agencies and are shown in tables 2 and 3.

Total annual costs under section 10 (f) of the Federal Power Act (interest, depreciation, and maintenance) are shown in table 3, at line 7. Line 8 of this table includes the annual payment made by Montana Power Co. to an Indian tribe for use of reservoir lands flooded by Flathead Lake. It also includes certain annual costs at Coeur d'Alene Lake which are incurred by the Washington Water Power Co., largely for crop damage and drainage. Line 9 gives the total annual costs including "other" costs in line 8. Both interested companies claim that these other costs are proper charges under section 10 (f) of the Federal Power Act, however the present position of our Washington office is that these costs should not be included in the annual costs.

The apportionment of the annual costs in accordance with the column 4 energy figures of table 4 is given in that table at columns 5 and 5a. Computations for Coeur d'Alene and Flathead are given with and without "other" costs (cols. 5a and 5 respectively). Tables 5 and 6 summarize these costs. Inspection of table 6 shows that the "other" costs at non-Federal plants do not affect the estimated gross payment to the Federal Government. The average payment to the Federal Government over the 5-year period January 1, 1955, through December 31, 1959, is estimated at \$456,584, say \$457,000, from table 6.

TABLE 1. — ENERGY PRODUCED FROM STORAGE RESERVOIRS

TABLE 2

*Grand Coulee project (1954-55)—Capital and maintenance costs<sup>1</sup> of dam and reservoir for use in preliminary studies by task force on headwater benefits in matter of docket No. E-6384*

Item (1)	Dam and reservoir costs		Costs designated as "Other" by task force (4)	Total costs (5)
	Depreciable cost (2)	Nondepreciable cost (3)		
Capital costs:				
1. Land and land rights.....		\$3,790,000		\$3,790,000
2. Relocation of existing property.....		10,110,000		10,110,000
3. Structures and improvements.....	\$4,691,000			4,691,000
4. Clearing lands.....		3,691,000		3,691,000
5. Reservoirs.....		964,000		964,000
6. Dams.....	108,938,000			108,938,000
7. Waterways-river channel.....			<sup>2</sup> \$8,058,000	<sup>2</sup> 8,058,000
8. Miscellaneous equipment.....	303,000			303,000
9. Subtotal.....	113,932,000	18,555,000	8,058,000	140,545,000
10. Construction cost of general plant.....			18,870,000	18,870,000
11. Total construction cost.....	113,932,000	18,555,000	26,928,000	159,415,000
12. Less flood control and navigation allocation.....	715,000	116,000	169,000	1,000,000
13. Remainder to be allocated.....	113,217,000	18,439,000	26,759,000	158,415,000
14. Power allocation at 56 percent.....	63,401,000	10,326,000	14,985,000	88,712,000
15. Interest during construction:				
(a) Grand Coulee Dam and Reservoir.....	5,096,000	830,000	<sup>3</sup> 0	5,926,000
(b) General plant.....			87,000	87,000
16. Total power allocation.....	68,497,000	11,156,000	15,072,000	94,725,000
Maintenance costs: <sup>4</sup>				

<sup>1</sup> Source: U. S. Bureau of Reclamation letters of Dec. 23 and 14, 1953 (by James K. Cummings).

<sup>2</sup> Assumes all cost to complete is chargeable to this item.

<sup>3</sup> Assumes no interest during construction on waterways-river channel.

<sup>4</sup> Allocation of maintenance costs in proportion to construction costs (line 11):

	Construction costs	Maintenance costs
1. Total.....	\$159,415,000	\$352,000
2. Flood control and navigation.....	1,000,000	2,208
3. Power (sum of cols. 2 and 3, line 16).....	79,653,000	175,880
4. Other (by subtraction).....	78,762,000	173,912

TABLE 2—Continued

*Grand Coulee project (1958-59)—Capital and maintenance costs<sup>1</sup> of dam and reservoir for use in preliminary studies by task force on headwater benefits in matter of Docket No. E-6384*

Item  (1)	Dam and reservoir costs		Costs designated as "Other" by task force (4)	Total costs  (5)
	Depreciable cost (2)	Nondepreci- able cost (3)		
Capital costs:				
1. Land and land rights.....		\$3, 790, 000		\$3, 790, 000
2. Relocation of existing property.....		10, 110, 000		10, 110, 000

15. Interest during construction:				
(a) Grand Coulee Dam and Reser- voir.....	5, 096, 000	830, 000	( <sup>2</sup> )	5, 926, 000
(b) General plant.....			87, 000	87, 000
16. Total power allocation.....	68, 500, 000	11, 156, 000	15, 474, 000	95, 130, 000
Maintenance costs <sup>4</sup> .....				

<sup>1</sup> Source: U. S. Bureau of Reclamation letters of Dec. 23, 1953 and Dec. 14, 1953 (by James K. Cummings).

<sup>2</sup> Assumes all cost-to-complete is chargeable to this item.

<sup>3</sup> Assumes no interest during construction on waterways-river channel.

<sup>4</sup> Allocation of maintenance costs in proportion to construction costs (line 11):

	Construction costs	Maintenance costs
1. Total.....	\$160,138,000	\$330,000
2. Flood control and navigation.....	1,000,000	2,061
3. Power of (sum of cols. 2 and 3, line 16).....	79,656,000	164,149
4. Other (by subtraction).....	79,482,000	163,790

TABLE 2—Continued

*Albeni Falls project—Capital and maintenance costs<sup>1</sup> of dam and reservoir for use in preliminary studies by task force on headwater benefits in matter of Docket No. E-6384*

Item (1)	Dam and reservoir costs		Costs designated as "Other" by task force (4)	Total costs (5)
	Depreciable cost (2)	Nondepreciable cost (3)		
Capital costs:				
1. Reservoir clearing.....		\$848,500		\$848,500
2. Land and land rights.....		2,974,000		2,974,000
3. Protection and restoration of existing facilities.....		1,059,952		1,059,952
4. Housing and service structures.....			\$61,759	61,759
5. Public use facilities.....			38,924	38,924
6. Dam and spillway.....	\$3,915,883			3,915,883
7. Spillway gates and crane.....	1,850,895			1,850,895
8. Log passage facilities.....	63,703			63,703
9. Total.....	5,830,481	4,882,452	100,683	10,813,616
10. Joint cost per Col. J. U. Moorhead's letter of Nov. 27, 1953.....	\$ 6,362,319	\$ 5,327,814	\$ 109,867	\$ 11,800,000
Maintenance costs: Power storage.....				\$ 40,000

<sup>1</sup> Source: U. S. Corps of Engineers letters of Jan. 20, 1953, and Nov. 27, 1953 (by Col. L. W. Correll and Col. J. U. Moorhead).

<sup>2</sup> In proportion to amounts on line 9.

<sup>3</sup> Includes \$380,000 in interest during construction.

<sup>4</sup> See Col. J. U. Moorhead's letter, Corps of Engineers, dated Nov. 27, 1953, and teletype by division engineer, Corps of Engineers, dated Dec. 2, 1953.

*Hungry Horse Project—Capital and maintenance costs<sup>1</sup> of dam and reservoir for use in preliminary studies by task force on headwater benefits in matter of docket No. E-6384*

Item (1)	Dam and reservoir costs		Costs designated as "Other" by task force (4)	Total costs (5)
	Depreciable cost (2)	Nondepreciable cost (3)		
Capital costs:				
1. Water and water rights.....		\$10,155		\$10,155
2. Relocation of F. S. facilities.....		4,787,000		4,787,000
3. Seismograph station.....	\$8,369			8,369
4. Reservoir clearing.....		8,298,398		8,298,398
5. Reservoir log boom.....	36,000			36,000
6. Dam.....	59,080,078			59,080,078
7. Access highway.....			\$1,217,000	1,217,000
8. Total.....	59,124,447	13,095,553	1,217,000	73,437,000
9. Hungry Horse village.....			2,107,000	2,107,000
10. General Service facilities.....			901,000	901,000
11. Total.....	59,124,447	13,095,553	4,225,000	76,445,000
12. Plus interest during construction.....	\$ 2,930,342	\$ 649,045	\$ 209,401	3,788,788
13. Less flood control allocation.....	\$ 15,212,489	\$ 3,369,435	\$ 1,087,076	19,669,000
14. Total.....	46,842,300	10,375,163	3,347,325	60,564,788
Maintenance costs:				
Estimated amount for year 1959.....				17,000
Power storage $\left\{ \begin{array}{l} \$ 57,217,463 \\ \$ 75,799,387 \end{array} \right\} \times 17,000$ .....				12,833
Flood control $\left\{ \begin{array}{l} \$ 18,581,924 \\ \$ 75,799,387 \end{array} \right\} \times 17,000$ .....				4,167

<sup>1</sup> Source: U. S. Bureau of Reclamation letters of Dec. 23, 1953, and Dec. 14, 1953 (by James K. Cummings).

<sup>2</sup> In proportion to totals above (line 11).

<sup>3</sup> \$46,842,300 + \$10,375,163 = \$57,217,463.

<sup>4</sup> \$79,124,447 + \$13,095,533 + \$2,930,342 + \$649,045 = \$75,799,387.

<sup>5</sup> \$15,212,489 + \$3,369,435 = \$18,581,924.

No. 18. The answer to this question is shown on the last page of the study (answer to question No. 17) and the results are as follows:

Headwater benefits paid by United States to—

(1) Washington Water Power Co.....	\$141,372
(2) Montana Power Co.....	159,061

ANSWERS TO QUESTIONS 19 AND 20 CONTAINED IN THE LETTER OF JUNE 8, 1955, FROM SENATORS WARREN G. MAGNUSON AND HENRY M. JACKSON RE HEADWATER BENEFITS BILL (S. 1574, 84TH CONG.) (S. 3434, 83D CONG.)

Question 19. In which of its annual reports did the Commission first recommend that section 10 (f) of the act be amended to provide for payment by the United States for benefits received from headwater improvements? Who was Chairman at the time?

Answer. The Commission's 33d annual report, covering the fiscal year ended June 30, 1953, was the first such report in which the Commission recommended that section 10 (f) of the Federal Power Act be amended to provide for payment by the United States for benefits received from headwater improvements. With respect to this matter the Commission said at page 156, paragraph 19, of the report:

"19. *Federal Power Act—Headwater benefits.*—That section 10 (f) of the Federal Power Act be amended so as to require not only reimbursement by non-Federal power developers for benefits accruing to them from upstream facilities constructed by another but also to require reimbursement by the United States for

improvements constructed by non-Federal interests. These amendments have been submitted to the Bureau of the Budget in connection with the Commission's comments upon the recommendations of the Interagency Water Policy Review Committee on reimbursement, Committee Paper 27."

Mr. Thomas C. Buchanan was Chairman of the Federal Power Commission from July 8, 1952, through the close of business on May 15, 1953. Mr. Jerome K. Kuykendall assumed the duties of Chairman of the Commission on May 18, 1953, and was Chairman during the remainder of fiscal year 1953.

Question 20. Will you list for us each subsequent annual report of the Commission containing this recommendation and who was Chairman in each case?

Answer. Thirty-fourth Annual Report of the Federal Power Commission covering the fiscal year ended June 30, 1954.

Mr. Jerome K. Kuykendall was Chairman of the Federal Power Commission during fiscal year 1954.

(A subsequent letter from Mr. Gatchell is as follows:)

FEDERAL POWER COMMISSION.

Washington 25, July 8, 1955.

Re S. 1574, 84th Congress.

HON. CLINTON P. ANDERSON,

*Chairman, Subcommittee on Irrigation and Reclamation,*

*Committee on Interior and Insular Affairs,*

*United States Senate, Washington 25, D. C.*

DEAR SENATOR ANDERSON: As requested I have corrected the stenographic transcript of my testimony before your subcommittee on the bill S. 1574 which would provide for headwater benefit payments by hydroelectric power projects. It had been my purpose in testifying to give a full explanation of the effect of the amendment proposed by the Federal Power Commission by which a new section 31 would be added to the Federal Power Act. Apparently, however, two questions were subsequently raised which I should have discussed.

One question concerned the possibility of imposing headwater benefit charges under the new section 31 against irrigation benefits when upstream stored water is subsequently utilized at a downstream multiple-purpose project not only for developing power but for irrigation. However, such a possibility is not present in the new section 31. The language of the Commission's proposed amendment is clear, for it limits the benefits to be considered to benefits to "any hydroelectric project" whether owned by a non-Federal interest (par. (a)) or by the United States (par. (b)). The Commission has no intention of suggesting to Congress that if water should be used for irrigation purposes after being released from upstream storage headwater benefit charges should be imposed for the irrigation benefit, and the expressed language of section 31 effectively precludes such imposition. The only benefits which can be considered under the proposed section 31 would be benefits received at a hydroelectric project. An illustration could be given by considering the Grand Coulee multiple-purpose development for irrigation, navigation, and power. All of these purposes might be benefited by having flood flows stored upstream and low flows augmented from the upstream storage. But the only benefit which could be considered under section 31 would be the power benefit at the hydroelectric power project.

The other point was raised more as an inquiry by Mr. Irvin Hoff, who was representing Senators Magnuson and Jackson. He called attention to the fact that section 10 (f) now calls upon the Commission to fix an equitable proportion of the annual charges for interest, maintenance, and depreciation on the upstream storage reservoir, whereas the proposed section 31 prescribes that the annual charges shall be "such part of the fixed cost of the facility furnishing the benefit, plus such part of the annual operating and maintenance cost of such facility, including land rental and similar charges, as the Commission may deem equitable."

I had not discussed this change because it does not appear to me to be significant, although it should have been explained. The new language adds operating costs to the elements of the cost of headwater facilities being considered in fixing the annual charges.

This was proposed because the operating costs are as much a part of the expense of making the benefit available from the upstream reservoir as the interest, maintenance, and depreciation. The land rentals were expressly mentioned because question has been raised as to the inclusion of land rentals in operating expenses and it was considered desirable to remove all doubt on this particular point. The cost of land owned in fee simple is covered by the interest charge and there did

not appear to be any valid reason for excluding land rentals if the costs of the upstream reservoir are to be covered, as presumably are intended to be.

Actually, the annual charges which the United States would be called upon to pay at any project could not be substantial and by way of illustration our engineering staff has roughly estimated the charges against the United States in the Columbia River system for the year 1959 when the Dalles powerplant will be 50 percent in operation and the other Federal powerplants will be in operation. For that year it is estimated that headwater benefit charges payable for benefits received by the Federal hydroelectric power projects would be approximately \$300,000; the Bonneville Power Administration will sell approximately 32.3 billion kilowatt-hours of electric energy for which it will receive around \$72,400,000. The headwater benefit charges under the proposed section 31 would amount to about 0.4 percent of the revenues or about 0.01 mill per kilowatt-hour.

Finally, whatever charges are paid to a privately owned power company under section 10 (f) or under the proposed section 31 would be accountable as other income and where regulated by a State agency or by the Federal Power Commission would be considered in fixing the rates. The Federal Power Act looks to a limitation of the profits of such licensees to a reasonable return and a part of any excess earnings of licensees must be set aside in an amortization reserve to reduce the net investment in the project.

Respectfully submitted.

WILLARD W. GATCHELL, *General Counsel.*

Mr. LINEWEAVER. We have one more witness, Mr. Chairman.

Senator SCOTT. All right.

Mr. LINEWEAVER. Mr. Fain?

**STATEMENT OF CHARLES J. FAIN, ASSISTANT GENERAL MANAGER,  
ACCOMPANIED BY CHARLES ROBINSON, STAFF ENGINEER,  
NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION**

Mr. FAIN. My name is Charles J. Fain, assistant general manager of the National Rural Electric Cooperative Association. The membership of the association is composed of rural electric cooperatives of the United States and Alaska.

We are appearing here today in opposition to Senate bill 1574 and also in opposition to the recommended substitute as given to the committee by the Federal Power Commission. We appeared last year before a subcommittee of the Interstate and Foreign Commerce Committee against Senate bill 3434, which is in the identical language as is found in the recommended substitute of the Federal Power Commission, with the exception of paragraph (g) in the proposal this year which has been added since last year.

We will endeavor to summarize very briefly the statement we have made, Mr. Chairman, which we would like to file for the record.

Our interest in this bill comes about because of the power derived by our rural electric system members from the Federal Government.

Specifically, in 1954 our rural electric cooperatives purchased over 15.1 billion kilowatts of energy and 46 percent of that came from private companies, but, important to this situation here, 36 percent of that 15 billion kilowatt-hours came from the Federal Government.

In the Northwest, where there are 36 cooperatives and public utility districts receiving power from the Federal Government, there was a total of 758 million kilowatt-hours furnished to these cooperatives and public utility districts by the Federal Government.

In the States involved, in Washington there was 385 million, Oregon, 285 million; Montana, 28 million; and Idaho, 60 million. We feel that this bill has been specifically tailor-made for the Northwest area, Mr. Chairman; that is where we have called these figures

to the attention of the committee to show the amount of power that is involved and what it will mean to these rural electric cooperatives if a bill is passed which will drive up the cost of Federal power to those cooperatives.

Before coming to these substantive objections which our association has to both the Senate bill and the recommended substitute, I would like to go into one phase of it that evidently has not been touched on, to my knowledge here this morning, and which might be of interest to this committee especially.

To do so, I would like to very briefly go into the legislative history involved.

Last year when we appeared against Senate bill 3434, one of the objections which we raised was to the possible interpretation of that bill. As the bill was drawn, we felt that it was entirely possible under the bill that not only hydroelectric benefits would come under this specific bill but also it might be possible, under the wording of the bill, that irrigation benefits downstream from private developments could be made to pay a private owner upstream for incidental irrigation benefits.

We raised that question before the committee. It is because of the wording of the old S. 3434 which has now been supplanted by the substitute.

Under section 2 of this bill, it is proposed that whenever there is a hydroelectric power project owned by the United States and that it will be benefited by the construction, operation, or maintenance of a reservoir or any water-use facility, then it will pay for the benefits thus received.

The chairman will undoubtedly know that the benefits as such are not limited. They are stated in the plural and it does not say that it would be limited to hydroelectric benefits. The limitation, so far as hydroelectric is concerned, is in the first sentence which says "hydroelectric power project."

Now, there are many hydroelectric power projects which are multiple-purpose projects, having not only power but irrigation involved. Consequently, we feel that it is possible under the language as it is written to interpret benefits more broadly than just hydro benefits.

Evidently there were members of the subcommittee last year who felt this should be clarified. The record will show that the question was brought up and members of the committee last year felt that that language should be clarified so that there would be no possibility of a tremendous payoff to private owners for reclamation benefits that might be supplied downstream.

At that time it was stated by officials from the Federal Power Commission that they thought that language should be written into the bill that would clarify that and not make that possible. But the bill, the substitute, as it has been recommended, is identically the same and that point has not been clarified at all.

So we feel that in order that the intent which officials of the Federal Power Commission say is not to go to reclamation benefits, in order that that intent might be carried out, that the committee might wish to consider amending this substitute if that is the one considered by the committee so that such an interpretation would not be gained from the specific language used.

There is one other point that I think bears on that question, Mr. Chairman.

When S. 1574 was introduced by the Senator from Arizona this year, it was specifically spelled out in the bill that these benefits would not go to the question of reclamation benefits. They were specifically limited to hydroelectric power benefits. So that would be the first thing we would like to call the attention of the committee to; that if the Federal Power Commission substitute is adopted, we feel it is an open question as to just what benefits are concerned. We feel that should be clarified.

Now, as to the substantive reasons why our association is opposed, not only to the Senate bill but to the Federal Power Commission substitute, there are about 4 or 5 main points I would like to very briefly touch.

First of all, we have the problem of assessing these incidental benefits from multiple-purpose projects. The chairman is familiar with the John Kerr project in Virginia and undoubtedly the testimony that was taken before the Federal Power Commission as to the incidental benefits that would be afforded downstream to the Virginia Electric & Power Co. if it built the Roanoke project.

This estimate of incidental benefits ranged all the way from \$250,000 to the sum of \$1,955,000.

In other words, the experts themselves could not agree within a range of approximately \$1.5 million as to what the benefits are. Now, that would be annually.

Consequently, if these incidental benefits are taken into consideration when they are so nebulous as is proven by the record in the John Kerr project, we feel that practically any answer from the Federal Power Commission as to the incidental benefits that would be assessed against Federal projects would not be too precise.

We feel certainly that the bill should spell out some criterion for determining how these incidental benefits are to be arrived at.

I think the Hungry Horse project has been referred to, and it illustrates what can happen to a downstream project if such a bill as this is passed. The Hungry Horse project, which was developed by the Federal Government, is such that it affords a great deal of downstream benefits to other projects lower on the river.

In fact, about 37 percent of the cost of the Hungry Horse project goes against benefits downstream. Now, if that dam were built by private interests, this would mean that 37 percent of the total cost of that project would be paid by the Federal Government for the benefits downstream.

There is another question, too, involved here and that is as to how this will affect the economic feasibility of proposed Federal projects.

A specific example of this is the proposed Ice Harbor project on the Snake River. The Corps of Engineers stated in congressional testimony that the Ice Harbor project was not feasible unless the benefits incurred to it by the proposed Hells Canyon Dam were considered.

Now, if this bill were passed, it would mean that Ice Harbor could no longer be developed because the upstream benefits would be charged against Ice Harbor; that means that many projects that are a part of the comprehensive plan, especially in the northwest area, can be knocked out if this bill is passed.

Now, this will have the result of destroying comprehensive development of a river system so we feel that the committee should think long

and hard on this question of how this will affect the economic feasibility of specific projects as proposed and how it will affect the economic feasibility of an entire river system.

Another point is how will this affect the cost of power which has already been set at Federal projects?

The cost of power has been set at these Federal projects upon the basis that they will pay out within a certain period of time.

Now, if the Federal Power Commission comes along and assesses additional charges against these projects, it can only mean one thing, they will not be able to pay out in the period as proposed or they will have to raise the rates to consumers in that area; that is why we are strongly opposed to this bill.

In summarizing, Mr. Chairman, we would like to just briefly state that the National Rural Electric Cooperative Association is opposed to Senate bill 1574; it is opposed to the recommended substitute as proposed to the committee by the Federal Power Commission.

The basis of our opposition is largely because we feel that the rivers of the land belong to the people as the people express themselves through the Government.

As the Government has granted licenses to many private companies to build specific projects on these rivers, then these companies surely considered when the licenses were granted that they might be called upon to pay for benefits received and yet, surely they did not consider that at a later time, possibly 15 or 20 years later, that they would be able to come back and assess against the Federal Government downstream benefits.

We also feel that the passage of this bill will inevitably result in higher costs of power, especially in the northwest area, and as our rural electric cooperatives are certainly greatly affected by any increase in rates in that area, we ask the committee that it not approve S. 1574 or the substitute as proposed by the Federal Power Commission.

Mr. LINEWEAVER. Thank you, Mr. Fain.

Your statement will be put in the record as if you read it.

(The statement referred to follows:)

**STATEMENT OF CHARLES J. FAIN, ASSISTANT GENERAL MANAGER,  
NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, IN  
OPPOSITION TO S. 1574**

Mr. Chairman and gentlemen of the committee, my name is Charles J. Fain. I am assistant general manager of the National Rural Electric Cooperative Association, which is the national service organization representing some 92 percent of all REA-financed rural electric systems operating in 42 States and the Territory of Alaska. First, I would like to explain to the committee why it is that our member systems have such a stake in the disposition of Senate bill 1574, which is being considered by you today.

During the fiscal year 1954, the rural electric systems throughout the United States used 15.1 billion kilowatt-hours of energy. This represents an increase of 15.4 percent over the same figure for fiscal 1953, and indicates that the electrical loads of the rural areas are growing rapidly and have not ceased to grow even though in most areas about 90 percent of the farms are now electrified. It is inter-

esting to note that total wholesale power requirements cost the rural electric systems \$109 million during fiscal 1954. During that year, 6.96 billion kilowatt-hours, or 46 percent of our total power requirements was purchased from private companies. We purchased 4.63 billion kilowatt-hours, or 30.7 percent of our total needs, from Federal power marketing agencies. We generated 2.30 billion kilowatt-hours, 15.2 percent of the total, ourselves, and the remaining 8.1 percent we purchased from other miscellaneous sources. Thus, it is readily apparent that any measure which significantly affects the cost or availability of Federal power will, in turn, have a direct effect upon our member systems.

It is our understanding, Mr. Chairman, that spokesmen for both the Federal Power Commission and the Department of the Interior have stated that in their opinion, enactment of S. 1574, as originally proposed, would prove awkward of administration. They have, we are told, recommended, with the concurrence of the Assistant Director of the Budget, Mr. Donald R. Belcher, that the original bill be amended so that the authority contained in the proposal be delegated not to the Secretary of the Interior as originally proposed, but to the Federal Power Commission.

The substitute bill proposed by the Federal Power Commission is, except for section 2 (g), identical to Senate bill S. 3434, proposed during the 2d session of the 83d Congress. During hearings on S. 3434, held last year by the Subcommittee on Business and Consumer Interests of the Senate Interstate and Foreign Commerce Committee, I appeared in opposition to S. 3434. The position of the National Rural Electric Cooperative Association has not changed during the intervening months, and we, therefore, are opposed to S. 1574.

As we feel Senate bill 1574, like S. 3434 proposed last year, will inevitably drive up the cost of power generated at Federal projects and make it less likely that additional Federal multiple-purpose projects will be constructed in the future, it is essential that Senate bill 1574 not be approved by the Congress. With your permission, I would like to set out in the remainder of this statement, in detail, why we feel Senate bill 1574 is not in the best interests of the rural electric systems throughout the United States; and also why it is not in the best interests of our Government in the comprehensive form by which it is drawn.

As the subcommittee is well aware, the Federal Power Commission has long been vested with the authority to assess annual charges against privately owned water resource developments for benefits which accrue to them by reason of the existence of Federal multiple-purpose dams upstream. S. 1574 retains this feature of the Federal Power Act. It would make two net substantive changes in the law. The FPC would be empowered to assess charges against Federal multiple-purpose projects for benefits conferred on them by privately owned projects on the same stream. The Commission would also be empowered to charge one Federal project for benefits conferred on it by another Federal project.

To the best of our knowledge, the Commission has exercised its existing authority to fix and collect such charges from private utility companies only to a very limited extent, and the Federal Government has, up to the present time, received very few payments for benefits

accruing to privately owned projects. For instance, Interior Department figures indicate that the Hungry Horse project on the South Fork of the Flathead River in Montana will benefit privately owned downstream plants owned by the Washington Water Power Co. and Montana Power Co. in the amount of some 163,000 kilowatts of firm capability. The Hungry Horse project has been on the line for almost 2 years now, yet the Federal Power Commission, to our knowledge, has entered no final order establishing payments by the private companies to the Federal Government for the benefits. A similar situation exists in the Southeast United States where the Federal Government has constructed the 208,000-kilowatt John H. Kerr Dam on the Roanoke River in Virginia.

The Virginia Electric & Power Co. has been granted an FPC license to build the Roanoke Rapids site downstream from the John H. Kerr Dam. Roanoke Rapids is under construction. Estimates of benefits accruing to the Roanoke Rapids site from the construction of the John H. Kerr Federal Dam upstream have been estimated at from \$250,000 per year to \$1,955,000 per year. The Federal Power Commission has entered no final order assessing these benefits, but has indicated in a statement of findings and order, relative to the operating height of the Roanoke Rapids pool, dated May 29, 1953, that the Commission then considered in favorable light the lowest estimate of \$250,000 per year rather than any of the higher estimates. The Commission found that the benefits accruing to the Roanoke Rapids site consisted exclusively of incremental energy increases, and that no additional firm capability was made available by the existence of the upstream Federal project. The Commission apparently did not consider the fact that were the Federal Government to operate on an integrated basis both the John H. Kerr Dam and the Roanoke Rapids project, as was originally contemplated, additional firm power would, in all probability, be made available by the integrated operation of these two projects. In other words, here the Federal Government is deprived of the right to develop and operate one of the most feasible projects in the comprehensive plan for the Roanoke Basin by the granting of the Roanoke Rapids license to Vepco. Estimates indicate that the withdrawal of Roanoke Rapids reduces the feasibility of the comprehensive plan from 1.47 to 1.34. Yet, in discussing the benefits accruing to the power company, the Commission did not consider these facts. And it should be emphasized that this is a very substantial consideration in nearly all cases where the Federal Government is deprived of operating two or more projects on a given stream on an integrated basis by the granting of a Federal Power Commission license to a private utility company to construct and operate a project previously reserved for integrated operation by the Federal Government.

It is also interesting to note, especially with respect to the Roanoke Rapids project, that the Virginia Electric & Power Co. was granted by the Defense Electric Power Administration a certificate entitling the company to depreciate over a period of 5 years \$21,511,750 of the total \$33 million estimated cost of the project. Assuming a project life of 40 years, the certificate would benefit the Virginia Electric & Power Co. in the amount of \$53,653,014, more than over 1.6 times the entire cost of the project.

Mr. Chairman, because of the wide diversity of opinion existing among the experts themselves as to how the benefits referred to in the bill should be evaluated, and the consequent paucity of precedent and administrative procedure to act as a guide governing the assignment of such downstream values, we feel that the proposed legislation in Senate bill 1574 is entirely too broad and all inclusive, and jeopardizing the interests of the Federal Government.

There is no specific direction provided by the legislation to govern the Federal Power Commission in assigning charges against the Federal Government, and there is no body of existing precedent on which to predict what the Commission may do.

In view of the almost unlimited authority contained in the bill, and in the substitute recommended by the FPC, the Interior Department, and the Bureau of the Budget, we feel that this legislation could well result in an exploitation of the people's investment in water-resource developments for the enrichment of private utility companies. It is our contention that the natural resources of the Nation belong to the people and to the Government of the people, and that the licensing of private companies to construct hydroelectric projects on navigable streams is a privilege granted by the people and not a right of the licensee. We, therefore, contend that there is no justification for the people to be liable for payment without limit to private utility companies for incidental benefits which may accrue from private construction of resource development projects for corporate profit purposes.

Moreover, the recommended substitute for the present bill contains no limitation on whether benefits accruing to the Federal Government will be confined to upstream storage benefits, downstream reregulation benefits, or any other type of benefit that may be conceived in future years. Will companies which built dams 50 years ago, without any thought of downstream benefits, now receive a windfall of taxpayers' money—even after the rate payers have amortized the project? Will the benefits surrendered by the United States from comprehensive development plans be taken into account?

We feel that the present legislation is especially dangerous as regards its application to the assessment of cost to downstream Federal projects for privately owned upstream reservoir projects. Downstream benefits, with respect to hydroelectric development, accrue only from those upstream projects which involve appreciable reservoirs to contain seasonal variations of flow in the stream. Frequently, in the case of a large reservoir project operating in the headwaters of a given stream, the benefits attributable to the project accrue largely, not at the site itself, but at downstream hydroelectric plants already existing or planned for future construction. The Federal power developments in the Pacific Northwest are an excellent example of this.

Referring to our earlier example of the Hungry Horse project on the South Fork of the Flathead River in Montana, Bureau of Reclamation figures indicate that the firm power available from the installed capacity at the Hungry Horse site is 220,000 kilowatts. On the other hand, the existence of this project and its large storage reservoir, makes available to downstream projects, an additional 830,000 kilowatts of dependable power. These downstream benefits accrue not only to the privately owned hydroelectric facilities already mentioned,

but also to projects owned and operated by the Federal Government, both existing and under construction.

The total cost of the Hungry Horse project is \$102 million, of which \$82 million is allocated to power. Of this \$82 million allocated to power, \$57 million is the joint cost of facilities allocated to power. Of this \$57 million, only \$19 million of the joint cost of facilities allocated to at-site power, and twice that amount, or \$38 million, is allocated to power facilities at downstream projects benefited by the Hungry Horse construction. Thus, about 37.5 percent of the total cost of the project is charged to downstream hydroelectric benefits. In addition, by building and operating the Hungry Horse project, the Federal Government not only secures operating control over the 220,000 kilowatts at the site, but more important, it controls the additional 890,000 kilowatts of downstream power and can operate the integrated system as a unit, thereby securing the maximum benefits from the whole. In order to accomplish such coordinated operation of a system, it is necessary that all parts be interconnected by high-voltage transmission network which provides for the free flow of power between the various interconnected generating units. In the case of the Hungry Horse project, it will be operated at high production during the critical winter months, and production will be reduced at the site during the high runoff months in the spring and summer.

Had a private utility company constructed the Hungry Horse project, it would be reasonable to assume that under the proposed legislation, a goodly portion of its construction cost would have been paid by the Federal Government in the form of annual payments for benefits received at downstream projects. The Government would thereby, over a period of years, pay a percentage of the total cost of the project, but would be denied title to it. And these payments by the United States would apparently continue to perpetuity. Conceivably the Federal payments could repay to the private company the entire cost of its project. By contrast, the Federal Government having constructed the project itself, holds title to it and will continue to accrue benefits from the project in the form of power sales revenue, not only during the amortization period, but thereafter during the entire remaining useful life of the project.

Moreover, it is very doubtful that any private utility company, operating for profit purposes, would be able to as fully integrate a project such as Hungry Horse to provide maximum benefits to the area grid as does the Federal Government. Any utility company would have to maximize production at a project such as Hungry Horse during the entire year, reserving for only secondary consideration the benefits it made available to other generating plants downstream.

The private company undertaking these upstream storage projects, would secure operating control not only of the at-site power, but of the far greater quantities of power made available downstream by water released from the project, and although the Federal Government paid for downstream benefits, it would have no control over their availability.

On August 24, 1954, an article appeared in the Wall Street Journal directly bearing on this legislation. A combination of four major private utility companies in the Northwest, doing business as the

Pacific Northwest Power Co., stated, through Mr. Kinsey Robinson, its president, that although the Federal Power Commission had granted Pacific Northwest an 18-month preliminary permit to build 2 upstream reservoir storage projects on the Clearwater River, construction of these projects by his company depended on 2 conditions. One was enactment by the Congress of a downstream benefits bill to provide assessment on downstream dams for benefits from upstream water storage. Mr. Robinson's other condition for building was a decision by the Federal Government to advance funds for flood control features of the dam. The following is a copy of the excerpt from the Wall Street Journal to which I refer.

#### PACIFIC NORTHWEST POWER TO EXPLORE TWO SITES FOR IDAHO POWER DAMS

SPOKANE.—Pacific Northwest Power Co. will do exploratory work this fall at the sites of two proposed power dams in Idaho, according to Kinsey M. Robinson, president. The Federal Power Commission has granted the company an 18-month preliminary permit for study of the proposed hydroelectric developments.

The locations are at Bruce's Eddy on the North Fork of the Clearwater River, with power capability estimated at 244,000 kilowatts, and Penny Cliffs on the Middle Fork of the Clearwater, rated at 292,000 kilowatts.

Mr. Robinson said Pacific Northwest Power had asked for more time, as the 18-month limit is "terribly short." He also said two fundamental questions must be settled before the company could proceed to build the dams—a downstream benefit act of Congress, to standardize assessment of costs to downstream dams for benefits from upstream water storage, and a decision whether the Federal Government is willing to advance funds for flood-control features of the dams.

Pacific Northwest Power is a joint enterprise of Washington Water Power Co., which Mr. Robinson also heads; Montana Power Co., Pacific Power & Light Co., and Portland General Electric Co.

Mr. Robinson apparently feels that the Federal Government should finance, as flood-control features, a major portion of the project for which he has applied for a license, and in addition, should help pay for construction by his company of the power features of the project by assessing downstream Federal plants for the incidental benefits provided by the joint Federal-company project. Mr. Robinson is also president of the Washington Water Power Co. of Spokane, Wash., which has received a certificate authorizing accelerated depreciation on \$29,970,000 of the total cost of its 200,000 kilowatt Cabinet Gorge hydroelectric plant.

Federal power construction agencies in securing congressional authorizations and appropriations for development of comprehensive river basin development plans must now design with two criteria in mind. Each individual project of the plan must show a benefit-to-cost ratio better than 1 to 1, and the overall comprehensive plan must also show a benefit-to-cost ratio better than 1 to 1. If the private utility companies are allowed to develop the more desirable sites with the aid of subsidies in the form of Federal payments for downstream benefits, lucrative "partnership" proposals, and accelerated depreciation certificates, the Government will be left to develop the less desirable sites and the overall economy of the comprehensive plan will be reduced.

Furthermore, the cost of developing a given hydroelectric site would generally be higher to a private corporation than to the Federal Government because of the fact that the private group must pay a higher rate of interest on its capital investment, and must pay income taxes on the revenue accruing from the project. Thus, it can be

assumed that the private group may not always develop the entire potential of a given site, but the development undertaken by it may nonetheless, preclude full development by the Federal Government.

The pending application of the Idaho Power Co. for a license to build three relatively low head dams on the Snake River is a good example. The Bureau of Reclamation has rather complete plans for the construction of a high head Hells Canyon Dam on the Snake River which would develop virtually the entire potential of the river at that point. The single Idaho Power Co. Brownlee Dam recommended for licensing by FPC Presiding Examiner William J. Costello would develop only a portion of the benefits. Therefore, if the Federal Power Commission grants this license, it means that the Federal Hells Canyon Dam, including 3.9-million acre-feet of reservoir storage and approximately 1-million kilowatts of firm power, would be superseded by the private development plan which includes only 1-million acre-feet of reservoir storage and 230,000 kilowatts of firm power development.

In other words, the Government and the people it represents in the Northwest would be forever deprived of 2.9 million acre-feet of reservoir storage and 770,000 kilowatts of firm power. It seems to us perfectly absurd that although the Government, in this instance, would surrender 770,000 kilowatts of firm power and accompanying reservoir storage, it should nonetheless be ordered to pay such benefits as may accrue to downstream projects from the limited development by the Idaho Power Co. of the Snake River. The Idaho Power Co. also has pending with the Office of Defense Mobilization an application for a certificate entitling it to depreciate in 5 years for tax purposes \$67,138,000 of the \$90,433,000 cost of the Brownlee project.

We feel, Mr. Chairman, in addition, that S. 1574 and similar legislation would have an extremely detrimental effect on Federal comprehensive multiple-purpose river basin development plans. Again this is especially true with respect to the Columbia River Basin system in the Northwest where the Federal Government has already built many of the downstream plants. There are many upstream reservoir projects yet to be undertaken as part of the Federal plan. Two portions of the legislation presently under consideration would strike very hard at these comprehensive river basin development programs.

There are usually several hydroelectric projects in any multiple-purpose river basin plan. Each of them depends on the others for its feasibility. Thus, the feasibility of the 180,000-kilowatt Ice Harbor project on the Snake River which is authorized for Federal construction and on which the Corps of Engineers has already spent over a million dollars in planning funds, is based on the availability of upstream storage benefits from the Hells Canyon project.

If, under section 2 of the proposed legislation, S. 1574, downstream benefits accruing to the Ice Harbor site from upstream storage from Hells Canyon, when and if it becomes available, are charged against the Ice Harbor project, it immediately becomes infeasible and impossible of construction by the Federal Government. If, under section 1 of the proposed legislation a private utility company were to construct the Hells Canyon project, the benefits so accruing to Ice Harbor would be charged against it. The project would then also become infeasible under this portion of the bill. Thus, we see that both sections 1 and 2 of the bill could conceivably revise the whole economic feasibility

study of a comprehensive river basin development program either by authorizing transfer of benefits accredited to downstream Federal projects to privately owned upstream reservoir storage sites, or by allowing shuffling allocation among several federally owned projects of the benefits conferred upon each of them by all of the others. Thus, the bill effectively authorizes whatever agency is delegated authority under it to effectively review and pass upon the feasibility of the entire Federal power program in the Pacific Northwest and in other areas where comprehensive plans have been approved. Comprehensive basin plans must be viewed as an integrated concept. They cannot be considered as a series of discrete units. If the legislation now proposed as S. 1574 is passed, the Federal agency responsible for developing comprehensive river basin plans will have to not only design systems which are feasible as a whole and in which each project is separately feasible, but will have the additional burden of proving each project separately feasible when charged with all benefits accruing from other projects in the plan. Such criteria would present a serious threat to future development plans. Although it may not be the intent of the Congress to convey, in the proposed legislation, power to review and redetermine the feasibility of Federal water-resource development programs, nonetheless we feel such authority will be the effective result of the bill.

The rural electric systems of the country have a tremendous stake in the Federal power construction and marketing program. In the Pacific Northwest and in the Tennessee Valley area, our systems have requirements contracts with the Government under which the Federal agency agrees to supply the entire requirements of a particular system. Under these circumstances, we must oppose any legislation which provides for payments by the Federal Government to a private utility company for downstream benefits, thereby making feasible sites out of otherwise infeasible ones for private companies, and which would destroy or reduce the feasibility of Federal development.

We feel that the legislation proposed in Senate bill 1574 is entirely too broad and imposes no limits to the charges that may be made against the Federal power program by private utility companies which may construct stream improvement facilities under license by the Federal Power Commission. There is little existing precedent upon which to forecast the action of the Commission as regards the assignment of benefits from future stream improvements undertaken by private utility companies. As regards existing projects owned and operated by private groups, I would like to say that to now assess against downstream Federal projects a portion of the capital and operating costs of the privately owned upstream projects would be nothing short of a windfall or giveaway of the peoples resources to the private corporation.

Feasibility of existing private projects was not based upon the payment to the Federal Government of downstream benefits, and we contend that the people, as owners of the Federal resources of the Nation, are, in licensing for private development of these projects, adequately compensating the companies for such downstream benefits as may normally accrue. In addition to this, we feel that the virtually unlimited authority contained in the proposed legislation could very appreciably raise the cost of power to the Federal Government at

existing and proposed projects, and thereby destroy the value of Federal power to the rural electric systems. As you know, our systems rely on the availability of increased amounts of Federal power, not only because of the fact that they are able to buy such power at lower than average rates, but because the Federal power construction and marketing program has provided a standard against which to measure the rates and operating practices of adjacent private utility companies. We further feel that the virtually unlimited authority contained in this bill would, by subsidizing development by private utility companies of the most desirable units of an extensive basinwide development program, lower the overall economy of such a plan, and could, as in the Hells Canyon case, lead to less than full development of the potentialities of various sites throughout the country.

Mr. LINEWEAVER. I have some inserts for the record.

First is a telegram to Hon. Clinton Anderson from Mr. B. Boydstun, acting general manager, Grand River Dam Authority in Oklahoma, favoring the bill.

(The telegram follows:)

VINITA, OKLA., June 27, 1955.

HON. CLINTON ANDERSON,  
*United States Senator, Washington, D. C.:*

Re Senate bill 1574: It is my understanding that your committee will consider this proposed legislation within the next few days. The Grand River Dam Authority is a public power agency of the State of Oklahoma. It owns and operates the Pensacola Dam and Reservoir project on Grand River in Oklahoma. This project provides the headwater improvement and storage for the Government-owned Fort Gibson Dam downstream from the Pensacola Dam. The Authority is a licensee of the Federal Power Commission. We urge favorable consideration to require the Government to compensate the Authority for the benefits that it receives from the headwater improvements and storage.

Q. B. BOYDSTUN,  
*Acting General Manager, Grand River Dam Authority.*

Mr. LINEWEAVER. Next is a letter from the National Association of Railroad and Utilities Commissioners to Senator Murray, chairman of the Senate Committee on Interior and Insular Affairs, also endorsing S. 1574.

(The letter referred to follows:)

NATIONAL ASSOCIATION OF RAILROAD AND UTILITIES COMMISSIONERS,  
*Washington 4, D. C., May 26, 1955.*

HON. JAMES E. MURRAY,  
*Chairman, Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.*

DEAR CHAIRMAN MURRAY: I am advised that your committee plans to hold hearings on May 27 on S. 1574, a bill to provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom and for other purposes.

The membership of this association embraces the members of the public utility regulatory commissions and boards of all of the 48 States of the United States and the District of Columbia. The executive committee of this association at a regular meeting held in Washington, D. C., in June 14, 1954, adopted a resolution favoring enactment of S. 3434, 83d Congress, which resolution reads as follows:

"RESOLUTION FAVORING ENACTMENT OF S. 3434, 83D CONGRESS

"Resolved, That this association favors enactment of S. 3434, 83d Congress, a bill to amend section 10 (f) of the Federal Power Act to provide that charges shall be paid by Federal power projects which are benefited by stream improvements constructed by other parties, the payments to be determined in the same manner as for charges paid by non-Federal interests; and

*"Resolved further, That the committee on legislation and the legal representatives of this association be and they are hereby authorized to support said bill, or any similar bill which will accomplish the same objectives, on behalf of this association at any hearing upon such bill or bills before any committee in either House of Congress."*

S. 1574 provides that the Secretary of the Interior shall fix the annual payments. S. 3434, 83d Congress, would have amended section 10 (f) of the Federal Power Act adding a new section 31 to that act. I am advised that the Federal Power Commission report on S. 1574 recommends that the bill be amended to repeal 10 (f) of the Federal Power Act and by adding a new section 31 to the act. On behalf of this association I recommend that S. 1574 be amended in the manner recommended by the Federal Power Commission.

It would be sincerely appreciated if you would incorporate this letter and resolution in the record of the hearings held by your committee in regard to S. 1574.

Sincerely yours,

AUSTIN L. ROBERTS, Jr.,  
*General Solicitor.*

Mr. LINEWEAVER. Next are two letters from Gus Norwood, executive secretary of the Northwest Public Power Association, Inc., opposing the bill; also a letter from Ken Billington, of the Washington Public Utilities District Association; and a statement from C. Emerson Duncan II, of counsel for the American Public Power Association.

NORTHWEST PUBLIC POWER ASSOCIATION, INC.,  
*Vancouver, Wash., June 4, 1955.*

HON. JAMES E. MURRAY,  
*Chairman, Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR MURRAY: By resolution of its member electric systems which serve almost 2 million people in Montana, Idaho, Oregon, Washington, and Alaska, the Northwest Public Power Association opposes Senate bill 1574 and urges the retention of the policy of section 10 (f) of the Federal Power Act in its present form.

Senate bill 1574 is objectionable on the same grounds as were developed in the opposition testimony against Senate bill 3434 of the 83d Congress. What Senate bill 3434 attempted to do by direct amendment of the Federal Power Act, the new Senate bill 1574 would attempt to do by indirection by granting the equivalent authority to the Secretary of Interior.

For over three decades private electric corporations have been granted 50-year leases on tremendously valuable Federal waterpower sites under FPC license with the understanding that under section 10 (f) any downstream Federal dam, present or future, will not be required to pay rent, toll, or tribute to any privately owned upstream storage reservoir. This provision has been sound in law and fair in equity because the sovereign people of the United States own the waterpowers of the great rivers. Free storage benefits to downstream Federal dams is part of the bargain, part of the quid pro quo, for the FPC license. It is part of the inherent characteristic of the site, as a part of the river system, which has not been licensed away.

An FPC license does not confer ownership. It merely grants a lease which in itself is most valuable even though the title to the waterpower resource remains in the name of the public. The Federal Government continues to own every site for which a license has been granted.

It is inconceivable that the people of the United States as the owners of Bonneville Dam should pay tribute to an upstream private utility merely because that utility was granted use of a valuable upstream waterpower privilege which also belongs to the people. This would be like paying rent on your own property.

Accordingly, we respectfully urge your rejection of Senate bill 1574.

The principles and objectives of Senate bill 1574 and of Senate bill 3434 of the previous Congress are also opposed in the testimony and resolutions of region 9 of the National Rural Electric Cooperative Association, the American Public Power Association, the Washington Public Utility Districts Association, the Oregon Rural Electric Cooperative Association, and the Montana State Rural Electric Cooperative Association.

Respectfully yours,

GUS NORWOOD,  
*Executive Secretary.*

NORTHWEST PUBLIC POWER ASSOCIATION,  
Vancouver, Wash., June 28, 1955.

Re Opposition to S. 1574, Upstream Storage Charges

Hon. JAMES E. MURRAY,  
Chairman, Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington, D. C.

DEAR SENATOR MURRAY: This supplements our testimony of June 4 which was submitted in the form of a letter in opposition to Senate bill 1574. We would like to list two additional objections to the bill.

We are now advised that S. 1574 would require the Federal Government to pay downstream benefits not only at future private utility dams but at projects which have already been constructed; for example, the Federal Government as the owner of the Bonneville Dam on the Columbia River would be required to pay tribute to the Montana Power Co. which happens to own the Kerr Dam and regulates the level of Flathead Lake. The ideal storage from Flathead Lake was achieved at very little additional cost but results in appreciable downstream benefits. However, it was clearly understood when the company received its FPC license for the Kerr project that these downstream benefits constituted a part of the consideration, a part of the quid pro quo for the license. Thus Senate bill 1574 would provide for a duplication of benefits or create new windfall profits for the Montana Power Co. These profits would accrue only to the stockholders and they would be exacted only from the electric consumers. The result would be higher electric rates. Aside from the obvious injustice of Senate bill 1574, this proposal is contrary to good public policy.

#### IS THIS GOOD BUSINESS?

May I strongly urge upon the committee that the committee staff be requested to apply S. 1574 to a number of actual cases such as the Hungry Horse Dam or the Brucers Eddy Dam. As a guide to such study may I submit the following hypothetical illustration. Let it be supposed that a \$100 million project is to be constructed by a private utility as an upstream storage dam and that all downstream dams are federally owned. Let it be supposed that the costs of this dam are allocated entirely to power, half of which is for power generated at the site and half for downstream power. Under S. 1574 the Federal Government must pay to the private utility a 12 percent rate of return, before Federal income taxes, upon \$50 million or \$6 million per annum on this account. This does not include the cost of operation, maintenance, and administration. However, if the Federal Government constructed the entire project, the rate of interest would be 2½ percent on the entire \$100 million or \$2.5 million per annum. Thus the \$6 million charge under S. 1574 is 140 percent greater than would be the case if the entire project were federally financed, yet the Federal Government under S. 1574 would obtain only half the benefits, namely the downstream benefits.

This case study, however, illustrates only the direct economic cost which would result from S. 1574. The analysis should be continued to show how the long range development of an entire river basin would be hampered.

For example in the Columbia River Basin our preliminary study indicates that under a ceiling price of 6 mills for power that about 80 to 90 percent of the power potential of the Columbia River Basin can be developed if the interest rate is 2½ percent, but that under typical private utility financing that far less than half of the Columbia River Basin would be developed. Thus Senate bill 1574 may operate as a form of birth control for the development of river basins.

This analysis should then be continued further to show that as projects like Hungry Horse Dam are not built, because they are not feasible under private utility financing, the region suffers vast economic losses because of industrial developments and other economic opportunities which are prevented from coming into being.

The first full year of operation of the Hungry Horse project has just been reported in the 1954 Annual Report of the Bonneville Power Administration which shows a cost of \$2.93 million of which some 60 percent was required for interest. Interest is the key cost. With interest at 2½ percent it is readily seen that for each 1 percent of interest there is a 24 percent power cost. Thus to increase the rate of interest from 2½ percent to 3½ percent would increase the cost of Hungry Horse power by 24 percent. If the 2½ percent were increased under private utility financing to a 12 percent rate of return before Federal income taxes the cost of power from Hungry Horse Dam would be more than tripled. The result

would be that there would be no phosphate plant at Silver Bow, Mont., that there would be no aluminum plant at Columbia Falls, Mont., that there would be no dam at the Hungry Horse Dam site; the economy of western Montana would not be good.

I most strongly urge your rejection of S. 1574 and also the rejection of its predecessor, S. 3434 of the last Congress. I urge the retention of section 10 (f) of the Federal Power Act. Every organization of public and cooperative electric systems in the Pacific Northwest is on record against these bills.

I can only add an observation which must be described as strictly personal: It is my personal opinion that Senate bill 1574 represents the thief at the gate. It proposes not only to establish a tollgate upon our presently developed water resources and upon such future projects as may be built, but by its effect will serve to throttle a large proportion of our potential river development.

Most respectfully submitted.

GUS NORWOOD,  
*Executive Secretary.*

---

WASHINGTON PUBLIC UTILITY DISTRICTS' ASSOCIATION,

*Seattle 1, Wash., July 1, 1955.*

HON. JAMES E. MURRAY,  
*Chairman, Senate Committee on Interior and Insular Affairs,  
Senate Office Building, Washington 25, D. C.*

(Attention of Subcommittee on S. 1574, upstream storage charge legislation.)

DEAR SENATOR MURRAY: We understand that hearings were held on S. 1574 on June 29, 1955.

Since we desire to be of record on this legislation but were unable to be present for a verbal presentation, may we respectfully request approval for inclusion in the record of our written statement in opposition to S. 1574.

The statement is attached.

Sincerely yours,

KEN BILLINGTON.

STATEMENT IN OPPOSITION TO S. 1574 ON BEHALF OF THE WASHINGTON PUBLIC  
UTILITY DISTRICT'S ASSOCIATION, SEATTLE, WASH.

This association comprised in membership of 23 public-utility districts serving in excess of 216,000 electric customers in the State of Washington, adopted the following resolution in opposition to S. 1574 on June 10, 1955:

"UPSTREAM STORAGE CHARGES

"Whereas the Senate Committee on Interior and Insular Affairs is conducting hearings on Senate bill 1574 which would require downstream Federal dams such as Bonneville Dam to pay upstream storage charges to future private utility upstream dams; and "Whereas such reimbursement would not only provide a heavy subsidy to private utilities but would also artificially increase our cost power: now, therefore, be it

"Resolved, That we urge Washington Senators and Representatives to oppose Senate bill 1574."

Our opposition to this legislation is based on the principle that the navigable water resources of this Nation are a Federal public domain. Non-Federal water users are permitted to develop this public resource under FPC licenses. The licenses provide the right of use but not ownership of such public resource. The non-Federal developer evaluates any water-resource development on the basis of his own individual project's production. He makes use of only his own financial resources. An in return, he gets the benefits accruing from such project. When the production or benefits of his facility are increased or augmented by a public Government investment (i. e., upstream storage) it is only right that such non-Federal developer should be required to pay for these additional benefits which come, not from his own investment, but rather from the investment of the people as a whole. This is the reasoning which supports section 10 (f) of the Federal Water Power Act, and which has been the rule in river development for over 30 years.

Preliminary studies as regards the amount of payments on the part of non-Federal owners to the Federal Government for benefits which came to them from Government investment in headwater developments, have tended toward the

establishment of a very reasonable charge for the increased kilowatt-hour production.

Certainly, the incremental cost to the non-Federal water users of the additional energy production due to such Federal investments is only a fraction of the cost of the power produced at these plants as a result of the at-site facilities installed by such non-Federal water users themselves.

To alter present procedures and make the Federal Government pay upstream storage charges to non-Federal users would doubly benefit such developers. We feel it is proper, as our FPC licensing procedures provide, that a non-Federal user be told, "So long as you make full use of this site as provided for in the Federal Power Act, you may have the right to this site and its water to develop to the extent of your own finances and for your own special interest."

We do not think that such non-Federal developer should also be told, "In addition, we will pledge and loan to you the Government's investment and earning power of downstream plants to make your investment a much better one for your own special interest." This is what S. 1574 would do if enacted into law.

In short, we feel that special local interests should pay for the special "windfall" benefits which they may enjoy by virtue of public investment by all the people in upstream storage. But we do not think that all the people should be required to pay non-Federal upstream developers for storage benefits, in addition to granting them the right to the use of the public domain for their own individual purposes and benefit.

We respectfully urge rejection of this legislation.

---

STATEMENT OF C. EMERSON DUNCAN II OF COUNSEL FOR THE AMERICAN PUBLIC POWER ASSOCIATION, ON S. 1574

My name is C. Emerson Duncan II. I am an attorney associated with the firm of Ely, McCarty & Duncan, Tower Building, Washington, D. C. We are general counsel for the American Public Power Association, and this statement is submitted on behalf of that association. The American Public Power Association is a national trade organization representing more than 800 local publicly owned electric utilities in 40 States and Puerto Rico.

The local publicly owned electric utilities which comprise our membership are substantial purchasers of federally produced hydroelectric power. In the fiscal year ending July 1, 1953, all local public agencies purchased 19,667 million kilowatt-hours from various Federal power-marketing agencies. This represented some 36.69 percent of all power sold by the Federal Government.

We are therefore concerned about S. 1574 not only because of the effect it might have upon the price at which such power would be sold, but also because of its possible effects on the economic feasibility of construction of dams in the future by the Federal Government.

S. 1574, introduced by Senator Goldwater, is entitled "A bill to provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom, and for other purposes."

For all practical purposes S. 1574 is identical in intent to S. 3434 which was introduced in the 83d Congress and referred to the Committee on Interstate and Foreign Commerce, except that the functions assigned to the Federal Power Commission under S. 3434 would be assigned to the Department of the Interior under S. 1574. S. 3434, in effect, would have repealed section 10 (f) of the Federal Power Act (16 U. S. C. 803 (f)) and would have substituted a new section which was recommended by the Federal Power Commission.

This new section would have provided for payments by the Federal Government for benefits received by Federal power projects from upstream non-Federal storage reservoirs.

The Federal Power Commission, in its report on S. 1574, recommended against the passage of the bill, and proposed again that language similar to that contained in S. 3434 of the 83d Congress be adopted instead. The chief objections raised by the Commission to the bill before the committee were, among others, that the arrangement contemplated under S. 1574 would give to the Secretary of the Interior the authority to determine charges for benefits received, with the additional authority to assess these charges against the proper parties—functions presently performed by the Commission. An equally serious matter would be the procedural questions raised by the bill, involving the manner in which parties may apply for, secure, and have reviewed determinations of headwater benefits

received and the costs to be shared. The Commission considered that before the bill could be effectively administered, provisions for providing notices, hearings, rehearings, and court review would have to be enacted. A method of enforcing determinations would also appear to be necessary. The Bureau of the Budget concurred in the recommendations of the Commission.

While the adverse recommendations of the Federal Power Commission and the Bureau of the Budget constitute a serious bar to favorable consideration of this legislation, there are equally compelling reasons why the legislation proposed as a substitute by the Commission (which is for all purposes the same legislation that was considered in the last Congress) should not be enacted.

The present language of section 10 (f) of the Federal Power Act (16 U. S. C. 803 (f)) provides that when licensees are benefited by reservoir or other headwater improvements constructed by other parties, including the United States, they shall reimburse the owner of the improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Federal Power Commission may deem equitable. In 1935, section 10 (f) was amended to provide for the reimbursement for headwater benefits by nonlicensees under certain circumstances.

Attempts have been made to justify the proposals of the Commission on the basis that the Federal Government should be required to make payments similar to those made by other licensees of hydroelectric projects when Federal projects derive benefits from an upstream developer. Proponents of the measure, however, have chosen to ignore the fundamental distinctions between the types of operations involved.

The present provisions of section 10 (f) of the Federal Power Act have been in force since 1920, when Congress enacted the Federal Power Act. The authority granted to the Federal Power Commission under that act to issue licenses to States, municipalities, cooperatives, private power companies and others, stems from the principle that ownership of the water resources of navigable streams rests with the people of the United States, and that those resources, therefore, are subject to the jurisdiction of the Congress under the commerce clause of the Constitution.

When private groups or individuals are granted licenses permitting them to utilize these resources, it is with the understanding that conditions which may be imposed by the terms of the license are imposed in the public interest and for the benefit of the people generally.

Under the terms of the amendment proposed by the Federal Power Commission, Federal projects which are to be constructed, as well as those already in existence, would be required to pay annual charges to the owner of a headwater facility, where the construction, operation, or maintenance of that facility benefits the Federal project. These annual charges would be determined by the Federal Power Commission, after a hearing, in accordance with a formula set forth in section 31 (a) of the FPC's proposed amendment.

Private licensees, whose operations have included the construction of upstream facilities which have benefited or will benefit Federal downstream projects, have in the past 30 years regarded the furnishing of any such benefit as a condition upon which the license was granted. To now provide that the private licensee shall be reimbursed for these benefits will mean nothing more than granting a windfall which was never anticipated, and which was never taken into account when costs of operations and rate schedules were determined. It would also mean an increase in the cost of generating power at existing federally owned projects and a decrease in the cost of generating power at privately owned projects. This may well have the effect of increasing the rates for publicly generated power, but there is no assurance that a corresponding reduction in the rates charged by private power producers will be forthcoming.

As to the possible effect of the proposed legislation upon Federal projects to be constructed in the future, the General Counsel of the Federal Power Commission testified:

"Under this bill, the power costs of a few Federal projects would include the headwater benefit charges which are now borne by other power consumers. In thus spreading the cost of headwater improvements, the bill would assist at least, to this limited extent, in securing comprehensive development of water resources."

The language of the Commission's proposed amendment, set forth in section 31 (b) in the annex to the Commission's report, obligates the United States to reimburse upstream developers for any benefits accruing to Federal hydroelectric power projects which will be constructed in the future as well as those already in operation. Just how the comprehensive development of water resources can be secured by the existence of this obligation on the part of Federal projects to reim-

burse upstream developers for benefits which must later be determined is not made clear. Certainly any projected plans for comprehensive Federal development of potential power sites would have to include possible increases in the cost of generating power at those sites as a result of subsequent construction, operation, and maintenance of upstream projects.

There has been, since section 10 (f) of the Federal Power Act was enacted, only one instance, according to the testimony of the General Counsel of the Federal Power Commission (Hearings, S: 3434), in which the Commission has made a final determination of annual payments which should be made by a licensee to an upstream developer for headwater improvements, but according to the testimony of Senator Morse before this committee, the United States has yet to receive 1 cent of revenue under the present law. How the formula set forth in the bill would apply, in the event that many Federal and non-Federal up-river projects were involved, each providing upstream benefits for at least one other, and possibly several, was not spelled out, and there was no testimony given before the committee on this point. It would be fair to anticipate, however, that the cost of making these determinations each 5 years, as provided in the legislation, might result in a very sizable increase in the Federal Power Commission's costs of administering the Federal Power Act.

The American Public Power Association takes the position that at the present time there is no vital need for changing the provisions of the Federal Power Act which apply to reimbursement for upstream benefits. Those licensees presently operating reservoirs or water-use facilities which directly or indirectly benefit a federally operated project are providing such benefits as a condition which was present or contemplated when licensed, and fully taken into account when costs of operations were determined. These costs are, of course, reflected in the rates to consumers, and in the profits retained by the operator. There is no question of equity involved here which would justify the adoption of the Commission's proposed amendment on the ground that only the Federal Government at present is not required to make similar payments. To the best of our knowledge, little if any income has been received by the Federal Treasury as a result of charges assessed against public or private licensees under presently existing regulations.

Further, the proposed amendment would thrust upon the Federal Power Commission a myriad of additional duties, in line with administrative requirements for carrying out the provisions of the law, which could only increase the present costs of operation. This factor should certainly be fully considered prior to any change in the existing law.

In addition, it should be pointed out that existing procedures, authorizing the accelerated amortization of costs of construction, have allowed private utility operators to benefit by many millions of dollars, and the cost of these benefits has been borne by the taxpayer generally. A further subsidy, such as that contemplated by the amendment which would seemingly help to defray not only the cost of construction, but of operation as well, is impossible of justification.

Mr. LINEWEAVER. Thank you, gentlemen, for appearing.

(Whereupon, at 12:30 p. m., the subcommittee recessed, subject to the call of the Chair.)

## HEADWATER BENEFITS

---

WEDNESDAY, JULY 13, 1955

UNITED STATES SENATE,  
SUBCOMMITTEE ON IRRIGATION AND RECLAMATION  
OF THE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,  
*Washington, D. C.*

The subcommittee met at 10:30 a. m., pursuant to notice, in room 224, Senate Office Building, Hon. Clinton P. Anderson presiding.

Present: Senator Clinton P. Anderson, New Mexico.

Senator ANDERSON. The subcommittee will be in order.

In view of the fact that Senator Gore was unable to be present on May 27 when hearings were held on S. 1574, a bill to provide for payments by the Secretary of the Interior to owners of non-Federal water-use facilities for hydroelectric power benefits realized by the United States therefrom, and for other purposes, the subcommittee is glad to give Senator Gore an opportunity to make a statement in opposition to this bill.

We will be glad to hear from you, Senator.

### STATEMENT OF HON. ALBERT GORE, A UNITED STATES SENATOR FROM THE STATE OF TENNESSEE

Senator GORE. I am grateful to you and to the members of this committee for the special effort that has been made to arrange an opportunity for me to present my views with respect to Senate bill 1574, nor under consideration by your committee.

Simply stated, the purpose of the bill is to provide for payment by the Federal Government to private concerns for any so-called headwater benefits accruing to a federally constructed facility on a navigable stream as a result of the construction upstream therefrom of some facility by a private concern operating under license.

The bill is unsound as a matter of public policy. It is based upon a philosophy which ignores the fundamental fact that the resources of our navigable streams are a part of the public domain belonging to all the people. When a private company is permitted to make use of these resources for private profit, it does so by sufferance rather than as a matter of right.

It is true that existing law contains a provision under which a private concern may be required to make certain payments to the Federal Government for benefits received from an upstream facility owned by the people.

It is argued that, in view of this fact, it is only fair and equitable to require similar payments by the Federal Government when the circumstances are reversed. This argument may appear plausible on the surface; however, as I have already indicated, it ignores the fact

that a private concern making use of these resources does so by virtue of a grant from the people.

In bestowing such a privilege, the representatives of the people have not only the right but the duty to issue such a license upon such conditions as may be necessary to protect the public interest.

It is interesting to note that this bill would be retroactive in this respect. The payments would be required not only with respect to Federal projects constructed in the future, but also to those already constructed.

As the members of this committee know, prior to the construction of any Federal facility, studies are conducted to determine its economic feasibility and the ratio of benefits to costs. The imposition of an additional burden, after the project has been constructed, would serve to alter the basis of economic justification. It would tend to disrupt the planned schedule for amortization of the Government's investment.

Then, too, the benefits of the bill would be made available not only to private facilities to be constructed in the future, but those already constructed as well.

Private concerns which have applied for a license to construct a given project have done so on the basis of existing law. Presumably, they did not expect any gratuity of this nature from the Federal Government. To grant such to them now would be nothing more than providing them with an unexpected and undeserved windfall profit.

S. 1574 is identical in purpose with the provisions of S. 3434, introduced during the 83d Congress and considered by the Interstate and Foreign Commerce Committee. I appeared before that committee in opposition to that bill last year.

All the arguments against S. 3434 are equally applicable to S. 1574. As a matter of fact, it is my understanding that this committee has received from certain agencies of the United States Government a recommendation that the language of S. 1574 be amended so as to conform word-for-word with the provisions of S. 3434.

The major difference in the two bills is one of administration. S. 1574 bestows upon the Secretary of the Interior, or such other agency as may have administrative control over a Federal facility, responsibility for administration.

As the committee knows, under the provisions of S. 3434, it was contemplated that the Federal Power Commission would exercise this responsibility.

The bill now before the committee is, in many respects, unclear in its details.

The Secretary of the Interior is given authority to fix and determine the amount of the payments due the owner of any upstream project said to benefit a Federal facility. He is also given authority to fix the amount of any payment that might be due the United States from a private concern. But nowhere is there any provision or direction as to how the charge due the Government is to be collected. The authority given to department heads who administer Federal projects is very broad, indeed.

I would like to call specifically to the attention of the committee the authority granted to these department and agency heads to negotiate privately contracts obligating the Government to make payment

to private owners for upstream improvements. Though the bill requires that such contracts be reported to Congress, specific legislation would be required to negate any of them.

S. 3434 was basically unsound; S. 1574 is equally unsound. In addition, the language of the latter bill would be even more difficult to administer.

I urge this committee to reject S. 1574 or any other bill designed to accomplish a similar objective.

Senator ANDERSON. Thank you very much, Senator, for your statement.

Is there anything further?

If not, the committee will stand adjourned with permission for additional statements to be filed for the record.

(Whereupon, at 10:40 a. m., the hearing was adjourned.)

WEDNESDAY, JUNE 1, 1955

UNITED STATES SENATE

SUBCOMMITTEE ON TERRITORIES AND INSULAR AFFAIRS OF THE  
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS.

*Washington, D. C.*

The subcommittee met at 10 a. m., pursuant to call, in room 224, Senate Office Building, Senator Alan Bible, acting chairman of the Subcommittee, presiding.

Present: Senators Alan Bible, Nevada; Barry Goldwater, Arizona.

Present also: Stewart French, General counsel, and N. D. McSherry, assistant chief clerk.

Senator BIBLE. The meeting will come to order, please.

At the outset, I want the record to show that the distinguished chairman of the Subcommittee on Territories, Senator Jackson of Washington, regrets his inability to be here to conduct this hearing personally, but he is unavoidably away from Washington. Accordingly, with the concurrence of the ranking majority member of the subcommittee, Senator Long of Louisiana, Senator Jackson has asked me to serve as chairman in this matter.

This hearing is somewhat unusual in that there is no bill or resolution concerning its subject before the Congress. Rather it is a hearing based on that historic "right of petition" which the Founding Fathers wrote into the Constitution.

A petition for a congressional hearing was filed on March 30, 1935, with the Congress by Max Barash, a Washington lawyer, on behalf of A. Ben Shallit, a mining engineer of Fairbanks, Alaska, who operates the Cripple Creek Co. on leased Federal coal lands in the Healy River Valley about 100 miles southwest of Fairbanks.

Mr. Shallit in his petition alleges that the Secretary of the Interior has both a statutory and an equitable duty to provide adequate rail facilities, in circumstances such as are present here, to develop the mineral deposits on the public lands of which he, Shallit, is lessee. He further alleges that up to the time of the filing of the petition, every governmental operating agency that looked into the matter, including agencies of the Department of the Interior and of the Department of Defense, as well as those of the Territory of Alaska, has recommended construction of a railroad spur, about 5 miles in length, from Suntrana, Alaska, through the Shallit leasehold to the Roth reserve, a coal lands area withdrawn by the Army.

The Shallit petition asserts that, upon the unanimous recommendation of the operating agencies, the Department of the Interior made a survey of route of the proposed spur, and developed working plans for building it.

However, although, according to the petition, no change took place in the basic facts which are briefly sketched in broad outline above, the Department of the Interior abruptly reversed its position, canceled its plans, and abandoned the project entirely.

Mr. Shallit charges that such a reversal of policy and action is highly detrimental to the national interest, and to his own interests. He asserts that if the spur is not built, costs of coal to the Federal Government and the economy of the Fairbanks area will continue to be upward to \$1 a ton higher than if it is built—that the lower costs of coal will rapidly amortize the cost; that because of the present necessity of delivery to the military 12 months a year, unless the spur is built, he will be forced out of business, an event which he asserts will greatly foster monopoly in central Alaska, leaving coal consumers at the mercy, for practical purposes, of a single producer.

Implicit and explicit in the petition is the allegation that the Secretary of Interior is failing to do his clear duty with respect to the development of Alaskan resources which are an important part of our natural resources, his duty with respect to the protection of the public and governmental agencies, and his duty to a Federal coal lands lessee, namely to Shallit himself.

Also, implicit and explicit, is the allegation that the Secretary, or his aides, may have been subjected to undue influence and pressures to the extent that he reversed his previous position and abandoned the projected building of the spur.

That such an allegation is a basic part of the petition is recognized in an answer filed on behalf of an adjoining downstream lessee, Usibelli Coal Mine, Inc., by the Washington law firm of Ely, McCarty & Duncan. The Usibelli answer, filed on May 12, states that part of its purpose is "to comment on the scandalous and unwarranted innuendo throughout the petition."

These charges and allegations, if true, constitute a serious indictment of the administration of the Department of the Interior.

Senator Jackson, upon having the petition referred to the Territories Subcommittee by Senator Murray, chairman of the full committee, immediately sent copies to the Secretary of the Interior, the Assistant Secretary of Defense, and other interested officials and persons. That was on April 1. Subsequently, after analyzing the petition, he wrote Secretary McKay at some length under date of April 13, raising specific points and asking specific questions.

I will read a copy of Senator Jackson's letter to the Secretary at this point.

HON. DOUGLAS MCKAY,

*Secretary of the Interior, Department of the Interior, Washington, D. C.*

DEAR MR. SECRETARY: Senator Murray has asked me, as chairman of the Territories Subcommittee, to look into the grave issues raised by the petition of A. Ben Shallit, Cripple Creek Coal Co., Fairbanks, Alaska, for an investigation of your alleged refusal to permit the Alaska Railroad to extend its lines a matter of 6 miles or so to serve the operating mines in the Healy River Valley, despite strong recommendations to do so from Federal and Territorial operating agencies. A copy of Mr. Shallit's petition is enclosed for convenient reference, although I note that his Washington attorney, Mr. Max Barash, already has forwarded copies to you and to the Secretary of Defense.

While of course Mr. Shallit's petition probably presents only one side of the situation, the case appears to warrant a public hearing and inquiry in view of this committee's responsibilities for the development of Alaska. However, before setting up such a hearing, it would be helpful to have your comments.

In particular, I would appreciate a report on the following specific points in the petition which commend themselves to my attention:

1. According to the petition (see exhibit CC) your Subcommittee on Coal of the Alaska Field Committee of the Department of the Interior unanimously passed resolutions on April 30, 1953, in pertinent part, as follows:

"(a) That the extension of the Healy River spur to the Roth property is vital to the security of military installations this coming fiscal year of 1954, and in the future, and to the development and prosperity of the coal industry as a whole in Alaska.

"(b) That by the extension of the Healy River spur to the Roth property would mean a substantial savings to the Government in the price of coal and this savings to the Government should amortize the cost of construction within 3 or 4 years."

2. In filing for a railroad right-of-way along the route of the proposed extension of the Alaska Railroad under date of April 29, 1953 (see exhibit X), acting general manager of the Alaska Railroad John E. Manley stated that:

"It is estimated that the construction of this line will result in the reduction of coal costs to the territory of \$200,000 annually."

In addition, Mr. Manley pointed out the line is necessary in order that Usibelli Coal Co., Cripple Creek Mining Co., and any future producers may have access to the Alaska Railroad, thereby reducing the costs of operations which are then passed on to the Government and private industry.

3. Both Mr. Ludlow G. Anderson, Chief of the Coal Mining Branch of the Bureau of Mines at Anchorage, Alaska, and Mr. L. H. Saarela, mining supervisor of the Geological Survey in charge of coal mining operations in Alaska, have recommended the extension of the Alaska Railroad to the operating coal mines, including the Cripple Creek Coal Co. mine, in the Healy River Valley. See pages 23, 42, and 43 of the petition.

4. Your special Committee to investigate the coal resources of Alaska, headed by Charles W. Connor, recommended the extension of the Alaska Railroad to the operating coal mines, including the Cripple Creek Coal Co. mine, in the Healy River Valley. See page 47 of the petition. See also pages 96 to 101 of the Connor Committee report which Mr. Strand was good enough to make available to the committee upon request, and in particular the following statement on page 101:

"Prompt construction of spur is urgent: The prompt construction of the spur, beginning no later than the summer of 1954, is of salient importance. By the beginning of fiscal year 1956 (the summer of 1955), the military coal requirements will create a need for increased production by both the Usibelli and Cripple Creek mines. Unless a railroad spur is available for use during fiscal year 1956, the ability of these mines to deliver coal in the required tonnages would be in doubt."

Again at page 100, the Connor Committee states that:

"The responsibility for constructing the spur would appear to rest upon the Alaska Railroad as the Department of the Interior agency charged with providing the rail transport facilities needed to further the development of the Territory. A corresponding responsibility to assist in financing the spur rests upon the military agencies which will be the principal beneficiaries of the project. Not only will the military agencies stand to profit directly from reduced coal costs, but the construction of the spur is clearly of major significance to the defense mission in Alaska."

The foregoing reports and recommendations of representatives of your department seem to clearly establish the fact that the extension of the Alaska Railroad to serve the operating coal mines in the Healy River Valley is necessary to develop the coal resources and to provide an adequate supply of coal for military and civilian consumption at the lowest possible cost. Although it appears from the petition that the Alaska Railroad had previously filed its railroad right-of-way and had made a survey of the route of proposed construction, the Alaska Railroad recently withdrew its right-of-way and abandoned the proposed construction.

With the idea of saving your time and that of the subcommittee, permit me, with all deference and courtesy, to observe that the mere assertion that no funds were available for the construction of either the railroad spur or the all-weather truckload will not be an adequate answer to the issues. We have a most impressive record of official findings and recommendations by your own field experts and by Territorial officials, that the construction of the spur or

the road will result in very substantial savings to the military, to the Territory, and to civilian users, and that it will contribute to the security and to rapid economic development of the area.

While I am aware of your probably justifiable pride in Mr. Kalbaugh's achievements in turning a deficit into a profit in his short term operation of the railroad, I am certain you will agree that his and your achievement in this respect should not be made at the expense of the basic purposes of the legislation establishing the railroad, namely, the economic development of Alaska. Nor should such achievement have been made at the expense of proper maintenance and development of the Federal property involved.

From the record, a number of spurs similar to that recommended for the Healy River Valley has been constructed without specific appropriation (see p. 75 of the petition). But more important, there does not appear to have been any effort whatever on the part of the Department to obtain funds to carry out the unequivocal recommendations of its experts.

I regret both the length of this letter and the perhaps unnecessary observations on the catchall answer of lack of funds, but I sincerely believe that time will be saved in the long run by my endeavor to come to grips with the issues at once.

That is signed by Senator Jackson.

Only yesterday the committee received a reply from the Department of the Interior, and I will also read this letter, which is dated May 27, 1955, and addressed to Senator Jackson.

MY DEAR SENATOR JACKSON: Reference is made to your letter of April 13, regarding the desire of the Cripple Creek Coal Co. to have the Alaska Railroad build a 6-mile extension of its Healy River branch, so as to provide better transportation for the Company and certain other coal properties in the Healy River Valley. You ask for the comments of this Department on Mr. Shallit's petition, and particularly with respect to certain specific points in it. The Department is more than willing to answer all your questions on the matter.

Certainly I agree with your statement that the basic purpose of the railroad is the economic development of Alaska, subject, of course, to the desirability of holding down railroad operating expenses and thus perhaps giving the public the benefit of freight rate reductions wherever possible. I may add that we do not consider there is any conflict between these two goals. That is, any justified extension or improvement of the railroad which will further the economy of the Territory may likewise be expected to be good business for the railroad.

In analyzing this proposal, therefore, the question is whether it will foster the development of the coal industry of Alaska. In other words, is there a need and a market for the coal which would be shipped over this extension?

We have studied these questions with considerable care and in the greatest detail over the past 2 years. On the basis of this study, we have found that there is no need for an expanded production capacity for coal north of the Alaska range for the next few years, so far as we can foresee. In fact, the capacity of existing mines north of the range is larger than the predicted demand. The sole effect of building the extension would be to improve the competitive position of one coal producer as against his competitors.

Furthermore, the terrain of the area is such that any railroad construction from the present railroad to the Roth Coal Reserve would be excessively costly, perhaps too much so to justify the construction even if the prospective tonnage were far greater than it is. A study of the construction cost of the proposed extension, largely prepared prior to Mr. F. E. Kalbaugh's period of service as general manager, arrived at an estimate of \$1,453,251.50. Mr. Kalbaugh feels that this figure was on the extremely conservative side.

In passing, I should like to mention that there are a number of coal mines being operated in the Territory without the benefit of special branches of the railroad to their properties, but none of them with the exception of the Cripple Creek Coal Co. is asking for construction of special rail connections for the benefit of the particular company. For example, the Arctic Coal Co. on Lignite Creek (north of the Healy River), the Usibelli mine adjacent to Cripple Creek, and several of the smaller mines in the Matanuska area are operating or have operated without expecting a Government subsidy in the form of a special branch of the railroad.

To understand the overexpanded condition of the coal industry of Alaska north of the range, it is necessary to be familiar with the changing picture of

coal needs in Alaska during the last few years. You will note that all of the citations in the Cripple Creek petition dealing with the alleged need for additional coal are dated in 1953 or prior thereto. As you correctly point out, as late as 1953 the Connor Committee felt that there might be a continuing need for expansion of coal production in the Territory. That conclusion, however, was subject to confirmation of the figures on anticipated defense requirements for the ensuing years. During recent years, military needs have constituted the greater part of the total demand for Alaskan coal. When the Connor Committee report was prepared, we refrained from publicizing it precisely because we were unable to "firm up" those figures on estimated defense needs.

Since then, defense requirements for coal in Alaska have been scrutinized with the greatest care by the Defense Department. The abrupt cessation of hostilities in Korea, considerable changes in the defense construction program in Alaska, plus the more careful scrutiny referred to above, have shown conclusively that the estimates of future need by the Connor Committee were far overstated.

Thus, you will note that the estimated deliveries required for defense establishments north of the range for the fiscal years 1955, 1956, 1957, and 1958 were given in 1953 by the Connor committee was 443,000, 895,000, 847,000, and 816,000 tons, respectively. By contrast, early in 1954 when the Defense Department made its determination of coal procurements requirements for fiscal year 1955, it found it needed only 142,000 tons—a reduction of more than two-thirds from the tentative Connor committee figure which had been prepared less than a year before. Although these figures relate to deliveries rather than consumption, and consumption has in fact been more stable, nevertheless the discrepancy is apparent.

This proposed sharp reduction in procurement promised to have disastrous effects on the financial situation of the coal producers in the Healy River Valley. The reduction was due in part to plans by the military to use stockpiles up fairly rapidly. For this reason, this Department and the Department of Defense jointly reached the conclusion that additional tonnage should be procured to replace in part the stockpiles being used. An additional 90,000 tones were purchased in this area, the tonnage being equally divided between the two unsuccessful bidders in the Healy River Valley.

For the next 3 fiscal years, the Defense Department has just issued its preliminary call for bids in amounts as follows: Fiscal year 1956, 149,800; fiscal year 1957 (estimate only) 286,000; and fiscal year 1958 (again estimate only), 392,500. Again you will note that these figures are from a third to a half of those estimated in 1953. Furthermore, although they appear to indicate a rising trend of need, that appearance is deceptive. The figures for fiscal years 1955, 1956, and 1957 are probably lower than consumption by reason of using accumulated stockpiles. With the expected attainment of a level of purchases somewhere near actual consumption in fiscal year 1958, we have no particular reason to expect that purchases will go any higher.

In short, our present problem is not one of stimulating the growth of the Alaskan coal industry north of the range through improving transportation facilities. Rather, it is one of helping the existing industry to stabilize. So far as we can see, that will be the principal problem for these coal producers for the next few years.

The above discussion represents our comments on Mr. Anderson's recommendations on page 23 and Mr. Saarela's comments on page 43 of the petition (item 3 of your letter) and on the quotation on page 101 of the Connor committee report (item 4 of your letter).

With respect to the several points in your letter dealing with the alleged need for the railroad extension from the standpoint of military security, that phase of the picture likewise hinges on the assumption that there will be a shortage, rather than a surplus of coal producing capacity. Your item (1 (a) and both quotations from the Connor committee report under your item 4 appear to stress that point. As noted above, the assumption of anticipated shortage is completely erroneous at the present time. To deal more directly with the security aspect of the question, however, I will state that at no time has the Department of Defense ever indicated to this Department that extension of the existing branch was essential from a security standpoint. No doubt the Department of Defense could tell you in more detail why it does not consider that the proposed extension is essential from a security standpoint.

The third major point mentioned in your letter has to do with alleged savings to coal consumers, sometimes given as amounting to \$200,000 annually. These al-

leged savings are estimated or touched on in items 1 (b) 2, 3 and the second quotation under item 4 of your letter.

This Department is convinced that, based on present-day conditions and those in the foreseeable future, no such savings would result but, on the contrary, the extension would fall far short of carrying sufficient tonnage to justify its construction. Further, we have no proof that any savings which, under certain conceivable conditions, might result, would accrue to the consumer rather than to a particular producer.

During the spring of 1953, at a meeting in Alaska attended by representatives of this Department and of the Cripple Creek Coal Co., it was tentatively estimated that savings of approximately \$200,000 per year, either to producer or consumer, might result from construction of the proposed extension, but that tentative estimate was based upon several assumptions which could not be confirmed at the time and have since failed to materialize.

First of all, the estimated saving assumed that the rather heavy output of the fiscal years 1953 and 1954 would continue for an indefinite period. As noted above, that assumption has already been proved unjustified.

Second, the figure assumed that Usibelli Coal Mine, Inc., would make the necessary investment in changed facilities required to use the proposed railroad transportation and would ship its entire output over the extension. This assumption was of key importance because the Usibelli mine has at all times been a far greater producer than the Cripple Creek property, generally producing several times the volume of Cripple Creek. Yet at no time has the Usibelli firm been very enthusiastic in support of the proposed extension, and at present we understand does not intend to use it, if constructed. The Usibelli firm contends that conversion to use the branch would require an additional investment of several hundred thousand dollars for construction of a new tipples and other needs, which would not be justified in view of the present discouraging outlook for volume sales.

Even under optimistic assumptions as to the future of the coal industry north of the range, the proposed extension cannot possibly be justified without firm assurance that the major producer to be served (Usibelli) would use it.

Thirdly, the justification depends upon the accuracy of estimated savings of \$0.84 per ton to Cripple Creek, and of \$0.42 per ton to Usibelli, and upon the willingness of both firms to pay off the construction costs at those rates for each ton of coal shipped. Elsewhere, Mr. Shallit (of Cripple Creek Coal Co.) has estimated his savings at only \$0.70 per ton (in the material supplied by Healy River Spur, Inc., in connection with its loan application to the RFC). More important, the Usibelli firm has never, so far as I know, accepted the hypothetical figure of \$0.42 per ton as its savings. To the contrary, Mr. Usibelli has insisted that conversion of his operations to use the railroad extension would put him to considerable expense which would require several years to amortize before any savings would accrue to his operations at all.

Fourthly, even under the optimistic estimates as to future coal requirements upon which this \$200,000 figure was based in 1953, it would have required 14 years to amortize the extension. During this 14-year period, no savings to either consumer or producer would accrue, since all such savings would have to be devoted to paying off the extension. Whether any savings would accrue following the conclusion of the 14-year period would of course depend on whether the demand for coal was sustained.

Fifth and finally, no showing has ever been made to this Department that the savings, if any, would accrue to the buyer rather than the producer of the coal. Clearly, the proposed extension would alter the competitive relationship among the three firms to the advantage of Cripple Creek. The Suntrana Mining Co., Inc. has largely exhausted its reserves of strippable coal, and Usibelli Coal Mine, Inc. likewise has used its strip reserves heavily. Both have made large investments in underground development. It is questionable whether either could compete against a third firm engaged entirely in a stripping operation, if that third firm were given the additional advantage of a special rail extension constructed primarily for its benefit.

I hope the above discussion has made clear the intimate linkage between coal production in the Healy River Valley and defense requirements north of the range. The Defense Department is almost entirely dependent upon these three mines for the coal supply for Ladd and Eielson Fields. The mines are almost entirely dependent upon military requirements for the business that keeps them alive. Obviously, defense requirements and the Alaskan coal industry will go up and down together.

For several years this Department has been engaged in endeavoring to maintain an even balance between these two factors—defense needs and Alaskan coal capacity. During periods when coal requirements appeared to be mounting, we have endeavored to develop additional capacity in advance of the need, through assistance with defense loans, provision of adequate rolling stock, etc. During periods of declining demand, such as at present, we believe we should try to keep all existing producers in business, through help in securing additional orders (such as the 90,000 tons of procurement for stockpiling made last year for fiscal year 1955), through encouraging a fair division of the existing market among the various producers, etc. Even during the present period of decline, we do not believe it would be desirable to permit any 1 of the 3 firms to fail by the wayside, since expanded needs for coal which we cannot now foresee may occur again in the future. We cannot justify a heavy investment in a rail extension at a time when the need clearly does not exist, the principal effect of which would be to subsidize one producer and disturb the present competitive relationship.

I hope the above rather lengthy explanation answers your questions. If you should desire further elaboration on any of the above points, please do not hesitate to call further on me or any of my staff for additional information.

Sincerely yours,

CLARENCE A. DAVIS,  
*Acting Secretary of the Interior.*

Senator BIBLE. The subcommittee also has received a reply from the Department of Defense and I will direct that this correspondence also appear in the record at this point.

(The letters referred to are as follows:)

APRIL 13, 1955.

HON. THOMAS P. PIKE,  
*Assistant Secretary of Defense,  
Department of Defense, Washington, D. C.*

DEAR MR. SECRETARY: Senator Murray has asked me, as chairman of the Subcommittee on Territories, to look into the petition of A. Ben Shallit, Cripple Creek Coal Co., Fairbanks, Alaska, for a public hearing on the alleged refusal of the Secretary of the Interior to permit construction of a railroad spur to permit development of the Healy River Valley coal reserves in Alaska.

A copy of Mr. Shallit's petition is enclosed for your convenient reference, although I note that his Washington attorney, Mr. Max Barash, has submitted a copy to Secretary Wilson.

The petition seems clearly to establish the fact that if the 5-mile spur were constructed, the military would be able to obtain coal at considerably less expense than at present, resulting in savings which would more than pay for the cost of the spur within a very short time. It is stated that at conferences held in the office of the Under Secretary of the Interior last spring, representatives of the Department of Defense (Colonel Vissering, chief of transportation, Mr. George A. Grimm, Utilities and Fuels Adviser, Commander Webster and Lieutenant Fogel of the Navy Fuel Supply Office) concurred in a finding that "construction of the railroad spur was in the public interest and in the interest of national defense to assure an uninterrupted supply of coal to meet military and civilian demand in Alaska for years ahead." P. 67 of the petition.)

Before setting a date for a public hearing, the subcommittee would appreciate the comments of the Defense Department on the situation set forth in the petition. Specifically, would the development of the Healy River Valley coal reserves be in the interests of national defense? Would construction of the 5-mile rail spur on an all-weather truck road result in cheaper prices and a more assured supply of coal to the military and to civilian users to the extent that the cost of the spur would be speedily amortized.

If the answer to either of the foregoing questions is in the affirmative, it would appear that either the spur or the road should be built.

Any additional facts or comments you would care to submit will, I am certain, be helpful to the committee.

Sincerely yours,

HENRY M. JACKSON,  
*Chairman, Subcommittee on Territories and Insular Affairs.*

ASSISTANT SECRETARY OF DEFENSE,  
Washington, D. C., May 4, 1955.

The Honorable HENRY M. JACKSON,  
United States Senate.

DEAR SENATOR JACKSON: Mr. Grimm and Commander Webster have returned from investigating the coal problems in Alaska. As I mentioned to you in my letter of April 20, their first-hand information enables me to more completely answer the questions you asked in your letter of April 13.

At the time of the meeting held in Under Secretary Tudor's office, the future status of the Military Establishments in Alaska was not clear. Considerable new construction was underway, especially large new heating and power plants. The best figures that were obtainable at the time indicated a large increase in the demand for coal. The magnitude of the requirements, as seen at that time, was such that all mines north of the range would be needed. To insure an uninterrupted supply of these requirements made it essential to provide either an all-weather road or a railroad spur. However, subsequently, with the operations of the military installations being more stabilized, the requirements for coal have been greatly reduced. As it appears now the present development of the Healy River Valley reserves are capable of supplying the current military requirements.

It is not possible for us to determine with any exactness the amount of saving to the Government that would be accomplished by an all-weather road or railroad spur. However, it appears that if the Crippled Creek Coal Co. could eliminate a 5-mile truck haul and deliver directly into cars at the rail head, a considerable saving in operating cost should result. An additional saving could be made by this means if production could be established on an all-year-around basis instead of seasonal. A still further saving should be reflected in doing away with the necessity of building new temporary roads at the beginning of each producing period. Upkeep on the railroad spur or the all-weather road should be much less than the above replacement expense.

We are not in a position to determine the rate of amortization or, for that matter, the total cost of building the road or the spur but we presume that this information will be made available from other sources.

We are glad to furnish you with any information we have and offer any assistance we can in this matter.

Sincerely yours,

T. P. PIKE.

Senator BIBLE. Certainly we do not want to foreclose the presentation of any information that will be helpful to the committee. The petition itself is in great detail running to 100 pages or so with appended exhibits. Then we have a fairly detailed answer filed by the counsel for the Usibelli Mine, Inc., and the responses from the Acting Secretary of Interior and the Assistant Secretary of Defense. All together the record is fairly voluminous already, and therefore I will ask the witnesses to try not to repeat detailed material that is already in the record. Rather, I think, as in a court case, they should limit their oral presentations to developing the main portions of their case pro and con. The Under Secretary of the Interior, Hon. Clarence Davis, will be with us at 2 o'clock this afternoon, and I believe we will hear him immediately upon our taking up after the noon recess.

Since Mr. Shallit is the petitioner here, the moving party, so to speak, I believe at this time it would be well to hear from him. Will you identify yourself for the record?

**TESTIMONY OF A. BEN SHALLIT, CRIPPLE CREEK COAL CO., ACCOMPANIED BY MAX BARASH, ATTORNEY, WASHINGTON, D. C.**

Mr. SHALLIT. Yes, sir. Before I start my testimony, would it be possible for me to be sworn in so that my testimony would be under oath?

Senator BIBLE. The committee counsel advises me there is precedent for a witness to be sworn at his own request. We certainly have no objection to your being sworn.

Will you please raise your right hand. Do you hereby swear the testimony you give before this hearing will be the truth, the whole truth, and nothing but the truth, so help you God?

Mr. SHALLIT. I do.

Senator BIBLE. I note your prepared statement is some 23 pages in length, and I think it might be well if you would just develop the highlights of your testimony, Mr. Shallit. But I want to emphasize that there is no desire nor intent to preclude you from a full presentation of your case.

Will you identify yourself for the purpose of the record?

Mr. SHALLIT. Mr. Chairman and gentlemen, I am Ben Shallit. I am owner and operator of the Cripple Creek Coal Co. of Fairbanks, Alaska. I am a professional mining engineer. With the exception of 2 years in the Navy, I have spent all of my working time since I entered the Alaska School of Mines in 1929 in some phases of mining.

Senator BIBLE. Mr. Shallit, before you proceed with your presentation, I think it might be well to have your counsel identify himself for the purpose of the record.

Mr. BARASH. My name is Max Barash. I am at 710 Sheraton Building, Washington 5, D. C. I am counsel for the Cripple Creek Coal Co. and have been for the last 5 years.

Senator BIBLE. You may proceed, Mr. Shallit.

Mr. SHALLIT. Thank you. I would like at this time first to take the opportunity to formally thank the committee for taking time for this hearing. I realize that with world tensions the way they are and with our country taking such an important part in it a Senator's time is of national and international importance. I am greatly appreciative of the opportunity afforded me and that our American way of life allows such an action as this hearing before a unit of the United States Senate.

Believe me, I never would have imposed upon your time in this manner if during the past 5 years I had not exhausted every other possible means. I would also at this time like to take the opportunity to formally thank the witnesses who have come here and the Secretary of the Interior for having made them available.

I fully realize the reluctance with which some of the witnesses may appear. They are in the unhappy position of having expressed professional opinions on which the Department has not seen fit to act. Some witnesses will be understandably hostile.

The Usibelli Coal Mine, Inc., have made themselves a part of these proceedings by their letter of May 12 to this committee. I think their 28-page report can be summarized in one phase: Fear of competition. Certainly adequate year-around transportation facilities to the mining areas above the Usibelli leasehold will take a portion of the present and future markets from Usibelli. A reduction will be made possible in the operating costs there, but this reduction in cost is of a necessity passed on to the consumer in accordance with the laws of supply and demand that are always effective in a consumer's market.

Senator GOLDWATER. May I interrupt just a moment? You said that Usibelli has joined. Do you mean they have joined you in this action or they are against you?

Mr. SHALLIT. They are against us, sir. They submitted a 28-page report in answer to our petition to the Secretary. I do not know whether it has been made a part of this record or not.

Senator BIBLE. It has been made a part of the record.

(See appendix B.)

Senator GOLDWATER. The reason I wanted to clear that up, Mr. Chairman, is that in your opening statement on page 2, you say:

Also implicit and explicit is the allegation that the Secretary or his aides may have been subjected to undue influence and pressure to the extent that he reversed his previous position and abandoned the projected building of the spur. Such an allegation is a basic part of the petition is recognized in an answer filed on behalf of the adjoining downstream lessee, Usibelli Coal Mine.

I was a little confused there because I did not know whether Usibelli agreed with your contentions or whether they were against your contentions.

Mr. SHALLITT. I hope that during my presentation I will be able to make the situation clear.

Senator GOLDWATER. I wanted to understand that at the outset.

Mr. SHALLIT. Thank you, sir. The cost of the construction of the branch line making available year around transportation to the entire area above the Usibelli Mine will be rapidly amortized and the military and civilian consumers will be benefited by the lower cost of coal. The entire area served by the Alaska Railroad will be benefited and the development of the territory served.

Before reading my prepared statement, I believe it might be advisable if I point out on these exhibits I have attached to the wall some of the geographic and geologic features.

Senator BIBLE. I think it would be well if you would designate for the purpose of the record.

Mr. SHALLIT. I did not bring a map of the whole territory of Alaska. I assume that you gentlemen are all more or less aware of the geographic shape of it. Fairbanks is about in the geographic heart of Alaska. It is 470 miles north of Fairbanks. Healy Station, which is the shipping point on the main line of Alaska Railroad for the coal field, is 112 miles south of Fairbanks. This map is kind of nice in that it shows apparent relationships of the hills and valleys and so forth.

Senator BIBLE. What map are you referring to?

Mr. SHALLIT. This is a map of the Fairbanks area. It is on a scale of about 4 miles to the inch.

Senator GOLDWATER. That is the topographic map. That should have a number on it.

Mr. SHALLIT. Yes, sir. It is NQ5615. This merely shows the area. The red line is the Alaska Railroad, and it is not particularly pertinent except that it does give you more or less an idea of the location of the railroad in relation to Fairbanks.

Senator BIBLE. I think we might identify that as Exhibit No. 1, which will be incorporated into the record of this hearing by reference.

(Exhibit No. 1 is on file with the committee, as are the other exhibits.)

Mr. SHALLIT. May I present the Healy map as exhibit 2?

Senator BIBLE. You might read the same number identification.

Mr. SHALLIT. The number is NN563. It is on the same scale. It shows the Alaska Railroad continuing from the point where I left off down to Honolulu on the Alaska Railroad, which does not mean a great deal except that I wanted to point out the present Healy branch,

the Suntrana branch of the Alaska spur, so that it can be seen relative to the Alaskan Railroad as a whole.

Senator BIBLE. What is the significance of the Healy spur?

Mr. SHALLIT. It connects the main line of the Alaska Railroad with the Healy River area of the Nenana coal field.

Senator GOLDWATER. Where are you in relation to that?

Mr. SHALLIT. I would like to show Healy Creek, which is this stream, to give you an idea of the general length. This is about 4 miles to the inch. On this side is Cripple Creek. Here is Suntrana. Here is Moody Creek, which is as large a stream as the Healy Creek itself. It comes in above Suntrana.

Senator BIBLE. How long is the Healy spur from the main line?

Mr. SHALLIT. The Healy spur is 4.4 miles from the main line.

Senator GOLDWATER. Where is your mine?

Mr. SHALLIT. It is rather difficult to show. It is at this red dot here.

Senator GOLDWATER. That is 5 miles?

Mr. SHALLIT. That is 5 miles from the end of the spur.

Senator GOLDWATER. When did they build the Healy spur?

Mr. SHALLIT. The Healy spur was built in 1922. At that time the Alaska Railroad was under construction and it was believed advisable to open up the coal fields of Alaska in order that the military could have coal. At that time the wood situation around Fairbanks was bad. At that time they were burning wood and they felt it was very necessary to open up the coal field.

The Healy River Coal Co. at that time owned the property at Healy. They made an offer to donate \$20,000 toward the cost of this road. Actually, when the negotiations were completed, the Healy River Coal Mine, Inc., put up \$10,000 in cash and sold the military \$20,000 worth of coal. The actual cost of building that branch at that time was considerably in excess of \$200,000. So the amount of money that Healy River put in was rather small.

In addition, I think it might be pertinent at this time to state that all of the spurs, all of the branches of the Alaska Railroad that have been built to any of the coal fields—and they have been built to all of the coal fields—have been built directly by the Alaska Railroad. The funds have come out of direct appropriations rather than specific appropriations for particular spurs.

In the basic act that set up the Alaska Railroad, one of the main purposes was to develop the territory of Alaska and develop it in such a manner that it would also develop the coal resources.

I think possibly this map is better than any.

Senator BIBLE. I think that may be introduced for purposes of the record as exhibit 2—that is, the second topographic map.

(Exhibit 2 marked for identification.)

Mr. SHALLIT. This is a map prepared by the United States Geological Survey. Incidentally, as a professional engineer I would like at this time to compliment the Survey on an exceptionally well-done job, not that the rest of their work is not also good. This is a map that I have had to work with professionally, and it is a very excellent and very good job. It is probably a little difficult to see, but I set it up more or less to show the relative relationship of the existing leases and the Healy River coal area.

The green is the tertiary coal-bearing series in which all of the coal is found. The brown on both sides are Precambrian, which is too old

a rock to have any coal. The known coal area is all confined to the green. The red that you see here are the outcrops of the coal. On this particular map I have shown Leasing Block No. 28 which is sometimes called the Roth property, sometimes the Army Reserve. I have shown that in green. Cripple Creek is shown in pink.

Senator BIBLE. Cripple Creek is the property held by yourself?

Mr. SHALLIT. Yes.

Senator BIBLE. For the purposes of the record, the Cripple Creek Corporation is an Alaskan corporation?

Mr. SHALLIT. It is a sole proprietorship.

Senator BIBLE. Operating as a corporation?

Mr. SHALLIT. No, sir; operating as a company only. It is the Cripple Creek Coal Co. Actually, you might say it is A. Ben Shallit doing business as Cripple Creek.

Senator BIBLE. You are the sole owner of Cripple Creek Co.?

Mr. SHALLIT. Yes, sir. I have Usibelli shown in red and Suntrana in blue.

Senator BIBLE. Might you develop the size of the lease?

Mr. SHALLIT. Yes, sir. This lease is 1,120 acres. It is one full section and three-quarters of another section. The Nsibelli lease is 2 full sections, or 1,240 acres. I am not sure how large the Suntrana lease is, but it is somewhat the same, or possibly a little larger.

Senator BIBLE. Will you point out the terminal of the Healy spur?

Mr. SHALLIT. Yes, sir. The terminal of the Healy spur is shown at this point [indicating]. This is the underground operation of the Suntrana mine. This is the end of the spur which is 4.4 miles from the main line at Healy.

Senator BIBLE. It is my understanding that was constructed in 1922.

Mr. SHALLIT. Yes, sir.

Senator BIBLE. There was no extension of the spur from 1922 to this date?

Mr. SHALLIT. That is right. This was the original terminal and it is still that.

The boundary line of the Suntrana line runs to this section line at Alaska Creek, which is probably immaterial at this point. This is the Usibelli mine with their operation consisting of an underground mine that has just been opened up on the north side of the river [indicating]. Incidentally, this is the Healy River. We call it Healy River, but the official name is Healy Creek.

Usibelli has an underground mine started here [indicating]. They have a washing plant which has been built and is located over here. The main strip operation is on the south side of the river in approximately this area and there is a certain amount of small stripping that is going along on the north side of the area. Our entire operation is now confined to stripping and developing the No. 1 bed, which is 57 feet thick at this point. We have also mined from the No. 2 and No. 3 bed, and we have started a small underground operation on No. 6 which we abandoned when it became evident that a railroad would not be built.

Senator BIBLE. Approximately how much coal do you mine per year at the present time?

Mr. SHALLIT. The amount of coal that we mine has varied entirely with the contracts that we have had. The greatest amount that we have ever mined is 135,000 tons in 1 fiscal year.

Senator BIBLE. What fiscal year was that?

Mr. SHALLIT. That was the 1953-54 fiscal year.

Senator GOLDWATER. How much coal do you have blocked out there, do you think?

Mr. SHALLIT. I have the amount set out in my petition. However, just roughly on the west side of Cripple Creek I have a block under strip in which I am developing 1,200,000 tons of coal. On the east side of Cripple Creek on the high bench I have in the last 3 years just fooled around because I have so much coal here that I have no market for. But I am in that area developing a block consisting of approximately 3 million tons of strippable coal.

In addition to the strippable coal here and on the east and west side of Cripple Creek, which we are developing, there is a potential for additional strippable coal depending upon the price of the coal in the first place, the ratio of overburden to coal, the topography of the ground, the ease of stripping it and especially marketing conditions. The coal beds in the Healy River area occur in what is technically known as a syncline which dips in the Healy River area to the north and pitches to the west. This gives you an indication of what it looks like.

The beds are all on this side dipping to the north, which means that in mining it—and I am mentioning this because I will tell you more about coal—any coal that is developed on the south side of the river is either dip slope coal; whereas, the amount of overburden is either the same or less as you go down on the dip of the coal, or on the bench area here where, because the coal dips at 30 degrees, one goes 2 feet horizontally for every 1 foot of depth. Therefore, you finally get to a place in stripping a dipping bed of coal where it is more expensive to mine by strip methods than it is by going underground.

In my particular case I feel that the ratio of stripping to underground coal that I can continue to operate at is approximately  $4\frac{1}{4}$  yards of overburden to 1 ton of coal developed. That factor will vary depending on market conditions, price of coal, ease of operation, and so forth. When I reach that ratio, it is going to be cheaper for me to go underground and develop coal than stay on the surface.

There are approximately 6 million tons of strippable coal that I believe I can mine today at a ratio of less than  $4\frac{1}{4}$  yards to 1 ton of coal.

Senator GOLDWATER. That would be in addition to the four?

Mr. SHALLIT. No, sir; that is the total.

Senator GOLDWATER. A total of 6 million?

Mr. SHALLIT. Roughly; yes, sir.

Senator GOLDWATER. What have you been getting for coal up there?

Mr. SHALLIT. Last year it was \$7.40 a ton for all of the operators. Everybody had the same price last year.

Senator GOLDWATER. What is your cost per ton to haul it down to Healy?

Mr. SHALLIT. The cost of hauling it down to Healy has varied a certain amount, but it is about \$1.24 a ton.

Senator GOLDWATER. The purchaser would save that money?

Mr. SHALLIT. He would save about a dollar, because if the railroad went up to the mouth of Cripple Creek, you would still have to truck roughly 1 mile. But there would be a good dollar that could be saved.

Incidentally, it might be interesting to point out that not only Cripple Creek would save about this dollar a ton, but I believe Usibelli would probably save the same amount. That might seem a rather unusual statement to make in view of the fact that he has only 3 miles to haul, whereas I have 6 miles, but at one time when we were negotiating for the possibility of their doing some of their hauling for us, I discussed the matter very thoroughly with their bookkeeper, and he showed me costs that were considerably higher for hauling than mine. When I tried to get an explanation on it, he told me that the reason for it was that whereas Cripple Creek hauled only during the wintertime when our roads are frozen and maintenance on equipment and roads is very little, Usibelli hauled 12 months a year and during the summer months when the rains and the roads get soft, it is a constant job of maintenance, and the trucks take a great deal of pounding and spend a great deal of time in the shops. From the figures he showed me, I think it is reasonable to believe that the costs on both operations on a 12-month basis are about the same. He could effect the same savings.

Senator BIBLE. What size truck do you use?

Mr. SHALLIT. We use a truck that hauls 14 tons.

Senator BIBLE. How long does it take you to make the round trip?

Mr. SHALLIT. It takes us roughly 40 minutes.

Senator BIBLE. You may proceed.

Mr. SHALLIT. Thank you. The thing that is important possibly, and Dr. Reed or Mr. Saarela might bring out something about the geology of these structures in relation to strip mining; whereas in the flat-lying strip mines that most of us are familiar with in the States, an operation uses the entire surface by first removing the overburden and casting it to one side, and takes the coal from under it, and through concentric roads or circles they mine the entire area and utilize the entire area, taking the overburden from the coal strip and spoiling it on the other area.

Here where you have a dipping bed, obviously only a small portion of the surface is necessary in stripping. One of the other factors affecting the depth to which one strips, of course, is the drainage, because one is not allowed to strip below the drainage level. That is to protect the beds in depth in the future.

Senator BIBLE. How many men do you have in the operation?

Mr. SHALLIT. It varies with the size of contracts. At the present time we have 17 men. In the winter we usually operate with about 25 when we are hauling.

We are producing coal when our roads are in shape, that is, we can haul coal to the railroad and put it out at the rate of 1,000 tons per shift. That is what we consistently do. That is per shift in which we can operate when our roads are usable.

If it were possible in any way for Cripple Creek Coal Co. to put all of its coal out during the wintertime, then we could do so, and we would not need a road or railroad or any summer access to the area. However, that would pose a tremendous problem to the railroad; for efficiency in handling the coal, the railroad and the military in burning it, it is much more advisable that coal is shipped only as it is burned.

Senator GOLDWATER. What are the military requirements in Alaska for coal?

Mr. SHALLIT. The military requirements in Alaska this year at the north end, 149,800 tons of new coal. However, the actual consumption is between 400,000 and 450,000 tons.

Senator BIBLE. May I interrupt to ask what you mean by 149,000 tons?

Mr. SHALLIT. I am sorry. The coal in Alaska is usually supplied to the Air Force base from the Nenana coal field. That is north of the Alaska Range. South of the Alaska Range the coal is usually supplied by the coal producers in the Matanuska area of which there is only one fairly large one, the Evans-Jones plant.

With a reduction in either railroad rates which the operators would like to see, or with the reduction of the price of coal, and it won't take too much—this \$1 per ton reduction in the price of coal will probably make it possible for the coal operators in the fields north of the Alaska Range to compete with the coal supplied from producers south of the range. At present there is practically no competition. So, in addition to the savings that would be effected at the north end, there is a potential saving that could be effected in the south.

I hope that the relationship of the various properties is shown here. Suntrana, Usibelli, Cripple Creek, and the Roth property all lie contiguous to each other and all lie along the bed of the Healy Creek. It is necessary in order to go from Suntrana to any of these other properties to cross in some part the leases of all of them. Cripple Creek has to cross the Suntrana and the Usibelli leases. If leasing block 28 is opened up, it will be necessary for anyone transporting coal out of the valley to cross all of the leases.

Senator BIBLE. Lease block 28, as I understand it, is also called the Roth property.

Mr. SHALLIT. Yes, sir.

Senator BIBLE. Is that operating now?

Mr. SHALLIT. No, sir. It has been held in reserve pending such time as the supply of coal from the other operations will be insufficient to meet the current demands or in the event of a military emergency of some kind, coal can be taken from leasing block 28, because there is a relatively little amount of overburden over the coal. That is one of the reasons it has been held out. It is felt that the coal from that particular area is so easy to mine that if anyone opened it up, it would be terrible competition to the rest of the properties. As such it constitutes a military emergency stockpile of coal, provided you can get it out of the country.

Senator BIBLE. Has it ever been opened up?

Mr. SHALLIT. No, sir. It has been thoroughly explored. It was one of the purposes for the Geological Survey making this map.

Senator BIBLE. Have they actually been a producer at any time?

Mr. SHALLIT. Back in 1924, Mr. Roth and a Mr. Manley took a matter of something less than 150 tons out with horse sleds but nothing more has been done. At that time Mr. Roth was attempting to get a railroad through. However, he didn't last long enough.

Senator BIBLE. Is there any road connecting the Roth property and your property?

Mr. SHALLIT. Yes, sir; we have a small road of our own. It shows up on this map. From the mouth of Cripple Creek we have a road built that goes to this point within a matter of a few hundred yards

of the boundary of the leasing block right here. It is just a wagon road. It would be usable to haul coal in an emergency.

The topography is flat. There is a low bench here. If a railroad were extended to the mouth of Cripple Creek, it would not be a great job to extend it the rest of the way. It is a mile from this point to this point. So it would be a mile and a quarter to the Roth property.

Senator BIBLE. What is the nature of the road from your property to the rail head?

Mr. SHALLIT. I think possibly it will show better on this map if I might digress for just a moment.

Senator BIBLE. We might for purposes of reference identify this as exhibit 3.

(Exhibit 3 marked for identification.)

Mr. SHALLIT. It is plate 18 from 963, United States Geological Survey, Geologic Map and sections of part of the Valley of Healy Creek, Alaska.

Senator BIBLE. The next map we might designate for purposes of reference as exhibit 4.

(Exhibit 4 marked for identification.)

Mr. SHALLIT. Exhibit 4 is the definite location between Suntrana and the Usibelli mine prepared by the Alaska Railroad for the purpose of estimating the costs of building a branch line from Suntrana to the Roth property, which would pass Cripple Creek.

Senator BIBLE. When you say Suntrana, that is synonymous with the end of the Healy spur?

Mr. SHALLIT. Yes, sir. Actually Suntrana is the group of buildings in which the people from the Suntrana mine are living now. Suntrana is the terminal of the Alaska Railroad at present.

The Healy River Coal Co. originally, and their successors, the Suntrana Coal Co., have their operation at this point. Their properties extend both east and west. This is north. Their beds are developed entirely by underground methods. They had a small amount of stripping coal which has now been exhausted. Their mine to the west of the main portal caught on fire about 3 years ago, and has been completely sealed off. It is mined out to the west.

To the east the Suntrana mine now has completed the development of all of the beds, and mined out all of the beds except portions of the 1 and the 2. This last year about December 20, 1954, the No. 2 bed, or it could have been the No. 1 on the far east end of the Healy mine, caught on fire and it, too, has been sealed off now. The only work being done on the Suntrana mine as I understand it is work constituting a retreat on the present beds of coal, so that the future of that mine now is limited to tonnages which could possibly be brought out better by Dr. Reed or Mr. Saarela. These tonnages are definitely very limited.

Unless the mine is developed in depth when they complete the exhaustion of the resources above drainage level, the chances are that that mine will be closed down.

Senator BIBLE. We will have witnesses testify later with respect to that.

Mr. SHALLIT. Thank you. The Usibelli mine has a tippie here at the end of the track of the Healy River spur. This map is on a scale of 1 inch to 100 feet, so you can get some idea of relative size. This is

Usibelli's camp. His coal is hauled from across the river at this point, and some strip areas here; from underground here; from a washing plant here. His road is shown in dark green. The distance from this point to the tippie, I believe, is about 3 miles.

Senator BIBLE. What is the nature of that road?

Mr. SHALLIT. That is a good road that has been built on the north bench of the Healy Creek. It is close to the edge of the water where a road would normally be built because that is the easiest place to build it.

Senator BIBLE. How wide is the road?

Mr. SHALLIT. The road is probably not less than 25 feet at any place, possibly a little wider, 35 feet elsewhere.

Senator BIBLE. Gravel or well surfaced?

Mr. SHALLIT. The tertiary gravels are composed of gravel and sand and all that is necessary to build a road is to take a dozer and dress it down and take a road grader and scrape the top.

Senator BIBLE. No oil surface?

Mr. SHALLIT. No oil surface. It is an ordinary gravel road built on the surface with adequate provisions for drainage.

Senator BIBLE. What is the nature of the road from the end of the Usibelli property to the Cripple Creek property?

Mr. SHALLIT. That is an entirely different road. Cripple Creek is not allowed to use the Usibelli road. That is their private road.

Senator BIBLE. Which road do you use?

Mr. SHALLIT. We use the road that is shown in light green to a loading point on the spur about three-quarters of a mile downstream from Suntrana. We cross the Healy River at this point. Incidentally, the dark blue is the main bed of the stream, but the stream is subject to flash floods as shown in light blue over a considerable area. Back of Suntrana we have to cross a canyon area with another bridge that is where the river is confined to a canyon. Here it goes like a mill race. It is very difficult to maintain a road on the side of it.

We skirt on the very edge in the only place possible, and around the edge here. The road from this point and from this point down to here, and from this point to our loading site is washed out every time high waters come up.

In this particular area the Healy River is in pretty much of a canyon, and the stream is confined to a narrow channel, and it is possible for us to bring our road up on the side, and hold it at that particular point.

Senator GOLDWATER. How big a stream is the Healy Creek? How many cubic second-feet average, do you know?

Mr. SHALLIT. It varies so much I would say it would vary from probably 40,000 to 150,000 gallons per minute.

Senator GOLDWATER. Is it that big a river?

Mr. SHALLIT. Yes, sir. Just to give you an idea, it runs on a grade of approximately  $1\frac{1}{2}$  percent. Here it is 100 feet across. I would say it would average in the deepest portions 3 or 4 feet deep.

Senator GOLDWATER. You call that a creek in Alaska?

Mr. SHALLIT. Yes, sir.

Senator GOLDWATER. That would be a river in Arizona.

Mr. SHALLIT. We have some little low hills that are six or seven thousand feet high that people here call mountains. I would like to

point out that as soon as you get away from the narrow confines of the valley, the stream does stretch out. From this point up here through this point up here, the Cripple Creek road is built in the flood plain of the river. It is impossible to maintain it during flood seasons. Any time after the middle of May—we have trucked up to the 11th of May before our roads went out—one is liable to have a flash flood every week. Normally you stop having these flash floods about the first of September, but last year we were a little unlucky. We had one on the 17th of September after our roads had been completely rebuilt, and one again on the 30th of September. That, however, is unusual.

Actually in this place our road is probably 50 or 60 feet from the Usibelli road. Here it is 100 to 150 feet away from it. Most places it is very close and parallels it all the way. This is our road and this is the Usibelli road. It is almost like a train track running down there. But because the Usibelli road is built on the edge of the bench, and because we have not been allowed to get in back of it in any way, since we would have to keep crossing his road in order to do so, we have been forced to put our road in the stream bed.

Senator BIBLE. What is the nature of your road? How wide is it?

Mr. SHALLIT. My road is also about 25 feet wide. We rebuild it every year as necessary with cats and cans.

Senator BIBLE. Is there any particular reason why you cannot use the Usibelli road?

Mr. SHALLIT. Yes, sir.

Senator BIBLE. They will not permit you to do it?

Mr. SHALLIT. That is correct. Things were rather rough in the valley when I first started in mining, Senator.

Senator BIBLE. How do you get through their property, by virtue of their giving you a right-of-way?

Mr. SHALLIT. By virtue of being allowed to use the right-of-way which the Bureau of Land Management has seen fit to grant us in the stream of the river only.

Senator GOLDWATER. Have you ever discussed with them the possibility of the joint use of the road so that you could reduce costs?

Mr. SHALLIT. Yes, sir; we have discussed that very often. We have never been able to arrive at any satisfactory conclusion. The nearest I ever arrived at was an offer which he made me which would have cost me 50 cents a ton for every ton of coal I put out. We have not been able to get together because this whole thing is very competitive. If Cripple Creek can deliver coal 12 months a year, we will constitute considerable competition to any other mines in the field. Whereas, if we are kept from hauling our coal 5 or 6 months of the year, then all of the contracts that we can bid on are only those in which we are allowed to schedule deliveries in the winter months which we are allowed to schedule deliveries in the winter months only.

This has not been too serious a problem up to now because the military have been kind enough to allow us to deliver during winter months only. However, because I can't deliver during the summer months, I am precluded from bidding on any other domestic contracts to the U. S. Smelting, city of Fairbanks, or furnishing coal to any other sources.

I have tried at times to bid on such coal with the expectation of purchasing coal from my competitors during the summertime, or

letting them bid on the summer quantity as required, and I would bid on the winter. However, under those conditions, the price given by these other people for the coal during the summer was so high that when it averaged with the lower price I gave during the winter, it still didn't come out. So I have never been able to enter a bid under those conditions.

The military, starting in 1957, I have been informed, are going to require deliveries on a 12 months' basis. That puts Cripple Creek in a very precarious position. In discussing the matter with the Fuel Supply Office, they said that they considered it very carefully, but that they thought probably I could buy coal from my competitors, or possibly I could stockpile the coal in the wintertime for use during the summer. It would be very nice if I could buy coal from my competitors during the summertime at such a price that would allow me to bid in competition with them in the wintertime. It also would be very nice if I could afford to stockpile approximately 125,000 tons which would be required under the present bids that we have just submitted yesterday for the 1958 delivery.

In order for you to visualize what 125,000 tons of coal are, I would like to point out that at 40 cubic feet to the ton, and assuming we would only stockpile to a height of 10 feet, because beyond that the coal is subject to spontaneous combustion, and we would have to tamp it down so that the cost would be prohibitive. A stockpile that size would be 10 feet high, 100 feet wide, and a mile long. That is an awful lot of coal to put in one pile at a cost of half a million dollars, subject to spontaneous combustion, and the additional cost of stockpiling and rehandling would be passed on to the consumer, and would make it impossible to compete with any other outfit.

I have digressed from my prepared statement. I had better skip over it as rapidly as possible.

Senator BIBLE. I am not clear how you hold this right-of-way through Usibelli.

Mr. SHALLIT. All of the lessees here in Alaska are on Federal coal lands. The Federal Government reserves the right of a road or right-of-way over, through, or on any of the leases. Therefore, with proper showing, Usibelli should be forced to give me a right-of-way. I have the right-of-way now, but it is right in the streambed which is the only one I have and has taken us 3 years to get it. We have hauled over that road. They probably felt that we could not stay alive doing that, because it was too rugged a job.

Now we have come to a place where in order to produce the tonnages we are capable of and in order to produce for the markets requiring 12 months a year delivery, we have to have a right-of-way that is out of the stream. I believe if I may be allowed to read my prepared testimony, I can show the attempts that we have made to do that.

Senator BIBLE. You may resume from that point.

Mr. SHALLIT. Because I have taken so much time in this introduction, I think it probably would be advisable for me to just skip over the highlights, because otherwise it would take me an hour to read what I have here.

Senator BIBLE. Just hit the highlights, please. It is understood that your entire statement will be inserted into the record as if it was read in full.

(COMMITTEE NOTE.—In accordance with the acting chairman's directive, the full text of Mr. Shallit's prepared statement appears at the conclusion of his oral presentation.)

Mr. SHALLIT. Yes, sir. I would like to comment now on the fact that the Department of the Interior or others may raise specious issues clouding the real one, and the principal issue before the committee is why the Secretary of Interior refused to authorize Alaska Railroad to construct a railroad spur from the present rail's end at Suntrana to Cripple Creek property in the face of the finding of its experts who stated that the extension of the railroad would result in a savings of from 200 to 300 thousand dollars annually to the military and the civilian consumers of coal in the Fairbanks area of Alaska. Also that the extension of the railroad would facilitate and promote the development of the coal resources in the Healy River Valley, and provide railroad access to the Government coal resources to meet the military installations in Alaska now and in the future.

Also, that the extension of the railroad would mean a substantial saving to the Government in the price of coal which should amortize the cost of construction within 3 or 4 years.

Senator BIBLE. Who made those findings?

Mr. SHALLIT. The various experts of the Department of Interior some of which are on your list of witnesses, and I assume will testify as to their findings.

Senator BIBLE. When were those findings made?

Mr. SHALLIT. The findings were made all the way from 1950 up to December of this last year.

Senator BIBLE. Very well.

Mr. SHALLIT. As a corollary to the findings of the Interior Department, the extension of the railroad would also promote competition which was not particularly brought out by any of the expert witnesses. That of course would benefit the military and civilian consumers by making coal available at a cheaper price.

Almost 6 years now have elapsed since a coal prospecting permit was issued to me by the Department.

Senator BIBLE. Were you in that area before?

Mr. SHALLIT. I have lived in Alaska for 25 years.

Senator BIBLE. You have been in the area before.

Mr. SHALLIT. Yes, sir. I was first in the area about 1931.

Senator BIBLE. You have been in Cripple Creek pursuant to this coal prospecting permit since 1950?

Mr. SHALLIT. Yes, sir.

At the time that the permit was first issued to me, I wrote to Mr. Ghiglione—actually I probably wrote to the Commissioner of Roads at that time, I don't remember whether he was Ghiglione at that time—and Mr. Ghiglione, the chief engineer, I believe, at that time, answered to the effect that—

The desirability of such a road is recognized. However, the Alaska Road Commission is not at present in a position to undertake this work since it has not been our policy to construct roads into undeveloped mining prospects.

All of the letters I quote here are also included in the petition in full, so if I merely quote a certain part of the letter, the entire letter is there for reference.

An important thing he says later on in the letter is:

Should the actual development and production be instigated on the property, it is very probable that some cooperative assistance could be worked out whereby the road could be constructed with a portion of the expense shared by you as offered in your letter.

Senator BIBLE. What type of offer of sharing expenses did you make in the letter?

Mr. SHALLIT. I think it was probably very general. It has been the custom in Alaska for the Road Commission to build roads into mining and farm areas, and the person being benefited tries to help as much as he can. There is nothing very definite about it. You do all you can to help and the Road Commission does all it can to help you. This offer was very rough.

Later on I made a specific offer, but that was in 1953.

In 1950, I obtained my first contract with the Government to supply 50,000 tons of coal to the military. Then, since the property was in operation and relying on this letter, I again wrote to Mr. Ghiglione. That was on December 20, 1950, when I was hauling coal in fulfillment of my contract, and Mr. Ghiglione wrote as follows:

The need for access to your coal properties is recognized and the Alaska Road Commission is interested in seeing that such access is provided.

Mr. Saarela, territorial mining engineer, has been contacted concerning the area served by your present road and the various mines and developments that would also be served if the road were improved as you have recommended. Mr. Saarela is of the opinion that the district merits development and he has taken the initiative by writing to the Alaska Railroad in order to ascertain whether an extension of the present railroad spur could not be undertaken. It appears that an extension of the railroad would be much more desirable than the road improvement, since the railroad service would eliminate your shorthaul trucking and rehandling of the coal.

If it transpires that the Alaska Railroad will not undertake extension of their line, Alaska Road Commission will program the road improvement, providing the anticipated farm and industrial road funds are appropriated by Congress.

So several months later, on April 3, the Commissioner of roads for Alaska, John R. Noyes, wrote to the Director of the Office of Territories of the department of interior, pointing out the desirability of extending the railroad to Cripple Creek.

Skipping over his letter again, just the high spots,

The development of the coal resources of the region on any adequate scale is dependent upon railroad transportation. For this reason the matter was referred to the Alaska Railroad through the Alaska Field Committee. A copy of a letter recently received from Col. J. P. Johnson, general manager of the Alaska Railroad, to Mr. A. Ben Shallit of the Cripple Creek Coal Co., indicates that funds are not available for this new railroad construction.

Road funds are not available either; but in view of the fact that the project was first proposed as a road project, it is desired to urge that the Alaska Railroad provide whatever facilities are required in the Healy River Valley rather than to attempt an unsatisfactory, half-way solution by means of a road. It is my opinion, concurred in by the Territorial Commissioner of Mines, that this area is definitely worthy of development at this time. Unless directed by the Office of Territories, we will leave this matter entirely to the Alaska Railroad. At the same time I wish to emphasize that I think the project is a worthy one for railroad development.

In May of 1951—I am following along in chronological order—Mr. Ghiglione advised that it would not be possible to undertake any

road construction to provide access to the Cripple Creek Coal Co., lease, and the reason given was—

\* \* \* This decision has been made necessary since the Interior Department considers that the development should be accomplished by the Alaska Railroad and that no highway funds can therefore be involved.

Four years have now gone by since I received those letters, and since the Interior Department decided that access was needed, and such access should be provided by an extension of the Alaska Railroad.

During all this time Cripple Creek Coal Co. has struggled along on the makeshift roads we have under the assumption that the findings and recommendations of these people in the Interior Department would be acted upon by the Secretary. In June of 1952, the Navy was short on coal and they wired to us, asking how much coal we could put out. I won't read the wire. I answered to the effect that I could put out 10,000 tons each month beginning in October, and continuing in the spring of 1953, as long as the roads were usable. The uncertain road conditions before October 1 precluded delivery during July, August, and September. Thus it is evident that the Cripple Creek Coal Co. was unable to deliver coal during that particular time.

On April 30, 1953, a meeting of the Coal Subcommittee of the Alaska Field Committee of the Interior Department attended by 12 of their top officials, including the military, the people from the railroad, the people from the Alaska Road Commission, the Bureau of Land Management, and the Geological Survey, and the Land Office, were all present, and I am going to hit the high spots on that.

All through that meeting which was rather long, the necessity for access to Cripple Creek, preferably by a railroad, was emphasized. Mr. Hinman, who was then assistant to the manager, was asked if the construction of the road had ever been on the railroad budget, and Mr. Hinman said it had been on their 6-year program for several years.

Incidentally, prior to that time I had discussed the railroad with Col. Johnson, who was then the manager, and Mr. Sharod, the chief engineer, and both had said they had constantly thought about that road, especially in so far as it was originally suggested by Mr. Frank Manley back in 1924. Mr. Sharod pulled a bunch of papers out of his desk and he said "We have a lot of information on this. As a matter of fact, this is one of the roads which if we owned the railroad we would put up ourselves." That was the attitude that the chief engineer had at that time.

Incidentally, they were very disturbed about getting this railroad built, because at that time they felt that coal was very essential. The military situation in the Far East was very bad. The military wanted to get a very large stockpile of coal at that time. They did so, but with the military situation the way it is at present, they are now reducing their stockpile from possibly a year or a year and a half to a 90-day stockpile.

At that time they wanted the railroad to be completed by October 1, 1953. This was April 30. That is a rather short time, but it is entirely realistic, for at one time when I was trying other methods of getting our spur up there, I contacted a large construction company in

Alaska, who told me that with the equipment they had available in Alaska, at that time, they would put the entire spur from Suntrana through to the Roth property in 2 months.

Senator GOLDWATER. How much money?

Mr. SHALLIT. At that time the amount was not discussed. Actually this company was willing to do it provided that I would give them the biggest chunk of Cripple Creek. Also in discussing this matter, I am not sure whether it was Mr. Sharod who was chief engineer at that time, or possibly Pat Cook, who is now the chief engineer. I asked him how long it would take to put up the railroad in accordance with the survey which the railroad had already prepared, and he said he thought they could get it through in about 4 months.

That is probably a tight schedule. I have gone over all of the data which was prepared by the Alaska Railroad and which was so kindly made available to me at one time, and in my opinion as an engineer, the railroad could be constructed at least with the amount of funds set up.

All these maps that you see here which I have colored in order to make them more easily read were supplied to the Healy River Spur, Inc., which was a private nonprofit corporation that I formed after I came down here last January with the idea that because, as you will see later on, there was this continued recommendation of these various experts in the Department to build the railroad, I thought surely we would get a railroad through this last year, and I came down here in order to kind of push the boys along a little bit, and help them carry the papers from place to place.

When it became evident that they were not going to ask for an appropriation this year, I suggested that possibly if I could obtain a contract to supply 500,000 tons of coal over the next 3 years—a sure contract—at a certain price which at that time was a dollar more than the prevailing price, I would be able to finance the construction of the railroad myself, although it was at first greeted with some enthusiasm, it was later turned down, because the military felt that their requirements during the next 3 years would be so low that if they entered into a contract of that type with me, then I would be supplying all of the coal and it would be unfair.

Actually as a result of this discouragement, the people in the Interior Department who are interested in this railroad, including people in the railroad, and people in the Defense Department, sat around and batted around the possibilities and came up with a brilliant brain child of forming a private nonprofit corporation for the purpose of borrowing money from Defense Transport Administration in order to build this spur, and then charge the users of the spur a certain amount which would be not more—actually we set it up a little less—than the actual savings they would effect, and then take the money we would obtain from the use of this spur and use it to pay back the money we had borrowed from the Government. When the money was all paid back, we would turn the spur over lock, stock, and barrel to the Alaska Railroad, and they would continue to operate it as a part of their own road.

It was actually a sort of quasi-Government deal. I am the one that formed the corporation because a private individual had to do it. I paid all of the costs incurred in the incorporation of the corporation

and other attendant costs. But the board of directors was to consist at that time of the 3 representatives from the 3 mines in the Healy River Valley, and a representative from the Bureau of Mines, a representative from the Geological Survey, from the Bureau of Land Management, and 1 from the Governor's office—the Governor was quite interested in this—and 4 or 5 from the Alaska Railroad.

The reason for putting in more directors from the Alaska Railroad was that we felt that the Alaska Railroad should actually control this situation. We got along pretty good in that meeting until our final meeting with OPA, RFC, and the Defense Department and everybody else. There were 17 people who met in Secretary Tudor's office.

Senator BIBLE. When was this?

Mr. SHALLIT. This was about May of last year, I would guess.

Senator BIBLE. May 1954?

Mr. SHALLIT. Yes.

Senator BIBLE. Give us the end result of that.

Mr. SHALLIT. The end result was that the people in the OPA—

Mr. BARASH. Not OPA. Office of Defense Mobilization.

Mr. SHALLIT. Office of Defense Mobilization and RFC felt that what we were doing might be interpreted as an attempt to circumvent the normal channels of appropriation, and therefore they did not want to do anything in conflict with those people.

Senator BIBLE. In short, then, in attempting to work out this method of financing, the deal fell through in May 1954.

Mr. SHALLIT. Let us say that the falling through of it was greatly stimulated by some letters which are in your record now in the presentation made by the Usibelli Coal Corp. to the Office of Defense Mobilization and RFC protesting that. That helped it to fall through.

Senator BIBLE. After that fell through in May 1954, what did you do?

Mr. SHALLIT. We canceled the Healy River Spur Corp. and started looking for other means of constructing the railroad.

I discussed the matter with the people in the Department of Interior, particularly Mr. Strand, asking that they consider a direct appropriation, either for a railroad or for an all-weather road. Mr. Strand seemed quite receptive to it at that time, but for some reason or another all of a sudden this whole thing got a very cold shoulder from not only Mr. Strand, but people in the railroad, and apparently the whole Division of Territories, turned a cold shoulder on what at one time they seemed to be very receptive.

Some of the reasons are brought out possibly in the answer to the petition made by the Department of Interior. However, I have been digressing, and I would like, if you don't mind, in order to expedite this hearing, to now read the conclusions of the meeting of this Coal Board in Alaska, which was the Department of Interior Subcommittee on Coal. Their own people unanimously passed—

Senator BIBLE. This was back in 1953?

Mr. SHALLIT. Yes, sir, I am trying to follow through.

Senator BIBLE. I thought you were up to 1954.

Mr. SHALLIT. We got off the track here on the construction of the road and how long it would take to do it.

Senator BIBLE. Just quickly give us the conclusions.

Mr. SHALLIT. The conclusions were—

That steps should be taken at once to finance the construction of an extension of the railroad from the Healy River mine to the Cripple Creek and Roth properties. This spur to be completed or partially so before October 1, 1953.

That the extension of the Healy River spur to the Roth property is vital to the security of military installations this coming fiscal year of 1954, and in the future, and to the development and prosperity of the coal industry as a whole in Alaska.

That the extension of the Healy River spur to the Roth property would mean a substantial savings to the Government in the price of coal and this savings to the Government should amortize the cost of construction within 3 or 4 years.

Senator GOLDWATER. Do you know the estimated cost of construction?

Mr. SHALLIT. Yes, sir; I have that figure from the estimates of the Alaska Railroad.

Senator GOLDWATER. That is it?

Mr. SHALLIT. Actually it is around \$512,000, as I remember, from Suntrana to the Usibelli property; about \$304,000 from the Healy property on up to Cripple Creek.

The cost of a bridge across Cripple Creek would vary. This is an awfully rough estimate that does not mean much. \$75,000, according to the railroad, if they could put a pile-driven wooden trestle across which, in my opinion, they could do, and up to \$500,000 if they wanted to put up a permanent steel structure, and another \$136,000 if they decide to extend the road all the way to the Roth property. In other words from Suntrana to Cripple Creek it would be something a little less than \$1 million, \$800,000 if the smaller bridge could be put in, and \$1,400,000 if a permanent bridge was put in.

The other conclusion was, "That shipment of coal by rail transportation is the only logical solution to the presently existing critical situation."

It was in view of this sort of expert advice that I have been trying to get this railroad through and the reason we have not tried to break our neck or knock ourselves out of business entirely in fighting Usibelli in trying to obtain the use of his road—

Senator GOLDWATER. Have either you or the other companies looked into the feasibility of conveyor belts to carry this down to Healy?

Mr. SHALLIT. Yes, sir; a conveyor belt could be built but the cost would be much more expensive than a road for the tonnages that would have to be hauled. You are still going to have to put it on a railroad. There would be no savings to the consumer if we had to have an expensive conveyor belt all the way through there. That is used only in extremely rough country by mines. The only advantage it would have is that the coal would be passing overhead as Usibelli's camp instead of passing on the ground. A conveyor belt is good if you have large tonnages so that it can be amortized. In the mines in the States they have rather long conveyor belts but they are putting out millions of tons a year. Here we are fooling around with a few hundred thousand tons only.

Just continuing here, and I will try to go faster as I seem to bog down: The Secretary of the Interior felt that the coal situation was so serious that he appointed a special committee headed by Charles W. Connor, to conduct an investigation on the ground in Alaska, and submit to the Secretary his findings. Mr. Connor is no longer with

the Government. Mr. Plein, however, is still with Defense Solids Fuels, and possibly it might be a good idea to have him testify. I would like to refer to Senator Jackson's letter in which he quotes something from the Connor report, which incidentally has not been made public, but in part and very briefly the Connor report states that prompt construction of the spur is urgent. Prompt construction of the spur beginning no later than the summer of 1954 is of salient importance.

Later on the responsibility for constructing the spur would appear to rest on the Alaska Railroad as the Department of Interior agency charged with providing the rail transportation facilities needed to further develop the Territory. A corresponding responsibility to assist in financing the spur also rests with the military agents who will be the principal beneficiaries of the project. Not only will the military agencies stand to profit directly from the reduced coal costs, but the construction of the spur is yearly of major significance in the defense mission in Alaska.

Continuing on now—and Mr. Plein is available and can probably testify as to his own on-the-ground findings—on April 29, 1953, Acting General Manager of the railroad, Mr. John Manley, who has probably been with the railroad as long as anybody, and as Acting Manager is the one who is responsible for a great deal of the success of the railroad—I am terribly sorry this is getting so extended, but what I would like to do is show in chronological order from 1950—

Senator BIBLE. Just proceed in your own way.

Mr. SHALLIT. Thank you. Mr. Manley, who was then Acting Manager of the railroad, and familiar with the whole problem from several administrations, filed a right-of-way with the Bureau of Land Management, which is shown on these various prints that are over here. Incidentally, in filing the right-of-way, that is tantamount to acceptance, because the railroad by filing the right of way obtains the right-of-way. I am going to skip over most of this, but the last paragraph I think is worth reading, and it says:

You will note in our letter of June 23, 1952, that the railroad contemplates the extension of this line in order that the Usibelli Coal Co., the Cripple Creek Mining Co., and any future producers, may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. It is estimated that the construction of this line will result in the reduction of coal costs to the Territory of \$200,000 annually.

Skipping on down again, in Mr. Kalbaugh's letter to Mr. Strand, who was Director of the Office of Territories, March 3, 1954:

The line between Suntrana Mine and Usibelli Mine has been located and staked. The remaining portion of the extension, M. P. 6.6 to the Roth Coal Reserve (Coal Creek), is based on a reconnaissance survey, and this line has not been staked. It is estimated that it would require approximately 2 months time with a single survey party to complete the reconnaissance survey and complete location.

Mr. Kalbaugh estimated the cost of constructing the entire spur at \$1,028,251.50. The figures I gave I won't repeat because it is approximately that, and \$1,450,000 if a steel bridge was found necessary. Then with all this, with the experts on the committee, with the people on the railroad, the people in the Road Commission, the Office of Territories, and everybody suggesting that a railroad should be there, with Mr. Manley obtaining the right-of-way on October 11, 1954, Mr. Kalbaugh—

Senator BIBLE. Did he obtain a right-of-way or file it?

Mr. SHALLIT. He filed it, but that is tantamount to obtaining it.

Senator BIBLE. It is your interpretation that when you file, that automatically gives you the right-of-way?

Mr. BARASH. It is automatically operative.

Senator BIBLE. We have the very able Mr. Bennett here. Is that a correct statement?

Mr. BENNETT. I am not familiar with that.

Senator BIBLE. We can check that.

Mr. SHALLIT. Mr. Kalbaugh on October 11, 1954, despite the fact that he was extremely cooperative in the formation of the Healy River Spur, Inc., that he seemed enthusiastic if there was some way of getting this railroad built, especially if he didn't have to dig in Government funds, wrote a letter on October 11, requesting that the right-of-way which had been filed by Mr. Manley be withdrawn.

Senator BIBLE. This is October 11, 1954?

Mr. SHALLIT. That is correct. He said that initially this request for withdrawal of the proposed right-of-way was occasioned by the possibility of the extension of the branch line being essential to the national defense. Since he arrived in Washington he was advised it was not essential.

That is the crux of the matter. I think it is well to call attention to the fact that there was nothing in Mr. Manley's letter, there was very little in the advice of these experts that said that a railroad should be built because it was essential to national defense.

I submit that it is of interest to the national defense as well as of interest to the development of the Territory as a whole. Mr. Manley's own letter in which he didn't say that it was essential to national defense, said that it would reduce the cost of operations which would in turn be passed on to the Government. There would be a saving to the Territory of \$200,000 annually. These reasons speak for themselves.

Senator BIBLE. Has anyone developed how you arrive at a saving of \$200,000 annually?

Mr. SHALLIT. Possibly Mr. Manley when he is here will care to testify.

Senator BIBLE. That is not developed in any of the testimony except the conclusions.

Mr. SHALLIT. No, sir, that is his letter.

Senator BIBLE. That is the conclusion but it does not say how he arrived at it.

Mr. SHALLIT. That is right.

Senator BIBLE. Proceed.

Mr. SHALLIT. There are some rather specious arguments that are probably advanced right now that the military no longer require large amounts of coal.

Senator BIBLE. We will let them tell their own story.

Mr. SHALLIT. Yes, sir. However, the consumption is still over 400,000 and possibly 450,000 tons at the military bases. The domestic consumption is over 150,000 tons, all at the north end of the range. In the south end of the range there is probably another 300,000 to 350,000 tons consumed. With the building of this railroad, we would possibly be able—I believe we would be able—to compete with the coals also furnished by the south.

I am going to skip over a great deal of this because it is in the record here and you possibly will care to read it yourself, but the total tonnage for which bids were invited to be submitted yesterday to the military was 828,300 tons over a 3-year period.

Senator BIBLE. Is that 828,000 tons annually for each of the 3 years?

Mr. SHALLIT. No, sir, that is for the total of 3 years. They are only consuming 400,000 to 450,000 tons each year. But they are reducing the stockpiles by taking the coal from the stockpiles and burning it, and only buying the coal they figure they actually need.

Senator BIBLE. That is a 3-year total figure?

Mr. SHALLIT. Yes, sir, that is a 3-year total of purchase only. Despite the fact that the Cripple Creek Coal Co. does not have at the present time year-around access to the railroad, nevertheless, I have submitted bids covering the entire tonnage needed by the military. I have had to do this to stay in business. If I lose the military contracts, then there are no other contracts that I can get. As a result, regardless of what it costs me, I am going to have to make some arrangements to get coal out. I am between the devil and the deep blue sea, and I have to figure out some way to do it, which I will do. I feel reasonably certain that either a railroad or all-weather road or some method is going to be found or I will have to find some way of cutting my costs down so I will have to put out coal 12 months a year or there will not be any Cripple Creek in business.

In my bids to furnish this 828,300 tons of coal, I hope my bid is the low bid, it has been cut down as low as I figure I could do and still stay alive—I have solemnly agreed and made it a part of the contract that I would reduce my bid prices by \$1 a ton for the entire 800,000 tons of coal provided that the spur was built to the mouth of Cripple Creek. There is time to build that spur in accordance with the information I have been given. However, if the spur is not constructed, when deliveries are to start—

Senator BIBLE. Did you incorporate that in your bid?

Mr. SHALLIT. Yes, sir, that is part of my formal bid.

Senator BIBLE. Go ahead.

Mr. SHALLITT. I had to take desperate measures. I have also agreed that if the spur is built at any time when these deliveries are to be made, I will reduce the price of my coal by \$1 a ton for every ton of coal I can deliver over that spur. In that manner I think that we will definitely reduce the price of coal because that means I have also had to bid my coal prices as low as I could. In that manner, if the railroad is built in that time, and the coal is shipped over it, there is a possible saving to the military of \$828,300, which will come very close to paying for construction of the spur within that 3-year period.

Senator BIBLE. I understand the point that you are making.

Mr. SHALLITT. I would like to return to the chronology of events. We kept writing letters. Mr. Barash is pointing out the part I ought to emphasize, that in 1954 on three separate occasions our roads were destroyed by flash floods and required constant rebuilding. The actual cost of rebuilding those roads the three times—we had to build them under emergency conditions, because we were faced with the necessity of making deliveries in a hurry, we pulled all the equipment we had

on the job, we worked on 3-shift basis—by the time we got through rebuilding that road 3 times, it cost me \$42,000. I put out 45,000 tons of coal during that year, so it cost me almost a dollar a ton for the rebuilding. That shows what can happen.

I wrote to Mr. Ghiglione again asking that if they could not get a railroad through, and if they could not get money for an all-weather road, at least get a right-of-way on ground that would not be in the Healy River itself, so that I could build a road where I could haul, and the road would not be washed out all the time.

Senator BIBLE. What did he answer you?

Mr. SHALLIT. I will read parts of his answer. He answered on October 29, 1954:

As you know, the Department has decided that proper access to the Healy River coalfields may best be provided by the railroad spur extension. As a result of this decision, the railroad has proceeded to obtain the necessary right-of-way and has filed necessary maps and instruments with the Bureau of Land Management for this purpose.

When the decision was finally made to encourage railroad access to the Healy River coal properties, the Alaska Road Commission was precluded from sponsoring further road projects for this purpose. As you will recall, a subsequent attempt was made to obtain funds for construction along the Alaska Railroad right-of-way in an effort to provide temporary relief for your problem. This attempt met with failure, again because the project was considered one for the Alaska Railroad and therefore any request for funds to implement the project should be initiated by that agency.

Since this was a temporary thing, therefore the project was considered one for the Alaska Railroad, and any request for funds to implement the project should be initiated by that agency. He adds:

I can only suggest that you contact the Alaska Railroad in an effort to expedite their development of the railroad spur further up the Healy River.

So I did. I wrote again to Mr. Ghiglione first because I had not gotten any place and I wondered whether or not that was an official finding.

Senator BIBLE. Tell us what you did.

Mr. SHALLIT. Anyway, I asked if he had been officially advised that the Alaska Railroad alone was to be responsible and could I have a copy of that directive so we may act. Mr. Ghiglione answered:

The situation along Healy River, insofar as access by railroad in preference to highway has been determined as policy by the Interior Department, has not been resolved in the form of a directive to the Alaska Road Commission. However, since all requests for funds must be processed through the Interior Department before reaching the Bureau of the Budget and Congress, it is obvious that the policies of the Department must be adhered to.

It is rather strange here Mr. Ghiglione was not aware at that time, that Mr. Kalbaugh had withdrawn his right-of-way. Anyhow, there is a continuous exchange of correspondence all the way through. I don't think it is fair to burden the committee with it. It is all in the same vein. I continually write to the Department, and they come back continually and say it is departmental policy to build the railroad, and it is essential in the well-being of the Territory as well as in the interest of the military.

Senator BIBLE. What is the last expression that you have from the Interior Department on that subject?

Mr. SHALLIT. Let me see if I can find that here. The last correspondence was from Mr. Ghiglione on December 21, 1954, in which in part he states:

I am surprised at Mr. Kalbaugh's statement regarding the appropriation of funds for this project since all previous—

Mr. Kalbaugh's statement, I might state, is to the effect that the railroad would not be economically justified and therefore we ought to get a road through there—

departmental policy has been in support of extension of the railroad spur in preference to the highway and obviously no funds will be appropriated by Congress without the support of the Interior Department.

Again I am going to skip a great deal of this. I think it is pertinent at this point, however, to show that there has been a great deal of objection from Usibelli to the building of any of our roads or rights-of-way. On page 16 of this presentation, I am reading from a Bureau of Land Management decision in which they state that the Usibelli Coal Co. claims that the proposed right-of-way would interfere with its operation, especially in furnishing an adequate water supply.

The report negatives this claim.

The report also shows a rifle range has been set up with gun pits on one side of the proposed Shallit right-of-way and the targets on the other side.

Both field reports recommend that a right-of-way be granted and one of them even suggests that it would be preferable to move the road, the subject of the application, out of the riverbed and onto the adjacent high land. However, it seems probable that a substantial part of the right-of-way will only be required temporarily. It is understood that the Alaska Railroad is now surveying a route for the extension of its line, now terminated at the Healy River Coal Co.'s mine, to a point at or near the Shallit lease, which will obviate the need for most of the rights-of-way.

Senator BIBLE. That is a decision of the Bureau of Land Management dating back to December 10, 1952?

Mr. SHALLIT. That is correct.

Senator BIBLE. Let us bring it as close to date as you can.

Mr. SHALLIT. I will try to bring it a little closer to date. There is one other thing I think I should point out. Rather than try to find it in this discussion, it is in the written form—possibly Mr. Ghiglione would care to testify on that. At one time when it looked like a railroad would not come through but possibly we would be able to get a road built, I offered the Alaska Road Commission the entire facilities of my camp. I offered to board and feed his men free of charge. I offered to provide free of charge the gasoline and the oil and the fuels and the power necessary to build the road.

In other words, what the road commission would do would be to bring in their equipment and their men and I would pay for the other costs. We had even gotten so far along in those arrangements that I had built an extra bunkhouse to house these men. I made a trip to Anchorage to find out what type of oil the road commission would particularly like in their trucks so I would be getting what they would want.

Mr. Ghiglione and the people from the Alaska Railroad and Mr. Usibelli met on the ground and went over the proposed road, but Mr. Usibelli objected so violently to the use of any parts of his road,

objected to the road going through his camp, threatened them with legal action if the road was built, and made such a fuss that he bluffed them out, is what it amounts to. However, he did offer \$50,000 for the construction of the railroad at that time, which he felt was important. However, I believe he stipulated—I do not know whether it was a railroad or a road—that if it was built it would have to be built on the south side of the river, which is engineeringly not feasible because of the nature of the ground.

There are only a few more pages, and Mr. Barash suggested I actually read it. This is at the bottom of page 18.

Thus, we find on the basis of the foregoing correspondence, that Usibelli Coal Mine, Inc., refused to permit the Alaska Road Commission to construct a highway across its lease, notwithstanding that it comprises public lands of the United States, and actually threatened to enjoin the Federal Government if the Alaska Road Commission attempted to do so. Moreover, we find from Mr. Kalbaugh's letter of March 3, 1954, to Director Strand that Mr. Usibelli has objected quite violently from time to time to the railroad line passing through what is known as the "G" bed, but that representatives of the Bureau of Mines and Geological Survey do not express as much concern about the potential of these beds as Mr. Usibelli.

It is apparent, therefore, that Usibelli Coal Mine, Inc., will resist the extension of the railroad or the construction of an all-weather highway over its coal lease unless the construction occurs at locations satisfactory to it, but entirely impractical and extremely costly from an engineering standpoint.

We hope that the committee will bear in mind that one way to postpone indefinitely railroad or highway access to the Cripple Creek Coal Co. lease is to insist that the construction be performed in a manner neither practical nor economically feasible. Thus far, the Interior Department has apparently remained browbeaten by these tactics.

Is progress to be halted—is the development of the coal resources of the Healy River Valley above the Usibelli lease to be stopped—is a monopoly to be created in the Healy River Valley for the benefit of the two existing coal mines having year-round transportation—is the military and civilian consumer of coal in the Fairbanks area to be denied greater competition—all because one coal operator is defying the Government?

Cripple Creek Coal Co. has an investment of approximately \$500,000 in its coal lease, which is being jeopardized because of lack of railroad access. Suntrana Mining Co., Usibelli Coal Mine, Inc., and Cripple Creek Coal Co. all operate coal leases issued by the United States and all are entitled to just and equal treatment at the hands of the Interior Department. Anyone in his right mind knows very well that there must be some place on the Usibelli lease on the north side of the Healy River where a narrow one-track railroad can cross without doing violence to the mining operations of Usibelli Coal Mine, Inc.

As stated earlier, the military was in dire need of coal in 1952 and 1953. No one can say when an emergency will threaten again. Is it necessary for an atomic bomb to explode before the Department will act to extend the railroad? We have shown that even on the basis of the tonnage the military expects to purchase in the next 3 years,

828,000 tons, the cost of extending the railroad will be substantially amortized as a result of a reduction in price to the military. In my own bids submitted to the Navy Fuel Supply Office yesterday, I have firmly obligated myself to reduce the bid prices by \$1 per ton if the railroad is extended to the Cripple Creek Coal Co. lease. This is evidence of good faith as well as firm conviction that extension of the railroad is vital to the development of the coal resources of the Healy River Valley, to the military and civilian consumer of coal in Alaska, and to the betterment of the Territory as a whole.

Through the courtesy of the staff of the committee, we have had an opportunity to read the report of the Department of the Interior submitted only yesterday, in response to Senator Jackson's letter of April 13. To say that we are shocked by its contents is putting it mildly.

It is hard for me to believe that the Department in putting out a letter of that type could possibly have the concurrence of the experts in its Department. I am not reading from the statement at this time. It is just my own personal opinion. I have worked for the Government. I have worked in a professional capacity as a mining engineer for them. I have worked with the professional people in the Department which one would normally expect, in Government procedure, to endorse such a letter to the committee as the Secretary has put out. It is almost beyond my belief that that letter has been endorsed by these experts. I think it might be interesting, Mr. Chairman, to ask the Secretary who of the experts in his Department actually endorsed it rather than merely acknowledged having read it. It just does not make sense to me.

Senator BIBLE. You may proceed.

Mr. SHALLIT. Yes, sir. Please bear in mind, Mr. Chairman, that the Suntrana and Usibelli coal mines with year-round railroad access supply coal to the domestic market in Alaska, as well as to the military. The domestic market at the present time is in excess of 150,000 tons annually. On the other hand, Cripple Creek Coal Co. without year-round railroad access is in a position to supply only the military, and then only if deliveries are permitted during the fall and winter months exclusively. As I indicated previously, the military has invited bids for fiscal years 1957 and 1958 on a 12-month-delivery schedule. The future of Cripple Creek Coal Co. is therefore shrouded in doubt unless railroad access is provided so that we can compete for military and civilian markets.

The position that the Secretary of the Interior is now taking in his report of May 27 to Senator Jackson leads me to conclude that the Department believes it owes a greater duty to the Suntrana and Usibelli coal mines than it does to the Cripple Creek coal mine and, even more important, that it owes a greater duty to the Suntrana and Usibelli coal mines than it does to the Government, the Territory of Alaska, and the taxpayers. Here is what the Department says:

Fifth, and finally, no showing has ever been made to this Department that the savings, if any, would accrue to the buyer rather than the producer of the coal. Clearly, the proposed extension would alter the competitive relationship among the three firms to the advantage of Cripple Creek. The Suntrana Mining Co. Inc., has largely exhausted its reserves of stripable coal, and Usibelli Coal Mine, Inc., likewise has used its strip reserves heavily. Both have made large investments in underground development. It is questionable whether either

could complete against a third firm engaged entirely in a stripping operation, if that third firm were given the additional advantage of a special rail extension constructed primarily for its benefit.

Cripple Creek at this time is a stripping operation. However, we have shown in our petition we are trying to put in an underground mine, and once we get railroad access it is good development procedure that the underground mine be put in.

The Department's doubt whether the savings, if any, would accrue to the buyer rather than to the producer is best answered by my current bids to supply the military for the next 3 fiscal years. Is there better proof than my offer to reduce my bids by \$1 per ton, if the spur is constructed to the Cripple Creek Coal Co. mine, for all coal shipped over the spur? Moreover, the Department's statement of doubt that any savings would accrue to the buyer of coal impeaches the contrary views of its own experts—namely, John Manley of the Alaska Railroad, who stated that the savings to the Territory are estimated at \$200,000 annually, and I think my bid substantiates that; Leo Saarela of the Geological Survey, who stated that the estimated savings to the military in 1953 would be \$300,000, provided that it could be put over a spur line, and the entire Alaska Subcommittee on Coal, who stated that the savings to the Government should amortize the cost of constructing the spur in 3 or 4 years.

With respect to the next statement of the Department quoted above, since when has it become incumbent upon the Department to substitute its judgment, as against our free-enterprise system, in stating that "It is questionable whether either (referring to Suntrana and Usibelli) could compete against a third firm engaged entirely in a stripping operation." Here is a strange and amazing anomaly. Is the Department attempting to protect Suntrana and Usibelli, the two giants, from little Cripple Creek Coal Co.?

Is the Department, as well as Suntrana and Usibelli, fearful of competition from Cripple Creek Coal Co.? Isn't that what the Department is saying? The Department's position would be ludicrous if it were not so serious for Cripple Creek Coal Co. In the light of the military's invitation for bids for the fiscal years 1957 and 1958 requiring deliveries to be made on a 12-month basis, Cripple Creek Coal Co. is in desperate straits. Yet the Department says not one word to explain how this predicament is to be met by Cripple Creek Coal Co. without railroad access, but instead helps Suntrana and Usibelli shed crocodile tears because they will be compelled to meet honest competition if the branch line is constructed.

Mr. Chairman, the position of the Department is so one-sided in favor of Suntrana and Usibelli, as it has been all along in overruling its own experts who have strongly recommended the construction of the spur, that we hope indeed this committee will not be misled by the spurious reasons advanced by the Department in its letter to Senator Jackson of May 27. Look at this statement in the letter:

\* \* \* Even during the present period of decline, we do not believe it would be desirable to permit any 1 of the 3 firms to fall by the wayside, since expanded needs for coal which we cannot now foresee may occur again in the future. We cannot justify a heavy investment in a rail extension at a time when the need clearly does not exist, the principal effect of which would be to subsidize one producer and disturb the present competitive relationship.

Since when is it subsidizing one producer to put it on a year-round operational basis so that it can compete on an equal basis with its competitors? Is it proper to call it a subsidy when it is evident that the cost of the spur will be repaid over a period of a few short years in terms of savings to the military alone in the lower price of coal, even leaving aside the benefits that would flow to the civilian consumer of coal in Alaska? Is there "present competitive relationship" as the Department states, when Cripple Creek Coal Co. does not have year-round railroad access and cannot compete for military and civilian markets? The Department says it would not "be desirable to permit any 1 of 3 firms to fall by the wayside." But what is to keep Cripple Creek Coal Co. from falling by the wayside if it cannot meet military requirements that deliveries be made over a 12-month period?

We leave to the committee the decision whether the Department is attempting to pull the wool over the eyes of the committee.

I thank you for giving me this opportunity to present my story and I hope that the committee will act promptly in preparing its conclusions in the light of all the testimony which is heard.

I am sorry I have digressed and taken so much time as I have.

Senator BIBLE. That is perfectly all right. I am not clear on the amount of production that you have had at Cripple Creek from the time that you first went in there in 1950. Could you develop that?

Mr. SHALLIT. Yes, sir; I have produced approximately 86,000 tons.

Senator BIBLE. I understand of that you produced—

Mr. SHALLIT. 135,000 tons in the 1953-54 fiscal year.

Senator BIBLE. Approximately how much would you produce this particular fiscal year?

Mr. SHALLIT. If I am the low bidder on this contract, I will produce 149,800.

Senator BIBLE. If you are not the successful low bidder?

Mr. SHALLIT. I will go fishing, I guess. That is the only market I have.

Senator BIBLE. You produce none at all in this current fiscal year?

Mr. SHALLIT. It is entirely possible that we may not produce coal in this fiscal year because the only markets I have are with the military. It is possible—I do not know that they will do it—that the military may decide to negotiate the contracts and divide them some way or other among all of the coal properties. I do not know.

Senator BIBLE. Have you sold any coal from July 1, 1954, to date?

Mr. SHALLIT. Yes, sir; from July 1954 to date I have sold 45,000 tons of coal.

Senator BIBLE. That is the figure I was looking for. I am not talking about the next fiscal year but the current fiscal year.

Mr. SHALLIT. Yes, sir. That is the amount of coal which the Department felt they should award to Cripple Creek and equal amounts to the Suntrana Coal Mining Co. in order to keep them alive during this past fiscal year.

Senator BIBLE. I think that is all I have, Mr. Shallit. Thank you very much.

(Mr. Shallit's prepared statement follows:)

STATEMENT OF A. BEN SHALLIT, CRIPPLE CREEK COAL CO.

May I state at the outset that it is reassuring and heartwarming that a small-business man in the Territory of Alaska can come to the Interior and Insular

**Affairs Committee of the United States Senate for help and assistance in the circumstances outlined in my petition, copies of which were filed with the committee on April 2 of this year. I take this opportunity to express my deep appreciation to the committee.**

No matter how the Department of the Interior or others may seek to cloud the real issues by raising specious ones, the principal issue before the committee is why the Secretary of the Interior refuses to authorize the Alaska Railroad to construct a railroad spur from the present rail's end at Suntrana to the Cripple Creek Coal Co. lease in the face of the findings of his own experts that:

1. Extension of the railroad would result in savings of \$200,000 to \$300,000 annually to the military and civilian consumers of coal in the Fairbanks area of Alaska;

2. Extension of the railroad would facilitate and promote the development of the coal resources in the Healy River Valley and provide railroad access to the Government coal reserves to meet the needs of the military installations in Alaska now and in the future; and

3. Extension of the railroad would mean substantial savings to the Government in the price of coal, which should amortize the cost of construction within 3 or 4 years.

As a corollary to the findings of the Interior Department, extension of the railroad would promote competition in the Healy River Valley which at present has only two coal mines operating on a year-round basis—thus benefiting military and civilian consumers by making coal available at cheaper prices. Documentary evidence in support of these findings is contained in my petition and reference will shortly be made thereto page by page.

So that the committee may have a clear understanding of the background which gives rise to the filing of the petition and this hearing, I shall sketch very briefly the salient facts.

Almost 6 years have now elapsed since a coal prospecting permit was issued to me by the Department of the Interior in July 1949 on what is now known as the Cripple Creek Coal Co. lease. Immediately following the issuance of the permit, I commenced the exploratory work necessary to develop a paying mine. In February 1950, I called upon the Alaska Road Commission of the Department of the Interior to construct an all-weather access road from the rail's end of the Alaska Railroad at Suntrana to my lease property so that I would be in a position to haul coal on a year-round basis. I offered to pay a portion of the expense involved in constructing the road. In response, Mr. A. F. Ghiglione, then chief engineer of the Alaska Road Commission, stated as follows (p. 5 of petition):

"The desirability of such a road is recognized. However, the Alaska Road Commission is not at present in a position to undertake this work since it has not been our policy to construct roads into undeveloped mining prospects.

"Should the actual development and production be instigated on the property, it is very probable that some cooperative assistance could be worked out whereby the road could be constructed with a portion of the expense shared by you as offered in your letter."

In July 1950, I entered into my first contract with the Department of the Army calling for the delivery of 50,000 tons of coal to the military installations in Alaska. It is a 6-mile haul by truck from my mine to the railroad siding of the Alaska Railroad at Suntrana, and to reach it it is necessary to cross the lands under lease to two competitors in the coal business, Usibelli Coal Mine, Inc., and Suntrana Mining Co., both holding coal leases from the Interior Department. The Usibelli lease has good roads on high ground which I was not permitted to use. Having no other alternative I undertook construction of a temporary road in the bed of the Healy River in the late summer of 1950 so that it could be completed and frozen over in time for deliveries of coal to be made to the military in October. Since the mine was now in commercial production, I again called upon the Alaska Road Commission for assistance in constructing an all-weather road. On December 20, 1950, Mr. Ghiglione replied as follows (p. 7 of petition):

"The need for access to your coal properties is recognized and the Alaska Road Commission is interested in seeing that such access is provided.

"Mr. Saarela, Territorial mining engineer, has been contacted concerning the area served by your present road and the various mines and developments that would also be served if the road were improved as you have recommended. Mr. Saarela is of the opinion that the district merits development and he has taken the initiative by writing to the Alaska Railroad in order to ascertain whether an extension of the present railroad spur could not be undertaken. It appears that an extension of the railroad would be much more desirable than the road

improvement, since the railroad service would eliminate your shorthaul trucking and rehandling of the coal.

"If it transpires that the Alaska Railroad will not undertake extension of their line, Alaska Road Commission will program the road improvement, providing the anticipated farm and industrial road funds are appropriated by Congress."

Several months later, on April 3, 1951, the then Commissioner of Roads for Alaska, John R. Noyes, wrote to the Director, Office of Territories, Interior Department, pointing out the desirability of extending the railroad to the Cripple Creek Coal Co. lease rather than constructing an all-weather road. Commissioner Noyes said (p. 8 of petition) :

"The development of the coal resources of the region on any adequate scale is dependent upon railroad transportation. For this reason the matter was referred to the Alaska Railroad through the Alaska Field Committee. A copy of a letter recently received from Col. J. P. Johnson, General Manager of the Alaska Railroad, to Mr. A. Ben Shallit of the Cripple Creek Coal Co., indicates that funds are not available for this new railroad construction.

"Road funds are not available either; but in view of the fact that the project was first proposed as a road project, it is desired to urge that the Alaska Railroad provide whatever facilities are required in the Healy River Valley rather than to attempt an unsatisfactory, halfway solution by means of a road. It is my opinion, concurred in by the Territorial Commissioner of Mines, that the area is definitely worthy of development at this time. Unless directed by the Office of Territories, we will leave this matter entirely to the Alaska Railroad. At the same time I wish to emphasize that I think the project is a worthy one for railroad development."

In May of 1951, Mr. Chiglione of the Alaska Road Commission advised me that it would not be possible to undertake any road construction to provide access to the Cripple Creek Coal Co. lease and the reason given was as follows (p. 8 of petition) :

"\* \* \* This decision has been necessary since the Interior Department considers the development should be accomplished by the Alaska Railroad and that no highway funds can therefore be involved."

Four years have now gone by since we were advised that the Interior Department had decided that access was needed and that such access should be provided by the extension of the Alaska Railroad rather than by the construction of an all-weather road. And during all that time Cripple Creek Coal Co. has struggled along operating its mine on a seasonal basis and supplying coal to the military during the winter months when our temporary makeshift road in the bed of the Healy River was frozen over so that deliveries could be made by truck. Several times during that period the military was in short supply of coal. In June 1952, the Naval Supply Depot at Seattle wired Cripple Creek Coal Co. as follows (see p. 12 of petition) :

"Request immediate advice by wire or telephone concerning additional tentative quantities of coal for Ladd and Eielson Air Force bases. Assuming availability of cars advise tonnage you could supply of size 8-6 X  $\phi$  mine run for each of the following months July, August, and September."

In its telegraphic reply Cripple Creek Coal Co. stated as follows (p. 13 of petition) :

"Reurtel June 25 can deliver 10,000 tons coal each month beginning October and continuing into spring of 1953 as long as road is usable.

"Uncertain road conditions before October 1 preclude deliveries during July, August, and September."

Thus Cripple Creek Coal Co. was unable to deliver coal to the military during the summer months for lack of railroad access or an all-weather road. Again in 1953 the military was in short supply of coal. A meeting of the coal Subcommittee of the Alaska Field Committee of the Interior Department was held on April 30, 1953, in the offices of the Alaska Railroad at Anchorage to discuss the critical shortage of coal. Some excerpts from that meeting will indicate the seriousness of the problem.

"Mr. ANDERSON (Bureau of Mines) (pp. 40 and 41 of petition). "When Mr. Usibelli gave Lieutenant Fisher his proposals of 100,000 tons Lieutenant Fisher called Mr. Shallit and asked him for the maximum tonnage he could produce. Mr. Shallit told him 100,000 tons, but he would be willing to negotiate for 150,000 tons if the railroad or the highway would be built up to Cripple Creek before October of this year. On the strength of that and from the meetings we had prior to this meeting with the Navy on negotiating coal contracts this year, we thought it was

almost certain that the Alaska Road Commission at least would be able to build a road into Cripple Creek or Roth property, which is just above the Cripple Creek property. Mr. Hinman, has it not been in your budget request to get funds for building this spur?"

"Mr. HINMAN (Alaska Railroad). 'It has been in our 6-year program for several years.'

"Mr. ANDERSON (p. 41). 'Now the vital point under consideration is how are we going to get the money immediately to build a road up to Cripple Creek? I called George Rogers in Juneau but he was unable to attend this meeting. He expects to go back to Washington and talk to the Secretary as to whether or not it would be possible to get funds for a railroad. Will this be possible, Mr. Hinman?'

"Mr. HINMAN. 'I do not know.'

"Major GOCHENAUR (Headquarters, Elmendorf Air Force Base) (p. 41 of petition). 'We are under now by about 12,000 tons of our requirements—figuring that Cripple Creek will take 150,000 tons.'

"Mr. HINMAN. 'Cripple Creek does not know how they are going to deliver 150,000 tons unless they get an all-weather road or a railroad this summer.'

"Major GOCHENAUR. 'That is why the military is here today. I compiled figures yesterday for our budget planning for the fiscal year 1955 for the Air Force, (I do not know the requirements of the Army). We will have at Eielson roughly 225,000 tons; at Ladd, 300,000 tons, and at Elmendorf, 140,000 tons. These are conservative figures. The main powerplant at Eielson at full capacity is capable of burning 50 or 60 tons an hour. Figures from the plant superintendent, based on full capacity, would be around 50 tons an hour. The average consumption during mild weather is 7,000 tons a month.'

"Major GOCHENAUR (p. 43 of petition). 'What was the conversation, Mr. Anderson, you had with Mr. Flakne when you went back to Washington? It was my understanding that the Department of the Interior was back of that road. After the conversation I had with you, Lieutenant Fisher said he laid it in the hands of the Interior Department and they would put it through.'

"Mr. HINMAN (p. 44 of petition). 'You ask if ARC had ever asked for funds to build a road. I am sure they have not. There is no reason to build a road when it should be a railroad. If you are going to ask for money, ask for funds to construct a railroad.'

"Mr. ANDERSON (p. 44 of petition). 'This suggestion comes from Joe Flakne. I am asking you to think about it as a possible solution. Joe Flakne and I spent about three-fourths of an hour in Assistant Secretary Lewis' office and gave him the whole picture, stressing the importance of this railroad up there, consequently, he is familiar with the immediate necessity of the construction of this project. I do not know what can be done; however, George Rogers will take this information to Washington and perhaps talk it over with the Governor—point out that it is a military necessity.'

"Mr. ROBINSON (Territorial Department of Mines) (p. 45 of petition). 'Right now, unless we get a railroad to Cripple Creek Mine to take care of 150,000 tons, the military is going to be at least 50,000 tons short. If the military is going to use coal, it will be shipped in from the States.'

At the conclusion of the meeting, the Alaska Field Subcommittee on Coal unanimously passed the following resolutions (p. 46 of petition):

"2. That steps be taken at once to finance the construction of an extension of the railroad from the Healy River mine to the Cripple Creek and Roth properties. This spur to be completed or partially so before October 1, 1953.

"3. That the extension of the Healy River spur to the Roth property is vital to the security of military installations this coming fiscal year of 1954, and in the future, and to the development and prosperity of the coal industry as a whole in Alaska.

"4. That the extension of the Healy River spur to the Roth property would mean a substantial savings to the Government in the price of coal and this savings to the Government should amortize the cost of construction within 3 or 4 years.

"5. That shipment of coal by rail transportation is the only logical solution to the presently existing critical situation."

Because the coal situation in Alaska was so critical, Secretary of the Interior McKay appointed a special committee headed by Charles W. Connor, formerly Administrator of Defense Solid Fuels Administration, to conduct an investigation on the ground in Alaska and to submit a report and recommendations to the Secretary. The Committee spent about 3 months in Alaska inspecting the

various mines and holding informal meetings with the mine operators. The Connor report has never been released to the public but it is generally known that the report strongly recommends the extension of the railroad to the Cripple Creek lease and to the Government coal reserves.

During this period, Cripple Creek Coal Co. continued its efforts to have the Department construct the railroad spur. They seemed to be bearing fruit, for under date of April 29, 1953, Acting General Manager of the Alaska Railroad John E. Manley filed a right-of-way with the Bureau of Land Management reading as follows (pp. 31 and 32 of petition) :

"The Alaska Railroad contemplates constructing at an early date an extension of its rail line from mile 4.2 on the Suntrana branch to mile 6.6, adjacent to the Usibelli mine camp. Also, from mile 6.6 to mile 10.3, adjacent to the Roth coal reserve.

"It is requested that there be noted under the act of March 12, 1914 (38 Stat. 305, 48 U. S. C. 301-308), a right-of-way for this line to the extent of 100 feet on each side of the center line of the track. Accordingly, we are attaching three copies each of part 1, Suntrana branch extension, Suntrana to Usibelli, and part 2, Suntrana branch extension, Usibelli to Roth reserve.

"You will note in our letter of June 23, 1952, that the railroad contemplates the extension of this line in order that the Usibelli Coal Co., the Cripple Creek Mining Co. and any future producers, may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. It is estimated that the construction of this line will result in the reduction of coal costs to the territory of \$200,000 annually."

In furtherance of the proposed construction of the spur, General Manager of the Alaska Railroad Kalbaugh submitted to his superior, William C. Strand, Director, Office of Territories, under date of March 3, 1954, drawings and estimates covering the proposed construction, in which he stated (p. 34 of petition) :

"The line between Suntrana Mine (mile 4.2) and Usibelli Mine (mile 6.6) has been located and staked. The remaining portion of the extension, mile 6.6 to the Roth coal reserve (Coal Creek), is based on a reconnaissance survey, and this line has not been staked. It is estimated that it would require approximately 2 months time with a single survey party to complete the reconnaissance survey and complete location."

Mr. Kalbaugh estimated the cost of constructing the entire spur at \$1,028,251.50 if a wooden trestle could be utilized to cross Cripple Creek and an additional \$425,000 if a steel bridge was to become necessary after a more complete study was made (p. 4 of exhibit Y of petition). Thus, the cost of constructing the entire spur was estimated at approximately \$1 million if a wooden trestle could be utilized to cross Cripple Creek, or \$1,450,000 if a steel bridge was found necessary. These figures include also an estimated cost of \$136,000 to extend the spur from the Cripple Creek Coal Co. lease to the Government coal reserves.

Then came the bombshell—the straw that broke the camel's back. Without notice of any kind to Cripple Creek Coal Co., General Manager of the Alaska Railroad Kalbaugh on October 11, 1954, filed with the Bureau of Land Management a withdrawal of the railroad right-of-way, stating as follows (p. 36 of petition) :

"Will you please refer to our letter of April 29, 1953, wherein the Alaska Railroad made request upon your organization for the withdrawal of a railroad right-of-way 100 feet on each side of center line of track on our Suntrana branch from the present end of said branch line at mile 4.2 to mile 10.3.

"Initially this request for withdrawal of the proposed right-of-way was occasioned by the possibility of the extension of this branch line being essential to the national defense. Since my recent arrival in Washington, however, I have been informed that the Defense Department does not consider the extension of this branch line essential to the national defense, and it would therefore be appreciated if you would withdraw the request as contained in our letter of April 29, 1953, on this matter."

I wish particularly to invite the committee's attention to the statement in Mr. Kalbaugh's letter that following his arrival in Washington he had been informed that the Defense Department did not consider the extension of the branch line essential to the national defense. We submit, Mr. Chairman, that the question is not whether the extension of the railroad is essential to the national defense. The real and only reasons for the extension of the railroad were succinctly stated in the earlier letter of April 29, 1953, from the Alaska

Railroad to the Bureau of Land Management applying for a right-of-way. In that letter the reasons are stated as follows (p. 38 of petition):

" \* \* \* the railroad contemplates the extension of this line in order that the Usibelli Coal Co., the Cripple Creek Mining Co. and any future producers, may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. It is estimated that the construction of this line will result in the reduction of coal costs to the territory of \$200,000 annually."

These reasons speak for themselves. We submit to your committee that there is not the slightest relevancy in whether the branch line is essential to the national defense. There is a vast distinction between the words "essential to national defense" and "in the interest of national defense." We say it is very much in the public interest and in the interest of national defense that coal be made available to military and civilian consumers in Alaska at cheaper prices and there can be no doubt that extension of the railroad would accomplish that objective.

Let me demolish once and for all the specious argument that the situation has now changed completely and that the military demand for coal is such that extension of the Alaska Railroad to the Cripple Creek Coal Co. lease is no longer necessary. There are two air force bases in the Fairbanks area which are served by the coal mines in the Healy River Valley. They are the Eielson and Ladd Air Force Bases. Combined they burn coal currently at the rate of between 400,000 and 450,000 tons annually. Because the military in Alaska has decided to reduce its rather large coal stockpile over the next 2 years to about a 90-day supply, bids were invited last week to supply the 2 installations with 149,800 tons of coal during fiscal year 1956; 286,000 tons of coal during fiscal year 1957, and 392,500 tons of coal during fiscal year 1958. The total tonnage for which bids were invited to be submitted by May 31 is 828,300 tons over a 3-year period. Despite the fact that the invitation for bids requires delivery of coal on a year-round basis during fiscal years 1957 and 1958 and Cripple Creek Coal Co. does not have at the present time year-round railroad or road access, Cripple Creek has nevertheless submitted bids covering the entire tonnage needed by the military. We do so in the firm belief that not even the Secretary of the Interior can or will stand in the way of progress and that the coal resources of the Healy River Valley will be opened up for development by providing adequate railroad access thereto.

In any event, I want this committee and the Department of the Interior and the Department of Defense to know that in submitting Cripple Creek Coal Co.'s bids to the Navy Fuel Supply Office yesterday, May 31, which we hope will prove to be the lowest bids, I have solemnly agreed that Cripple Creek Coal Co. will reduce its bid prices by \$1 per ton for the entire 828,300 tons if the railroad spur is constructed to the Cripple Creek Coal Co. lease before deliveries to the military commence. If the spur is constructed after deliveries commence, \$1 per ton will be deducted from the price of the remaining coal shipped over the new spur. It is obvious, therefore, that the military is in a position to save \$828,300 over the next 3 years if Cripple Creek Coal Co.'s bids are the low bids and the railroad spur is constructed. Even if the tonnage is divided among the present coal operators, there will still be substantial savings to the military as well as to civilian consumers of coal if the spur is constructed.

How, then, can it be contended by anyone that the situation has changed and that there is no longer any need for extending the Alaska Railroad to the Cripple Creek Coal Co. lease property? After all, when the stockpile is reduced within the next 2 fiscal years, the Ladd and Eielson military installations will again be purchasing coal at the rate of a minimum of 400,000 tons annually. It is conceivable that the tonnage required at Ladd and Eielson may be greater in 1958 than 400,000 tons. It is obvious, therefore, that the Government and the taxpayers would be the principal beneficiaries in terms of dollars saved if a spur is constructed, and that the spur would make readily available to the military large quantities of coal which otherwise would not be available quickly if needed. We challenge anyone to deny the truth of these statements. If anyone does, we respectfully submit the denial would be palpably untrue and intellectually dishonest.

To return to the chronology of events, in the meantime Cripple Creek Coal Co. was having a terrible time in 1954 with the temporary makeshift road in the bed of the Healy River. On three separate occasions the road was destroyed

by flash floods, requiring time-consuming and costly rebuilding. In desperation, Cripple Creek Coal Co. wrote to Mr. Ghiglione, commission of roads for Alaska, as follows (p. 55 of petition) :

"Since you are entirely familiar with our problem, there is no point in repeating the factors involved. I would like to point out that the road that we are now using and for which we have a tentative right-of-way, was destroyed 3 times this year, requiring rebuilding at a cost in excess of \$40,000.

"Our present road is considerably better than any we had previously built, but the section through the Usibelli lease is still subject to destruction during every period of high water.

"I would appreciate your giving consideration to the possibility of the road commission obtaining a right-of-way at least through that section since we have not been able to make any progress in obtaining a right-of-way on which we can construct a permanent road."

Despite the fact that the General Manager of the Alaska Railroad had withdrawn the railroad right-of-way by letter of October 11, 1954, apparently without notice to the Alaska Road Commission, Mr. Ghiglione responded to Cripple Creek Coal Co. under date of October 29, 1954, as follows (p. 55 and 56 of petition) :

"As you know, the Department has decided that proper access to the Healy River coalfields may best be provided by the railroad spur extension. As a result of this decision, the railroad has proceeded to obtain the necessary right-of-way and has filed necessary maps and instruments with the Bureau of Land Management for this purpose.

"When the decision was finally made to encourage railroad access to the Healy River coal properties, the Alaska Road Commission was precluded from sponsoring further road projects for this purpose. As you will recall, a subsequent attempt was made to obtain funds for construction along the Alaska Railroad right-of-way in an effort to provide temporary relief for your problem. This attempt met with failure, again because the project was considered one for the Alaska Railroad and therefore any request for funds to implement the project should be initiated by that agency.

. . . . .

"\* \* \* I can only suggest that you contact the Alaska Railroad in an effort to expedite their development of the railroad spur further up the Healy River." Cripple Creek Coal Co. hastened to reply to Mr. Ghiglione on November 4, 1954, in pertinent part, as follows (p. 56 of petition) :

"For your information, this situation was recently discussed with officials of the Alaska Railroad, and we were advised that they had no immediate plans for the construction of such a spur. Under the circumstances, we believe that unless an actual directive was issued to you, precluding the construction of a road, it would still be in order for you to consider this project. If, however, you have been officially advised that the Alaska Railroad alone is to be responsible for the construction of this spur, we will appreciate a copy of this directive so that we may act accordingly."

Mr. Ghiglione responded on November 8, 1954, in pertinent part, as follows (p. 57 of petition) :

"The situation along Healy River, insofar as access by railroad in preference to highway has been determined as policy by the Interior Department, has not been resolved in the form of a directive to the Alaska Road Commission. However, since all requests for funds must be processed through the Interior Department before reaching the Bureau of the Budget and Congress, it is obvious that the policies of the Department must be adhered to."

I invite the attention of the committee to the fact that even as late as November 8, 1954, almost a month after the Alaska Railroad had withdrawn its right-of-way for the extension of the railroad, Mr. Ghiglione still adhered to his previous view that the policy of the Department remained the same: namely, that access by railroad was preferred to a highway. Following the exchange of letters between Cripple Creek Coal Co. and Mr. Ghiglione, I wrote to Mr. Kalbaugh of the Alaska Railroad on October 21, 1954, in pertinent part, as follows (p. 57 of petition) :

"Sections of our road were destroyed three times this year, pointing to the necessity of obtaining less vulnerable right-of-way on which a permanent road can be constructed. Assistance from an appropriate agency of Government, who can obtain a right-of-way through their powers of eminent domain appears to be the only way in which such a road can be built through the intervening leases.

"It is therefore, again, respectfully requested that consideration be given to the extension of the existing spur to Cripple Creek, and that if it is not believed advisable to construct a spur at this time, to at least survey and obtain a right-of-way for such a spur, and allow the Cripple Creek Coal Co. and the general public the right to use this right-of-way, until such time as a spur is constructed."

I was still not aware at this point of the withdrawal of the railroad right-of-way. By letter of November 5, 1954, Mr. Kalbaugh responded to my letter, in pertinent part, as follows (p. 58 of petition) :

"As we discussed in our several conversations on this matter, the Alaska Railroad is required to be self-sustaining and any such large expenditures as you have proposed by the railroad would have to be economically justified and, as we also discussed, such economic justification cannot be made by the railroad in support of this track extension.

"Inasmuch as the Defense Department has indicated that they cannot lend support to your proposed track extension, it appears to us that your next best bet would be to endeavour to procure an all-year road from your property to the present railhead at Suntrana, and of course such a road would not be under the jurisdiction of the Alaska Railroad. Therefore, you may wish to consider the possibility of having the Alaska Road Commission undertake such action as would be necessary for such a roadbuilding program."

On December 15, 1954, I again wrote to the Alaska Road Commission, to which Mr. Ghiglione responded under date of December 21, 1954, as follows (pp. 58 and 59 of petition) :

"Reference is made to your letter of December 15 regarding the possibility of obtaining funds for construction of an all-year road from Suntrana to Cripple Creek. I am surprised at Mr. Kalbaugh's statement regarding the appropriation of funds for this project, since all previous departmental policy has been in support of extension of the railroad spur in preference to the highway, and obviously no funds will be appropriated by Congress without the support of the Interior Department.

"In reviewing our previous estimates for this project, I find that several factors enter into the cost of the road and, therefore, any estimate must be qualified. Our last estimate, made in April 1953, for construction of the road from Suntrana to Cripple Creek, totaled \$420,000. This estimate was based upon the alignment following the present Alaska Railroad line within their right-of-way, since at that time Mr. Usibelli had refused consideration of a road easement either over his road or through his property, excepting on the railroad line. His refusal was always based on the contention that any such easements would conflict with the future development of his property \* \* \*."

Analyzing the correspondence, it is apparent that Cripple Creek Coal Co. is an innocent victim of bureaucratic buckpassing to the detriment of the development of the coal resources of the Healy River Valley and to the financial detriment of the military and civilian consumers of coal in the Fairbanks area. We respectfully submit that it is unconscionable for Mr. Kalbaugh to state in his letter of November 5, 1954, that "economic justification cannot be made by the railroad in support of the track extension." Had the spur been constructed 5 years ago, the military would have saved a minimum of \$263,614 in the cost of coal purchased from Cripple Creek Coal Co. at a savings of \$1 per ton. The military would also have saved a substantial sum in the cost of acquiring some 800,000 tons of coal over the same period from Usibelli Mine, Inc. What more is necessary to justify the construction of a spur when the Secretary's own Alaska Subcommittee on Coal unanimously concluded that "savings to the Government should amortize the cost of construction within 3 or 4 years" (p. 46 of petition) and when the Acting General Manager of the Alaska Railroad stated unequivocally that "it is estimated that the construction of this line will result in the reduction of coal costs to the territory of \$200,000 annually?" (p. 32 of petition).

Even leaving aside the fact that the savings to the military over the last 5 years would have amortized the entire cost of the spur, let us look at the future. In the invitation for bids to supply the military with 828,300 tons of coal during the next 3 fiscal years, I have offered to reduce my price by \$1 per ton if I am awarded the contracts and the spur is constructed before deliveries of coal commence. Here is tangible proof of the savings to the military as well as to the civilian consumer of coal in Alaska if the spur is constructed. How does Mr. Kalbaugh explain his statement that "economic justification cannot be made by the rail-

road in support of the track extension" in the light of the facts herein presented? This committee is entitled to an answer.

One other aspect of the current invitation for bids to supply the military installations during the next 3 years deserves the consideration of this committee. For the fiscal years 1957 and 1958, bids have been invited on the basis of deliveries on a year-round basis. Unless railroad or highway access is provided to Cripple Creek Coal Co., we are in a desperate situation. Even worse off, however, is the Territory of Alaska and the military and civilian consumer in the Fairbanks area. Its effect is to lock up and block the development of the coal resources in the Healy River Valley. Its effect also would be to create a monopoly in the Healy River Valley in favor of the two present coal operators who have year-round access to the railroad. Is this in the public interest and in the interest of the Territory of Alaska? We submit that the answer is self-evident.

I hope that the committee will bear with me in discussing the last problem which doubtless has played an important role in delaying the extension of the railroad or the construction of an all-weather road. I refer to the continuous protests and objections which have been raised by Usibelli Coal Mine, Inc. to the railroad or highway crossing its lease on the ground that it would interfere with its mining operations. It is important for this committee to know that the Usibelli coal lease is a lease from the United States embracing public lands and that Congress has provided by statute (pp. 15 and 16 of petition) that all coal leases issued by the Department of the Interior shall expressly reserve to the Government the right to grant easements in, over, through, or upon the lands so leased as may be necessary for the working of other coal lands under permits or leases issued by the Department. It would be simple indeed for a lessee to seek to keep competitors out of a particular area by alleging that any right-of-way across its lease would constitute interference with its mining operations. That appears to be the procedure which Usibelli Coal Mine, Inc. has utilized here to prevent the extension of the railroad or the construction of a highway. Even when Cripple Creek Coal Co. filed its right-of-way application in 1951 (p. 17 of petition) with the Bureau of Land Management for a road in the bed of the Healy River, which was its only alternative because of vigorous opposition by Usibelli, but which road was highly vulnerable to destruction by flash floods, spring thaws, and the elements in general, Usibelli Coal Mine, Inc. nevertheless filed vehement protests with the Department. On September 10, 1952, the Bureau of Land Management rendered a decision dismissing the protests and granting the right-of-way, stating, in pertinent part, as follows (pp. 18 and 19 of petition):

"\* \* \* The Usibelli Co. claims that the proposed right-of-way would interfere with its operations, especially in the furnishing of an adequate water supply for the domestic use of the employees on its lease who reside at a camp within the lease boundaries. The report negatives this claim and shows that there is more than ample underground seepage to furnish a sufficient supply of domestic water. The report also shows that a rifle range has been set up with the gun pits on one side of the proposed Shallit right-of-way and the targets on the other. \* \* \*

"Both field reports recommend that a right-of-way be granted and one of them even suggests that it would be preferable to move the road, the subject of the application, out of the riverbed and onto the adjacent high land. However, it seems probable a substantial part of the right-of-way will only be required temporarily. It is understood that the Alaska Railroad is now surveying a route for an extension of its line, now terminated at the Healy River Coal Co.'s mine, to a point at or near the Shallit lease, which will obviate the need for most of the rights-of-way. \* \* \*

\* \* \* \* \*

"This matter has been thoroughly considered. The facts have been meticulously assembled by three agencies of the Department whose representatives have examined the land and discussed the proposed right-of-way with the parties concerned, including the Usibelli Co. That company has filed a substantial body of arguments in support of its protest, all of which has been considered. We are unable to perceive in what way oral argument would supplement the showing already made or establish what has not been established that the granting of the right-of-way seriously affects Usibelli's interests as a lessee. On the contrary, it appears that no adverse effect would result but that the Usibelli Co. could accommodate its operations to the situation with little or no additional

expense. To accede to the protest would result in placing a heavy burden on Shallit who is also a lessee which is not justified in the circumstances. Accordingly, the application for an oral hearing and the protest as well are dismissed."

In 1953 the Department decided to have the Alaska Road Commission construct a road along the route of the survey of the Alaska Railroad so that the spur could be constructed thereon at a later date when funds did become available. Cripple Creek Coal Co. immediately placed at Mr. Ghiglione's disposal its entire camp facilities and offered without charge meals, lodging, gasoline, diesel fuel, lubricants, and other supplies. (See p. 27 of petition.) In Mr. Ghiglione's reply of March 11, 1953, he stated in part as follows (p. 27 of petition):

"\* \* \* The Alaska Road Commission now plans to initiate the construction as soon as possible this spring and will draw upon your cooperative assistance as detailed above.

"It is the intent of the Alaska Road Commission to provide and maintain the road from the railroad spur to the entrance of your properties. In accomplishing this it will also be essential that the cooperation of Mr. Usibelli be obtained. It is anticipated that Mr. Usibelli will not oppose this project since he will benefit by the Alaska Road Commission assumption of maintenance and responsibility. The road alignment will follow as much as possible the existing roads up the Healy River and also conform to the proposed alignment for the railroad extension where such conformance does not result in excessive cost. Since it is essential that this work be started this spring, I will contact you further regarding arrangements for your cooperative assistance."

However, on April 22, 1953, Mr. Ghiglione wrote to Mr. Joseph Flakne, at that time Chief of the Alaska Division of the Office of Territories, as follows (p. 28 of petition):

"It was not possible to obtain Mr. Usibelli's permission to utilize his road or to traverse his area as was planned for the low-cost road project. Mr. Usibelli claims that the traversing of his mine area by the road through to Mr. Shallit's property would seriously handicap his operations, in addition to preventing access to large quantities of coal which his approved development plans have contemplated mining. In addition, the increased liability to Mr. Usibelli's operations from through traffic using his road is considered by him to far offset any advantages he might receive through the Alaska Road Commission's assumption of maintenance responsibility. In view of the above factors Mr. Usibelli refuses public use of his road and further advised that he would be forced to take legal action to restrain the Alaska Road Commission if we should attempt to take over. Mr. Usibelli is extremely anxious to obtain railroad access to his property and made the firm offer to our group of a \$50,000 contribution toward this end.

"The above situation again forces the Shallit mine into the position of having only temporary road access which is not usable for at least six months of the year. \* \* \*

"\* \* \* The desirability of providing the railroad extension rather than a temporary road is again apparent and I urge that further effort be towards this end. \* \* \*

In Mr. Kalbaugh's letter of March 3, 1954, to Director Strand of the Office of Territories, forwarding drawings and estimates of the proposed extension of the Alaska Railroad, he stated as follows (page 34 of petition):

"It will be noted that on the located line drawing between Suntrana Mine (M. P. 4.2) and Usibelli Mine (M. P. 6.6) we show our location passing over the Usibelli Mining Company's air strip. This location was discussed with Mr. Usibelli, and he did not voice any objection other than that which could be normally expected under the circumstances. The line then passes through (according to information I have received) what is called 'G' Bed. This location Mr. Usibelli has objected to quite violently from time to time, inasmuch as he says he plans to mine these underground beds. However, from discussions with the Bureau of Mines Representatives and the Geological Survey, they do not express as much concern about the potentials of these beds as Mr. Usibelli has."

"In reviewing our previous estimates for this project, I find that several factors enter into the cost of the road and, therefore, any estimate must be qualified. Our last estimate, made in April 1953, for construction of the road from Suntrana to Cripple Creek, totaled \$420,000. This estimate was based upon the alignment following the present Alaska Railroad line within their right-of-way, since at that time Mr. Usibelli had refused consideration of a road easement either over

his road or through his property, excepting on the railroad line. His refusal was always based on the contention that any such easements would conflict with future development of his property \* \* \*."

Thus, we find on the basis of the foregoing correspondence that Usibelli Coal Mine, Inc. refused to permit the Alaska Road Commission to construct a highway across its lease, notwithstanding that it comprises public lands of the United States, and actually threatened to enjoin the Federal Government if the Alaska Road Commission attempted to do so. Moreover, we find from Mr. Kalbaugh's letter of March 3, 1954, to Director Strand that Mr. Usibelli has objected quite violently from time to time to the railroad line passing through what is known as the "G" bed, but that representatives of the Bureau of Mines and Geological Survey do not express as much concern about the potential of these beds as Mr. Usibelli. It is apparent, therefore, that Usibelli Coal Mine, Inc. will resist the extension of the railroad or the construction of an all-weather highway over its coal lease unless the construction occurs at locations satisfactory to it, but entirely impractical and extremely costly from an engineering standpoint. We hope that the committee will bear in mind that one way to postpone indefinitely railroad or highway access to the Cripple Creek Coal Co. lease is to insist that the construction be performed in a manner neither practical nor economically feasible. Thus far, the Interior Department has apparently remained browbeaten by these tactics. Is progress to be halted; is the development of the coal resources of the Healy River Valley above the Usibelli lease to be stopped; is a monopoly to be created in the Healy River Valley for the benefit of the two existing coal mines having year-round transportation; is the military and civilian consumer of coal in the Fairbanks area to be denied greater competition; all because one coal operator is defying the Government? Cripple Creek Coal Co. has an investment of approximately \$500,000 in its coal lease, which is being jeopardized because of lack of railroad access. Suntrana Mining Co., Usibelli Coal Mine, Inc., and Cripple Creek Coal Co. all operate coal leases issued by the United States and all are entitled to just and equal treatment at the hands of the Interior Department. Anyone in his right mind knows very well that there must be some place on the Usibelli lease on the north side of the Healy River where a narrow one-track railroad can cross without doing violence to the mining operations of Usibelli Coal Mine, Inc.

As stated earlier, the military was in dire need of coal in 1952 and 1953. No one can say when an emergency will threaten again. Is it necessary for an atomic bomb to explode before the Department will act to extend the railroad? We have shown that even on the basis of the tonnage the military expects to purchase in the next 3 years, 828,000 tons, the cost of extending the railroad will be substantially amortized as a result of a reduction in price to the military. In my own bids submitted to the Navy Fuel Supply Office yesterday, I have firmly obligated myself to reduce the bid prices by \$1 per ton if the railroad is extended to the Cripple Creek Coal Co. lease. This is evidence of good faith as well as firm conviction that extension of the railroad is vital to the development of the coal resources of the Healy River Valley, to the military and civilian consumer of coal in Alaska, and to the betterment of the Territory as a whole.

Through the courtesy of the staff of the committee, we have had an opportunity to read the report of the Department of the Interior submitted only yesterday, in response to Senator Jackson's letter of April 13. To say that we are shocked by its contents is putting it mildly.

Please bear in mind, Mr. Chairman, that the Suntrana and Usibelli coal mines with year-round railroad access supply coal to the domestic market in Alaska, as well as to the military. The domestic market at the present time is in excess of 150,000 tons annually. On the other hand, Cripple Creek Coal Co. without year-round railroad access is in a position to supply only the military, and then only if deliveries are permitted during the fall and winter months exclusively. As I indicated previously, the military has invited bids for fiscal years 1957 and 1958 on a 12-month delivery schedule. The future of Cripple Creek Coal Co. is therefore shrouded in doubt unless railroad access is provided so that we can compete for military and civilian markets.

The position that the Secretary of the Interior is now taking in his report of May 27 to Senator Jackson leads me to conclude that the Department believes it owes a greater duty to the Suntrana and Usibelli coal mines than it does to the Cripple Creek coal mine and, even more important, that it owes a greater duty to the Suntrana and Usibelli coal mines than it does to the Gov-

ernment, the Territory of Alaska, and the taxpayers. Here is what the Department says:

"Fifth and finally, no showing has ever been made to this Department that the savings, if any, would accrue to the buyer rather than the producer of the coal. Clearly, the proposed extension would alter the competitive relationship among the three firms to the advantage of Cripple Creek. The Suntrana Mining Co., Inc. has largely exhausted its reserves of strippable coal, and Usibelli Coal Mine, Inc. likewise has used its strip reserves heavily. Both have made large investments in underground development. It is questionable whether either could compete against a third firm engaged entirely in a stripping operation, if that third firm were given the additional advantage of a special rail extension constructed primarily for its benefit."

The Department's doubt whether the savings, if any, would accrue to the buyer rather than to the producer is best answered by my current bids to supply the military for the next 3 fiscal years. Is there better proof than my offer to reduce my bids by \$1 per ton, if the spur is constructed to the Cripple Creek Coal Co. mine, for all coal shipped over the spur? Moreover, the Department's statement of doubt that any savings would accrue to the buyer of coal impeaches the contrary views of its own experts—namely, John Manley of the Alaska Railroad, who stated that the savings to the Territory are estimated at \$200,000 annually, and I think my bid substantiates that; Leo Saarela of the Geological Survey, who stated that the estimated savings to the military in 1953 would be \$300,000; and the entire Alaska Subcommittee on Coal, who stated that the savings to the Government should amortize the cost of constructing the spur in 3 or 4 years.

With respect to the next statement of the Department quoted above, since when has it become incumbent upon the Department to substitute its judgment, as against our free-enterprise system, in stating that "It is questionable whether either [referring to Suntrana and Usibelli] could compete against a third firm entirely in a stripping operation. Here is a strange and amazing anomaly. Is the Department attempting to protect Suntrana and Usibelli, the two giants, from little Cripple Creek Coal Co.?"

Is the Department, as well as Suntrana and Usibelli, fearful of competition from Cripple Creek Coal Co.? Isn't that what the Department is saying? The Department's position would be ludicrous if it were not so serious for Cripple Creek Coal Co. In the light of the military's invitation for bids for the fiscal years 1957 and 1958 requiring deliveries to be made on a 12-month basis, Cripple Creek Coal Co. is in desperate straits. Yet the Department says not one word to explain how this predicament is to be met by Cripple Creek Coal Co. without railroad access, but instead helps Suntrana and Usibelli shed crocodile tears because they will be compelled to meet honest competition if the branch line is constructed.

Mr. Chairman, the position of the Department is so one-sided in favor of Suntrana and Usibelli, as it has been all along in overruling its own experts who have strongly recommended the construction of the spur, that we hope indeed this committee will not be misled by the spurious reasons advanced by the Department in its letter to Senator Jackson of May 27. Look at this statement in the letter:

"... Even during the present period of decline, we do not believe it would be desirable to permit any one of the three firms to fall by the wayside, since expanded needs for coal which we cannot now foresee may occur again in the future. We cannot justify a heavy investment in a rail extension at a time when the need clearly does not exist, the principal effect of which would be to subsidize one producer and disturb the present competitive relationship."

Since when is it subsidizing one producer to put it on a year-round operational basis so that it can compete on an equal basis with its competitors? Is it proper to call it a subsidy when it is evident that the cost of the spur will be repaid over a period of a few short years in terms of savings to the military alone in the lower price of coal, even leaving aside the benefits that would flow to the civilian consumer of coal in Alaska? Is there "present competitive relationship" as the Department states, when Cripple Creek Coal Co. does not have year-round railroad access and cannot compete for military and civilian markets? The Department says it would not "be desirable to permit any one of the three firms to fall by the wayside." But what is to keep Cripple Creek Coal Co. from falling by the wayside if it cannot meet military requirements that deliveries be made over a 12-month period?

We leave to the committee the decision whether the Department is attempting to pull the wool over the eyes of the committee.

I thank you for giving me this opportunity to present my story and I hope that the committee will act promptly in preparing its conclusions in the light of all the testimony which is heard.

Senator BIBLE. I think we will next hear from Colonel Welch.

**STATEMENT OF COL. DARRELL G. WELCH, CHIEF, FUELS DIVISION,  
DIRECTORATE OF SUPPLY AND SERVICES, DEPUTY CHIEF OF  
STAFF, MATERIEL HEADQUARTERS, UNITED STATES AIR FORCE**

Colonel WELCH. Thank you, sir.

Senator BIBLE. You may proceed.

Colonel WELCH. I have a prepared statement, Mr. Chairman.

Senator BIBLE. I see it is rather short, and I think it might be well that you read it in its entirety.

Colonel WELCH. Yes, sir. I am Col. D. G. Welch, Fuels Division, Directorate of Supply and Services, Headquarters, USAF. I have been asked to represent the Department of Defense in presenting the coal requirements in the Fairbanks, Alaska area, since these requirements are largely used at Ladd and Eielson Air Force Bases.

The total requirement for this area consists of that required for annual consumption and that required for a reserve stockpile. A reserve stockpile is necessary to provide the uninterrupted supply of coal during periods when work stoppages, transportation delays, and other interruptions in the supply system occur.

Since coal deteriorates when stockpiled, we try to keep the stockpile at a minimum consistent with the reliability of resupply.

The desired stockpile quantity is equal to one-quarter of the annual consumption. The current stockpile is larger than the above goal, due to estimates which were in excess of actual consumption. In planning for the fiscal year 1955 procurement, it became apparent that the coal stockpile was excessive. Instead of drastically curtailing new procurement, and reducing the surplus stocks immediately, it was determined to reduce surplus stocks gradually in order to prevent collapse of a production base for military use.

Our plan is to reduce the current stockpile through fiscal year 1956, after which the estimated consumption should level off at about 336,000 tons annually.

Accordingly, procurement of new coal will decline through fiscal year 1956 and increase to the above estimated level of consumption by fiscal year 1957.

The attached schedule indicates the Air Force requirements from fiscal year 1955 through fiscal year 1958 for coal at Ladd and Eielson Air Force Bases.

You will note that the next 3 years, fiscal year 1956 through 1958 amount to about 825,000 tons. It is actually 822,000 tons for the next 3 years to be procured, as compared with a Department of Interior figure furnished in the letter previously referred to, which gave 828,000 tons.

Senator BIBLE. Colonel, do you have available to you the amounts of coal that were consumed at Ladd and Eielson Air Force Bases for the years 1950 up to and through 1955?

Colonel WELCH. We cannot furnish that information at this time.

Senator BIBLE. I think it might be well to have it furnished for the record because it seems that is a period of time when a lot of coal estimates were made by defense.

Colonel WELCH. Yes, sir.

Senator BIBLE. I wonder if it might not be well to have not only your estimates but the actual consumption for the purposes of the record.

Colonel WELCH. Yes, sir, we could furnish those for the record.

(The material referred to follows:)

DEPARTMENT OF THE AIR FORCE,  
OFFICE OF THE SECRETARY,  
Washington, D. C., July 1, 1955.

HON. JAMES E. MURRAY,

*Chairman, Committee on Interior and Insular Affairs,  
United States Senate.*

DEAR MR. CHAIRMAN: During the hearing of June 1, 1955, before the Subcommittee on Territories and Insular Affairs of the Senate Committee on Interior and Insular Affairs on the Secretary of Interior's alleged failure to build the Alaskan Railroad spur, the Air Force witness was requested to furnish information for the record concerning estimates of coal consumption and the coal consumed at Ladd and Eielson Air Force Bases for the years 1950 up to and through 1955. The preceding information, in addition to procurement information for the above period, is as follows:

[In tons]

Fiscal year	Estimated requirements <sup>1</sup>	Procurement	Consumption
1950.....	159,000	(2)	111,636
1951.....	230,000	(2)	2 64 209
1952.....	165,000	152,000	2 62,080
1953.....	379,700	299,097	112 286
1954.....	315,559	392 236	172 206
1955.....	250,228	232,000	4 265,000

<sup>1</sup> Estimated 6 months prior to beginning of fiscal year.

<sup>2</sup> Procurement records for fiscal years 1950 and 1951 have been retired by the Alaskan Command and are no longer available.

<sup>3</sup> The reduced quantities used in fiscal years 1951 and 1952 are due to deterioration of coal-fired equipment to the extent that oil-fired equipment was required to meet heating demands.

<sup>4</sup> Estimated.

The USAF procured 1,075,000 tons of coal in northern Alaska during fiscal years 1952 through 1955, inclusive, as compared to a consumption of 611,000 tons. The balance of 464,000 tons contains only four-sevenths of the original heat content or an equivalent of 265,000 tons of new coal. Deterioration is caused by the high moisture content of the Alaskan atmosphere and the type of coal produced in this area. The coal acts similar to a sponge in absorbing moisture from the air and its maximum efficiency is reduced since additional heat is required to burn off the excessive moisture.

It is estimated that there is a surplus of 186,000 tons after allowance for a normal 90-day stockpile of 79,000 tons. The surplus of 186,000 tons plus procurement of 150,000 tons will meet the estimated fiscal year 1956 consumption requirement of 336,000 tons.

It is requested that the annual quantity of coal for procurement for fiscal year 1955 which appears in the enclosure to the statement of Colonel Welch which was presented before the above subcommittee be changed to read "232,000 tons" instead of "242,000 tons."

Sincerely yours,

JOE W. KELLY,  
Major General, USAF, Director, Legislative Liaison.

Senator BIBLE. What is the project that is used in calculating future coal consumption?

Colonel WELCH. The equipment in the area that will consume the coal and also the forces that will be in the area that will need it. We have both heating and generating equipment that uses coal at these two bases. The amount of generation and heating depends partially on the amount of use that is made of the base and the forces that are in the area using those bases.

Senator BIBLE. Do you forecast beyond the fiscal year 1958?

Colonel WELCH. We have no forecast at the moment beyond 1958.

Senator BIBLE. I think that is all we have, Colonel. Thank you very much.

(Discussion off the record.)

Senator BIBLE. The staff suggests that there are some projected natural-gas pipelines into this area. I am wondering whether or not with the advent of those pipelines—I do not know how realistic they are, I do not know how far along the planning is, whether there is going to be a natural-gas pipeline into this area or not—but if so, would that be likely to replace your coal needs at the two bases?

Colonel WELCH. I could not answer specifically. I could give you the Department of Defense policy. Our policy is that we use the cheapest fuel available. If at that time the sufficient gas was available and was cheaper than the coal, it would be a logical assumption to assume that we would convert to gas.

Senator BIBLE. Do you have any information as to the projected Haines pipeline?

Colonel WELCH. The Haines pipeline is not a natural-gas pipeline. That is a fuel pipeline which will carry our aviation gasoline and jet fuel and motor gasoline and diesel oil.

Senator BIBLE. Does that in any way affect the coal picture?

Colonel WELCH. No, sir.

Senator BIBLE. Does the possible development of Gubik natural-gas pipeline affect the picture, or do you have any knowledge of that?

Colonel WELCH. I have no knowledge of that, sir.

Senator BIBLE. I think that is all, Colonel. Thank you.

I think we will hear Dr. Reed next. I understand you have to leave Washington fairly soon.

#### STATEMENT OF DR. JOHN C. REED, UNITED STATES GEOLOGICAL SURVEY, WASHINGTON, D. C.

Dr. REED. My name is John C. Reed. I am a member of the staff of the Director of the Geological Survey. I have no prepared statement. I will attempt to answer any of your questions to the best of my ability and develop any aspect of this that you think I might be able to be of help on.

Senator BIBLE. How familiar are you with this particular area?

Dr. REED. I am familiar with the area, sir. I have been there a number of times over a period of a good many years.

Senator BIBLE. In what particular connection in the line of work?

Dr. REED. I have been a geologist in the Alaskan branch of the Geological Survey for nearly 25 years. I am now in the Office of the Director. During my time in the Alaskan branch I spent many years

in Alaska on geological work, involved in the investigation of the mineral resources. Although I have not worked specifically in this area to do detailed mapping or investigations, I have been there and probably connected with the area for a long time. I might also point out that the Geological Survey is responsible for the supervision of leases on the public lands, and I have had some familiarity with the area because of the responsibilities of lease supervision. We have here, however, Mr. Leo Saarela who is the regional supervisor of the Survey for that area.

Senator BIBLE. What particular name do you give to this entire area?

Dr. REED. I am referring at the moment to a belt on the north side of the Alaskan Range that includes the three or four lease areas that have been discussed in this area. There are large coal areas stretching along the north and west sides of the Alaska Range for many miles west of the Alaska Railroad to east of the Richardson Highway. This area is the one that has been developed because it is one near the river.

Senator BIBLE. What name do you give the area?

Dr. REED. The specific area is called the Healy River coal fields.

Senator BIBLE. That refers to the area covered by Suntrana, Usibelli, and Cripple Creek, as well as the Roth property to the north?

Dr. REED. As well as some additional area not included in that map.

Senator BIBLE. There has been considerable—and I think you probably picked it up from Mr. Shallit—testimony this morning (said both in the petition and in his testimony concerning the construction of a branch line through the Usibelli lease) as to whether or not that could be done without interfering with the economic mining operation of the Usibelli lease. Have you given any thought or have you made any study of that particular problem?

Dr. REED. The matter of decision as to whether or not there should be a railroad or as to whether or not there should be a highway is not within—

Senator BIBLE. I am not asking you that question. I am not asking you policy questions on either the highway or the road. What I am asking is, Could one extend the spur line from the Suntrana claim to Cripple Creek so as to go through the Usibelli lease without unduly interfering with the mining operations of the Usibelli property, if you are qualified to speak on that question?

Dr. REED. I do not think I am able to answer that question specifically. In my opinion it would be possible to build such a line without danger to the conservation of the coal in the area over which the line would run. I am not qualified specifically to speak as to the degree to which that might or might not interfere with Mr. Usibelli's operation.

Senator BIBLE. Who might, from a Government standpoint, be able to testify to that point?

Dr. REED. I would think Mr. Saarela would come as near to it as any, although I am not sure he would be a proper man, either.

Senator BIBLE. As a practicing lawyer for many years, I can certainly say that engineers disagree.

Dr. REED. The actual matter where such a right-of-way could be given or whether it would hurt would be a decision of the Bureau of

Land Management. We would advise the Bureau of Land Management, but the decision would be that of the Bureau of Land Management.

Senator BIBLE. You do not believe you are in a position to testify on that question?

Dr. REED. No, sir.

Senator BIBLE. I am not asking as to the builder of the highway or the road. I am asking whether you could build the spur line without interfering with the operation of the Usibelli company.

Dr. REED. I am not familiar with the degree to which that might hurt Mr. Usibelli.

Senator BIBLE. Several questions have been suggested to me that seem to go more to the economic phase, and I do not know whether that is your particular field of work in the Department or not.

Dr. REED. It is not.

Senator BIBLE. I might ask the question. If you are not the qualified witness to give the answer, simply say so. Do you believe the extension of the branch line through the Usibelli lease would result in a more economical operation to the Usibelli property? That is an economic question.

Dr. REED. As an individual, in my opinion it would make it easier for Shallit to operate, and hence he probably could deliver coal at a somewhat lower price.

Senator BIBLE. My question was directed to the Usibelli property rather than Cripple Creek. But I assume your answer would be the same.

Dr. REED. No, I am not sure that it would.

Senator BIBLE. You think there is a distinction?

Dr. REED. I have seen Mr. Usibelli's statement that this would not aid him at the present time. I am only going on his statement and not my own.

Senator BIBLE. You have no independent judgment as to whether the railroad would aid him or would not aid him?

Dr. REED. I do not.

Senator BIBLE. Do you have any opinion as to the opening up of the Roth property by extending the spur line to the Cripple Creek line? Is that a desirable feature of the problem before us?

Dr. REED. The Roth property has been held in reserve for a possible emergency. It was the opinion of my Bureau, and I believe generally accepted, that it was an area where coal could be obtained rather easily and rather quickly. However, to take that coal out, transportation of some sort would have to be provided. It hence would follow that it would be more immediately available if transportation were put in at this time.

Senator BIBLE. And if there were a spur line that extended to the Cripple Creek property, then that would be advantageous to the Roth property which adjoins it?

Dr. REED. It would, indeed. Although to my knowledge there is no plan to do any mining in the Roth property at the present time.

Senator BIBLE. There has been testimony given by Mr. Shallit to the effect that there would be a tremendous saving to the military if the railroad is extended to the Cripple Creek property. Are you in a position to comment as to the amount of saving that might be realized by extension of the line?

Dr. REED. No, sir, I cannot answer that. I heard Mr. Shallit's statement that he offered a firm bid at a dollar a ton cheaper if he had such a railroad.

Senator BIBLE. That is out of your field, too, is it? I do not want to ask you any questions on which you are not completely qualified as a witness.

Dr. REED. I will be glad to tell you if I cannot answer.

Senator BIBLE. Do not hesitate to tell me if there is something that is not within your field.

Dr. REED. Yes, sir.

Senator BIBLE. I think it might be helpful for the record if you could comment upon the known reserves in each of these 4 areas and the future potential.

Dr. REED. That matter of reserves is the field in which the Geological Survey is specifically responsible.

Senator BIBLE. So I understand.

Dr. REED. I do not have personally the detailed information to give you. I am sure that Mr. Saarela will be able to give you such figures. I can give you an impression that as we go up the stream from Suntrana across Usibelli to Cripple Creek that the available reserves are larger. There has been less mining, of course.

I heard Mr. Shallit's comments about the reserves that he had. As far as I know, they are of the right order.

Senator BIBLE. Your statement is that Mr. Saarela, who is the regional mining supervisor, is in a better position to develop the actual reserves in these 4 areas?

Dr. REED. That is correct.

Senator BIBLE. Do you have any information as to the quality of the coal in this particular area?

Dr. REED. The coal beds being mined are all in the same group of beds. The quality ranges somewhat from bed to bed and to a certain extent from place to place in the various coal beds. The quality in general is lower than the quality of the coal on the south side of the Alaska Range.

Senator BIBLE. The staff has suggested a number of questions here, Dr. Reed. I think they all go to economic considerations. I do not know whether that is your field.

Dr. REED. Specifically, it is not. Some of the questions I might be able to throw some light on. I do not know what they are.

Senator BIBLE. They are all in the nature of economics of making the extension of the spur line into the field and how that could affect the coal prices.

Dr. REED. I could not answer such questions.

Senator BIBLE. I think that is all we have to develop. Thank you very much, Dr. Reed. I hope you have a very fine trip. I am sorry we delayed your departure.

Dr. REED. That is perfectly all right, sir.

Senator BIBLE. I think we possibly have time for one more witness before the lunch hour. Are there any other witnesses that we can hear before we hear the Under Secretary at 2 o'clock?

(Discussion off the record.)

Senator BIBLE. We will now hear from Mr. Kirkpatrick. Will you identify yourself.

**STATEMENT OF N. B. KIRKPATRICK, SUNTRANA MINING CORP.,  
INC., ANCHORAGE, ALASKA**

**Mr. KIRKPATRICK.** My name is N. B. Kirkpatrick, Suntrana Mining Corp., Inc.

**Senator BIBLE.** You consider your residence as Alaska?

**Mr. KIRKPATRICK.** Anchorage, Alaska, is my home.

**Senator BIBLE.** Mr. Kirkpatrick, your interest in this particular problem is what? You are the owner of the Suntrana Mining Co., Inc.

**Mr. KIRKPATRICK.** I am a member of the corporation of Suntrana Mining Co., Inc.

**Senator BIBLE.** It is held as a corporation?

**Mr. KIRKPATRICK.** Yes, sir.

**Senator BIBLE.** How large a corporation is it?

**Mr. KIRKPATRICK.** How do you mean?

**Senator BIBLE.** Memberwise.

**Mr. KIRKPATRICK.** There are two of us that own the majority of the stock.

**Senator BIBLE.** We would be very happy to get your views as to this spur-line question. Of course, you have a spur line right into your property?

**Mr. KIRKPATRICK.** Yes, sir. I am vitally interested in that. When we purchased the assets of the Healy River Corp. in July of 1953—

**Senator BIBLE.** What was the Healy River Corp?

**Mr. KIRKPATRICK.** That was the predecessor of the Suntrana Mining Co., Inc. We obtained an asset of \$30,000—not \$20,000—that had previously been advanced by the Healy River Coal Corp. for the construction of the existing spur from Healy to Suntrana. I wanted to correct that figure of \$20,000 as stated by Mr. Shallit.

**Senator BIBLE.** You acquired a \$30,000 figure instead of a \$20,000 figure?

**Mr. KIRKPATRICK.** That is correct. We are unable to depreciate it and we still have it as an asset on our books and probably will continue with it. In addition to that there was some statement by Mr. Shallit about our ability to continue to produce coal as we would be removing all the reserves above water level.

**Senator BIBLE.** How do you mine on the Suntrana? Is that underground?

**Mr. KIRKPATRICK.** That is all underground. At the rate we can anticipate by bids here, we have about 2 to 3 years of continuing above water level. There has been engineering work accomplished and we do have pretty good knowledge of how we are going to go to the next lower level. By deepening we hope to increase the quality of the coal by the higher pressures. Indications at the present mining where we are mining with the deeper coal, the coal runs quite materially higher in quality. We do not plan to move to another location, but we do definitely plan to go to another lower level and explore the mine further.

**Senator BIBLE.** Is that below water level?

**Mr. KIRKPATRICK.** Yes, below water level.

**Senator BIBLE.** You have 2 or 3 years of reserves above water level?

**Mr. KIRKPATRICK.** It is dependent on how much our production will be and the market we will have.

Senator BIBLE. When you go below water, what type of cost do you go to in pumping?

Mr. KIRKPATRICK. It is unknown to us how much water there will be. We have quite a water problem in developing reserves now. We have to drain the water that comes in after we drive our gangways, and it runs for quite some time.

Senator BIBLE. How do you drain it, through pumping?

Mr. KIRKPATRICK. No, it drains out through gravity now.

Senator BIBLE. Can you still accomplish that if you go deeper?

Mr. KIRKPATRICK. No, sir; we will have to pump the water.

Senator BIBLE. Where do you get the power for your pumping?

Mr. KIRKPATRICK. We have our own powerplant. We burn our own coal to produce power.

Senator BIBLE. Is that sufficient to generate enough electricity for pumping purposes?

Mr. KIRKPATRICK. Yes, sir.

Senator BIBLE. I have a lot of familiarity with dewatering mines, and I know the cost is a terrific figure.

Mr. KIRKPATRICK. About the only indication of the problem we will have is our experience in getting water to service the camp. We must now go through an existing coal seam out into the river to get enough water to afford the fire protection. There is some doubt that the water permeates through the seams in great quantity.

Senator BIBLE. How long has your corporation held this property?

Mr. KIRKPATRICK. Since July of 1953.

Senator BIBLE. How much have you produced each year since then?

Mr. KIRKPATRICK. We produced the first year approximately 220,000 tons. We took over existing contracts held by the Healy Corp. This year our production will be down, I would anticipate, to 130,000 tons.

Senator BIBLE. Next year will be approximately the same?

Mr. KIRKPATRICK. Next year we do not know. We submitted on the same bids as Mr. Shallit.

Senator BIBLE. It depends upon your success in obtaining the bid?

Mr. KIRKPATRICK. Yes, sir.

Senator BIBLE. Prior to the acquisition by your corporation of the Smtrana property, what producing record did it have? How much coal was produced there by the Healy Coal Corp.? When was that founded?

Mr. KIRKPATRICK. I believe about 1922 or 1923.

Senator BIBLE. Was it a continuous producer from 1922 up until they sold to you in 1953?

Mr. KIRKPATRICK. Yes, it was.

Senator BIBLE. How much coal did they produce, if you know?

Mr. KIRKPATRICK. That varied. In the later years it increased to, I believe, about 150,000 tons from the records as I remember them. They got up to that, but the first year we operated was the largest year in production by quite some extent.

Senator BIBLE. You do not know what the overall 30-year production record of the mine is?

Mr. KIRKPATRICK. No. It is as the market existed.

Senator BIBLE. This is past markets, so there would be some records that would be available to show actual production?

Mr. KIRKPATRICK. That is true. However, I do not have them with me.

Senator BIBLE. You have been operating it for 2 years?

Mr. KIRKPATRICK. Yes, sir.

Senator BIBLE. Simply to clarify that one point as to the potential reserves, it is my understanding that your calculations, that you have reserves for 2 to 3 years' operation above the water level?

Mr. KIRKPATRICK. Yes, sir.

Senator BIBLE. Unknown reserves and unknown economic factors below the water level; is that a correct statement?

Mr. KIRKPATRICK. Yes, sir. We also bid on the entire amount of coal for the next 3 years, and we are willing and able to provide it.

Senator BIBLE. You bid on the entire 882,000 tons that the Air Force is requiring?

Mr. KIRKPATRICK. Yes, sir. We would like to bid on more.

Senator BIBLE. What effect would the extension of the spur to the Cripple Creek property of Mr. Shallit have upon your operation?

Mr. KIRKPATRICK. It is hard for me to forecast that. There would be some competitive effect, no doubt. It depends on what the railroad rate was. If our rate was raised, we would be vitally interested.

Senator BIBLE. Would that be likely if you are not served by it?

Mr. KIRKPATRICK. That I do not know. I have understood that might be a part of the plan in building the road up there, to increase the freight rate from the area. If that was true, our investment in the existing spur is somewhat lost to us.

Senator BIBLE. As I understand you, the cost of the spur from the main line to your property has been completely paid for.

Mr. KIRKPATRICK. The railroad and the Healy River Coal Corp. built that. I do not know whether the \$200,000 figure included the original cost or the development of a new bridge in later years. I think very possibly the latter is what you would find.

Senator BIBLE. Is there any unpaid cost of the spur line chargeable to your corporation at the present time?

Mr. KIRKPATRICK. No, sir.

Senator BIBLE. Would the construction of a spur line into the Cripple Creek area reduce the cost of coal at Anchorage?

Mr. KIRKPATRICK. At Anchorage?

Senator BIBLE. Yes.

Mr. KIRKPATRICK. I would have to know what Mr. Shallit is going to bid to tell you on that. I do not know.

Senator BIBLE. You do not know whether the change in the actual cost of hauling would be materially reduced? That is, railroad as compared to the present method of trucking?

Mr. KIRKPATRICK. No, I cannot say.

Senator BIBLE. You do not truck yourself; is that right?

Mr. KIRKPATRICK. In this mine, no. I have a lot of experience in trucking. But I would not want to make a statement on his analysis of cost, because I have not investigated.

Senator BIBLE. Are you familiar with the petition which Mr. Shallit filed with this committee?

Mr. KIRKPATRICK. Yes, I am.

Senator BIBLE. Likewise, the price and answers that have been made to it?

Mr. KIRKPATRICK. Yes.

**Senator BIBLE.** You have had occasion to read all of those?

**Mr. KIRKPATRICK.** Yes.

**Senator BIBLE.** Do you have any comment or further information that you would like to give to the committee?

**Mr. KIRKPATRICK.** I am particularly interested if there was a railroad built into there, what would be the new freight rate and whether our mine freight rate would be increased or not. That is quite an interesting thing to me.

**Senator BIBLE.** I can see why it would be. I understand your interest in it. We will try to develop that.

Do you have any further information or comments or suggestions you would like to make to the committee in regard to handling this petition?

**Mr. KIRKPATRICK.** Not that I can say right now. I have not heard enough.

**Senator BIBLE.** It can be understood that if you do care to furnish a written statement to the committee at the conclusion of the hearing, the hearing will be kept open for that purpose.

**Mr. KIRKPATRICK.** Thank you.

**Senator BIBLE.** Thank you, Mr. Kirkpatrick.

If there are no further witnesses to be heard during the morning hour, we will recess until 2 o'clock.

(Whereupon, at 12:25 p. m., a recess was taken until 2 p. m., of the same day.)

#### AFTERNOON SESSION

**Senator BIBLE.** The meeting will come to order.

**Mr. Secretary,** we will be very happy to hear from you as the No. 1 witness for the afternoon on this present matter that is before us. You may proceed.

#### STATEMENT OF HON. CLARENCE A. DAVIS, UNDER SECRETARY OF THE INTERIOR

**Mr. DAVIS.** Mr. Chairman, I would like to make a statement with reference to this matter.

In the first place, let me say that I am happy to be here and to present the views of the Department of the Interior with respect to the proposed extension of the present Healy River branch line, as far as the so-called Roth Reserve, approximately 6 miles beyond the present railroad.

Under date of May 27, I wrote to Senator Jackson, chairman of this subcommittee, setting forth in some detail the conclusions which had been reached by the Department on the basis of very careful study. In that letter it was pointed out that Mr. Shallit's petition was based entirely on various recommendations and statements made in 1953 or prior thereto, when it was thought that the demand and market for Alaskan coal north of the range would grow rapidly to a tremendous extent.

Since 1953 many things have happened. The Korean war has come to an end, military building programs have been modified, and a more careful analysis of the need for coal has been made.

These factors have altered the situation radically. It is now clear that the volume of coal which would be shipped over such an extension

would be far less than was formerly supposed. This sharp reduction in the anticipated coal requirements north of the range has made it clear that the proposed extension cannot be justified.

My letter of May 27 sets forth in somewhat more detail the facts upon which this conclusion is based.

To go a little farther into this general problem, it seems to me that there are 2 or 3 points of view from which this proposed extension might be analyzed.

First of all, would construction of the railroad help develop the coal production of the Territory? In other words, is there a market for additional coal production?

If so, there might be a valid argument for proceeding with the construction, notwithstanding the considerable expense in building this short stretch. However our study has convinced us that the market for coal produced north of the range is extremely limited.

Building this railroad extension to reach the Cripple Creek mine will not, in our judgment, result in an expansion of coal production. It may improve the sales of one company at the expense of the other two, but it will not result in any increase in the total volume of sales, or in any overall expansion of the coal industry.

Secondly, will construction of this extension result in savings to the Government and to civilian consumers in the cost of coal? This is strictly an economic question and must be answered solely on the basis of economic analysis. The key question here is, would enough coal be shipped and would the savings be great enough to amortize the cost of construction?

To answer this question, it must be recognized that even under the optimistic estimate of conditions that prevailed in 1953, and even assuming that all the savings would accrue to the consumer rather than to the producer, it would have taken 14 years to amortize the construction cost. Under present conditions, it is impossible to predict whether the construction cost would ever be amortized.

Thirdly, there is the question of the effect of this proposed extension on the financial position of the railroad. It would bring no new traffic to the railroad since the railroad already carries all the coal produced in the Healy River Valley.

If rates were to be established according to the method usually employed in making rates under such circumstances, we would make the same rate to all the coal producers in the Healy River Valley. That would mean that the railroad would derive no revenue at all from this additional mileage, but, on the other hand, would be put to additional maintenance and operational expense of approximately \$42,000 per year. In short, under such circumstances, the railroad would lose rather than gain, moneywise, from having the extension.

As an alternative, it has been suggested that we might try to collect so much a ton from the coal producers to be served by the extension, this revenue to be applied toward paying off the construction cost of the railroad.

Such a method of financing the extension would be rather unorthodox in the railroad business. Assuming that we followed such a system, it would obviously absorb all of the anticipated savings to the consumer or producer of coal for many, many years.

If the Department of Defense should indicate to us that this extension is essential from the standpoint of national security, I feel sure

we would give most serious consideration to the construction on that ground alone. However, the Department of Defense apparently does not consider that its needs require this construction.

As the committee knows, we in the Department of the Interior have made a diligent effort to hold down unnecessary expenses and to avoid unjustified construction programs in order to conform to the administration's policy of reducing Federal expenditures. Since this extension cannot be justified from the standpoint of economic development, national security, or sound business, we do not feel we should request funds for such a purpose.

If the committee has any questions on this subject, I have with me a number of members of my staff who are familiar with the details of the problem and who are in a position to supply any information the committee desires.

In addition to that statement, Mr. Chairman, I might say that the letter which was transmitted, and which I assume you have seen, is in addition to my statement.

Senator BIBLE. It has been made a part of the record.

Mr. DAVIS. Might I suggest that since Mr. Frank Kalbaugh, who has been the manager of the railroad for the last 2 years, is present and is quite familiar with this whole situation with which I obviously am not personally familiar, that we would appreciate it if Mr. Kalbaugh were given an opportunity to explain this situation as he sees it from what we think is a very successful managership of the Alaska Railroad for the last 2 years.

Then there are other members of the staff here who have been more or less familiar with this problem for some length of time.

Senator BIBLE. We would be very happy to do that. The thing that strikes the committee is the apparent reversal of position.

You have commented in your detailed letter of May 27 on that, which of course was made a part of the record. It seems that that is the main burden before this committee, to determine the whys and wherefores of this apparent change as a result of certain findings that were made back in 1952 and 1953 and even some findings and statements and acts of filing for right-of-way that were made as late as April 1954.

I do not know whether you care to develop that or whether you would rather have us call upon the manager of the Alaska Railway and others.

Mr. DAVIS. I think it might be better to call on some who have been closer to it because I, personally, have not had too much to do with this except in a general way.

I do know this, that the military requirements there have rather upset the timetable for everybody concerned. Instead of these estimates which were made in 1953 of estimates running up as high, if my memory is right, as seven hundred or eight hundred thousand tons a year, we are now down to 140,000 tons a year, and the military, of course, have a large stockpile which is accounting for some of that.

But, undoubtedly, there have been material changes in circumstances as to the amount of traffic which this spur might serve. Now that is just a generality but that is, in general I think, the departmental position.

I would like to defer the details of it to some of these other gentlemen.

Senator BIBLE. What is the departmental policy, Mr. Secretary, insofar as attempting to work out a means or method of obtaining adequate access for the Shallit property?

Mr. DAVIS. I think our policy in all of these cases with reference to lands over which we have control is, of course, to develop reasonable access to the property.

Senator BIBLE. I might state for your information that one of the main bases of the petition of the complaint is that the present road serving the Cripple Creek property of Mr. Shallit is inadequate. It is not an adequate road so that he can haul his coal from Cripple Creek to the railhead on the lower property of the Suntrana.

Mr. DAVIS. I am a little familiar with that and, as the committee may already know, of course, there has been a good deal of rivalry, lack of neighborliness shall we say, between some of the competitors in the area there and the right-of-way problem. The road especially has been a troublesome thing.

I do not think anyone would dispute that Mr. Shallit, as a matter of principle, should have access. The question is: Where and what complications ensue from that.

Senator BIBLE. Is the Interior Department in a position to serve as arbitrator and negotiator in attempting to work out proper access for the Shallit property?

Mr. DAVIS. I am not too familiar with where they stand now. There have been applications—and I do not know whether they are still pending or not—for various rights-of-way through the Usibelli property to this property.

There have been, as you probably know, rather forceful objections by Usibelli to the various routes on the grounds that they were interfering with buildings and interfering with wells and all kinds of objections of that nature. The parties have not been able to agree on a right-of-way to the mine.

Senator BIBLE. That has caused the committee some concern, I think, because it appeared here in the later stages of the presentation, at least, that in applying to the railroad company for a spur line; first, there seemed to be some assurance that there would be one as a result of this committee hearing; that later on the position was changed; and then application was made to the road commission and the road commission gave no relief on the grounds that they would build a spur line.

It appeared that somebody was throwing a hot potato from one to the other. I was wondering if there was some way to bring it to a head to determine whether or not the Interior Department itself can exercise powers to resolve this right-of-way problem.

Mr. DAVIS. Well, Senator, I think it possibly could be resolved and I suspect that it ought to be resolved, perhaps by the designation of a route. I have had some question about the right of the Interior Department to simply, on its own motion, say "This is to be the route."

The applications which have been filed there, if my memory serves me right, I took a look at them perhaps a year ago while I was Solicitor and I had the distinct impression then that they were not adequately defined on the map.

I am sure you understand as a lawyer that you file these designations with a map showing the rights-of-way. It seemed to me that it was vague, especially vague in the use of the Usibelli property.

It does create a difficult thing to resolve when you have protests that this route causes damage in such a particular, that route is wrong, and the other is wrong. Yet somehow I would assume that Mr. Shallit was entitled to an access route to that mine.

Senator BIBLE. It would appear to the committee that there has been some showing along that line. How is that resolved, A, B, C, D, by the Interior Department and what form does it take? It is instituted through application?

Mr. DAVIS. Instituted through application for this particular route. Once you disapprove of that particular route and that particular application then, as I say, I question whether Interior has the authority to start changing the route and all that sort of thing. Maybe they have, but it has not been done.

Senator BIBLE. What should be done then in order to clarify that question now?

Mr. DAVIS. What I was very much in hopes could be done was that these people could agree on a route which we would readily approve, of course.

Senator BIBLE. If they cannot approve of a route, what is the next step?

Mr. DAVIS. Then we would have to resolve it anyway.

Senator BIBLE. It would be by the Interior Department's final determination?

Mr. DAVIS. That is correct.

Senator BIBLE. There is no question about the statutory framework for doing that?

Mr. DAVIS. I do not believe there is.

Senator BIBLE. Thank you very much for your kindness, Mr. Secretary. I know you are very, very busy and you certainly may be excused.

Mr. DAVIS. Thank you.

Senator BIBLE. I think it is proper now that we call Mr. Kalbaugh. I was glad to learn that he ran the leading railroad in Nevada for a number of years.

#### **STATEMENT OF FRANK E. KALBAUGH, FORMER GENERAL MANAGER OF THE ALASKA RAILROAD**

Mr. KALBAUGH. Thank you, Mr. Chairman.

Senator BIBLE. Do you have a prepared statement?

Mr. KALBAUGH. No, Senator, I have no prepared statement. I was not informed until yesterday that I was requested to be here so, as a consequence, I did not prepare a statement.

Senator BIBLE. First, will you identify yourself for the record?

Mr. KALBAUGH. My name is Frank E. Kalbaugh and I was General Manager of the Alaska Railroad from September 1, 1953, to April 1, 1955.

Senator BIBLE. In your employment during that time, are you familiar with the present problem as presented by the Shallit petition?

Mr. KALBAUGH. Yes; in a general way, during my tenure in Alaska, I am familiar with the problem. I had the opportunity of looking over the area personally in August of 1954, which was my first, in fact only, trip up through that area to look at the topography of the country with relation to the possibility of building a railroad up in that area.

I might state that on my arrival in Alaska, sometime after my arrival, the matter was brought to my attention of this proposed extension of the Suntrana branch through the Usibelli properties and through the Cripple Creek property up to the Roth Reserve.

At that time it was represented to me by certain of the people on the railroad and elsewhere that the problem was one of national defense. In other words, that the Defense Department was interested in getting a railroad up there to get the coal out.

Subsequently, on a trip to Washington in, as I recall, the fall of 1954 I found out that the Defense Department had notified the Interior Department that they would not support such an extension; that was brought to the attention of the Interior Department in connection with Mr. Shallit's application to the ODM people for a loan as he has outlined. They turned it down on the basis that it was not necessary to defense and, as a consequence, I believe the petition for a loan was withdrawn.

Mr. Shallit asked me if I would not serve upon this board of directors along with others in the railroad group. I told Mr. Shallit that I did not believe it was proper for the Alaska Railroad to be represented on any such group and, if he did secure such a loan, that it should be someone else that should control it rather than have the railroad mixed up in it.

The loan was denied, or at least it was withdrawn on the basis that it would be withdrawn because the Defense Department informed us the extension of the railroad could not be justified from the defense angle. That then left it purely and simply a question of economics as to the railroad, would the railroad built it.

In analyzing the matter from a very practical standpoint, I did not see how 1 ton of coal more was going to be shipped over the railroad than is presently being shipped over the railroad if the spur were extended. So, from a practical standpoint, I could not see why the railroad should spend nearly \$1.5 million on something that would bring no revenue in and particularly after the Congress had indicated on many occasions that the Alaska Railroad should be on a self-sustaining basis and should cease coming to Congress and cease asking for continued appropriations.

So, as a result, I did nothing about it. In fact, the only concrete action I took was the withdrawal of the application to the Bureau of Land Management of our request for a right-of-way easement through this property in order to construct a railroad.

Senator BIBLE. And in making that withdrawal, you based it upon what, specifically?

Mr. KALBAUGH. It was based primarily upon the fact that the railroad could not justify it from the economic standpoint. In other words, it would cost the railroad additional money to operate and maintain this without additional revenues coming in to support it. There would be no more coal shipped than had been shipped previously and I could not see the position, could not take the position, that the railroad should subsidize one coal operator in order to get him on a more competitive basis with other operators.

Senator BIBLE. As I understand it, the cost of building a spur into Cripple Creek varies somewhere between \$1 million and \$1,450,000, and those are your figures; is that correct?

Mr. KALBAUGH. Those were figured at the time, Senator, yes; but, however, those figures were made prior to my arrival in Alaska. I have always felt that they were ultraconservative. I doubt very much that it could be built for that amount of money.

Similarly, the proposed route was surveyed in part and then a reconnaissance survey made of the balance and, after looking at it on the ground, I do not believe that it would be practical for the railroad to be built where the proposed survey was initially outlined.

I discussed that matter informally with Mr. Shallit and, as I recall, I am not too sure of this, he agreed that a possible relocation, if the railroad were to be built, would be the thing. In other words, the railroad would be then faced with the same trouble he is having with his road, the railroad would be washed out and it is true the railroad would have to be replaced at a cost to the railroad and not to the mine operator.

It just seemed to me that as long as this mine is up there, I figured it out that Mr. Shallit went in and developed this property and he certainly knew what he was getting into; that if it could not be justified from a defense standpoint, I could not justify it from a railroad standpoint.

Senator BIBLE. Prior to the time you made withdrawal of the right-of-way, was that before the Bureau of Land Management, is that the agency that would handle that?

Mr. KALBAUGH. Yes.

Senator BIBLE. Prior to that, what representations, if any, did you make to Mr. Shallit concerning the construction of a spur?

Mr. KALBAUGH. I told Mr. Shallit that I would have no objection to constructing the trackage up there if the money were appropriated for it, but I was not in a position to make the request for the money to be appropriated and that I was not then and I still would not be if I were still connected with the railroad.

Senator Bible. During the time you were connected with the railroad, did you ever give Mr. Shallit reason to believe that you felt the railroad should be built into his property?

Mr. KALBAUGH. No; I did not. If I did, it was not the intention to do so. I did not come right out and tell Mr. Shallit, as I recall, that I would either oppose or support such a move because, after all, it was not my decision to make. All of these people who made reports on the proposed extension of the Suntrana Branch, it's true that there have been reams of reports and correspondence made about it but as I recall our files on Alaska, no decision was ever made either in this administration or the prior administration at a level where it would have to be made whether it would or would not be extended.

Senator BIBLE. And you were no party to ever making such a recommendation?

Mr. KALBAUGH. No.

Senator BIBLE. Could a railroad be built into the Cripple Creek area without disrupting the mining operations of the Usibelli property?

Mr. KALBAUGH. I am not sufficiently qualified in mining, Senator, to answer that. I do not know.

Senator BIBLE. The committee called to my attention that they were under the impression that sometime during the course of your em-

ployment with the Alaska Railroad, you had recommended the spur. I do not know whether that is correct or not. I understood you to say you never recommended it.

Mr. KALBAUGH. Not on the basis of it being built by the railroad except in support of a request from the Department of Defense that it was necessary from the defense standpoint. But if it were not necessary from the defense standpoint and the Department of Defense indicated that it was not, then I would not recommend it. In other words, I did not place myself in the position of recommending the extension of the Suntrana branch in opposition to the Department of Defense.

Senator BIBLE. Apparently this particular letter that Mr. French had reference to does not bear directly on that point. It bears more directly on the question of right-of-way. I think that is all I have, Mr. Kalbaugh, unless you have something to add for the enlightenment of the committee.

Mr. KALBAUGH. No; really I cannot think of anything, Senator, but if there is anything subsequently that you would like to discuss with me, I would do my utmost to answer.

Senator BIBLE. My understanding of your testimony is that the costs of between \$1 million and \$1,450,000 were established by your predecessor with the Alaska Railway and that your opinion is that that cost figure, if anything, is conservative.

Mr. KALBAUGH. Yes, sir; notwithstanding that they had planned on using old secondhand 70-pound light rail for the extension. But the bridges in themselves were going to be the very expensive items.

Senator BIBLE. Thank you very much.

Mr. KALBAUGH. Thank you.

Senator BIBLE. Maybe we ought to have the present manager of the Alaska Railroad. I understand the assistant manager is here.

Will you state your name and identify yourself for the record?

#### **STATEMENT OF JOHN E. MANLEY, ACTING MANAGER OF THE ALASKA RAILROAD**

Mr. MANLEY. John E. Manley, Assistant General Manager of the Alaska Railroad.

Senator BIBLE. You have been acting in that capacity for how long a period of time?

Mr. MANLEY. Since July of 1949.

Senator BIBLE. You are familiar with the petition as filed by Mr. Shallit?

Mr. MANLEY. Yes, sir; I am quite familiar with it.

Senator BIBLE. Are you familiar with the requests that have been made for the building of a spur track into the Cripple Creek area?

Mr. MANLEY. Yes, sir.

Senator BIBLE. What assurances have you made or has the Alaska Railroad made to Mr. Shallit concerning the spur?

Mr. MANLEY. I do not think that the Alaska Railroad made assurances to Mr. Shallit directly, Mr. Chairman. The railroad did apply or request funds for the year ending June 30, 1953, the fiscal year 1953 appropriation. The railroad requested, as I recall, \$1,350,000 for the extension of the Suntrana branch.

Senator BIBLE. That request was based on what?

Mr. MANLEY. That request was based on the then tonnage predictions given by the military for projected coal tonnage requirements.

Senator BIBLE. Was a similar request made after that particular date?

Mr. MANLEY. No, sir.

Senator BIBLE. I take it that appropriation was not allowed.

Mr. MANLEY. That is right, sir.

Senator BIBLE. The request has never been renewed?

Mr. MANLEY. No, sir; not to my knowledge.

Senator BIBLE. What is your feeling as to the construction of this spur track into the Cripple Creek area?

Mr. MANLEY. Mr. Chairman, in April, I believe it was April of 1953, I wrote a letter to Mr. Lowell Puckett of the Bureau of Land Management and requested the withdrawal of land for a railroad right-of-way from Suntrana to the Roth Reserve. That request was based largely on a series of meetings which were held by, I believe Mr. Lud Anderson, of the Bureau of Mines. Perhaps it was Mr. Leo Saarela.

These meetings were held subsequent to the time the railroad realized that the money would not be forthcoming from Congress.

Senator BIBLE. These meetings were held when?

Mr. MANLEY. Subsequent to our understanding that the money would not be appropriated for the extension of the Suntrana branch. At that time both coal operators, both Mr. Usibelli and Mr. Shallit, were striving to arrive at a means whereby they could finance the construction, whether by means of a reduction in their price to the procuring officer or by contributing labor.

Mr. Shallit stated at these 1953 meetings that he could save. I believe the figure was 84 cents per ton should a rail spur be built and, at the same time, Mr. Usibelli was in favor of a rail spur; in fact, he stated that he would contribute \$50,000 toward the construction of such a spur.

Senator BIBLE. Now, this was in the spring of 1953, is that correct?

Mr. MANLEY. Yes.

Senator BIBLE. You may proceed.

Mr. MANLEY. Since both operators were striving for a spur, we initiated action with the Bureau of Land Management in order that there would not be any legal question as to the right-of-way between Suntrana and the Roth Reserve. That, I believe, is the last action.

Senator BIBLE. That is the last action that you took, is that correct?

Mr. MANLEY. Yes, sir.

Senator BIBLE. And that was later withdrawn by Mr. Kalbaugh, is that correct?

Mr. MANLEY. Yes, sir.

Senator BIBLE. I note in this letter or this filing under date of April 29, 1953, that after making the request and describing the right-of-way, you state as follows:

You will note in our letter of June 23, 1952, that the railroad contemplates the extension of this line in order that the Usibelli Coal Co., Cripple Creek Mining Co. and any future producers may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed on to the Government in reduction of bid prices for the furnishing of coal as well as to private industry. It is estimated that the construction of this line would result in the reduction of coal costs to the Territory of \$200,000 annually.

I am directing your attention particularly to that last sentence where you state that it is estimated the construction of the line will result in the reduction of coal costs to the Territory of \$200,000 annually. Upon what was that based?

**Mr. MANLEY.** Mr. Chairman, as I recall it, that estimate was based on statements made by Mr. Shallit in the meeting held in the spring of 1953. Mr. Shallit indicated, and I was informed it was an estimate only, that he could in some manner or other contribute or save approximately 84 cents a ton if a rail spur went up there.

On the basis that Mr. Shallit hauls approximately 6 miles and the Usibelli Coal Co. hauls approximately 3 miles, we halved the amount of savings that Mr. Shallit would make and applied that to the tonnage that would be shipped from the Usibelli Coal Corp. and multiplied that by the projected coal tonnage for the following season that we obtained from the military. It produced, I think, actually \$201,000.

**Senator BIBLE.** What projected tonnage did you take in arriving at that figure?

**Mr. MANLEY.** I think it was the fiscal 1954 tonnage, which was approximately 350,000 tons as the combined tonnage from Usibelli and the Shallit property.

**Senator BIBLE.** Well, is it your opinion now that you would save that much in coal costs by building a spur into this property?

**Mr. MANLEY.** Well, Mr. Chairman, on the fiscal 1956 tonnages, I would like to stress incidentally that the railroad would not save anything. It would actually mean an added cost.

**Senator BIBLE.** I understand that.

**Mr. MANLEY.** The 1956 tonnages out of the Suntrana area are, roughly, half of what they were for 1954.

**Senator BIBLE.** It would be half that. Do you think that the users in the Territory would save \$100,000 then in this next fiscal year if the spur were constructed?

**Mr. MANLEY.** There are a lot of variables. If all of the coal were sold by the Suntrana Coal Corp., there would be no saving.

**Senator BIBLE.** I understand.

**Mr. MANLEY.** If it were all by Usibelli, it would be a lesser saving, or if it would be all by Mr. Shallit there would be a greater saving.

In fiscal 1954, the year that estimate was made, there were approximately 550,000 tons of coal, I believe, from the Suntrana area, of which approximately 350,000 tons were shipped by Usibelli and Shallit. The total military requirements as projected for the fiscal year 1956 for north of the range is 150,000 tons so the reduced tonnage, of course, will upset the picture by quite an amount.

**Senator BIBLE.** This right-of-way request was filed April 29, 1953, which is just 2 years ago, by yourself. That was done under what authority? Were you authorized to do that or is that within your purview as manager?

**Mr. MANLEY.** As acting general manager. Actually, Mr. Chairman, under the railroads enabling act, it is not necessary to make such a filing. I think it is title 48, section 301 through 309, which indicates that and also title 48, section 411, confers the right on not only the Alaska Railroad but I believe any railroad in the Territory to achieve a right-of-way by the construction of rail lines. But at the time that

letter was written, the whole thing was in a state of flux and it was felt that if the railroad were not constructed, this same plan that Mr. Shallit was working on could perhaps be utilized in part for a road to be constructed, as you might say by the method of the principal beneficiaries financing it.

Senator BIBLE. The real purpose of my question is to determine why the change in attitude because it does seem to me that in 1952 and 1953 there were some definite indications that right-of-way was to be secured and that a spur line was to be built and that representations were made by certain people, possibly including yourself, and then a short time after that the picture seems to have changed. Exactly why did that picture change?

Mr. MANLEY. At the time of this letter being written, Mr. Chairman, there was no request for funds on the part of the railroad in effect for the extension of this spur. We had, as I say, made for the fiscal year 1953, a request for \$1,350,000 for such an extension and the funds had been deleted. At the time of writing this letter, it was my personal opinion that in view of the apparent enthusiasm at that time of both coal operators, that they would achieve some method of financing. As I said before, Mr. Usibelli offered \$50,000 toward the initial construction of a rail line. Mr. Shallit at these meetings indicated that he had been conferring with the Navy officer who does the procuring for the military coal procurement.

They both, and Mr. Shallit especially, felt so confident that they could achieve some financing that the letter was written to the Bureau of Land Management merely as preliminary step so that there would be no delay if it turned out that the matter could be financed.

Senator BIBLE. Was that filing on behalf of yourself or the Alaska Railroad bolstered by whatever type of showing you had before you? Was that passed on to the Interior Department to secure from them a positive statement as to their policy?

Mr. MANLEY. I would have to presume, Mr. Chairman, that it was passed on in the form of copies. I do not believe I could answer you definitely on that without referring to the files.

Senator BIBLE. Since the date of your filing of April 20, 1953, again, what has come about to change the position of the Alaska Railroad? Does it boil down purely and simply to the estimated needs of the Defense Department, the two airbases?

Mr. MANLEY. That is correct. It was my understanding, and I am not too familiar with this Healy or this Cripple Creek Spur, Inc., that Mr. Shallit spoke of this morning.

I was aware that the incorporation was in progress and he, Mr. Shallit, at least, was hopeful that by that method the spur could be financed. At the time that Mr. Kalbaugh mentioned that he came to Washington, he apparently received information to the effect that the Defense Department or the proper authorities were not going to lend the money, which tended to just abolish the whole plan, you might say.

Senator BIBLE. Are you qualified to speak as to whether or not a spur could be built into the Cripple Creek property without endangering the mining property of the the Usibelli's.

Mr. MANLEY. I believe the Usibelli Coal Co. approached the railroad, either with correspondence or verbally, and indicated that a rail line would cause them difficulties. In any event, the railroad

wrote to Mr. Saarela and requested advice as to whether such a spur or line would destroy the value of mining property, and I believe Mr. Saarela's answer is in Mr. Shallit's presentation. He indicated that he did not believe it would be detrimental.

Senator BIBLE. I think that is all we need at this time, Mr. Manley. Thank you very much.

Mr. MANLEY. Thank you.

Senator BIBLE. I think it might be well to call on Mr. Saarela now.

Do you have a prepared statement, Mr. Saarela?

**STATEMENT OF LEO H. SAARELA, REGIONAL MINING SUPERVISOR,  
UNITED STATES GEOLOGICAL SURVEY, ANCHORAGE, ALASKA**

Mr. SAARELA. No; I do not.

Senator BIBLE. Will you identify yourself for the record, please?

Mr. SAARELA. I am Leo H. Saarela, regional mining supervisor for the Geological Survey in Alaska, a mining branch of the Geological Survey, and my position is to supervise the mining operations under the leases on the public lands and, as practically all of Alaska is on public lands, all the coal leases in the Territory are under the Survey's jurisdiction.

Senator BIBLE. You are familiar with this Healy-Cripple Creek area?

Mr. SAARELA. Yes; I am.

Senator BIBLE. That you heard discussed this morning and this afternoon?

Mr. SAARELA. Yes.

Senator BIBLE. I might ask you, because of Mr. Manley's last statement, What is your opinion as to the construction of a spur line from the Suntrana property to the Cripple Creek property insofar as it might adversely affect the mining property of the Usibelli Corp.?

Mr. SAARELA. Well, Mr. Chairman, that problem has been discussed a number of times as there continually seemed to be objection by the Usibelli Coal Co., but I believe that the road could be routed without an undue hardship or difficulty as far as the Usibelli Coal Co. is concerned.

Senator BIBLE. That was the opinion you expressed in response to Mr. Manley's inquiry to you previously?

Mr. SAARELA. That is right.

Senator BIBLE. It is still your opinion?

Mr. SAARELA. That is right. It might be a little difficult, but most of the stripping reserves on the Usibelli property—the large stripping reserves in the vicinity of the baulage road and the proposed extension of the railroad have already been mined out, and while it would take some study and careful preparation as far as G-bed, which is on the foot wall of the No. 1 bed, is concerned, most of the coal on No. 1 bed, for instance, has been already removed so while it is a problem, I think it is not an unsurmountable one.

Senator BIBLE. If you could secure a right-of-way without undue damage to the Usibelli Coal Mining Co., I assume you could require right-of-way for road purposes by the same standards; is that right?

Mr. SAARELA. That is true. There was a railroad right-of-way, and I think Mr. Shallit himself, for the Cripple Creek Coal Co., has

a right-of-way application in and it was acted upon by the Department. I am fairly certain of that.

Senator BIBLE. Do you have any testimony to add to what was said this morning concerning the reserves in this particular area?

Mr. SAARELA. Well, leasing block 28, which is the old Roth property, has been reserved many years on the question of military necessity.

Going back to the history of coal production in the Territory, you must realize that Alaska produced at the rate of about 200,000 tons per year for many, many years.

In 1942 and 1943, as the result of the establishing of military posts in the Territory, the requirements for coal jumped alarmingly.

In the Healy property there were a number of problems, including mine fires that jeopardized the situation. In fact, the mines of the Territory in 1943 were hard pressed to get coal to keep the establishments going. So that was the reason for the leasing of the Usibelli Coal Co. in the first place.

The leasing of the Usibelli coal was started in about 1944 and has continued to the present date. The Alaska coal production has increased to approximately 880,000 tons a year in 1954. Last year it dropped down to 660,000 tons and I think will continue, the need will continue, at a level of about 700,000 tons per year.

I might also add that the Department set up the Connors committee to investigate and throw additional light on the question of coal production problems in Alaska and that committee came up in the summer of 1954 and investigated the situation thoroughly. The committee came up with greatly increased coal consumption figures. In fact, I think some of their figures were as high as 1.5 million tons per year.

Those figures have not materialized for the simple reason that there have been delays in construction and we have had two very mild winters. However, the capacity of the present military plants in Alaska is far over 1 million tons per year; that is, the actual boiler capacity of the plants.

We have gone over the problem in very, very great detail as did the Connors group. Those figures have not firmed up but it has been the position of the Department to insure that a proper supply of coal be available because certainly we would be severely criticized if an adequate supply of coal were not available. It takes a considerable length of time to get a mining operation going. In fact, we issued a lease last year to the Arctic Coal Co. in Lignite Creek, to the north of Healy River, with the understanding that in possibly within a 3-year period that company could get into operation and probably meet the additional demand.

As I stated before, the fact is that the coal consumption necessary demand has not materialized. However, I would like to point out that the present boiler capacity of these various military plants, plus the civilian plants is over a million tons per year.

I have not heard anything today about the civilian consumption here which is a factor that should also be considered.

Senator BIBLE. I would like to have you comment on that.

Mr. SAARELA. That is a material part of this picture. I think last year the total production was around 700,000 tons from all of Alaska and about 400,000 tons of that came from the Healy field, and I believe that about 260,000 tons of that were civilian.

So we are not faced only with the military, we are also faced with the civilian demand and being positive that enough coal-producing capacity exists in the area.

The problem of transportation as, for instance, Lignite Creek, is an unsurmountable one. It is very, very difficult. However, the Department issued a lease but, these leases, of course, do not guarantee that the mining operation is going to be a profitable one.

I think that the question of the reserves of each individual property, should be examined in this problem that we have here today.

Senator BIBLE. Is it your opinion that a spur line should be built into this particular area? You are laying quite some stress on the Roth property as well, if I understand you.

Mr. SAARELA. The Department of Interior at the time the Roth reserve was set up in 1950, I believe, went around to the various agencies and asked the military and other departments whether or not they thought the leasing of block 28 was essential to maintain a supply of adequate coal. I believe that was written up in a public lands order in 1950. I do not know the number of the land order.

We have a member of the staff here, Mr. Abernathy from the Geological Survey, and I think he has knowledge of the language of that public land order.

Senator BIBLE. Your purpose in commenting on that is what, for the sake of the record?

Mr. SAARELA. The purpose of leasing block 28 was to be positive that an easy, available source of coal would be ready for the military in case it was necessary.

Senator BIBLE. Was it or was it not leased?

Mr. SAARELA. It was not. It is still in reserve.

Senator BIBLE. Still in reserve?

Mr. SAARELA. That is right.

Senator BIBLE. Have you answered the question as to the desirability of constructing or extending the spur line into that particular area?

Mr. SAARELA. Well, as I say, the tonnages did not materialize. However, that is a problem that may arise at any time. In other words, should we have a conflict, should there be a great increase in the demand for coal, it is entirely possible that leasing block 28 might have to be utilized.

Senator BIBLE. My attention has been directed to a statement that has been attributed to you during the Alaska Field Committee's Coal Subcommittee meeting on April 30, 1953, where I am advised you made the statement that the hauling of 140,000 tons 3 miles by Mr. Usibelli and 150,000 tons 6 miles by Mr. Shallit would cost the Government approximately \$300,000 this year. Is that a correct statement?

Mr. SAARELA. I believe that is a reasonable statement.

Senator BIBLE. How is that calculated?

Mr. SAARELA. That is calculated on a tons-per-mile basis. I do not remember what figures I used at that time but it would seem to me that it is cheaper to haul coal by rail than it is by truck because using a figure roughly 25 cents a ton-mile, or 20 cents a ton-mile, versus probably 4 or 5 cents a ton-mile for a railroad, I think that the comparison is obvious.

In other words, you are going to have a saving. Whether or not that saving would be passed on to the consumer depends on the operator, of course, but in this case the military was paying the entire bill.

Senator BIBLE. So I understand. So there would be a saving, according to your statement, according to the Government because they would be saving that much money through the use of railroad transportation rather than truck transportation?

Mr. SAARELA. Yes.

Senator BIBLE. Based on the figures of 150,000 tons from the Usibelli and 150,000 from Shallit?

Mr. SAARELA. Yes.

Senator BIBLE. And you believe that same statement is true today?

Mr. SAARELA. I believe so, yes.

Senator BIBLE. I assume, based upon that statement, that you believe extension of a branch line through the Usibelli lease would result in a more economical operation to the Cripple Creek property then; is that true?

Mr. SAARELA. Yes.

Senator BIBLE. Would that same hold as to the Usibelli property itself?

Mr. SAARELA. I believe it would, although the Usibelli management has disagreed with that. They have a tippie to move. At the railhead they have their present tippie. In other words, they are trucking their coal from 3 miles or more and they have their tippie at the railhead at the present time. However, they have indicated that it would cost too much to move the tippie and that is the prohibiting argument, I believe, in their statement that they do not want to use the railroad.

Senator BIBLE. I guess in view of your statements that it undoubtedly follows that in the event of some type of emergency, it would certainly make the Roth property far more accessible if the spur line were built at least to Cripple Creek.

Mr. SAARELA. Yes, it would.

Senator BIBLE. I think that follows very naturally from what you have developed here.

Mr. SAARELA. In other words, there is another point that I do not think has been explored. We have to consider these problems in the light of physical reserves on each property.

In other words, everyone here appears to think that a coal property is something like a gas well or something like that that you just turn on a valve; that is not true. You are depleting reserves constantly and to increase production there are a number of problems that have to be taken into consideration at great amount of time and cost.

Senator BIBLE. What, in general, is the overall picture concerning the development of the Alaska coal reserves? What has been done along the line of developing the Alaska coal reserves?

Mr. SAARELA. I do not quite understand your question, sir.

Senator BIBLE. How extensive have the explorations been toward developing coal in Alaska?

Mr. SAARELA. Well, Alaska is unlike anywhere else in the world, I believe, for the simple reason that an intensive metamorphism and diastrophism has changed the structure of the coal beds, making coal mining a very precarious and a difficult and costly operation.

We have two areas of coal that we are drawing from and for which the railroad was built. The language of the railroad act of 1912 states that the railroad is built to open up the Alaskan coal lands to development by the Navy and that is one of the reasons for the railroad in the first place to the Matanuska field and the Healy field.

In the Matanuska field, we have today only one large operator due to the fact that faulting, folding, and other conditions have made mining there very costly. The beds there are thin. It, however, happens to be a better grade of coal. It is bituminous coal, running around 11,600 B. t. u. and it is a better grade of coal.

In the Healy River area, however, we have a subbituminous coal, running around 8,600 B. t. u. and, as the railroad progressed or was built to these various areas—

Senator BIBLE. Are these the only two areas?

Mr. SAARELA. That are producing at the present time for any large commercial production. In other words, we have a lot of coal area but we do not have any production capacity except from these two areas.

As the railroad was built past the Healy River, a spur was constructed to the Healy Coal Corp. site. There was some early coal mining around the old station site of Healy. However, it was realized that that was not a good mine site and the thing that was objected to was the coal mining going on under the tracks so they shifted up to Healy River and are in their present position.

One of the witnesses said this morning that they had been mining since 1922 and that is true. Healy River, or the Suntrana Coal Mining Co., was the principal producer up until about 1944 or 1945, when Mr. Usibelli began his operations. Healy River Coal Corp. has produced over 2 million tons in its about 30 years.

You asked that question this morning.

Senator BIBLE. Yes.

Mr. SAARELA. In the Healy field, production has gone on very steadily and with considerable increase.

Senator BIBLE. What further steps are being taken to develop coal reserves in Alaska other than what you have commented on?

Mr. SAARELA. The Geological Survey has done a considerable amount of geologic work—that map is an example—in all coal fields in Alaska and, besides that, the Bureau of Mines has been doing a considerable amount of drilling in the Matanuska field where the faulting and folding problems are difficult ones.

So there has been considerable amount of help in that way of exploration.

Senator BIBLE. I take it that you are in full accord with the Government policy of continuing development of the coal reserves in Alaska?

Mr. SAARELA. That is right.

Senator BIBLE. Are there any better means of developing reserves above Usibelli than would be Cripple Creek and block 28 through the extension of the branch line? Is there any other way to get it out?

Mr. SAARELA. I do not think so.

Senator BIBLE. I think that develops it very well, Mr. Saarela.

Thank you very much.

Mr. SAARELA. Thank you.

Senator BIBLE. Mr. Ghiglione?

Do you have a prepared statement?

**STATEMENT OF ANGELO F. GHIGLIONE, COMMISSIONER, ALASKA ROAD COMMISSION**

**Mr. GHIGLIONE.** No, I do not have a statement, sir.

**Senator BIBLE.** Will you identify yourself for the record, please?

**Mr. GHIGLIONE.** I am Angelo F. Ghiglione, Commissioner of the Alaska Road Commission. I have been with the Alaska Road Commission for 20 years, a commissioner since 1951.

**Senator BIBLE.** Are you familiar with the petition that has been filed in this case?

**Mr. GHIGLIONE.** Yes, sir.

**Senator BIBLE.** And the general problems that arise as to both railroad rights-of-way and highway rights-of-way, road construction?

**Mr. GHIGLIONE.** Yes, sir.

**Senator BIBLE.** It is my understanding that it is your feeling the construction of a road by your commission would more quickly provide the needed access to the Alaska Railroad; that is, the construction of a road from the spur into this property involved.

**Mr. GHIGLIONE.** Yes, sir. I should qualify that. When we originally were contacted by Mr. Shallit when he first opened up this property, his request to the road commission was given consideration along with similar requests from elsewhere in Alaska for assistance to open up properties in Alaska.

It has always been the policy of the road commission to assist wherever a road will become a public road and contributions or cooperation by the requester are offered. In that case, we did recognize that Mr. Shallit needed assistance on the road and we offered assistance on the cooperative basis, however, always recognizing that we were limited in funds to projects of fifteen or twenty thousands dollars in scope. When we got into Mr. Shallit's picture a little further and saw the scope of it, and also recognized that it would be more desirable to have the railroad extended into the area, since this was just a stub road from the railroad and not connected with any road system, the policy of the department came to bear in which we backed out of it, frankly, and supported the justification of a railroad extension.

**Senator BIBLE.** You say the policy of the department came to bear; how did that come about?

**Mr. GHIGLIONE.** Through the Office of Territories, under which both the railroad and the road commission are concerned and through the Alaska field committee which was brought out in the presentation.

All the interior agencies got together about three times a year in Alaska and discussed our mutual problems. It was the feeling of the entire committee at that early stage that it would be more desirable to support a railroad extension than a road.

**Senator BIBLE.** Who made that determination?

**Mr. GHIGLIONE.** That was the Alaska Field Committee made up of the heads of all the Interior agencies in Alaska.

**Senator BIBLE.** Who are the heads of the Interior agencies in Alaska?

**Mr. GHIGLIONE.** That is presented in Mr. Shallit's statement. There is the head of the Alaska Railroad, at that time Colonel Johnson; the head of the Bureau of Land Management, Mr. Puckett; the head of the Road Commission, at that time Colonel Noyes; the Bureau of

Mines; Geological Survey; Bureau of Indian Affairs. I believe that covers the field.

Senator BIBLE. That determination was made in what year?

Mr. GHIGLIONE. It is in the record there, about 1951 or 1952.

Senator BIBLE. And it was resolved then that it was preferable to serve this area by a spur railroad line rather than a highway; is that true?

Mr. GHIGLIONE. That is true; yes, sir.

Senator BIBLE. Is that still the thinking of the Road Commission of Alaska?

Mr. GHIGLIONE. It was our thinking up until just the recent determination that the Department does not support a railroad based on tonnage figures of coal. Now it looks like we are back in the picture.

Senator BIBLE. How are you back in the picture?

Mr. GHIGLIONE. In that any request for road assistance will come to us. If Shallit fails to get a railroad, I know he is going to be back asking for a road.

Senator BIBLE. When he comes to ask you for a road, then what do you do?

Mr. GHIGLIONE. Then we are in a position, as I said, where we can assist on that type of road if it is of small scope; in other words, fifteen or twenty thousand dollars.

Senator BIBLE. How much would a road adequate to take care of Mr. Shallit's needs to the spur line cost, 6 miles?

Mr. GHIGLIONE. We have never run our own survey there but, based on the Alaska Railroad survey, located a road in the canyon practically over Mr. Shallit's road, with all of the riprap and protection against the river floods, would exceed half a million dollars. Such a project now would require identification in our budget and we would have to request the funds from Congress.

Senator BIBLE. What type of road would you have if you spent \$500,000?

Mr. GHIGLIONE. It would still be a gravel road but down in the river, in the canyon, practically on the railroad right-of-way grade which is a terrific section of road to build; that is why Mr. Shallit loses it every year. Such a road, as I say, would require justification, identification as a project in our budget and, frankly, with all the other development in Alaska that is required, it would not be very high in priority in the needed projects in Alaska when the cost is considered.

Senator BIBLE. What category of road does this fall under, is it a mine to market?

Mr. GHIGLIONE. I suppose that is what you would call it; yes, sir. But for us, the present road there is not ours.

Senator BIBLE. I understand it is a private road.

Mr. GHIGLIONE. Building a private road and going to Congress and asking for half a million dollars for one individual is not the policy of the Road Commission. It has been our policy, as I say, on these smaller project to assist even where it is for one individual where he will cooperate and will leave the road open for the public.

We have assisted with these small funds that are available but we have never identified an item in the budget solely for one concern.

Senator BIBLE. The use of small funds available would be of no value in this problem?

Mr. GHIGLIONE. That is right, they would be of no value.

Senator BIBLE. You might as well eliminate them?

Mr. GHIGLIONE. That is right.

Senator BIBLE. Your statement is that it looks as if you are back in the roadbuilding game but it will cost you half a million dollars to do it?

Mr. GHIGLIONE. Yes, sir

Senator BIBLE. That would be a congressional appropriation?

Mr. GHIGLIONE. Yes, sir. I might say that in the middle of this series, we were in the picture at first, and then in the spring of 1953 while the field committee, and you might say the lower echelon of the Interior Department, still felt that the railroad spur was the answer, a meeting was held in the Office of Territories at which time it was recognized that money was not immediately available for extending the railroad; therefore, it would be desirable for the Road Commission to assist if possible on a road that would be on a grade that could be used by the railroad.

At that time Mr. Usibelli, or the presentations to our meeting in Washington were that Mr. Usibelli would permit us to use his existing road, recognizing that by our taking it over he would be relieved of maintenance and improvement. It looked like everybody was getting together and we could move in and take over the maintenance of the road and extend it to Mr. Shallit for, again, 15 or 20 thousand dollars, within the scope of our little fund, and relieve the situation.

At that time Mr. Shallit proceeded to expand his camp because we wrote him that we were coming to do it. However, Mr. Usibelli backed out on us and we stopped.

Senator BIBLE. When was that done?

Mr. GHIGLIONE. In the spring of 1953. When Mr. Usibelli refused to let us use his grade, forcing us down into the canyon where we are talking of a million dollars rather than a few thousand.

Senator BIBLE. I cannot understand why two mining companies cannot use the same road. I cannot quite get that through my head. The Usibellis are here and we will have them testify on that point.

As I understand it, the Usibellis have an upper road which is very adequate for hauling coal out of their property.

Mr. GHIGLIONE. Yes, sir

Senator BIBLE. Yet the property higher up cannot use that road and they are forced down on a lower road which washes out when we have flash floods?

Mr. GHIGLIONE. Yes, sir

Senator BIBLE. If it were possible to secure the high all-weather road that runs through the Usibellis' property, could that be extended on into the Cripple Creek area without difficulty?

Mr. GHIGLIONE. Yes, sir. In fact, Mr. Shallit has very little trouble with the road above Usibelli's property, the road through Mr. Usibelli's property is free of damage and the road above there is practically free of damage, too. The trouble is in, you might say, the detour road forced upon Mr. Shallit. If we could take over the Usibellis' road for Mr. Shallit's use it would solve the problem.

Senator BIBLE. Is it possible to build an all-weather road over the present road Mr. Shallit has?

Mr. GHIGLIONE. It is possible but again, it would cost \$500,000.

Senator BIBLE. Have you any suggestions to make as the road commissioner of the Territory of Alaska concerning solving this problem, because I have a hunch this is going back to some type of road construction?

Mr. GHIGLIONE. No, sir; not being familiar enough with the terms of Mr. Usibelli's permit. I believe as the Assistant Secretary stated that it will wind up in the hands of the Department to determine what is an adequate right-of-way through the Usibelli property under the terms of the permit; that, of course, is the first step here to recognize you have to build a half-million-dollar road or to get Mr. Shallit a right-of-way that does not force him into that extremely high-cost location; that is out of my purview.

Senator BIBLE. Do you have any thinking as to the construction of a railroad spur at this time? Your opinion changes because of the difference in the defense demands; is that a correct statement?

Mr. GHIGLIONE. Yes, sir; that, and frankly, I was not aware of that until just the last 2 months. Up until 2 months ago I would have told you that a railroad extension was justified but I have not kept up with tonnage figures.

I believe in the records is a letter of mine saying I was surprised to learn that the railroad now was out of the picture and Mr. Shallit should come to the road commission for assistance. Since then, studying the new tonnage figures, of course there is a question in my mind as to whether it justifies a railroad.

Senator BIBLE. Based upon the reduced tonnage figures, you feel then that the railroad spur as a possible solution to this problem might be out of consideration?

Mr. GHIGLIONE. That is right, unless some value is given to the nebulous future as to the use of the Roth properties and so forth.

Senator BIBLE. I think I have no other questions.

Thank you very much.

Mr. GHIGLIONE. Thank you.

Senator BIBLE. We would be very happy to hear from you at this time, Mr. Coulter.

#### **STATEMENT OF KIRKLEY S. COULTER, ASSISTANT DIRECTOR, OFFICE OF TERRITORIES, DEPARTMENT OF THE INTERIOR**

Mr. COULTER. I am Kirkley S. Coulter, Assistant Director, Office of Territories, Department of Interior.

I do not have anything very much to add other than to comment on 1 or 2 points to straighten the record. If you have any questions, of course I will be glad to try to answer them.

I would like to make it clear that the Department is not, as has been suggested, barring Mr. Shallit's access. We have objected to spending money, but we have no objection to his having access. We would be glad to try to cooperate with him as the Under Secretary said.

Senator BIBLE. Right at that point, how do you cooperate with him?

Mr. COULTER. Well, I think the key question, he says we will not give him access because we will not build the railroad for him. We will not build a railroad because it involves a lot of money. If we are talking just about access which involves no money, we are talking

about a different thing than access for a road which costs half a million dollars or a railroad which costs \$1.5 million.

Senator BIBLE. Access for road purposes, how do you accomplish that?

Mr. COULTER. The Department would have no objection, I feel sure, to trying to work out an adequate right-of-way for him to do whatever he wanted to do with it, you see.

Senator BIBLE. Even though that right-of-way goes over the Usibelli property?

Mr. COULTER. Even though it goes over the Usibelli property in such a way that it does not damage substantially the mining operation.

Senator BIBLE. Could you designate the right-of-way as going over their present road?

Mr. COULTER. Of course, their present road is something that they have constructed and they have put in a lot of money and I assume we could not take that without paying for it. I understand the Department has the right to designate a right-of-way but of course, if we destroy or take some investment that the present occupant, Usibelli, has made, you would have a question of compensating him; that would be another problem.

Senator BIBLE. Very well, you may proceed.

Mr. COULTER. Mr. Shallit suggested that the railroad could be almost amortized out of the 828,000 tons that the Defense Department has called for on bids at his figure of \$1 per ton.

That, of course, assumes that he would get all of the contract, which we have no way of assuming if we build the railroad. In other words, all of these suggestions about amortizing the railroad involve assumptions as to the tonnage of coal and we have no way of knowing that Mr. Shallit will get the entire contract.

Further, on the amortization of the railroad, we are up against the proposition that any of the computations assume that both Shallit and Usibelli would ship substantial tonnages over that and Usibelli has indicated to us that he will not use a railroad. Whether he might change his mind later is hard to say but we would feel like we were taking an awful risk if we built a railroad on the assumption that Mr. Usibelli would use it, when he tells us he will not. We could never justify it to Congress.

Senator BIBLE. Why does he tell you he will not use it?

Mr. COULTER. I understand that they do not now intend to use it for the time being on account of the fact that it will require considerable investment.

Senator BIBLE. Very well.

Mr. COULTER. At any rate, we cannot overrule them and tell them, "You have to use our railroad."

Senator BIBLE. I understand.

Mr. COULTER. I would like to comment on one other point. Mr. Shallit indicated he felt the Department was biased against him. We certainly do not feel we are. We are anxious, as was stated in Mr. Davis' letter, to keep all of these mines in existence.

To prove that point, last year when the bids were called for and the contracts were let, Mr. Shallit did not secure any part of the defense contract. Thereafter, the Defense and Interior Departments

went out of their way to agree that an additional tonnage should be bought which should be distributed between the two coal mines which did not have any coal contract; that is, Suntrana and Shallit.

The Defense Department refers to that as relief tonnage in the sense that it was let primarily to give these two mines some business. I believe it is our policy to help all three of these mines continue in existence.

Senator BIBLE. Is it the policy of your Department to encourage the development of coal reserves in Alaska?

Mr. COULTER. It is, up to the extent that we can see any market at all. At the moment, with the buying of the military down so far, we would not, I think, go out of our way to start any more coal mines.

Senator BIBLE. I think that is all, Mr. Coulter.

Mr. COULTER. Thank you.

Senator BIBLE. Will you identify yourself?

#### STATEMENT OF ANTHONY T. LAUSI, DIRECTOR, OFFICE OF TERRITORIES, DEPARTMENT OF THE INTERIOR

Mr. LAUSI. Anthony T. Lausi, Director of the Office of Territories of the Department of the Interior, sir.

Mr. Chairman, there has been pretty well pointed out the reason the Department feels we should not go ahead with this railroad spur. Primarily the reduced tonnage of coal, the figures that have been submitted now.

When they talked about a spur they were talking about eight or nine hundred thousand tons of coal. They even talked about a million tons.

Furthermore, the Appropriations Committees when they had before them the request of the \$1,300,000 to do this project, they refused the appropriation and made it clear that the railroad was to be on a self-liquidating basis and any future capital improvements would have to be along that line.

Furthermore, the Defense Department sees no need for the railroad spur. That was another factor that has to be considered.

Now, some comment was made about the Roth reserve. I think Mr. Saarela made the statement that we should have access to the Roth reserve. That reserve is primarily for the military.

So far as I know they have never made a request that we make that property accessible to the railroad even though we have been through one war since the reserve has been in effect.

So far as I know, the military has never requested the railroad or the road commissioner or anybody else to build a road or railroad through that property.

I just want to make those few comments, Mr. Chairman.

Senator BIBLE. Is there anything further you want to add?

Mr. LAUSI. No.

Senator BIBLE. Do you have any information concerning Gubich pipeline, or how it might affect this reserve picture?

Mr. LAUSI. No, I really haven't on that.

Senator BIBLE. That is all. Thank you.

Mr. COULTER. Mr. Chairman, on the Gubich pipeline, the only thing we can say is that it is a proposal that is in the talking stage by some people who are interested in building it.

Senator BIBLE. Where will it be piped from?

Mr. COULTER. From the discovery adjacent to Navy Petroleum Reserve No. 4 on the Arctic Ocean. It would be a pipeline running several hundred miles south from there.

The gas is apparently there. There is a good deal of interest in it, but it has not progressed beyond the talking stage at this time.

Mr. LAUSI. Mr. Chairman, I would like to have made a part of the record, with your permission, the statement in the Interior Department appropriation bill, 1952, which is marked here in this report No. 339.

Senator BIBLE. This is the finding on the \$1,300,000 for the railroad spur?

Mr. LAUSI. Yes, sir.

Senator BIBLE. The entire paragraph entitled "Construction Alaskan Railroad" starting at the end of page 21 and running over to about the center line on page 22, will be made a part of the record at this point.

An estimate of \$2,500,000 was submitted for completion of the rehabilitation program of the railroad, for the acquisition of boats and barges, and for certain repairs and improvements to marine and other facilities. The estimate has been reduced by \$500,000 and an appropriation of \$2 million is recommended to cover all of the items included in the budget. To the extent that such appropriation may be inadequate, the program should be reduced.

The committee does not intend that additional appropriations be provided for the rehabilitation program, and does not intend to support an endless program of additional capital investment in the Alaskan Railroad. Realistic long-range objectives to accomplish well defined transportation needs will have to be worked out before estimates for additional capital expenditures will be considered, and any proposed capital expenditures from the appropriated funds will be carefully reviewed in the light of their self-liquidating possibilities.

We will hear from Usibelli.

Mr. McCarty, are you going to lead off? Will you identify yourself for the purpose of the record?

**STATEMENTS OF ROBERT McCARTY, OF ELY, McCARTY & DUNCAN, WASHINGTON, D. C.; AND WILLIAM WAUGAMAN, GENERAL MANAGER, USIBELLI COAL MINE, INC.**

Mr. McCARTY. My name is Robert McCarty. I am a member of the firm of Ely, McCarty and Duncan, Washington, in the Tower Building.

Our firm is special counsel for the Usibelli Coal Mine, Inc. of Suntrana, Alaska.

I am accompanied here by William Waugaman; Mr. Waugaman is general manager for the Usibelli Coal Mine and has been for the past 2 years.

I am also accompanied by Mr. Duncan of our firm.

Mr. Chairman, I would like, if I may, to proceed along the lines of the formal statement which we submitted in response to the petition. I think some of it can be eliminated because it has been covered.

But I think to bring our arguments on this matter into perspective—I am attempting to get up a brief response to this lengthy petition—I think that this response we have made in the form of a letter to Senator Jackson outlines substantially our position in as brief a fashion as possible.

I think it will serve your questioning if we were permitted to proceed in that fashion.

Senator BIBLE. Proceed along that line.

Mr. McCARTY. I would like to make a preliminary comment with regard to a statement made by Mr. Shallit at the opening. That is to the effect that we had made ourselves a part of this hearing.

We were served with a copy of the petition by Mr. Barash, Mr. Shallit's attorney, and one needs to turn only 1 or 2 pages to discover that not only was our appearance necessary, but it was required.

I think that is obvious. There is one point also that has been generally overlooked in the testimony of Mr. Shallit. That relates to the operator in this area known as the Arctic Coal Co.

I appended this map to our response to the petition. It is slightly different than others already presented. It may be identified as Healy (d-4) quadrangle—

Senator BIBLE. It may go in as exhibit A.

Mr. MCCARTHY. From the United States Geological Survey. We have blocked out the area of the leases in the Healy River Valley on this map.

It shows also the approximate location of the Arctic Coal Co, a new operator which started last year on Lignite Creek.

Their present operation is approximately 4 miles from the Nenana River, and thus also 4 miles from the railroad which is across the Nenana River.

It becomes obvious from this map, as I think Mr. Saarola commented, that the Arctic Coal Co. has a significant transportation problem of its own.

The only other thing which is apparent from this map which I think is useful, is to recognize that these properties all lie cheek by jowl and are only separated by about 6 miles.

It is also significant to note that the Usibelli operation, by virtue of his lease, happens to lay astride the Healy River.

The proper and economic development requires coal mining operations on both banks; accordingly, it may be seen from the lease which he has that any passageway that is to go up and down this river must traverse the full length of the Usibelli leasehold.

To identify somewhat more fully the origins of the Usibelli Mine, in 1943 Mr. Usibelli began mining coal on his present lease under a use permit issued by the United States Army.

In 1946 he applied for a lease on the so-called Roth property. It was rejected on the ground that this property was to remain in reserve. Accordingly, Usibelli was offered in lieu of the Roth property a lease on the property now being developed by the Usibelli Coal Mine, Inc.

I think before I go any further that I should state as I did in the opening paragraph of our response to the petition that the railroad sought here is one which would cut the heart out of the Usibelli Mine in order to serve a claimed but disproven military demand.

That one sentence is the summary of our objection to the repeated proposals that have been made in connection with this railroad.

Since the acquisition of the lease in 1946 progress and development of the mine has been steady, but sure.

The investment in the plant and equipment is now about \$2 million.

This mine is presently equipped to mine and ship a minimum of 500,000 tons of coal a year. This could be boosted to 700,000 tons within a few months and beyond that should the demand for coal warrant it.

The property represents a small village in actuality. There is a schoolhouse, a modern bunkhouse to accommodate the men; there is a mess hall, wash shacks, and all of the accouterments that go up to make a modern mining camp.

Senator BIBLE. Is it operated the year around?

Mr. McCARTY. Yes, sir; it is. And I think without doubt it is as substantial and as properly developed a mining camp as there is in the entire Territory of Alaska.

In 11 years this mine has become the best in the Territory. All earnings over the years have been plowed back into the business to achieve this. No dividends have ever been declared. Salaries to management are modest.

Also, I want to point out that this is a corporation where the moneys made in the mining and selling of coal have been in large proportion plowed back into this mine to develop it and to bring it to its present excellent condition.

There is an airstrip which you may have noted in connection with this larger map on the wall. It is also shown on the small map which I just exhibited. That was, of course, built at our own expense. It is highly necessary because it provides the real link with Fairbanks in the event of an emergency for passengers, for small cargo, and that sort of thing.

To come to the nub of our objection to the railroad, they are, first:

The military demand, upon which heavy production is dependent, does not justify the present extension of the Suntrana branch of the railroad, or a public road; second, the route selected would destroy the economic development of the Usibelli Mine.

We will treat these two points below.

First, we want to make clear that we favor the eventual extension of the Suntrana branch of the Alaska Railroad, assuming that greatly increased coal needs are clearly advanced. But we want to make it equally clear that we do not intend to sit by while a competitor maneuvers in every way possible—the most recent being this petition—to get a railroad or a road built at public expense on a route which will cut the heart out of our mine.

We were not consulted when the Alaska Railroad made its survey in the spring of 1953. We were not consulted when Mr. Shallit filed his Healy River Spur, Inc., proposal with the Government in 1954 asking for a loan of \$1,594,000—without a dime of equity money—using the identical map surveys of the Alaska Railroad.

We protested the proposed location of the railroad in August 1953 to Edgar Hart, the engineer in charge of the survey and to Messrs. Connor, Plein, and Newman, then in Alaska to survey the coal industry for the Secretary of the Interior, as well as to the Interior Department in Washington.

We protested Mr. Shallit's Healy River spur proposal to RFC, ODM, and the Department of Defense in May 1954.

The letters we wrote in connection with the Healy River Spur, Inc., proposal are cited by date at page 69 of Mr. Shallit's position.

We have furnished them as part of our material. I do not intend to read those, Mr. Chairman. I think they speak for themselves, but we would like to again point out that Mr. Shallit did not furnish us with a copy of his Healy River Spur proposal, and we only learned of it sometime after it was submitted, although the proposal itself suggested that we utilize the spur for the transporting of our coal and that the coal operators in the Healy field be invited to serve on the board of directors.

The reasons for our opposition to Mr. Shallit's Healy River Spur, Inc., proposal were identical with those set forth above.

Briefly, they relate to the demand for coal and the route of the proposed railroad. We think our objections are sound. Neither is met by the Shallit.

With respect to demand, he relies on generalizations which events of the past 2 years have proven false. Route, he neglects entirely.

Before going on to these two points, we want to make a further observation and that concerns the matter of the Shallit right-of-way over the Usibelli leasehold.

Mr. Shallit filed a right-of-way map in June 1951. He was immediately given a construction permit, although we protested the route and asked for a hearing under oath as to its location. The hearing was not granted and the road was constructed.

The Bureau of Land Management, in September 1952, upheld the right-of-way. We appealed, still asking for a hearing.

The Interior Department urged some agreement and ultimately a stipulation was achieved between the parties which was incorporated in a decision of the Interior Department dated November 4, 1954.

The stipulation, signed by Mr. Shallit, was in effect an agreed statement of operating conditions under which both mines presumably could work together.

Mr. Chairman, I would like to digress at this moment to point out that decision because there has been discussion here of what the Interior Department might do in order to provide access for Mr. Shallit.

As Mr. Coulter correctly pointed out, there is that access. The degree of cooperation of the Interior Department in getting the parties together in order to arrive at the so-called operating rules under which the mines might live together in this valley, was greatly appreciated, we thought, by both mines.

This Interior decision is dated November 5, 1954. Its number is A-26673. It is signed by Assistant Secretary Orme Lewis. It is found as exhibit M of the petition. Those pages are not consecutively numbered, but it is exhibit M.

I would like to call attention particularly to page 2 of that exhibit, the third full paragraph, in connection with your inquiry as to what sort of rules under which the road might be set up by the Interior Department.

There follow there seven numbered paragraphs which constitute the stipulation arrived at between the parties, between Mr. Usibelli and our office as counsel and Mr. Shallit and Mr. Barash as his counsel.

This was signed by both the parties. After it was signed it was then incorporated in a decision by the Interior Department.

I want to point out also that the right-of-way which is formalized by this decision is identical in most respects with the right-of-way applied for by Mr. Shallit in 1951.

Senator BIBLE. Is that the right-of-way he is now using?

Mr. McCARTY. That is the right-of-way he is now using, and has used since 1951. There are a few variations in it.

The agreement itself provided that there should be a resurvey of the road right-of-way so that everybody would know for certain where it was and a map was filed to show what variations there were in the actual road presently being used, as opposed to the actual filing that had been made for the right-of-way.

They were very slight. In a substantial part the road is identical to the road applied for in 1951.

Senator BIBLE. Is it true that this particular road is occasionally washed out by flash floods?

Mr. McCARTY. I think there is no doubt that portions are for lack of proper construction.

We are willing to follow your preference, Senator. I know the time is late. If you would like to have Mr. Waugaman answer this question, it is all right with me.

Senator BIBLE. No, you go ahead.

Mr. McCARTY. One feature of the stipulation which we point out in our response is that it recognizes the development of the Usibelli leasehold as the dominant use. In any event, following the promulgation of this decision on November 5, 1954, we thought that this matter was finally at rest as it has been going for a long time, because the right-of-way so formalized was approximately the same as that applied for by Mr. Shallit in 1951 and in use by him since that time.

Then came the petition, making it abundantly clear that Mr. Shallit has never contemplated building a road which he could use all year around. He wants a railroad and he wants the Government to build it.

If I may make one further digression at this point. An amendment has already been filed by Mr. Shallit to this agreed right-of-way.

Senator BIBLE. If I understand the testimony of the commissioner of roads, if Mr. Shallit was to build this as a year-around road it would cost \$500,000.

Mr. McCARTY. I am not certain about that. I would like to have Mr. Waugaman make some comment on that. This promontory that bulges out on the map is our campsite. You will note that the Shallit road as it runs around that promontory is on high ground. That is usable all the year around. It is obvious to the east of that promontory going upstream, according to the shading that has been supplied by Mr. Shallit, that the road is subject to washing at certain times of the year.

This is one area in which the riprap that Mr. Ghiglione talked of could be used to make this route—that is, Mr. Shallit's present road—available as an all-year-around all-weather road if the operator were willing to go to the expense necessary to riprap this section.

The same thing goes for the short stretch down here, immediately below our camp. Now, in our response, I make the point that tailings which resulted from the mining of this No. 1 seam were used in our construction of the airstrip. Our road runs right across the airstrip and then continues on down to the tippie.

Our own works below the camp on the north bank [indicating] are protected only because of the tailings which we have piled and accumulated.

Actually the airfield creates the dike for these workings in here.

This is another vulnerable area as far as Mr. Shallit's road is concerned. Again this is an area where riprap could make that unsable all the year around.

Senator BIBLE. Why can he not use the upper road?

Mr. McCARTY. This is the road which we have built. This is our own road. From all the history of the situation as far as I am familiar with it, there has never been a business-like proposal made by Mr. Shallit for the use of that road.

Senator BIBLE. How many trucks go over that mine a day?

Mr. WAUGAMAN. We average 5 trucks running continuously 8 hours a day.

Senator BIBLE. Coming and going?

Mr. WAUGAMAN. Yes, sir.

Mr. McCARTY. The burden of the testimony has been to the effect here that Usibelli is the dog in the manger. Our lease ends right here.

Mr. Shallit pointed out he cannot use this high ground up here [indicating]. This is entirely off our lease. If he wants to apply for a route here the Interior Department may give it to him, but he has never applied.

The only route he has applied for is the route that was granted to him, this was formalized in the decision of November 5, 1954 which I just mentioned.

Now, to get down to our first point with regard to the military demand, there has been quite a bit said about it. Our presentation on that is brief and I would like to go into it, if I may.

The Alaska Range, capped by Mount McKinley, separates Fairbanks and Anchorage. It also separates the Nenana coalfield, in which the Suntrana, Usibelli, Shallit, and Arctic properties are situated, and the Matanuska coalfield, some 30 miles from Anchorage.

Two military bases lie north of the Alaska Range.

In all of this, sir, I think it should be kept in mind that the military requirement, to my best knowledge, makes up over 70 percent of the demand for coal in Alaska.

Senator BIBLE. What is the percentage from the Healy field? Is it still 70 percent?

Mr. McCARTY. I would say, but am not certain, that that supplied by the Healy Feld is above 50 percent.

Mr. WAUGAMAN. Sixty-five percent.

Senator BIBLE. Will you clarify that statement? I do not have it in my mind.

Mr. McCARTY. My point was that of all the coal, 70 percent—

Senator BIBLE. Seventy percent is used for the military? Of the coal used from the Healy field, how much is military demand?

Mr. McCARTY. Close to 70 percent again.

As of this moment, and I mean this moment, the operators are awaiting word from the Navy as to the outcome of the bids.

Senator BIBLE. When are the bids opening?

Mr. McCARTY. I think they are examining them.

Mr. WAUGAMAN. They are supposed to let us know between now and Friday.

Mr. McCARTY. Whether that will be the final word or whether that means they will make further inquiries, I don't know.

Senator BIBLE. Very well.

Mr. McCARTY. As we wrote our response the requirements were not known.

The statement we made in our response was that we anticipated a rather pessimistic demand this year. We were not disappointed because as we now know the requirement is for 149,000 tons for fiscal 1956.

We understand that all of this is in further effort to bring the stockpile to a workable size.

In any event, we estimated in our response that military needs, north of the Alaska Range, even with all of the projected power units on the line, would not exceed 450,000-500,000 tons per year.

That was Mr. Waugaman's opinion. He felt it was optimistic but, on the other hand, for the purpose of our response we did not want to appear niggardly. We now find by virtue of this 3-year program the Navy has announced that the peak demand is apparently to be 336,000 tons per year.

Senator BIBLE. Is that Navy or is that Army?

Mr. McCARTY. That is Navy. The Navy buys the coal. The Army and the Air Force use it and the Interior Department has the policy problems. So it is quite a situation.

Senator BIBLE. We had the testimony from Army colonels.

Mr. McCARTY. It was an Air Force colonel. The Air Force is the substantial user of the coal.

Senator BIBLE. The Navy buys it.

Mr. McCARTY. That is correct. I understand they buy all of the coal requirements for the military west of the Mississippi. I am not certain.

Mr. WAUGAMAN. They buy the solid fuel, sir.

Senator BIBLE. Very well.

Mr. McCARTY. At least this much coal, 336,000 tons, can be provided with the existing facilities of our mine—working at half schedule—let alone the four mines in the field. Yet the petition demands public expenditures for a railroad or public road as essential to the national defense.

Assume for the purposes of argument that a railroad were built, on whatever route, to the Usibelli mine tomorrow. The mine's tippie is located at the present railhead. In order to make use of a railroad to the camp, the Usibelli mine would have to move its tippie. Moving the tippie, which will in fact involve constructing a new one, is expected to cost in the vicinity of \$200,000.

Production and improvements at the mines are, of course, dependent upon demand. The Usibelli mine is now carrying a heavy load in the effort to pay off RFC loans, which funds were put into the most recent improvements.

Unless there is an appreciable jump in demand, hardly indicated now, it will be several years at least before the Usibelli Mine is able, financially, to rebuild its tippie. And until the tippie is moved, several years hence at present demand, this mine will continue to truck its production to its present tippie.

Both the Usibelli and Shallit strip operations would need trucks to get the coal from constantly moving pits to a railroad, even though extended. The petition concedes this, page 72, yet claims that \$1 per ton could be saved on haulage costs if a railroad were extended to these two mines.

Just a year ago, in his Healy River Spur, Inc. proposal, Mr. Shallit estimated the savings would be 70 cents a ton, (exhibit C (b) in that proposal). In that same proposal, he said the cost of the railroad would be \$1,600,000, yet in his present petition alleges that at his estimated saving of \$1 per ton of haulage cost, the Government over the past 5 years would have saved \$1 per ton, or \$1,200,000, the entire cost of constructing the railroad spur, page 75. We are unable to reconcile these changing figures.

It should be noted that Mr. Shallit does not take into consideration the cost of maintenance of a railroad in figuring the saving to the Government, although he is careful to include the cost of maintenance of a road in his estimates that 70 cents or \$1 per ton would be saved. Nor does he include any figure for maintenance of railroad rolling stock, annual railroad roadbed, and bridge repair or board loss, all of which he takes into consideration in connection with trucks and truckroads.

We submit that if a figure were arrived at for these costs in connection with a railroad, that Mr. Shallit's savings, whether he chooses to set it at 70 cents or \$1 per ton, would prove to be fictional. And in the very demonstration of these figures, whichever he chooses, he explodes the idea that a public road or a truck route would save anything.

Mr. Giaglione in his figure of half million dollars for the road did not indicate what it would cost to maintain that road.

Nor did he indicate whether the Alaska Road Commission, in its modest budget, would be able to provide the equipment to keep that road in condition.

Although we do not for a moment concede the saving Mr. Shallit presupposes, let us assume for argument it would be \$1. Let us also assume a military demand of 500,000 tons and an extension of the railroad as desired by Mr. Shallit which would cost, on estimates he has used, some \$1,600,000.

To start with, Mr. Shallit would be the only real user of the railroad, because Suntrana is already on it, and has been for over 30 years, and Usibelli could not use it. If Mr. Shallit got all the tonnage, the railroad would be paid for in something over 3 years, exclusive of maintenance costs, which Mr. Shallit ignores. Suntrana and Usibelli would be out of business. So would Arctic, which has significant transportation problems of its own.

Such a result, which would eliminate the 2 most significant producers and 1 new mine, would hardly be in the interests of national defense, yet this is the basis upon which the railroad is urged.

The point is that there does not exist a military demand justifying this railroad and this conclusion cannot be avoided.

Mr. Shallit relates an elaborate history, in none of which we participated, in support of his contentions. These conferences and correspondence took place before the actual military needs were known.

The low military requirement of 142,000 tons north of the range, published in March 1954, brought reality into the picture. It was only

after months of still further conferences that the Suntrana and Shallit mines received an additional 90,000 tons, split between them, which was granted to keep them operating. This, together with military realization that the full capacity figures for the powerplants (cited p. 41 of the Shallit petition.) estimated prior to the installation of the major plants, were simply not working out in actual operations, burst the bubble entirely.

The figures quoted at page 41 of the Shallit petition for fiscal year 1955 total 525,000 tons for the 2 bases north of the range, Ladd and Eielson. What was actually ordered in fiscal year 1955? Only 235,000 tons, or a little more than two-fifths of the estimated made in April 1953, and that exceeded by 90,000 tons what the military authorities indicated would be actually required; 90,000 tons were ordered on a relief basis, one-half of it to help Mr. Shallit, not because it was currently needed.

I might point out here also that for the first time figures from the Connor report have been made available. I am not certain whether it was in the Secretary's letter which was filed with you today. In any event, the Connor report apparently indicates figures 2 and 3 times the size of the 525,000-ton figure, again the basis for the feeling, and we think proper on those figures, that there should be a railroad, but hardly in the face of actuality.

We do not rejoice that military needs are proving to be less than heating engineers may have estimated. There are a number of reasons, not the least of which is an improved quality of coal giving more heat per ton than anticipated.

But the realities have to be faced squarely. Recognition of them leads to only one conclusion: the extension of the Suntrana branch of the Alaska Railroad or a public road are not essential to the national defense.

Now, our second point concerns the route. One of the four mines in the Nenana coalfield, Suntrana Mining Co., Inc., is already on the Alaska Railroad.

Another mine, Arctic Coal Co., Inc., is 4 miles over the hills and could not possibly be served by the railroad for which the petition asks. Thus the railroad desired will affect only two mines, Usibelli and Shallit. Of these two, the Usibelli mine would be affected adversely by reason of the route for which Mr. Shallit contends.

When operations were started at the Usibelli mine, the first development was to take the strippable coal from No. 1 seam.

This [indicating] is the No. 1 seam. It runs along here, back of the airstrip, entirely back of the camp itself, this being the campsite on this promontory, over to the edge of the river again.

When that coal was taken from that seam, it provided, together with the tailings that had been dumped to make the airstrip as an extension of the natural contours of the promontory, a drainage ditch. The long-range mining plan provided that that would be the manner in which the property would be developed.

I will not take the time to open up this plan [indicating], but it was done by an engineering service in Fairbanks. It is brought up to date on occasion to reflect recent developments and consists of a number of maps, charts and cross section drawings.

This one I have happens to be for September 1953 and shows the buildings at that time. It shows the long-range economic develop-

ment of this property, the manner in which the underground and the stripping is to proceed.

These charts, so far as I am informed, are filed with the Geological Survey. As far as I know, no objection to the production plan disclosed in these charts has ever been given to us at least by the Geological Survey or anyone else within the Interior Department.

When Mr. Edgar Hart, surveyor for the Alaska Railroad, made his survey in 1953, he plotted the line directly through the No. 1 cut. The location of a railroad or a road in this cut would destroy its use for drainage and render the planned economic development of the mine impossible.

We protested emphatically, at the time that Mr. Hart and the Connor group were in Alaska in August 1953, and to the Interior Department in Washington. Mr. Hart and the Connor group told us that they would recommend that a feasible alternate route, skirting the camp to the right, be surveyed. The Interior Department advised us that the matter would be held in abeyance until Mr. Connor's report had been received and considered.

Incidentally, Mr. Shallit's petition also takes note of that in connection with his rhetorical question as to why the Interior Department suddenly reversed itself. Yet earlier in his petition there is the statement that he had been advised there would be no further developments on a railroad until the Conner group had made its report (pp. 22-23, Shallit petition).

In 1954 Mr. Shallit filed his Healy River Spur, Inc., proposal. The survey maps he used were identical with those filed in 1953 by the Alaska Railroad.

Exhibits 1, 2 and 3 tell our reaction to this and need not be repeated here. These exhibits show that by this time in 1954, however, the military requirements for fiscal 1955, amounting to 142,000 tons, had been published.

Thus, to our only objection in 1953, namely, that if a railroad was to be built in the interests of national defense it should not be built so as to destroy the Usibelli Mine, was added the belief that the railroad was simply not essential to that same national defense.

The petition ignores the question of route entirely. Yet if the railroad is to be constructed for \$1,200,000 as the petition suggests, it must obviously take the shortest and most direct route which could be devised, and still could not be constructed for that sum if the figure of \$1,600,000 in Mr. Shallit's Healy River spur proposal is correct.

In any event, such a route would be through our No. 1 cut. This cut, which we made, is essential to our mine. If it were used as a transportation artery we might as well close the mine.

After 2 years of objections to this route it should be abundantly clear to Mr. Shallit and to anyone else interested that we will fight it every time it is proposed. We cannot do otherwise.

I should point out that immediately above this No. 1 cut, which forms the natural drainage ditch I have referred to, lie the five seams, No. 2, 3, 4, 5, and 6, going up this steep hill, which constitute the major portion of our reserves. Mining a considerable portion of them by hydraulic sluicing is the cheapest and most efficient way to produce the coal.

The underground development work on these seams is expensive, as we have found out and as Mr. Waugaman may have opportunity

to tell you, but the important thing is that the stripping of a good portion of these No. 2, 3, 4, 5, and 6 seams that lie up the hill from the No. 1 cut cannot be accomplished unless there is some way in which that overburden can be carried off to the river.

If there were a railroad running through that No. 1 cut it would either have to be trestled for the entire distance in order to permit drainage, or there could be no sluicing down there at all. The trestling would be impossibly expensive, I am sure.

In our conclusions, Mr. Chairman, we point out that we have absolutely nothing to hide in this matter.

We are volunteering herewith, as exhibits, letters hinted at darkly by the petition.

Mr. Usibelli's letter to the Senate committee of April 14 offers every cooperation, including the opening of the company records, should your committee desire to go further into this matter.

That letter also mentions other developments in Alaska such as the possibility of opening the Gubik gas field, the intensified search for oil, and the opening of coal beds on Lignite Creek, as possibly having some effect upon decisions among the Government departments against Mr. Shallit's proposals.

We would have been happy to have joined in some of the conferences which Mr. Shallit enjoyed, as shown by his petition. Contrary to the petition's inference that influence was somehow exerted by Usibelli, a reading of the petition and its exhibits makes the Usibelli mine quite conspicuous by its absence from the many meetings and conversations which Mr. Shallit discloses that he had with Department officials, all having considerable impact on the Usibelli operation.

Mr. Shallit says that "powerful pressures" were brought to bear to halt the railroad. If protests to the agencies of Government concerned, charged with the responsibility of protecting all citizens, based on a right-of-way filing that would have cut the development potential of the Usibelli mine to ribbons, can be characterized as "pressure," what defenses are left?

We decry this whispering of scandal in the effort to get the Congress to build something the Government departments have rejected on the basis of cold fact.

We can only speculate what reasons have prompted the Government to reject the Shallit proposals. We have urged two reasons with vigor. Mr. Shallit's record shows equal vigor in the urging of his proposals.

Our reasons are "demand," which at its expected rate would make a railroad constructed to our camp tomorrow practically useless and which does not justify the proposals under the color of the national defense; and "route," which, as has been proposed, would kill us.

We submit that the combination of these factors justifies the action taken by the Government. We feel the agencies involved are earnestly attempting to bring some stability into the coal procurement picture.

We feel that should the demand picture change sharply in the next several years that they will again consider a railroad. We are hopeful when and if that time comes, that our development will be considered in connection with its route.

Mr. Chairman, if I may, in connection with your inquiry about the present right-of-way, I would like to submit for the record 2

letters, 1 to the Solicitor of the Interior Department, dated October 6, 1953, and signed by Northcutt Ely.

Briefly this letter points out that we had withdrawn our appeal on a decision rejecting our application for a flume and ditch right-of-way over the southern portion of the Shallit property which would have diverted waters from Cripple Creek to be used in the hydraulic sluicing of overburden from a 400-foot level on the south bank of the Usibelli operation.

Senator BIBLE. The letter may be received.

(The letter referred to is as follows:)

Re Fairbanks Serial 08832

OCTOBER 6, 1953.

The honorable the SOLICITOR,

*The Department of the Interior,  
Washington 25, D. C.*

DEAR MR. SOLICITOR: Reference is made to my letter of June 4, 1953, concerning the above-captioned matter.

Fairbanks Serial 08832 constitutes an application for a road right-of-way over the leasehold of my client, Usibelli Coal Mine, Inc., of Suntrana, Alaska, filed by A. Ben Shallit, holder of a lease on adjacent coal lands. Mr. Shallit's application was approved by Bureau of Land Management decision dated September 10, 1952.

As you know, we have appealed this decision to the Secretary. Since the withdrawal of our appeal on Usibelli's application for a pipeline right-of-way, the Shallit road right-of-way constitutes the only matter now on appeal.

Usibelli's proposed pipeline right-of-way would have utilized waters of Cripple Creek to sluice off overburden. Mr. Shallit's sluicing operation this past summer involved the use of Cripple Creek waters for this same purpose. Accordingly, Mr. Usibelli recognized that use by him of Cripple Creek flow would constitute some interference with the Shallit operation and instructed us to withdraw his appeal.

The road right-of-way involves the same principle. If there is to be such a right-of-way, we feel it should incorporate the following factors:

1. That it be located so as to insure a minimum of interference with Usibelli's development and enjoyment and avoid the Usibelli headquarters and camp area where men and their families are housed;

2. That any right-of-way be definitely located; and

3. That the continued development of the Usibelli lease will make it necessary to cut the right-of-way from time to time in order to provide access to water, provide drainage, etc., thus making it essential that Usibelli's development be expressly recognized as a dominant use to the right-of-way.

In order to insure definite location and location with a minimum of interference, we have continued to request a hearing of this entire matter.

In connection with item 3 above—that is, dominant use, I would like to advise that the case of *Shallit v. Usibelli*, upon motion by plaintiff and by consent of defendant Usibelli, was recently stricken from the calendar. As we understand it, this action involved claims for damages by Shallit for alleged injuries to his road as well as an application by Shallit for an injunction. In denying the Shallit application, the court enjoined him in June 1952 from trespassing without a proper right-of-way. Even so, he continued to use roads over the Usibelli lease.

Even though Usibelli has consented that this case be stricken from the calendar, there remains the possibility of future suits for damages for alleged injuries to any right-of-way. Departmental action on our appeal should recognize that a right-of-way must be qualified as subservient to the developmental requirements of the Usibelli leasehold in order to minimize, if not obviate, such suits.

Respectfully,

NORTH CUTT ELY.

Mr. McCARRY. The point we made in withdrawing our application for the use of Cripple Creek waters which, incidentally, was made in 1950 before Shallit began operations, was that our use would have

been detrimental to Mr. Shallit's need for those waters for the same purpose, that is, sluicing.

We felt the same principle was involved in the right-of-way.

We pointed out by that letter three features which we felt were necessary in the Department's consideration of the formalization of the right-of-way over the Usibelli leasehold. They related essentially to the fact that the right-of-way should recognize the development of our lease as the dominant use so that we might be able to cut that right-of-way and provide substitute roads as we do under the present decision under which we are operating; or to provide the use of our roads in the event it is necessary to disrupt any Shallit road because of our operation. We felt that that was a proper proposal to make to the Department.

The second letter I have is a reply made by Mr. Barash, dated October 23, 1953, again to the Solicitor.

If I may, I would like to read a portion of this. He says:

I have noted with interest Mr. Northcutt Ely's letter of October 6 to you relative to the road right-of-way Fairbanks 08832 of my client, A. Ben Shallit, and it struck me rather forcibly that there is in fact no real controversy between appellants Emil Usibelli and Usibelli Coal Mine, Inc., and my client which could not be amicably resolved by the parties themselves if a determined effort were made to do so.

He then says:

It may come as a surprise to appellants, but Shallit does not disagree with the principles enunciated by Mr. Ely in those three factors.

Then Mr. Barash discusses the three factors. It was in this spirit that we arrived finally at the stipulation which is incorporated in this decision.

It was this road that was applied for. It was this road which was eventually granted.

No other route has been applied for by Mr. Shallit.

Senator BIBLE. Do you want to make that letter a part of the record?

Mr. McCARTY. If I may.

Senator BIBLE. The statement will be made a part of the testimony. (The letter referred to is as follows:)

WASHINGTON 5, D. C., October 23, 1953.

Re Road right-of-way Fairbanks 08832

The honorable the SOLICITOR,  
Department of the Interior,  
Washington 25, D. C.

DEAR MR. SOLICITOR: I have noted with interest Mr. Northcutt Ely's letter of October 6 to you relative to the road right-of-way Fairbanks 18832 of my client, A. Ben Shallit, and it struck me rather forcibly that there is in fact no real controversy between appellants Emil Usibelli and Usibelli Coal Mine, Inc. and my client which could not be amicably resolved by the parties themselves if a determined effort were made to do so.

Appellants obviously recognize that a suitable, permanent road right-of-way is indispensable to Shallit's mining operation. What appellants object to is summed up in three factors cited by Mr. Ely in his letter of October 6 as being in effect essential prerequisites to the road right-of-way. It may come as a surprise to appellants but Shallit does not disagree with the principles enunciated by Mr. Ely in those three factors.

With regard to the first factor, appellants surely must know that Shallit has sought conscientiously and with due regard to the rights of appellants to locate his road right-of-way in such a manner as to insure a minimum of interference with their mining operation and the enjoyment of their coal lease. Appellants

cannot reasonably expect the road right-of-way to be located where it would be flooded and washed out time and again, causing interruption to the hauling of coal as well as great expense to Shallit in rebuilding the washed-out portions of the road.

We sincerely believe that the location of the road right-of-way could be resolved amicably if appellants gave the same consideration to Shallit as they would wish if the situation were reversed. Incidentally, I understand that in two recent incidents where appellants' stripping water was beginning to destroy Shallit's road, both parties took cooperative measures to their mutual benefit and satisfaction. These incidents merely serve to illustrate that the present differences are not insurmountable if approached in a spirit of cooperation and reasonable accommodation one to the other.

There is, of course, no difference of opinion with respect to Mr. Ely's second factor, namely, that the road right-of-way should be definitely located. We contend that the road is definitely located and that this can be established from the data shown on the map by any competent surveyor. Yet here, too, I have no doubt that Shallit would be willing, as an accommodation to appellants, to do whatever may be reasonable to allay their apprehension on this score.

With respect to Mr. Ely's third factor: Here again Shallit has no objection to appellants' development work being recognized as the dominant use for the purpose of cutting temporarily the road right-of-way in order to provide access to water, drainage, etc., provided that appellants in doing so make temporary arrangements for Shallit to have access over a substitute right-of-way until appellants restore the permanent road. This does not actually present any great problem because appellants would simply have to put in temporary culverts or small crossings.

One remaining point in Mr. Ely's letter needs discussion. The injunction of the court to which he refers is in our judgment no longer in force and effect, bearing in mind that Shallit does have a proper right-of-way granted by the Bureau of Land Management in its decision of September 10, 1952. The purpose of this letter is not argumentative. It is, rather, to suggest that there are in fact no real differences between the parties which justify a hearing with the expense and delays inherent therein. We have always been ready and willing to resolve these differences with appellants in a spirit of cooperation and good faith.

A copy of this letter has been mailed today to the office of Northcutt Ely, Tower Building, Washington, D. C., as you will note from a copy of my letter to him of this date which is annexed hereto for your convenience.

Sincerely yours,

MAX BARASH.

Mr. McCARTY. There is one other point. There has been some discussion about the filing of a right-of-way by the railroad and it becoming automatically a right-of-way. I think that is subject to some question.

There is no doubt about the broad authority of the Alaskan Railroad under the organic act.

Senator BIBLE. It was withdrawn in any event.

Mr. McCARTY. It was withdrawn and the policy responsibility of Interior and the Secretary in connection with the Alaska Railroad cannot be avoided.

That policy responsibility must be exercised when it is determined whether or not there shall be any building on a right-of-way.

I think it is in that connection that this should be considered. I don't need to offer this memorandum for the record, but for the information of the committee or staff, if it would be useful at all, I shall be glad to put it in.

Senator BIBLE. This is a memorandum prepared by your law firm. I do not think it need to be made a part of the record.

Mr. McCARTY. There has been some comment about Mr. Usibelli's desire for a railroad and his offer to contribute \$50,000. That is correct.

However, it concerned the placing of the railroad not in the area we object to and Mr. Shallit desires, but on the south bank of the river which we now understand some engineers, or, at least, the engineers for the railroad, say is unfeasible for the reason it is underlaid with schist which might occasion slides and that sort of thing.

Whether that is true as far as a road is concerned, we do not know, but we would appreciate very much if this matter is continued, that that be examined and examined rather closely because if it were feasible to put this road on the south bank of the river, then as far as our camp operations are concerned and as far as the proper economic development of the bulk of our reserve is concerned, Mr. Shallit would be out of our way entirely.

As a matter of fact, Mr. Usibelli offered \$50,000 for the construction of that road as well, but it was not considered feasible at that time.

I don't think that we would be able to go through with that offer any longer for the reason that we are now operating a big plant on a small demand which makes it pretty difficult to compete as it is. The unit costs are naturally higher. I am afraid that that old proposal no longer holds good.

I did want to straighten up for the record that reference earlier to Mr. Usibelli's desire for the railroad. There was such a desire on the demand picture 3 years ago, but not on the route that has always been proposed.

Mr. Chairman, there are some other things that have come up in this hearing on which I might comment but I think I have used enough time. Mr. Waugaman is from way out of town. You can hear from me any time.

Senator BIBLE. If you feel that there are other things that you want to comment on, Mr. McCarty, you are more than free to do so by filing a written statement which will be examined by the committee if you would like to file a supplementary statement. The record will be kept open for a reasonable time for that purpose.

Mr. McCARTY. I think anything further that I might say would be brought out by questions you might direct to Mr. Waugaman.

Senator BIBLE. There is one question on which I am not clear yet. I understand that it is your position that by stipulation you worked out a mutual mining operation in November of last year, November of 1954. In accordance with that stipulation, the decision was handed down by the Assistant Secretary Orme Lewis designating the use of the lower right-of-way—

Mr. McCARTY. Designating the use of the route for which Mr. Shallit applied.

Senator BIBLE. And that is the lower right-of-way as you pointed out in brief.

Mr. McCARTY. Yes, Senator, that is what is shown in green as the lower road.

Senator BIBLE. It is your contention that that is the right-of-way which he, himself, said he wanted?

Mr. McCARTY. Yes, sir.

Senator BIBLE. He agreed with you on an agreed statement of facts for mutual operation of the two properties that that was a satisfactory route?

Mr. McCARTY. We could only assume so because it was the only route for which he had applied.

Senator BIBLE. But it is your position, by entering into that agreement pursuant to which a later decision was handed down, that that indicated satisfaction with that particular route?

Mr. McCARTY. I think that is substantially correct.

Senator BIBLE. Over the past few years, where this very obvious controversy has existed, has there been any effort made to work out an agreement concerning the joint use of the upper, higher, all-weather road?

Mr. McCARTY. I would like to ask Mr. Waugaman to comment on that.

Senator BIBLE. I will be very glad to question him on those points because that is one thing the record is not clear on, why cannot the two mining companies use the upper all-weather road.

Mr. WAUGAMAN. From what I know, sir, and I have been with this company for 2 years, the only time of which I am aware that Mr. Shallit has ever made any offer whatsoever to use our road was last fall at which time he approached me and I told him that I would refer the matter to the owner.

He later was asked to contact our attorney in Fairbanks, Mr. Clasby, and after several conferences, I understand—now this is hearsay—that Mr. Shallit's purpose for buying or attempting to buy into our road a half interest was for the purpose of building a railroad down through the middle of it—

Senator BIBLE. I am not so much interested in what his purpose was as to determine what was actually done toward working out a joint—

Mr. WAUGAMAN. This naturally stopped negotiations immediately because we definitely did not want a railroad built in the middle of our road, and we still do not, sir.

Senator BIBLE. What is the position of your company as of now on the use by Mr. Shallit of the upper all-weather road?

Mr. WAUGAMAN. At the present time, if we were offered reimbursement for 50 percent of the cost of that road we would consider the offer. The road cost us approximately \$100,000—

Senator BIBLE. And you have used it how many years?

Mr. WAUGAMAN. We have used it about 10 years, or about 9 years.

Senator BIBLE. Do you depreciate roads? I do not know whether you do or not.

Mr. WAUGAMAN. No, sir, we have not depreciated our road. In fact, every year we add to it. We straighten out curves, make it wider and put in additional drainage.

Senator BIBLE. I am not talking about maintenance. I am talking about the cost of the road. I understand the road cost you \$100,000. You have used it for 10 years, and you will sell a half interest to Mr. Shallit for \$50,000.

Mr. WAUGAMAN. Yes, sir.

Senator BIBLE. In addition to that, there is cost of maintenance and operation occurring year after year.

Mr. WAUGAMAN. Yes, sir.

Senator BIBLE. What is the cost annually to maintain the road?

Mr. WAUGAMAN. Frankly, sir, I do not have any cost on it extended to the present time because last year, this present fiscal year, is the first year that we have ever used our present maintenance system on

the road—I know that costs were less this year than last year. I know what it cost to truck coal, but I do not know what it cost us to maintain our road, because we have not maintained it under our present system of maintenance for a full year.

Senator BIBLE. Other than this one effort to work out a joint use of the road which you say fell by the wayside, because you learned that the purpose was to construct a railroad, were there any other conversations between Mr. Shallit and your company looking toward a joint use of the road?

Mr. WAUGAMAN. To my knowledge, no, sir.

Mr. McCARTY. I think I can add to that.

It is my understanding that there have been conversations from time to time in regard to the road but none of those has approached the basis of actually sharing the capital cost of the road.

I think the suggestion has been made previously by Mr. Shallit that he would bear half of the maintenance cost or something of that sort. There must be, in addition to half of the maintenance some consideration regarding capital cost and that the Usibelli mine be held harmless from any accident which may result from the road. It is a treacherous country, sometimes foggy. It is a three-lane road, so constructed for the purpose of safety. If there is going to be any other traffic on it, we do not want to be held liable.

There is another problem which arises in connection with the public road. It would subject us to licensing or subject us to other Territorial requirements from which we are now free.

Senator BIBLE. You may proceed if you have anything further.

Mr. WAUGAMAN. That is all I have, sir, unless you have questions.

Senator BIBLE. Let me ask you this: What is the position of your company as to the construction of the spur line into your mining property? Are you for it or are you against it, as of now? I understand once in 1953 you were for it and were willing to put up \$50,000 for the construction of a spur. Is that a correct statement?

Mr. WAUGAMAN. Provided it was constructed on the south side of the river.

Senator BIBLE. So as not to harm your mining property?

Mr. WAUGAMAN. We do not object to having a spur line up there on the north side of the river, either, sir. What we do object to is having a spur run up through the middle of the existing road through the No. 1 cut which would eliminate the possibility of stripping any coal reserves which amount to about 2 million tons on the north shore of the river. Now, we happen to be located in the spot in Healy Valley where all of these coal seams cut across the river. We mine on both sides of the river. So, as a result, regardless of where you build a road, you either interfere with existing operations or with the tailings resulting from operations located away from the river. So, regardless of where you go it interferes. It is all a matter of which location is chosen that would interfere with us least. Sticking a railroad or a road up through the old No. 1 cut would eliminate the possibility of stripping any coal whatsoever out of that whole area on the north side.

Senator BIBLE. What advantage would a spur line in your property be at the present time?

Mr. WAUGAMAN. At the present time, it would be no advantage whatsoever other than we would be able to unload our freight up there, and as far as loading coal up there is concerned, we would still have to haul our coal to a tipple. A new tipple would cost approximately \$200,000.

Senator BIBLE. Building the spur line in would shorten up your haul from 3 miles to approximately what, a half mile?

Mr. WAUGAMAN. I would say about a half mile, or a quarter mile, all depending on which pit you were hauling from.

Senator BIBLE. Even with your spur line in your property, you would still have a loading and unloading operation?

Mr. WAUGAMAN. That is correct.

Senator BIBLE. I think I have no further questions unless you want to add something to what Mr. McCarty said.

Mr. WAUGAMAN. That is all.

Senator BIBLE. Mr. McCarty, it may be understood you can file a supplementary statement.

Mr. Woozley, were you going to testify on this matter? We will be very happy to have you join us.

Mr. WOOLEY. I do not know, Senator, if there is anything I, as representative of the Bureau of Land Management, can add. If there are any questions, I will be glad to attempt to answer them.

Senator BIBLE. Are you familiar with the petition which has been filed?

You might come up here and make yourself comfortable, Mr. Woozley.

#### **STATEMENT OF EDWARD WOOLEY, DIRECTOR, BUREAU OF LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR**

Senator BIBLE. You are familiar with the petition of Ben Shallit, which has been filed in this matter?

Mr. WOOLEY. Yes, sir.

Senator BIBLE. I think probably the only question we might care to ask of you is how would Mr. Shallit obtain a right-of-way through the Usibelli property in order to reach the spur line on the Alaska Railway, some 6 miles distance?

Mr. WOOLEY. I would say he would make an application for the right-of-way, giving the metes and bounds description that he desired to use. It could then be considered and weighed on its merits.

Senator BIBLE. In case of a conflict and protest filed by Usibelli, that is resolved in the same manner as other filings and protests are resolved?

Mr. WOOLEY. Yes, sir; we would probably make a decision based on all the known facts and that is subject to appeal to the Director and on to the Secretary.

Senator BIBLE. It would follow the regular pattern of the Bureau of Land Management procedure?

Mr. WOOLEY. Yes, sir.

Senator BIBLE. I am directing my attention almost entirely to the right-of-way for road purposes as distinguished from the right-of-way for railroad purpose.

I think it is a fair statement from the evidence that the road presently being used by Mr. Shallit does wash out during flash floods at various times of the year. The road is of some 25 feet in width, it is a gravel road, it is not an all-weather road.

I do not know whether there is anyway that can be designed other than meeting of the minds of these two parties, whereby a satisfactory road can be built to serve not only the Cripple Creek property but also the so-called Roth property on the north. It seems to me this problem directs itself pretty much to that point.

MR. WOOLEY. Yes, sir; I think if they can find a way that they can cross the property without undue damage, that they should try and work it out between themselves. That has been our attitude.

I think Mr. Shallit is now offered a right-of-way permit from the Bureau of Land Management.

SENATOR BIBLE. It appears that is not completely satisfactory although I am not too clear, and I think we can recall Mr. Shallit for the purpose of questioning him on it as to why that road is not satisfactory if in fact he agreed to accept that right-of-way in November of last year. Are you familiar with that particular negotiation?

MR. WOOLEY. No, sir.

SENATOR BIBLE. That decision is one that was written by Under Secretary Orme Lewis; is that correct?

MR. WOOLEY. I think it was on appeal; yes, sir.

SENATOR BIBLE. My attention has been directed to a letter which is made part of the petition, on pages 51 and 52. I direct your attention, first, to page 51, where you directed a letter to the Assistant Secretary under date of October 14, 1954.

MR. WOOLEY. Yes, sir.

SENATOR BIBLE. With particular reference to the last paragraph of that letter as it is contained on page 52:

At the meeting Mr. McCarthy (sic) stated that the relations between his client and Mr. Shallit were better, that Mr. Barash and he were engaged in preparing a form for a stipulation and agreement between Usibelli and Shallit which would provide for the mutual operation of 1 truck road only through the Usibelli interests, instead of the present 2 roads, one Usibelli's and the other Shallit's. As soon as this agreement is signed and filed with the record of the appeal, Fairbanks 08832, your solicitor expects to dispose of the appeal and thus close the entire case.

MR. McCARTY. May I comment with regard to that, because it uses my name?

SENATOR BIBLE. Yes.

MR. McCARTY. Later in the text of the petition, there is this sentence:

The latter statement, attributed to Mr. McCarty, is completely erroneous.

I subscribe to that entirely.

SENATOR BIBLE. This letter itself is correct?

MR. McCARTY. No doubt about that.

SENATOR BIBLE. But the reference to you is wrong?

MR. McCARTY. Exactly. There must have been some mistaken impression. That is all I can say. I did not say that.

MR. WOOLEY. Mr. Chairman, there may have been a misunderstanding, but that was my understanding at the time that Mr. Mc-

Carty and Mr. Barash were engaged in trying to arrive at a satisfactory arrangement for the use of the road.

Senator BIBLE. That was your understanding. Of course, it seems that might be one ideal way of working this out, but, apparently, that is not what they were doing.

Mr. WOOLEY. That was my understanding. That is why I stated so in the letter.

Senator BIBLE. Do you have any further ideas as to how you can work out a mutual use of that road?

Mr. WOOLEY. I would think that if these two gentlemen cannot arrive at a satisfactory solution to get through there and Mr. Shallit makes an application for a road by metes and bounds that we would have to make a determination whether that road would be satisfactory or not.

Senator BIBLE. If they designate it as the route, the present all-weather road which Usibelli is using exclusively—

Mr. WOOLEY. That would be something we would have to determine when we got to it if they made that application.

Senator BIBLE. If that is the property of the Usibelli Co., is it not true that some compensation would have to be provided for use of that road?

Mr. WOOLEY. I would think so; yes, sir. There would have to be an arrangement worked out.

I am not so sure, Mr. Chairman, that that road—and I would have to ask Mr. McCarty or Mr. Barash, whether that road itself is on public lands. If it were not—

Mr. McCARTY. Yes; these are all public lands.

Senator BIBLE. I was under the impression they were.

Do you have any further suggestion to offer as to the amiable solution of this entire problem?

Mr. WOOLEY. I am afraid I do not.

Senator BIBLE. I think that is all, Mr. Woolley. Thank you very much. I did not know how familiar you were with this particular situation.

Mr. WOOLEY. I am sorry I do not have any technical people down here with me who have actually worked on this.

Senator BIBLE. I understand that Mr. Barash wants 3 minutes by way of rebuttal.

#### STATEMENT OF MAX BARASH—Resumed

Mr. BARASH. Mr. Chairman, I merely want to make some comments on the question of the right-of-way.

Senator BIBLE. Let us limit ourselves to the right-of-way for the road.

Mr. BARASH. First, with regard to the right-of-way, Mr. Chairman, Mr. Shallit filed the application for right of way in 1951. Thereafter, Usibelli Coal Mine, Inc., filed protest and appeals against that right-of-way. That continued in the Department for a period of 2 years. I should say 3 years. The final decision was rendered by the Department in 1954.

Well, we might ask, why did Usibelli Coal Mines, Inc., write a letter to the Secretary of the Interior offering to settle the controversy on certain conditions to which I subsequently acquiesced.

Let us look at this in proper perspective. You must bear in mind that in April 1953, the Alaska Railroad had filed a right-of-way application with the Bureau of Land Management. The construction of the railroad was at that time imminent.

My theory is, sir, if I may say so, that Usibelli Coal Mine, Inc., was willing to concede and give Mr. Shallit at that time a road in the bed of the Healy River, which they should not have opposed in the first instance.

The petition that Cripple Creek Coal Co. has filed cites the decision of the Bureau of Land Management, dismissing the protest filed by Usibelli as being without merit.

I do not want to take the time of the committee, but merely want to suggest that that was one reason why Usibelli was willing to settle the controversy with regard to the right-of-way in the bed of the Healy River.

Senator BIBLE. Now, to clear my own thinking on it, the statement of the counsel for Usibelli says this: that the stipulation of last year, signed by Mr. Shallit, was in effect an agreed statement of operating conditions under which both mines would work together:

It recognized the development of the Usibelli leasehold as the dominant use. We thus thought this matter was finally at rest because the right-of-way so formalized was approximately the same as that applied for by Mr. Shallit in 1951 and in use by him since that time.

Mr. BARASH. Yes, sir. But bear in mind, sir, that in 1951, Mr. Shallit had no other alternative.

Mr. Usibelli would not permit Mr. Shallit to construct a road on the high ground of his lease. The only place that he would permit Mr. Shallit to file a right-of-way and to construct a road was in the bed of the Healy River. So rather than get into any extended controversy at that time, in 1951, Mr. Shallit took the easiest way out and filed his right-of-way in the bed of the Healy River.

Senator BIBLE. What you are saying is that although you formalized that right-of-way does not necessarily mean you were satisfied with that right-of-way.

Mr. BARASH. Yes, sir; because all through those years, 1951, 1952, 1953, and 1954, even though Mr. Shallit's right-of-way application was pending, we nevertheless were asking the Alaska Road Commission and the Alaska Railroad either to construct an all-weather road or a spur.

Senator BIBLE. What consideration has your client, and yourself, given to working out a joint use of the upper road?

Mr. BARASH. Well, Mr. Shallit has testified with regard to that before and I would rather he would say a word about that.

Senator BIBLE. You can sum it up very briefly.

#### STATEMENT OF A. BEN SHALLIT—Resumed

Mr. SHALLIT. I have attempted many times to work out some sort of deal where we could use the road but at all times we have never arrived at any figure that would leave me any chance to compete in any markets. What Usibelli wanted was so much that I would be entirely out of the business. I have discussed this matter with Mr. Waugaman since he has been in charge of Usibelli's operations, but Mr. Waugaman apparently cannot make any decisions. It is up to

Mr. Usibelli to do that. I have asked Mr. Waugaman, "Where on your lease can I go and still keep out of the river? Where will I interfere least with your operation? That is where I will file for my right-of-way." He says, "There just isn't any place you can go. That is your answer."

Mr. BARASH. Now with regard to the testimony of Mr. Kalbaugh, he proceeded on the philosophy, Mr. Chairman, that the Alaska Railroad is a private railroad rather than a Government railroad, and that its purpose is to open up and develop the coal resources of Alaska. Both the Alaska Railroad and the Defense Department are arms of the Government. The Government is the beneficiary in any event if the military purchases coal at cheaper prices. True, the military expects to purchase only 828,000 tons during the next 3 fiscal years because it is reducing its present stockpile to a 90-day supply, but the Ladd and Eielson Air Force Bases are burning coal currently at about 400,000 tons annually. These air bases will again be purchasing coal at the rate of, as the colonel from the Defense Department testified today, 336,000 tons after fiscal year 1958, if not a greater tonnage. If the spur is constructed, there is no doubt that the military would be purchasing coal at cheaper prices. It would unquestionably promote competition in the Healy River Valley.

Cripple Creek Coal Co. has offered to cut its price by \$1 per ton. That is tangible proof of the savings that would result. Usibelli Coal Mine, Inc., does not want the railroad spur constructed. It will not permit the Alaska Road Commission to utilize Usibelli's present road to construct an all-weather road to the Cripple Creek Coal Co. property.

What is the answer? Is Cripple Creek Coal Co. to be forced out of business? That sums up my comments.

Senator BIBLE. Thank you very much.

Mr. SHALLIT. In rebuttal to what Mr. McCarty or Mr. Waugaman said in regard to the mining operations on the north side of the river, it was stated that it would be impossible to put a railroad through that cut; that it would so interfere with the mining operations that they could not sluice, remove the overburden from the coal from the 2, 3, 4, 5, or 6 beds up there. That is a question of engineering judgment. It is my opinion that first of all they will not strip the beds on the north side of the river that dip into the hill because that is a question of economics, it is a question of cost, and in my opinion as an engineer, I do not think they will be able to do it. The other thing is, they say if you put a railroad through that cut or some place around there that it will block off the stripping so that the gravel cannot be drained through there. It is my contention that a small trestle in 1 or 2 places or a culvert or something like that would be ample to bring the water in the strip area and let the tailing go down below. I think it is an extremely simple engineering problem; and if Usibelli does not have the engineering staff to decide on it, I think there are experts around here who are familiar with that work and can testify on that.

Senator BIBLE. Prior to the time that you obtained this lease permit in 1949 or 1950, did you investigate the right-of-way possibility both for the road and the railroad?

Mr. SHALLIT. Yes, sir.

Senator BIBLE. As a lawyer of seven lots of land-blocked people, what did you do prior to the time you obtained the permit or the lease?

**Mr. SHALLIT.** I had read the act. It was my impression that access would be granted to me, that the Government had reserved that right to all coal leases. I see no reason now why proper access cannot be granted. Before I even started on there one of the main problems was that of transportation. That is when I wrote to Mr. Ghiglione asking if it was possible to get any help from the road commission. It was my feeling that if the road commission came in there and even got a right-of-way, even though I had to put the money into it, if they got a safe right-of-way I could build on it there; it would be necessary in order to get through. In other words, it is my contention that when the Government gives you a coal lease they give you access to it. And by access I mean a reasonable access. I felt that certainly I could obtain a proper right-of-way either through the railroad or through the road commission.

For a long time, thinking that the railroad would, of course, be the ultimate way of getting coal out, because it is the cheapest way, and after all the thing to do is to get your coal out as cheaply as possible—so you want to get it on the railroad as soon as possible—I asked the railroad if they would kindly survey the right-of-way; where, if they ever built a railroad, I would build my road there. They could give me permission to use that right-of-way and I would gradually build that right-of-way on railroad grade.

I would start in building along the grade of the railroad where I could, and where it got too difficult in the cuts or fills, I would skirt around until such time as I could gradually whittle away at it. I thought in a period of time I would have that road whittled down so it would be feasible for railroad grading. But the railroad never saw fit to run that survey until the year the Connor Committee was up there. At that time it looked as though they were going to put the road through. So I did not request the permission to use that right-of-way while they were in the process of surveying.

**Senator BIBLE.** Thank you, Mr. Shallit.

Do we have any further witnesses?

**Mr. BARASH.** We appreciate the time you have given us.

**Senator BIBLE.** Is there anything further?

**Mr. McCARTY.** I would like to make this one general observation. That is, that we are here on the petition directed at the railroad. We have gotten into a right-of-way problem which, in my opinion, is a substantially different situation. If the committee desires more information with regard to either of them, we will be delighted to supply it. We are prepared today mainly in connection with this railroad. That is what our formal statement was directed to.

**Senator BIBLE.** I think the petition was directed to that and a great deal of the case. The Chair feels that possibly there is a happy solution to this overall problem.

**Mr. McCARTY.** Mr. Shallit stated he could not file for a right-of-way anywhere else than where it now is. That is obviously wrong. The man can file for anything he wants anywhere. Whether it is granted or not, is the question.

**Senator BIBLE.** What will the attitude of your client be when he files on the upper road?

**Mr. McCARTY.** The problem, of course, is to get a road which can be constructed economically. Accordingly, the area is restricted and it runs smack into our operation. As far as the railroad is concerned,

the continued insistence for some reason or another to want to plot this thing through our No. 1 cut would be something that might be to the economic advantage of the railroad and Mr. Shallit, but would simply destroy us.

Senator BIBLE. The joint use of the upper road would not bother?

Mr. McCARTY. No, sir, but there are conditions which we state with respect to that. That proposition has never been made except in the context that it be bought into by Mr. Shallit with the idea of converting it to a railroad. If it means we are going to let ourselves open to someone participating in our investment so they might have some say as to what that will be used for at a later date, I am afraid we have to be quite wary in connection with it.

Thank you, Mr. Chairman, very much for your courtesy.

Senator BIBLE. We are very happy to have you, Mr. McCarty.

I might state that the record will be available to all who testified for the purpose of correcting and editing their statements if they would like to do so. I assume that the record can be kept open for a reasonable time for the purpose of allowing any insertions.

Mr. WATGAMAN. Mr. Shallit said a minute ago that it would not be economically feasible to strip coal on the north side of the river in the area where the No. 1 cut goes through the hill. I might say, sir, that we have been stripping coal there for the last 2 years. We have constructed a dam on that side. We have installed 2 pumps and 2 pipelines. We intend to strip in there the remainder of this stripping season and probably for the next 2 or 3 stripping seasons or until all the coal is stripped out of there. I cannot understand his making that comment. Of course, we may lose money on it. If so, some of our stupid engineers will probably get fired over it.

Senator BIBLE. Without getting into any surrebuttal here on that question, the subcommittee hearing will stand adjourned.

I want to thank and commend all of the witnesses. Without exception, presentations have been clear and pertinent to the issues. I think we have made a good record upon which the subcommittee will be able to reach a determination. So that all of the material may be available in a single document, I will direct that Mr. Shallit's petition and Mr. Usibelli's answer appear as an appendix, together with any related material that is pertinent. Also, the record will be kept open a reasonable time to permit any party in interest to file supplemental statements or additional information that might be helpful to the committee. Again, thank you.

(COMMITTEE NOTE.—Pursuant to the express permission of the acting chairman, the record of the hearings was kept open for a period of 2 weeks to permit any party in interest to submit additional and supplemental material. Mr. Usibelli's counsel requested that the original answer to Mr. Shallit's petition be printed and this document appears as appendix B, post.)

(The following supplemental statement was submitted by Mr. Max Barash, counsel for Mr. Usibelli:)

WASHINGTON, D. C., June 7, 1955.

HON. ALAN BIBLE,

*Acting Chairman, Subcommittee on Territories,*

*Interior and Insular Affairs Committee,*

*United States Senate, Washington 25, D. C.*

DEAR SENATOR BIBLE: At the conclusion of the hearing on June 1, 1955, of the Subcommittee on Territories of the Interior and Insular Affairs Committee,

United States Senate, on the petition of Cripple Creek Coal Co., you kindly offered to keep the record open for a reasonable time for the submission of such additional statements as might be desired. The following statement is therefore being submitted pursuant thereto in the hope it will be helpful to the committee in pinpointing the vital issues and the key testimony of the Interior Department expert witnesses who had no ax to grind.

I. There is nothing in the statute authorizing the establishment of the Alaska Railroad which requires that construction of a branch be self-sustaining and self-amortizing.

The petition of Cripple Creek Coal Co. (see p. 74) quotes the governing statute (48 U. S. C., 1955 edition, secs. 301 et seq.) which declares the policy of Congress to be that the line or lines of the Alaska Railroad

"\* \* \* be so located as to connect one or more of the Pacific Ocean harbors on the southern coast of Alaska \* \* \* with a coalfield or fields so as best to aid in the development of the \* \* \* mineral or other resources of Alaska, \* \* \* and so as to provide transportation of coal for the Army and Navy \* \* \*." [Emphasis added.]

and empowers, authorizes, and directs the President

"\* \* \* to construct and build a railroad or railroads along such route or routes as he may so designate and locate, with the necessary branch lines, feeders, sidings, switches, and spurs \* \* \*."

On pages 74 to 80 of the petition several instances are cited where branch lines were constructed out of lump-sum appropriation in furtherance of the purposes of the act. In those instances nothing was said to even suggest the necessity that the branch lines be self-sustaining or self-amortizing except for the significant observation that the construction of the branch lines would result in saving money for the Alaska Railroad and the taxpayer in cheaper fuel. On pages 76 and 77 of the petition appears the following statement made by Colonel Steese, head of the Alaskan Engineering Commission, now the Alaska Railroad, to Chairman Cramton of the House Appropriations Committee:

"Colonel STEESE. \* \* \* The Moose Creek spur was never estimated for, but was actually built out of a lump-sum appropriation. It was built after the matter had been referred to the President. One of the objects specified in the Railroad Act was to reach the coalfields as a means of development. The statement shows that the construction of the Moose Creek spur would save its cost to the railroad in 2 years in the lower price of coal."

Colonel Steese's statement that one of the objects of the Railroad Act was to reach the coalfields as a means of development is as valid today as it was then. On pages 77 to 79 of the petition appears the story behind the construction of the 4-mile spur to the coal deposits of the Healy River Coal Corp., predecessor to Suntrana Mining Co. The cost of constructing the spur was stated by Colonel Mears, then head of the Alaskan Engineering Commission, to be \$200,000 (see p. 79 of the petition). Toward the cost of constructing that spur, Healy River Coal Co. contributed \$10,000 in cash and \$20,000 in coal delivered to the railroad. Again, it is significant that no mention was made of the need for the spur to be self-sustaining or self-amortizing other than the fact that it would result in cheaper coal to the railroad and to the Territory.

There is no need to labor the point that the Alaska Railroad is Government-owned and operated and that it has a clear duty under the statute to provide railroad access to open up the coal resources of Alaska even if the cost of constructing a spur should never be amortized. However, there is not the slightest doubt, on the basis of the evidence adduced at the hearing, that the cost of constructing a spur to the Cripple Creek Coal Co. lease would be amortized over a period of years by savings to the military alone. In submitting its bids to the Navy Fuel Supply Office to supply the coal requirements of the Ladd and Eielson Air Force bases in Alaska for the fiscal years 1956, 1957, and 1958, estimated at 828,000 tons for the 3 years, Cripple Creek Coal Co. made a firm offer to reduce its price by \$1 per ton if a spur is constructed to its lease property. This evidences good faith and demonstrates the savings which would accrue to the military. Nor can there be any doubt that the savings to the civilian consumers of coal in the Fairbanks area would also be substantial by virtue of the added competition that would result from the construction of a spur.

II. The testimony of the key witnesses of the Interior Department at the hearing demonstrates beyond doubt the need for railroad access to the Cripple Creek Coal Co. lease and to the Government coal reserves.

Of all the key witnesses personally familiar with coal mining operations in Alaska, Leo H. Saarela, regional mining supervisor of the United States Geo-

logical Survey, is best qualified to discuss the importance of the spur in developing the coal resources of the Healy River Valley above the Usibelli lease. Mr. Saarela is in charge of coal mining operations on all Federal coal leases in Alaska, including the Usibelli and Cripple Creek coal leases. Excerpts from his testimony follow:

Transcript, page 141:

"Senator BIBLE. \* \* \* So there would be a saving, according to your statement, according to the Government because they would be saving that much money through the use of railroad transportation rather than truck transportation?"

"Mr. SAARELA. Yes.

"Senator BIBLE. Based on the figures of 150,000 tons from the Usibelli and 150,000 tons from Shallit?"

"Mr. SAARELA. Yes.

"Senator BIBLE. And you believe that same statement is true today?"

"Mr. SAARELA. I believe so; yes.

"Senator BIBLE. I assume, based upon that statement, that you believe extension of a branch line through the Usibelli lease would result in a more economical operation to the Cripple Creek property then; is that true?"

"Mr. SAARELA. Yes.

"Senator BIBLE. Would that same hold as to the Usibelli property itself?"

Page 142:

"Mr. SAARELA. I believe it would, although the Usibelli management has disagreed with that. They have a tippie to move. At the rail head they have their present tippie. In other words, they are trucking coal from 3 miles or more and they have their tippie at the rail head at the present time. However, they have indicated that it would cost too much to move the tippie and that is the prohibiting argument, I believe, in their statement that they do not want to use the railroad.

"Mr. SAARELA. I guess in view of your statements that it undoubtedly follows that in the event of some type of emergency, it would certainly make the Roth property far more accessible if the spur line were built at least to Cripple Creek.

"Mr. SAARELA. Yes; it would.

"Senator BIBLE. I think that follows very naturally from what you have developed here."

\* \* \* \* \*

Page 145:

"Senator BIBLE. Are there any better means of developing reserves above Usibelli than would be Cripple Creek and block 28 through the extension of the branch line? Is there any other way to get it out?"

"Mr. SAARELA. I do not think so.

"Senator BIBLE. I think that develops it very well, Mr. Saarela.

Dr. John C. Reed, in charge of Alaskan Affairs for the Geological Survey, is headquartered in Washington, D. C., but he has personally inspected the coal properties in the Healy River Valley and, although competent to testify on the key issues, did so with tongue in cheek to avoid conflict with the policy decision of the Secretary of the Interior not to construct a spur. Nevertheless, we believe his testimony although guarded is self-revealing. Excerpts from that testimony follow:

Transcript, pages 95-96:

"Senator BIBLE. I might ask the question. If you are not the qualified witness to give the answer, simply say so. Do you believe the extension of the branch line through the Usibelli lease would result in a more economical operation to the Usibelli property? That is an economic question.

"Dr. REED. As an individual, in my opinion it would make it easier for Shallit to operate, and hence he probably could deliver coal at a somewhat lower price.

"Senator BIBLE. My question was directed to the Usibelli property rather than Cripple Creek. But I assume your answer would be the same.

"Dr. REED. No; I am not sure that it would.

"Senator BIBLE. You think there is a distinction?"

Page 96:

"Dr. REED. I have seen Mr. Usibelli's statement that this would not aid him at the present time. I am only going on his statement and not my own.

"Senator BIBLE. You have no independent judgment as to whether the railroad would aid him or would not aid him?"

"Dr. REED. I do not.

"Senator BIBLE. Do you have any opinion as to the opening up of the Roth property by extending the spur line to the Cripple Creek line? Is that a desirable feature of the problem before us?"

"Dr. REED. The Roth property has been held in reserve for a possible emergency. It was the opinion of my Bureau, and I believe generally accepted, that it was an area where coal could be obtained rather easily and rather quickly. However, to take that coal out, transportation of some sort would have to be provided. It hence would follow that it would be more immediately available if transportation were put in at this time.

"Senator BIBLE. And if there were a spur line that extended to the Cripple Creek property, then that would be advantageous to the Roth property which adjoins it?"

"Dr. REED. It would, indeed. Although to my knowledge there is no plan to do any mining in the Roth property at the present time."

Mr. A. F. Ghiglione, Commissioner of Roads for Alaska, falls in the same category as Dr. Reed—a witness who would have preferred to speak more freely. Excerpts from his testimony follow:

Transcript pages 146-149:

"Senator BIBLE. It is my understanding that it is your feeling the construction of a road by your Commission would more quickly provide the needed access to the Alaska Railroad; that is, the construction of a road from the spur into this property involved.

"Mr. GHIGLIONE. Yes, sir. I should qualify that. When we originally were contacted by Mr. Shallit when he first opened up this property, his request to the Road Commission was given consideration along with similar requests from elsewhere in Alaska for assistance to open up properties in Alaska.

"It has always been the policy of the Road Commission to assist wherever a road will become a public road and contributions or cooperation by the requester are offered. In that case, we did recognize that Mr. Shallit needed assistance on the road and we offered assistance on the cooperative basis; however, always recognizing that we were limited in funds to projects of fifteen or twenty thousand dollars in scope. When we got into Mr. Shallit's picture a little further and saw the scope of it, and also recognized that it would be more desirable to have the railroad extended into the area since this was just a stub road, it was not connected with any road system, the policy of the Department came to bear in which we backed out of it, frankly, and supported the justification of a railroad extension.

"Senator BIBLE. You say the policy of the Department came to bear; how did that come about?"

"Mr. GHIGLIONE. Through the Office of Territories, under which both the railroad and the Road Commission are concerned and through the Alaska Field Committee which was brought out in the presentation.

P. 148:

"All the Interior agencies got together about three times a year in Alaska and discussed our mutual problems. It was the feeling of the entire committee at that early stage that it would be more desirable to support a railroad extension than a road.

"Senator BIBLE. Who made that determination?"

"Mr. GHIGLIONE. That was the Alaska Field Committee made up of the heads of all the Interior agencies in Alaska.

"Senator BIBLE. Who are the heads of the Interior agencies in Alaska?"

"Mr. GHIGLIONE. That is presented in Mr. Shallit's statement. There is the head of the Alaska Railroad, at that time Colonel Johnson; the head of the Bureau of Land Management, Mr. Puckett; the head of the Road Commission, at that time Colonel Noyes; the Bureau of Mines; Geological Survey; Bureau of Indian Affairs. I believe that covers the field.

"Senator BIBLE. That determination was made in what year?"

"Mr. GHIGLIONE. It is in the record there, about 1951 or 1952.

"Senator BIBLE. And it was resolved then that it was preferable to serve this area by a spur railroad line rather than a highway; is that true?"

"Mr. GHIGLIONE. That is true; yes, sir.

"Senator BIBLE. Is that still the thinking of the Road Commission of Alaska?"

Page 149:

"Mr. GHIGLIONE. It was our thinking up until just the recent determination that the Department does not support a railroad based on tonnage figures of coal. Now it looks like we are back in the picture."

Mr. John E. Manley, Acting General Manager of the Alaska Railroad, for obvious reasons was reluctant to offer testimony which might conflict with departmental policy. Excerpts from his testimony are, we submit, revealing.

Transcript, page 130:

"Senator BIBLE. \* \* \* Do you think that the users in the Territory would save \$100,000 then in this next fiscal year if the spur were constructed?"

"Mr. MANLEY. I would say that they would save, well, there are a lot of variables. If all of the coal were sold by the Suntrana Coal Corp., there would be no saving.

"Senator BIBLE. I understand.

"Mr. MANLEY. If it were all by Usibelli, it would be a lesser saving, or if it would be all by Mr. Shallit there would be a greater saving.

"In fiscal 1954, the year that estimate was made, there were approximately 550,000 tons of coal, I believe, from the Suntrana area, of which approximately 350,000 tons were shipped by Usibelli and Shallit. The total military requirements as projected for the fiscal year 1956 for north of the range is 150,000 tons so that, of course, will upset the picture by quite an amount, of course."

Transcript, pages 132-133:

"Senator BIBLE. Was that filing [referring to the railroad right-of-way] on behalf of yourself or the Alaska Railroad bolstered by whatever type of showing you had before you? Was that passed on to the Interior Department to secure from them a positive statement as to their policy?"

"Mr. MANLEY. I would have to assume, Mr. Chairman, that it was passed on in the form of copies. I do not believe I could answer you definitely on that without referring to the files.

Page 133:

"Senator BIBLE. Since the date of your filing of April 20, 1953, again, what was come about to change the position of the Alaska Railway? Does it boil down purely and simply to the estimated needs of the Defense Department, the two airbases?"

"Mr. MANLEY. That is correct. \* \* \*

In connection with this latter testimony, it is important to note what Col. Darrel G. Welch, Chief, Fuels Division, United States Air Force, testified with respect to reduction of the present coal stockpile and estimated future needs for the Ladd and Eielson Air Force Bases in Alaska.

Transcript, pages 88-89:

"Colonel WELCH. \* \* \* Our plan is to reduce the current stockpile through fiscal year 1956, after which the estimated consumption should level off at about 336,000 tons annually.

"Accordingly, procurement of new coal will decline through fiscal year 1956 and increase to the above estimated level of consumption by fiscal year 1957.

"The attached schedule indicates the Air Force requirements from fiscal year 1955 through fiscal year 1958 for coal at Ladd and Eielson Air Force Bases.

Page 89:

"You will note that for the next 3 years, fiscal year 1956 through 1958 amount to about 825,000 tons. It is actually 822,000 tons for the next 3 years to be procured, as compared with a Department of Interior figure furnished in the letter previously referred to, which gave 828,000 tons."

Thus, the stockpile is to be reduced significantly only in fiscal year 1956. In the following fiscal year 1957 Colonel Welch states military procurement of coal will increase to 336,000 tons. For fiscal year 1958, however, the Navy Fuel Supply Office, acting for the Air Force, has invited bids to supply the Ladd and Eielson bases in Alaska with 392,000 tons. It is difficult to understand, therefore, Colonel Welch's statement that after fiscal year 1956 "the estimated consumption should level off at about 336,000 tons annually." Whether the tonnage be 336,000 tons, 392,000 tons, or more, the plain fact is that the military would unquestionably save money if the spur is constructed.

III. The testimony of the Department's key witnesses establishes that the construction of a spur line would not affect adversely the mining operations of Usibelli Coal Mine, Inc.

Some brief excerpts from the testimony of key witnesses should be sufficient to establish that the plea of Usibelli Coal Mine, Inc., of possible damage to its mining operations has for its purpose delaying construction of a spur.

Transcript pages 134-135:

"Senator BIBLE. I might ask you, because of Mr. Manley's last statement, what is your opinion as to the construction of a spur line from the Suntrana property to the Cripple Creek property insofar as it might adversely affect the mining property of the Usibelli Corp.?"

Page 135:

"Mr. SAARELA. Well, Mr. Chairman, that problem has been discussed a number of times as there continually seemed to be objection by the Usibelli Coal Co. but I believe that the road could be routed without an undue hardship or difficulty as far as the Usibelli Coal Co. is concerned.

"Senator BIBLE. That was the opinion you expressed in response to Mr. Manley's inquiry to you previously?

"Mr. SAARELA. That is right.

"Senator BIBLE. It is still your opinion?

"Mr. SAARELA. That is right. \* \* \*

Transcript pages 93-94:

"Senator BIBLE. I am not asking you that question. I am not asking you policy questions on either the highway or the road. What I am asking is, Could one extend the spur line from the Suntrana claim to Cripple Creek so as to go through the Usibelli lease without unduly interfering with the mining operations of the Usibelli property, if you are qualified to speak on that question?

"Dr. REED. I do not think I am able to answer that question specifically. In my opinion it would be possible to build such a line without danger to the conservation of the coal in the area over which the line would run. I am not qualified specifically to speak as to the degree to which that might or might not interfere with Mr. Usibelli's operation."

Transcript page 133:

"Senator BIBLE. Are you qualified to speak as to whether or not a spur could be built into the Cripple Creek property without endangering the mining property of the Usibelli's?

"Mr. MANLEY. I believe the Usibelli Coal Co. approached the railroad, either with correspondence or verbally, and indicated that a rail line would cause them difficulties. In any event, the railroad wrote to Mr. Saarela and requested advice as to whether such a spur or line would destroy the value of mining property, and I believe Mr. Saarela's answer is in Mr. Shallick's presentation. He indicated that he did not believe it would be detrimental."

#### IV. CONCLUDING REMARKS

The principal objection of the Secretary of the Interior to the construction of the spur is the contention that it is not economically justified in view of the declining military demand for coal. This contention is manifestly specious and without merit. The military demand for coal in fiscal year 1956 to supply the Ladd and Eielson Air Force bases in Alaska has been reduced to approximately 150,000 tons only because it has been decided to reduce the present stockpile over a 3-year period. Both bases are still burning coal at the rate of about 400,000 tons annually. For fiscal years 1957 and 1958 the military requirements for coal for the 2 bases are estimated by the Navy Fuel Supply Office, acting for the Air Force, as totaling 678,000 tons, such estimate being predicated on continued reduction of the stockpile. Beyond fiscal year 1958 it is reasonable to assume that the demand for coal will be greater. In any event, however, it is indisputable that the military must save money on coal procurement if railroad access is provided. We hope and pray that the committee's report on the hearing will produce the following conclusions:

1. That railroad access to the Cripple Creek Coal Co. lease and to the Government coal reserves is the only feasible means for opening the coal resources above the Usibelli lease to development to assure an adequate and uninterrupted supply of coal to the military and civilian consumers of coal in Alaska.

2. That until railroad access is provided, immediate steps should be taken by the Department of the Interior, acting through the Alaska Road Commission, to construct an all-weather highway to the Cripple Creek Coal Co. lease and to the Government coal reserves, properly graded so that rail tracks can eventually be laid thereon.

3. That the all-weather road be constructed over the Federal lease properties of Suntrana Mining Co., Usibelli Coal Mine, Inc., and Cripple Creek Coal Co. utilizing all existing roads on public lands of the United States deemed most feasible engineeringly.

Respectfully submitted.

MAX BARASH,

*Attorney for Cripple Creek Coal Co.*

(Whereupon, at 5:55 p. m., the hearing in the above-entitled matter was concluded.)

## APPENDIX A

### **PETITION OF A. BEN SHALLIT DOING BUSINESS AS CRIPPLE CREEK COAL CO., FAIRBANKS, ALASKA, TO THE INTERIOR AND INSULAR AFFAIRS COMMITTEES OF THE UNITED STATES SENATE AND THE HOUSE OF REPRESENTATIVES FOR AN INVESTIGATION AND PUBLIC HEARINGS**

#### OUTLINE

Purpose of investigation and public hearings.

Chronological account of efforts made by Cripple Creek Coal Co. to have the railroad spur constructed by the Department of the Interior.

Issuance of coal prospecting permit to A. Ben Shallit and need for railroad access.

Correspondence in 1950 and 1951 between Cripple Creek Coal Co. and Interior Department with regard to construction of railroad spur or all-weather road.

Shallit's application for preference right lease and dismissal of protests by the Interior Department.

Correspondence in 1952 between Cripple Creek Coal Co. and Interior Department with regard to construction of railroad spur or all-weather road.

Exchange of telegrams between Naval Supply Depot and Cripple Creek Coal Co. showing need for supplying additional coal to military installations and outcome thereof.

Statutory authority for Secretary of Interior to issue right-of-way easements and action taken under the regulations.

Protests filed against granting of right-of-way easement to Cripple Creek Coal Co. and disposition thereof.

Work done by Alaska Railroad in 1952 and 1953 in surveying the route of its proposed right-of-way in anticipation of construction of spur.

Correspondence between Office of Secretary of Interior and Governor of Alaska in 1952 with regard to importance of increasing coal production in Alaska.

Correspondence in 1953 between Cripple Creek Coal Co. and Interior Department with regard to construction of railroad spur or all-weather road.

Request of Alaska Railroad for railroad right-of-way for construction of spur.

Suspension of permission to construct railroad spur by Bureau of Land Management and withdrawal of right-of-way by Alaska Railroad.

Recommendations of Coal Subcommittee of Alaska Field Committee of Interior Department urging construction of railroad spur.

Investigation of Alaska coal situation by committee headed by Charles W. Connor, formerly Administrator of Defense Solid Fuels Administration, and Annual Reports of Secretary of Interior to the President for fiscal years ending June 30, 1953, and June 30, 1954.

Exchange of correspondence between Assistant Secretary of the Interior and Director, Bureau of Land Management; which led to withdrawal of railroad right-of-way.

Correspondence in 1954 between Cripple Creek Coal Co. and Interior Department with regard to construction of railroad spur or all-weather road.

Cripple Creek Coal Co.'s application for Government loan to develop an underground mine, the need therefor, and approval thereof as a defense loan pursuant to section 302 of Defense Production Act.

Creation of Healy River Spur, Inc. as nonprofit corporation, to construct railroad spur, how it was conceived, and its demise.

Estimated savings to Government had railroad spur been constructed and in existence since 1950.

Failure of Secretary of Interior to carry out statutory mandate of Congress and precedents for providing railroad access to lessees operating coal leases on Federal lands in Alaska.

Conclusion.

HON. JAMES E. MURRAY,  
*Chairman, Interior and Insular Affairs Committee,*  
*United States Senate, Washington, D. C.*

and

HON. CLAIRE ENGLE,  
*Chairman, Interior and Insular Affairs Committee,*  
*House of Representatives, Washington, D. C.*

DEAR MR. CHAIRMEN: Because of the continued failure of the Secretary of the Interior to provide adequate railroad access to the Healy River Valley of the Nenana coalfield, Territory of Alaska, A. Ben Shallit, doing business as Cripple Creek Coal Co., Fairbanks, Alaska, holder and operator of a Federal coal lease on public lands in the United States in the Territory, hereby petitions the Interior and Insular Affairs Committees of the Congress to conduct an investigation and hold public hearings to determine:

1. Why the Secretary of the Interior refuses to authorize the Office of Territories, which has jurisdiction over the Alaska Railroad, to construct a spur from the present rail's end at Suntrana, Alaska, to the operating coal mines and to the Government coal reserves (also known as the Roth coal reserves) in the Healy River Valley, a distance of approximately 6 miles, when:

(a) it is essential in the public interest and in the interest of national defense that a spur be constructed to serve the military and civilian needs of the Territory of Alaska;

(b) the interested bureaus and agencies of the Department of the Interior familiar with Alaskan coal development in the Healy River Valley have for the past 4 years consistently recommended the construction of a spur;

(c) the United States Government and the taxpayers will be the principal beneficiaries of a spur in terms of dollars saved each year in the cost of purchasing coal used by the military installations in Alaska—failure to construct the spur has already cost the Government an estimated additional \$1 million over the last 5 years;

(d) the construction of a spur will facilitate the development of the coal resources in the Healy River Valley and provide ready access to the reserves to meet the ever-increasing needs of the military installations in Alaska;

(e) the development of the coal resources in the Healy River Valley is necessary and essential in promoting true competition among the present coal operators serving the military and civilian markets in Alaska;

(f) the importance of maintaining adequate coal reserves and year-round transportation facilities in Alaska is even more significant today to meet projected military demand in the light of the present tensions in the Far East;

(g) the Secretary of the Interior is under a statutory duty to provide adequate railroad access to lessees operating coal leases on Federal lands in Alaska in circumstances such as are present here.

After almost 5 years of continuous but unsuccessful efforts to prevail upon the Department of the Interior to construct a railroad spur or an all-weather road so that coal produced from the Healy River Valley can be transported at the lowest possible cost to military and civilian consumers, we have no alternative but to petition your committee to conduct an investigation and to hold public hearings so that the true reasons for the failure to do so may be brought to light. Failure to construct a spur has resulted in increasing the cost to the Government of coal purchased for use by the military installations in Alaska over the last 5 years by an estimated \$1 million. Moreover, the lack of a spur has needlessly cost Cripple Creek Coal Co. a total of \$132,495.37 to construct and maintain temporary roads and bridges—money that was wasted and could have been contributed toward the construction of the needed spur.

So that the members of your committee may have a better understanding of the reasons which prompt this petition, we are submitting herewith a chronological account of the efforts we have made to have a spur constructed from the present rail's end at Suntrana to the operating coal mines and Government coal reserves in the Healy River Valley.

On July 22, 1949, the Department of the Interior granted A. Ben Shallit a coal prospecting permit covering 1,120 acres of land in the Healy River Valley for a period of 4 years. While performing the exploratory work necessary to determine the existence, extent, and workability of the coal deposits underlying the lands included in the prospecting permit, it became obvious that proper development of the coal deposits would necessitate an extension of the Alaska Railroad from its rail's end at Suntrana to the property or, in the alternative as an immediate expedient, the construction of an all-weather truck haulage road. The rail's end at Suntrana is situated on the Federal coal lease of Suntrana Mining Co. (formerly Healy River Coal Co.). Adjoining the Suntrana lease to the east is the Federal coal lease of Usibelli Coal Mine, Inc., and adjoining the Usibelli lease also to the east farther up the Healy River Valley is the coal property of Cripple Creek Coal Co. The Government coal reserves, also known as the Roth coal reserves, adjoin and lie beyond the Cripple Creek lease still farther to the east and continuing up the Healy River Valley. The Healy River traverses the Suntrana, Usibelli, Cripple Creek, and Roth properties. An extension of the Alaska Railroad from Suntrana to the Usibelli mine would cover a distance of approximately 2.4 miles; from the Usibelli mine to the mouth of Cripple Creek a distance of approximately 2.2 miles; and from Cripple Creek to Coal Creek (Government coal reserves) a distance of approximately 1.5 miles—making a total of little more than 6 miles from Suntrana to the Government coal reserves.<sup>1</sup>

On February 15, 1950, more than 5 years ago, a request for the construction of an all-weather road as an immediate expedient was made by Shallit to the Alaska Road Commission of the Department of the Interior. Replying to this request on March 2, 1950, Mr. A. F. Ghiglione, then Chief Engineer of the Alaska Road Commission, stated as follows:<sup>2</sup>

"Reference is made to your letter of February 15 requesting that an extension of the Healy River-Suntrana road be undertaken to serve your property. *The desirability of such a road is recognized.* However, the Alaska Road Commission is not at present in a position to undertake this work since it has not been our policy to construct roads into undeveloped mining prospects.

<sup>1</sup>These distances are based upon estimates submitted by F. E. Kalbaugh, general manager of the Alaska Railroad, to William C. Strand, Director, Office of Territories, Department of the Interior, under date of March 8, 1954. (See exhibit Y appended thereto under footnote 25.)

<sup>2</sup>A copy of the letter is appended hereto as exhibit A.

"Should the actual development and production be instigated on the property, it is very probable that some cooperative assistance could be worked out whereby the road could be constructed with a portion of the expense shared by you as offered in your letter.

"Since you indicate that you will be in Juneau in the near future, it is suggested that you visit our office, at which time more detailed information can be given you." [Italics supplied.]

By July 5, 1950, Mr. Shallit had developed sufficient coal reserves to mine commercially and, pursuant to the regulations of the Department of the Interior, he filed a preference right application for a coal lease on the lands included in his prospecting permit. Toward the end of June, Mr. Shallit organized the Cripple Creek Coal Co. and in July executed a contract with the Department of the Army calling for the delivery of 50,000 tons of coal to the military installations in Alaska.

To reach the railroad siding at the rail's end at Suntrana, a distance of approximately 6 miles, it is necessary to cross the lands under lease to two other coal mining companies, viz. Usibelli Coal Mine, Inc., and Suntrana Mining Co. Because the contract with the military was not signed until late July, and because the Usibelli Coal Mine, Inc., interposed such strenuous opposition not only to the use of any of its existing and available roads running through its Federal coal lease but also to the construction of any road traversing the high ground of its lease, it was necessary immediately to begin construction of a temporary road down the middle of the stream of the Healy River so that it could be completed and frozen over in time for deliveries of coal to military installations starting in October of that year. Thus, the only immediately available location of the road in the middle of the stream subjected it to being washed out and destroyed by the spring thaws, summer flash floods, and manmade destruction, rendering the road unavailable for use during part of the year and requiring rebuilding and maintenance at great cost.

Since the Cripple Creek Coal Co. property was now in commercial production, a formal request for assistance was again made to the Alaska Road Commission on November 4, 1950. On December 20, 1950, Chief Engineer Ghigliione responded, in pertinent part, as follows:<sup>3</sup>

*"The need for access to your coal properties is recognized and the Alaska Road Commission is interested in seeing that such access is provided.*

*"Mr. Saarela, Territorial mining engineer, has been contacted concerning the area served by your present road and the various mines and developments that would also be served if the road were improved as you have recommended. Mr. Saarela is of the opinion that the district merits development and he has taken the initiative by writing to the Alaska Railroad in order to ascertain whether an extension of the present railroad spur could not be undertaken. It appears that an extension of the railroad would be much more desirable than the road improvement, since the railroad service would eliminate your short-haul trucking and rehandling of the coal.*

*"If it transpires that the Alaska Railroad will not undertake extension of their line, Alaska Road Commission will program the road improvement, providing the anticipated farm and industrial road funds are appropriated by Congress."* [Italics supplied.]

On April 3, 1951, Mr. John R. Noyes, then Commissioner of Roads for Alaska, addressed a letter to the Director, Office of Territories, in which he stated as follows:<sup>4</sup>

*"The development of the coal deposits of the Healy River Valley up to the present time has been dependent upon the Alaska Railroad for transportation. The Healy River Coal Corp. mine is served directly by the railroad. Several properties farther up the valley, including the Usibelli and Cripple Creek mining properties, have been served by the railroad through short access roads of a low standard extending from the properties to the end of the railroad.*

*"Appeal has now been made to the Alaska Road Commission to construct a standard all-weather road up the Healy River Valley from the end of the railroad to the farther coal properties. This would involve about 8 miles of road.*

*"The development of the coal resources of the region on any adequate scale is dependent upon railroad transportation. For this reason the matter was referred to the Alaska Railroad through the Alaska field committee. A copy of a*

<sup>3</sup> A copy of the letter is appended hereto as exhibit B.

<sup>4</sup> A copy of the letter is appended hereto as exhibit C.

letter recently received from Col. J. P. Johnson, general manager of the Alaska Railroad, to Mr. A. Ben Shallit of the Cripple Creek Coal Co., indicates that funds are not available for this new railroad construction.

"Road funds are not available either; but in view of the fact that the project was first proposed as a road project, *it is desired to urge that the Alaska Railroad provide whatever facilities are required in the Healy River Valley rather than to attempt an unsatisfactory, half-way solution by means of a road. It is my opinion, concurred in by the Territorial Commissioner of Mines, that the area is definitely worthy of development at this time. Unless directed by the Office of Territories, we will leave this matter entirely to the Alaska Railroad. At the same time I wish to emphasize that I think the project is a worthy one for railroad development.* [Emphasis supplied.]

On May 9, 1951, Chief Engineer Ghiglione of the Alaska Road Commission, wrote to Shallit as follows:

"This letter is written to inform you that it will not be possible for the Alaska Road Commission to undertake any road construction to assist in providing access to your property on Healy River. This decision has been necessary *since the Interior Department considers the development should be accomplished by the Alaska Railroad* and that no highway funds can therefore be involved.

"I am sorry that our previous correspondence may have misled you and may have caused you to plan on having assistance this season. I hope we will be in a position to work with you at some future date." [Emphasis supplied.]

Thus, even as early as 1950 and 1951 the Alaska Road Commission and the territorial mining engineer recognized the necessity for extending the railroad from Suntrana up the Healy River valley to encourage the development of the coal resources and to serve the coal-mining properties, including Usibelli and Cripple Creek. Commissioner of Roads Noyes unequivocally stated in his letter of April 3, 1951, that The Development of the coal resources of the region on any adequate scale is dependent upon railroad transportation; that "It is desired to urge that the Alaska Railroad provide whatever facilities are required in the Healy River Valley rather than to attempt an unsatisfactory, half-way solution by means of a road; and that I wish to emphasize that I think the project is a worthy one for railroad development." Chief Engineer Ghiglione stated with equal firmness in his letter of December 20, 1950, that "The need for access to your coal properties is recognized" and that "It appears that an extension of the railroad would be much more desirable than the road improvement." In his later letter of May 9, 1951, Chief Engineer Ghiglione advised Shallit that it would not be possible for the Alaska Road Commission to undertake any road construction to assist in providing access to his property on Healy River because "the Interior Department considers the development should be accomplished by the Alaska Railroad." Four years have elapsed since Shallit was advised that the Interior Department considered that the needed access should be provided by the Alaska Railroad, and despite the fact that Cripple Creek Coal Co. has continuously pleaded with the Department for the construction of the spur its efforts have met with failure.

In the meantime, Shallit's application for a preference right lease was meeting vigorous opposition in the Department of the Interior at the hands of Emil Usibelli and Usibelli Coal Mine, Inc., the owner and operator of the adjoining coal lease and a competitor in the coal business. Protests were filed with the Bureau of Land Management and later with the Secretary of the Interior against the issuance of a lease to Shallit. Three separate decisions dated April 5, 1951, October 2, 1951, and December 6, 1951, were rendered by the Department of the Interior dismissing the protests as being without merit and affirming the right of Cripple Creek Coal Co. to the issuance of the lease applied for and the coal lease was finally issued on December 20, 1951, effective as of July 5, 1950.<sup>5</sup> The final decision of the Department is reported in volume 60, Interior decisions, beginning at page 515.

While the delay in the issuance of a lease to Shallit did not preclude Cripple Creek Coal Co. from entering into contracts for supplying coal to the military installations in Alaska, it did seriously hamper obtaining the financing necessary for long-range planning and development of the lease property. However, the delay in issuing the lease did not detract from the obvious—namely, that the construction of a spur and the extension of the railroad from its present rail's

<sup>5</sup> A copy of the letter is appended hereto as exhibit D.

<sup>6</sup> Copies of the decisions are appended hereto as exhibits E, F, and G.

end at Suntrana to the Usibelli lease property, then continuing on to the Cripple Creek lease property, and beyond that to the Government coal reserves, was in fact a military necessity to meet any possible emergency and was absolutely essential if the coal resources of the Healy River Valley were to be properly developed. Every agency of the Department of the Interior concerned with this problem has so declared itself in no uncertain terms, as we shall hereinafter establish.

Following the issuance of a lease to Shallit on December 20, 1951, he renewed his efforts to obtain construction of a spur, or an all-weather road which could be used as a base for the eventual laying of the spur. Under date of February 25, 1952, A. F. Ghiglione, Commissioner of Roads for Alaska, wrote to Shallit as follows:<sup>7</sup>

"Reference is made to your letter of February 20, 1952, concerning the recent plans for providing an all-weather approach road up the Healy River to the Roth property. The statement received from your Washington attorney is correct insofar as the plans of the Alaska Road Commission are concerned. However, to date no funds are available for the initiation of this work.

"As you will recall, our previous efforts to construct a road up the Healy River were stopped when the possibility of the extension of the Alaska Railroad spur entered the picture. At a recent meeting in Washington, D. C., it was decided that the construction of a road by the Alaska Road Commission would most quickly provide the needed access to the coal reserves. As a result of this meeting the Alaska Road Commission was instructed to make surveys and prepare estimates for the project in anticipation of funds for the construction.

"No funds for this work are included in our budget estimates now before Congress, and unless an emergency appropriation is received, there can be no work undertaken this coming season. Since I have no information regarding possible emergency funds for this work, I am not able to give you any assurance upon which to base your judgment in submitting bids to the military for a coal contract."

Thus, 9 months after Shallit was advised that the Department considered desirable the extension of the railroad by the Alaska Railroad, he was told by letter of February 25, 1952, that it had been decided at a meeting in Washington, D. C., that construction of a road by the Alaska Road Commission would most quickly provide the needed access to the coal reserves. But even this road was not forthcoming despite the fact that, as indicated in Mr. Ghiglione's letter of February 25, 1952, the Alaska Road Commission had been instructed to make surveys and prepare estimates for the construction of an all-weather road in anticipation of an emergency appropriation for this purpose. Moreover, Mr. Ghiglione was not even able to give Shallit any assurance with regard to the all-weather road upon which to base judgment in submitting bids to the military for a coal contract. The need for year-round access had become extremely important in supplying coal to the military. On June 25, 1952, Cripple Creek Coal Co. received from the Naval Supply Depot, Seattle, Wash., the following telegram:<sup>8</sup>

"Request immediate advice by wire or telephone concerning additional tentative quantities of coal for Ladd and Eielson Air Force bases. Assuming availability of cars advise tonnage you could supply of size 8-6 x 0 mine run for each of the following months July, August, and September."

By telegram of the same date, Cripple Creek Coal Co. replied as follows:<sup>9</sup>

"Reurtel June 25 engineer at mine now determining available tonnage months July, August, September and will advise you.

"Meanwhile right-of-way across Usibelli lease blocked by Usibelli Coal Mine since April 21 although permission for advance construction granted by Bureau of Land Management on August 10, 1951.

"This roadblock until removed precludes delivery of any coal unless right-of-way established.

"Interior Department Washington fully advised regarding Usibelli interference."

Again by telegram of June 27, 1952, Cripple Creek Coal Co. advised Naval Supply Depot as follows:<sup>10</sup>

"Reurtel June 25 can deliver 10,000 tons coal each month beginning October and continuing into spring of 1953 as long as road is usable.

<sup>7</sup> A copy of this letter is appended hereto as exhibit H.

<sup>8</sup> A copy of the telegram is appended hereto as exhibit I.

<sup>9</sup> A copy of the telegram is appended hereto as exhibit J.

<sup>10</sup> A copy of the telegram is appended hereto as exhibit K.

"Uncertain road conditions before October 1 preclude deliveries during July, August, and September."

Inasmuch as Cripple Creek Coal Co. was not in a position to supply coal to the military installations on a year-round basis because of the failure of the Department of Interior to construct an all-weather road or to construct a spur extending the Alaska Railroad from Suntrana to the Cripple Creek coal lease and beyond that to the Government coal reserves, the major portion of coal purchased by the military for the year beginning July 1, 1952, went to Usibelli Coal Mine, Inc. Whether this point up the real motivation for the vigorous opposition which Usibelli Coal Mine, Inc., later interposed to the construction either of a railroad spur or an all-weather road across the Usibelli lease, as evidenced by the official correspondence of the Department of the Interior hereinafter cited, we deem unnecessary to discuss.

Although the Usibelli mine operations are from 2 to 3 miles from the present rail's end at Suntrana, it has a permanent substandard all-year road which, though expensive to maintain, is used to truck coal to the railroad. Obviously, extending the railroad to the Usibelli lease property would eliminate a large part of the truck haul and reduce substantially the cost of supplying coal to the military. Even more important, however, it is apparent that Usibelli Coal Mine, Inc., recognizes that if a spur is constructed it would also serve Cripple Creek Coal Co. and give it permanent all-year transportation. Should this occur, Cripple Creek Coal Co. would then become a real competitor not only in supplying coal to the military but in supplying coal to the civilian consumer in Alaska.

Failure of the Secretary of the Interior to extend the Alaska Railroad up the Healy River Valley to the Government coal reserves serves to impede the development of the coal resources and, in effect, to freeze that entire area by discouraging new venture capital that might otherwise be interested in coal development. Cripple Creek Coal Co. does not fear competition—it welcomes it because we believe that in the long run it will prove beneficial to the coal industry and to the Territory of Alaska. Aside from retarding the development of the coal resources of the Healy River Valley for lack of adequate railroad access, the military has paid in higher prices for coal purchased over the last 5 years the entire estimated cost of constructing a spur from Suntrana to the Government coal reserves. Thus, despite the fact that the military has paid higher prices for its coal, there is still no railroad access to the Usibelli and Cripple Creek coal mines and to the Government coal reserves in the Healy River Valley. Should an emergency develop, the need for coal would be urgent. In that event, the failure of the Secretary of the Interior to authorize the extension of the Alaska Railroad in order to provide year-round access to the operating coal mines and to the Government coal reserves would be disastrous. The public interest and the national security would be jeopardized.

From the very beginning, following the issuance of a coal prospecting permit to Shallit by the Department of the Interior, Emil Usibelli and Usibelli Coal Mine, Inc., have successfully resisted the construction of a railroad spur or the construction of a permanent all-weather road across the Usibelli coal lease property as constituting interference with the enjoyment of its lease and its conduct of mining operations thereon. That such opposition was and is without merit will become evident as this story unfolds, but it should be obvious that cooperation on the part of a competitor coal company was not to be expected. It is important to remember that the Usibelli coal lease is a Federal lease embracing public lands of the United States. The Congress has provided that all coal leases issued by the Department of the Interior shall expressly reserve to the Government the right to grant easements in, over, through, or upon the lands so leased as may be necessary for the working of other coal lands under permits or leases issued by the Department. 48 U. S. C. 446 provides as follows:

"Any lease, entry, location, occupation, or use permitted under sections 432-445 and 446-452 of this title shall reserve to the Government of the United States the right to grant or use such easements in, over, through, or upon the land leased, entered, located, occupied, or used as may be necessary or appropriate to the working of the same or other coal lands by or under authority of the Government and for other purposes: *Provided*, That the Secretary of the Interior, in his discretion, in making any lease under said sections, may reserve to the United States the right to lease, sell, or otherwise dispose of the surface of the lands embraced within such lease under existing law or laws hereafter enacted insofar as said surface is not necessary for use by the lessee in extracting and

removing the deposits of coal therein. If such reservation is made, it shall be so determined before the offering of such lease.

"The said Secretary during the life of the lease is authorized to issue such permits for easements herein provided to be reserved, and to permit the use of such other public lands in the Territory of Alaska as may be necessary for the construction and maintenance of coal washeries or other works incident to the mining or treatment of coal, which lands may be occupied and used jointly or severally by lessees or permittees, as may be determined by said Secretary (Oct. 20, 1914, ch. 330, sec. 11, 38 Stat. 744)."

and 43 United States Code 956 provides that—

"The Secretary of the Interior is authorized and empowered, under general regulations to be fixed by him, to permit the use of the right-of-way through the public lands of the United States, not within the limits of any national forest, park, military or Indian reservation, for tramroads, canals, or reservoirs to the extent of the ground occupied by the water of the canals and reservoirs and 50 feet on each side of the marginal limits thereof, or 50 feet on each side of the center line of the tramroad, by any citizen or any association of citizens of the United States engaged in the business of mining or quarrying or of cutting timber and manufacturing lumber or for the purposes of furnishing water for domestic, public, and other beneficial uses (Jan. 21, 1895, ch. 37, 28 Stat. 635; May 11, 1898, ch. 292, sec. 1, 30 Stat. 404; Mar. 4, 1907, ch. 2907, 34 Stat. 1269)."

The general regulations promulgated by the Interior Department applicable to such rights-of-way in effect at that time provided for the granting of permission for advance construction. 43 CFR 244.10 (a) provides as follows:

"The manager may grant authority to construct project works over and through Interior Department lands other than Indian lands, in advance of approval of a permit or easement for the right-of-way or site upon a satisfactory showing of the necessity for such action, if found compatible with the public interest. Applications for such authority shall be cleared with interested agencies of the Department. The applicant for such authority shall agree that such construction is done at the applicant's own risk and that the applicant will make full and prompt compliance with all requirements laid down by the Department as conditions precedent to the approval of the permit or easement. Applications for such authority should be filed with the agency of the Department of the Interior having supervision of the land involved. Such agency shall submit the record with an appropriate report and recommendation to the manager."

Acting pursuant to the statutes and regulations above quoted, Cripple Creek Coal Co. on June 14, 1951, filed an application with the Bureau of Land Management for a road right-of-way across the Federal coal leases of Usibelli Coal Mine, Inc., and Suntrana Mining Co. Because of the strenuous resistance encountered from Usibelli when Shallit sought to use part of the Usibelli road for hauling supplies and equipment to his prospecting permit—a road which is situated on high ground and which Shallit considered at that time to be a public tramroad available for use in common by coal operators—the road right-of-way applied for by Cripple Creek Coal Co. followed the bed of the Healy River in an effort to avoid further controversy. Permission for advance construction of the road was granted by the manager of the Fairbanks land office on August 10, 1951. In this connection, it might be added that even though the road right-of-way followed the bed of the Healy River, legal proceedings and counterclaims for injunctive relief and for damages between Shallit, on the one hand, and Emil Usibelli and Usibelli Coal Mine, Inc., on the other, were prosecuted in the Alaska courts during this period.

Notwithstanding that the law provides for the granting of tramroad easements, that the Usibelli coal lease itself expressly reserves to the Secretary of the Interior the right to grant such easements, and that the road right-of-way in the bed of the Healy River was highly vulnerable to destruction by flash floods, spring thaws, and the elements in general, and was costly to maintain and rebuild, Emil Usibelli and Usibelli Coal Mine, Inc., nevertheless vigorously protested to the Department of the Interior not only the grant of permission for advance construction of the road but the grant of the easement itself. So vehement were the protests that two field investigations were conducted—one by the Bureau of Land Management and one at the direction of the Secretary.

Upon receipt of the two reports of field investigation and upon consideration of all the facts, the Bureau of Land Management rendered a decision on September 10, 1952, dismissing the protests and granting the right-of-way.<sup>11</sup> Its decision, in pertinent part, is as follows:

<sup>11</sup> A copy of the decision of September 10, 1952, is appended hereto as exhibit L.

"\* \* \* The Usibelli Co. claims that the proposed right-of-way would interfere with its operations, especially in the furnishing of an adequate water supply for the domestic use of the employees on its lease who reside at a camp within the lease boundaries. The report negatives this claim and shows that there is more than ample underground seepage to furnish a sufficient supply of domestic water. The report also shows that a rifle range has been set up with the gun pits on one side of the proposed Shallit right-of-way and the targets on the other. \* \* \*

"Both field reports recommended that a right-of-way be granted and one of them even suggests that it would be preferable to move the road, the subject of the application, out of the riverbed and onto the adjacent high land. However, it seems probable a substantial part of the right-of-way will only be required temporarily. It is understood that the Alaska Railroad is now surveying a route for an extension of its line, now terminated at the Healy River Coal Co.'s mine, to a point at or near the Shallit lease, which will obviate the need for most of the rights-of-way. It is possible that the railroad will follow, if not use a part of the proposed Shallit right-of-way. The proposed right-of-way is usable in winter and can be used during the coming season after certain repairs are made. A new right-of-way would apparently involve extensive new construction which Shallit has not indicated that he desires to undertake. In fact, Shallit on his map outlines the same general route as that he first applied for. In view of these facts, it seems unnecessary to consider the suggestion that the right-of-way be relocated on higher ground.

"Although the matter has not been called to the attention of this office by either Shallit or Usibelli, the field report made at the request of his office recites that the surface works of the Healy River Coal Co. were destroyed by fire on August 29, and that in consequence it will be some time before that company can resume full active mining operations: The report states that the Healy River Co. carried the major portion of the burden of supplying coal to the rail belt portion of Alaska. In such an emergency, it seems obvious that both Usibelli and Shallit will need to meet more of this burden than they have in the past and it is apparent from the whole record that the right-of-way is necessary to Shallit's operations and that it does not unreasonably burden the Usibelli operation.

"This matter has been thoroughly considered. The facts have been meticulously assembled by three agencies of the Department whose representatives have examined the land and discussed the proposed right-of-way with the parties concerned, including the Usibelli Co. That company has filed a substantial body of argument in support of its protest, all of which has been considered. We are unable to perceive in what way oral argument would supplement the showing already made or establish what has not been established that the granting of the right-of-way seriously affects Usibelli's interests as a lessee. On the contrary, it appears that no adverse effect would result but that the Usibelli Co. could accommodate its operations to the situation with little or no additional expense. To accede to the protest would result in placing a heavy burden on Shallit who is also a lessee which is not justified in the circumstances. Accordingly, the application for an oral hearing and the protest as well are dismissed.

"Since the rifle range across the right-of-way is neither a necessary nor proper activity under the lease and since it is a hazard to the free use of the right-of-way, the Usibelli Co. is required to dismantle it and to discontinue its use. Thirty days from receipt of a copy of this decision by that company are allowed within which to show compliance herewith in the absence of which further appropriate action will be taken."

In citing the Bureau's decision of September 10, 1952, and in quoting therefrom, we have no desire to rekindle the controversy with regard to this road. Our purpose primarily is to show that the Bureau of Land Management recognized that the road right-of-way in the riverbed was undesirable but deemed it unnecessary to consider the suggestion made in one of the reports of field investigation that the right-of-way be relocated on higher ground because, as the Bureau said in its decision, "it seems probable a substantial part of the right-of-way will only be required temporarily" and "It is understood that the Alaska Railroad is now surveying a route for an extension of its line, now terminated at the Healy River Coal Co.'s mine, to a point at or near the Shallit lease, which will obviate the need for most of the rights-of-way." At the same time, we do wish to call the Bureau's decision to the attention of the committees to show that the Bureau found the protests against the granting of a road right-of-way to be without merit.

Emil Usibelli and Usibelli Coal Mine, Inc., however, did not accept the decision of the Bureau of Land Management as final. They filed an appeal to the Secretary of the Interior from the Bureau's decision of September 10, 1952, and submitted briefs in support thereof. The appeal dragged on for 2 years and finally, in an effort to resolve the controversy in which we are glad to say Usibelli and Usibelli Coal Mine, Inc., cooperated, agreement was reached between Shallit and Usibelli with respect to certain conditions governing the use of the right-of-way by Shallit. The appeal was thereupon withdrawn and the conditions governing the use of the right-of-way were incorporated in the decision of the Department of November 5, 1954.<sup>12</sup>

It seems hardly necessary to point out that the right-of-way granted by the Department after more than 3 years of controversy is still a temporary makeshift road requiring constant rebuilding. It is not a permanent all-year road which is an absolute necessity if the coal resources of the Healy River Valley are to be properly developed. While the appeal was pending in the Department, Cripple Creek Coal Co. nevertheless continued with its efforts to have the Department act quickly in constructing the railroad spur.

Returning to the decision of the Bureau of Land Management of September 10, 1952, it should be noted again that the Bureau stated its understanding as being that "the Alaska Railroad is now surveying a route for an extension of its line, now terminated at the Healy River Coal Co.'s mine, to a point at or near the Shallit lease, which will obviate the need for most of the rights-of-way." The latter statement was in fact true. In the spring of 1952 the Alaska Railroad sent a survey party into the field which began a detailed right-of-way survey on the proposed extension of the railroad from Suntrana. A plan of location line between Suntrana and Usibelli Coal lease property, a distance of 2.4 miles, was located and staked. A plan of reconnaissance survey from the end of the location line at the Usibelli lease to the Government coal reserves (Roth property) was made but not staked and it was estimated by F. E. Kalbaugh, General Manager of the Alaska Railroad, that it would require 2 months time with a single survey party to complete the reconnaissance survey and location. At that point the survey was temporarily discontinued. In the spring of 1953 the Alaska Railroad survey party resumed work on the project. Field quarters were established at the Cripple Creek Coal Co. camp and the company at its expense furnished this survey party with bunk and mess facilities as well as a jeep and a bulldozer in order to facilitate its work. Two weeks later, for reasons never clearly explained to Cripple Creek Coal Co., this location survey was discontinued. Later it was learned that the Secretary of the Interior had ordered an investigation to be made of the coal resources of Alaska by a committee headed by Charles W. Connor, formerly Administrator of Defense Solid Fuels Administration.<sup>13</sup> The investigation was to be made on the ground in Alaska and pending the submission of a report by the Connor Committee all decisions or activities pertaining to the Alaskan coal situation were to be held in abeyance.

In the interim, in October 1952, Ludlow G. Anderson, Chief of the Coal Mining Branch of the Bureau of Mines at Anchorage, prepared a report on the coal situation in the Healy River valley for the information of all interested Government agencies in Alaska, in which it is understood he strongly recommended that the Alaska Railroad be extended from Suntrana to Cripple Creek to assure production throughout the year and to encourage the development of the coal resources in that area. Shortly thereafter, then Assistant Secretary of the Interior Joel D. Wolfsohn wrote to the then Governor, Ernest Gruening of Alaska, in response to the latter's letter of October 30, 1952, on the problems pertaining to the coal supply situation in Alaska. Reiterating the policy of the Department, Assistant Secretary Wolfsohn stated, in pertinent part, as follows<sup>14</sup>: "This Department has been endeavoring for some time to promote an increase of coal-producing facilities in the Territory to meet the increase in demand, which the best information available indicates will arise in the near future.

"The present tight situation, due in a large measure to the fire at the Healy River mine which curtailed production, and the loss of production at the Usibelli mine during the labor difficulties, indicates the necessity for an increase in productive capacity. *It appears clear that the present mining facilities cannot pro-*

<sup>12</sup> A copy of departmental decision of November 5, 1954 (A-26673) is appended hereto as exhibit M.

<sup>13</sup> Further reference will be made to this committee and its report later in this presentation.

<sup>14</sup> A copy of this undated letter is appended as exhibit N.

*duce sufficient additional coal to meet the requirements of the proposed new facilities which will be erected by the Department of Defense, and the needs of the increasing population."* [Emphasis supplied.]

On January 12, 1953, Shallit wrote to Col. J. P. Johnson, then manager of the Alaska Railroad, as follows<sup>16</sup>: "We have been advised that the survey of the proposed Healy-Suntrana spur extension has been completed as far as the Usibelli airstrip and that a preliminary line has been run on the right limit of the Healy River as far as Coal Creek.

"Any extension of the present spur would be of advantage to Cripple Creek, as well as the other operators in the Healy district. We have already gone on record as willing to assume our share of the cost of this construction, provided the financing can be arranged on a tonnage basis or by any other equitable means within our capacity.

"Considerable benefit will accrue to us if the spur is extended as far as the mouth of Cripple Creek. Maximum advantage for full scale production would require a river crossing to the left limit of the Healy River near Cripple Creek.

"In our long-range planning we are contemplating increasing our production to 200,000 tons per year by 1955. We believe that best operating costs will be obtained if the spur is brought over to the left limit of Healy River near the mouth of Cripple Creek.

"It would be appreciated if during the coming season your engineering department would look into the feasibility of building such a spur, in order that we may have benefits of your estimates in arriving at our future operating decisions."

Acting General Manager of the Alaska Railroad John E. Manley replied to Shallit on January 28, 1953, as follows: <sup>16</sup>

"This will acknowledge your letter of January 12, 1953, in reference to extension of the Healy River spur from the Healy River mine to your operations at Cripple Creek.

"As you are undoubtedly aware, we have surveyed a location as far as the Usibelli mine and proceeded with preliminary location thence on to your mine at Cripple Creek. The construction of this extension from Healy River is thoroughly contingent on the financing, and it is very gratifying to hear that you have funds to contribute to the building.

"In order that we can better consolidate the thinking of various people concerned, we would appreciate it if, the next time you are in Anchorage, you would contact Mr. Irvin P. Cook, our chief engineer, and discuss the problem with him in reference to our preliminary location, as well as finance."

As requested, Cripple Creek Coal Co. wrote to Chief Engineer Irvin P. Cook, on February 2, 1953, in pertinent part, as follows: <sup>17</sup>

"We believe that the preliminary location as surveyed by you is entirely satisfactory for our needs and we would be pleased if actual construction during 1953 proceeded as far as the Usibelli mine. If this were done, we would expect that we would be given track area and a small site for loading at that point.

"We are willing to contribute to the cost of this construction on a tonnage basis, assuming that other users will make a like contribution. We assume that payments would be made to reimburse the railroad after the spur was completed. The foregoing represents our thinking in regard to this matter but if there are any other questions we shall appreciate hearing from you as soon as possible.

"The United States Bureau of Mines has recently released figures indicating the requirements for coal along the rail belt during the next few years and from these figures it should be apparent that uninterrupted production on a year-round basis would be required to fill these needs. The present haulage road of the Cripple Creek Coal Co. is subject to unforeseen washouts and is often made impassable because of glaciering of the Healy River. In order to insure year-round coal deliveries, it is imperative that this spur track be extended without delay."

On the same date Cripple Creek Coal Co. wrote to Acting General Manager Manley as follows: <sup>18</sup>

"Thank you for your letter of January 28 inviting us to call on Mr. Irvin P. Cook, your chief engineer at Anchorage, to further discuss the extension of the Suntrana spur.

<sup>16</sup> A copy of this letter is appended as exhibit Q.

<sup>17</sup> A copy of this letter is appended as exhibit P.

<sup>18</sup> A copy of this letter is appended as exhibit Q.

<sup>19</sup> A copy of this letter is appended as exhibit R.

"As mentioned in our letter of January 12, we are willing to assume our share of the cost of this construction, provided the financing can be arranged on a tonnage basis or by any other equitable means within our capacity. We wish to make it clear that at the present time we do not have funds to contribute to the building of the railroad, but it is assumed that we would be permitted to reimburse the railroad on a tonnage basis for an equitable share of the cost.

"We understand that the railroad has requested funds for this construction in the current budget."

Later in the month our Washington attorney was advised informally by Joseph T. Flakne, Chief, Alaska Division, Office of Territories of the Department of the Interior, that funds were not available to the Alaska Railroad for construction of the spur but that a decision had been reached for the Alaska Road Commission to construct a road along the route of the survey of the Alaska Railroad so that the spur could be constructed thereon at a later date when funds did become available. When it was learned that Mr. Ghiglione, Commissioner of Roads for Alaska, was to be in Washington, D. C., early in March, Cripple Creek Coal Co. sent a telegram dated March 1, 1953, to its Washington attorney as follows:<sup>19</sup>

"Suggest you advise Mr. Ghiglione that entire camp facilities of Cripple Creek mine will be at his disposal and that we will, without charge, provide meals, lodging, gasoline, diesel fuel, lubricants, explosives, lumber, welding supplies, and use of shop and repair facilities."

A copy of this telegram was forwarded to Mr. Flakne by letter of March 3, 1953.<sup>20</sup> On March 11, 1953, Mr. Ghiglione, writing to Cripple Creek Coal Co. from Washington, D. C., acknowledged receipt of the offer of assistance as follows:<sup>21</sup>

"Your offer to cooperate in the construction of a road up the Healy River from the Alaska Railroad spur has been transmitted to the Office of Territories by Mr. Barash. This offer by which you agreed to furnish all housing and feeding of road crews in addition to supplying fuel and explosives needed in the construction will greatly assist in accomplishing this needed project. The Alaska Road Commission now plans to initiate the construction as soon as possible this spring and will draw upon your cooperative assistance as detailed above.

"It is the intent of the Alaska Road Commission to provide and maintain the road from the railroad spur to the entrance to your properties. In accomplishing this it will also be essential that the cooperation of Mr. Usibelli be obtained. It is anticipated that Mr. Usibelli will not oppose this project since he will benefit by the Alaska Road Commission assumption of maintenance and responsibility. The road alignment will follow as much as possible the existing roads up the Healy River and also conform to the proposed alignment for the railroad extension where such conformance does not result in excessive cost. Since it is essential that this work be started this spring, I will contact you further regarding arrangements for your cooperative assistance."

Any elation over the prospect of having the road constructed in the spring of 1953 was short-lived. On April 22, 1953, Mr. Ghiglione wrote Mr. Flakne as follows:<sup>22</sup>

"Confirming our telephone conversation of this date the following is a résumé of the present status of the Healy River coal transportation problem.

"After preliminary meetings with the Healy River Coal Corp., Usibelli Coal Mine, Inc., and A. Ben Shallit's attorney in Fairbanks, a trip was made on April 18 into the Healy River area for the purpose of working out the details of providing low-cost road access. *These details were to conform with the plan of construction outlined to me in Mr. Davis' letter on March 9, 1953.*<sup>23</sup>

"The following people were present at the site on April 18: Mr. Emil Usibelli, president, Usibelli Coal Mine, Inc.; Mr. Pete Nielsen, superintendent of Healy River Mine; Mr. Pat Cook, chief engineer of the Alaska Railroad; Mr. Ed Hart, locating engineer, the Alaska Railroad; Mr. Bruce Cannon, engineer, the Alaska Railroad; Mr. B. D. Stewart, Jr., chief, operations division, Alaska Road Commission; Mr. E. J. White, district engineer of the Anchorage district, Alaska Road Commission; and myself. Mr. Ludlow Anderson had been expected to attend but was called to Washington at the last minute.

"*It was not possible to obtain Mr. Usibelli's permission to utilize his road or to traverse his area as was planned for the low-cost road project.* Mr. Usibelli

<sup>19</sup> A copy of this telegram is appended hereto as exhibit S.

<sup>20</sup> A copy of this letter is appended hereto as exhibit T.

<sup>21</sup> A copy of this letter is appended hereto as exhibit U.

<sup>22</sup> A copy of this letter is appended hereto as exhibit V.

<sup>23</sup> Mr. Davis at that time was Director, Office of Territories.

claims that the traversing of his mine area by the road through to Mr. Shallit's property would seriously handicap his operations, in addition to preventing access to large quantities of coal which his approved development plans have contemplated mining. In addition, the increased liability to Mr. Usibelli's operations from through traffic using his road is considered by him to far offset any advantages he might receive through the Alaska Road Commission's assumption of maintenance responsibility. In view of the above factors *Mr. Usibelli refuses public use of his road and further advised that he would be forced to take legal action to restrain the Alaska Road Commission if we should attempt to take over.* Mr. Usibelli is extremely anxious to obtain railroad access to his property and made the firm offer to our group of a \$50,000 contribution toward this end.

"As a result of the stand of Mr. Usibelli, the only construction possible at this time would be along the Alaska Railroad right-of-way and it is obvious that insufficient funds are available for this heavy work involving river changes, bridges, and rock riprap bank protection. The previous suggestion of Mr. Usibelli that the line be located south of Healy River is not practical both from a road and railroad construction standpoint, and he now agrees to accept a through line south of his camp area on the north side of the river.

*"The above situation again forces the Shallit mine into the position of having only temporary road access which is not usable for at least 6 months of the year. I do not consider it reasonable for the Alaska Road Commission to undertake any work on this temporary line since the work would be lost in subsequent seasonal floods. This, of course, forces the Shallit mine to consider contracts for supplying coal only during the fall and winter months.*

"As discussed in our telephone conversation, it will be necessary to obtain considerable funds before any improvement of the road access problem may be attempted. If supplemental funds could be obtained through support of the military, it is possible that some relief could be afforded the Shallit mine this season. In my opinion such action is not too probable and I have so advised Mr. Shallit. *The desirability of providing the railroad extension rather than a temporary road is again apparent and I urge that further effort be toward this end.* Our estimates for preparing the railroad grade from the Healy River mine to Cripple Creek by force-account work, exclusive of railroad ballast, rail, and structures, is \$420,000.

"The Alaska Road Commission is unable to proceed further with this project under the conditions outlined above." [Emphasis supplied.]

Cripple Creek Coal Co's hopes were further jolted by the contents of Mr. Ghiglione's letter of June 30, 1953, to Mr. Flakne as follows: \*

"Reference is made to our telephone conversation of June 29 and previous correspondence on the subject of transportation access to the Healy River coal fields. Specifically answering the questions posed, it is necessary to restate that the Alaska Road Commission does not have sufficient funds to initiate construction of an access road beyond the present railroad spur. This situation was explained in detail in my letter of April 22, 1953, which submitted an estimate of \$420,000 as being necessary for providing year-round highway access to the Usibelli and Cripple Creek mines along the Alaska Railroad right-of-way.

"Provision of a dependable low-cost road through to the Cripple Creek mine as planned earlier this season on the basis of utilizing all existing roads of the Usibelli and Cripple Creek Coal Cos. is not possible as further stated in my letter of April 22.

"The Alaska Road Commission has not filed formal right-of-way plat with the Bureau of Land Management for road access through this area. The Regional Administrator, BLM, has advised such filing is unnecessary since the Alaska Railroad filing will cover either road or railroad construction. A copy of Mr. Puckett's letter of June 24 is enclosed.

"In summing up the situation I see no way in which the Alaska Road Commission can provide dependable access to the Cripple Creek property with funds presently available. I have again so advised Mr. Leo Saarela and Mr. Orsini. As stated in my letter of April 22, I similarly advised Mr. Shallit in early April. The heavy construction that would be necessary through the present Usibelli tiddle area and on up the Healy River with channel changes, bridges, and large amounts of heavy riprap protection would require funds greatly in excess of any which might be diverted from our meager farm road allotments. The cooperation offered by the Cripple Creek mine, while of considerable value, would still be insufficient to offset the large cost involved in this project."

\* A copy of this letter is appended hereto as exhibit W.

Despite the confusion that seemed to prevail in the spring of 1953 as to whether a spur would be constructed by the Alaska Railroad or an all-weather road by the Alaska Road Commission as an immediate expedient, the Alaska Railroad nevertheless proceeded to file in the Fairbanks land office of the Bureau of Land Management a right-of-way along the route of the proposed extension of the railroad from Suntrana to the Government coal reserves, a distance of approximately 6 miles. This was accomplished by a letter dated April 29, 1953, from Acting General Manager of the Alaska Railroad John E. Manley to Lowell M. Puckett, Regional Administrator, Bureau of Land Management, Anchorage, Alaska, reading in pertinent part as follows:<sup>28</sup>

"The Alaska Railroad contemplates constructing at an early date an extension of its rail line from mile 4.2 on the Suntrana branch to mile 6.6, adjacent to the Usibelli mine camp. Also, from mile 6.6 to mile 10.3, adjacent to the Roth coal reserve.

"It is requested that there be noted under the act of March 12, 1914, 38 Statutes 35, 48 United States Code 301 to 308, a right of way for this line to the extent of 100 feet on each side of the center line of the track. Accordingly, we are attaching 3 copies each of part 1, Suntrana Branch extension, Suntrana to Usibelli, and part 2, Suntrana Branch extension, Usibelli to Roth Reserve.

"You will note in our letter of June 23, 1952, that the railroad contemplates the extension of this line in order that the Usibelli Coal Co., the Cripple Creek Mining Co., and any future producers, may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. *It is estimated that the construction of this line will result in the reduction of coal costs to the Territory of \$200,000 annually.*" [Emphasis supplied.]

It should be observed that under the act of March 12, 1914 (48 U. S. C. secs. 301-308), upon the filing by the Alaska Railroad of a right-of-way application accompanied by appropriate maps of location of the road, the rights-of-way becomes automatically operative upon notation of the application on the records of the Bureau of Land Management. Consequently, upon the filing of the right-of-way application in the Bureau of Land Management, the Alaska Railroad was immediately in a position to begin construction of the spur provided, of course, that funds were available.

Three things stand out in Acting General Manager Manley's letter, of April 29, 1953, which we wish particularly to stress and to invite close scrutiny by your committees. First, is his statement that the Alaska Railroad contemplates constructing at an early date an extension of its rail line from Suntrana to the Roth coal reserve. Second, is the impelling reason given for the extension of its rail line from Suntrana to the Roth coal reserve, namely, that Usibelli Coal Mine, Inc., Cripple Creek Coal Co., and any future producers may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. And third, is the clear and unequivocal declaration that "It is estimated that the construction of this line will result in the reduction of coal costs to the Territory of \$200,000 annually." Thus, the load of the Alaska Railroad, estimated at that time that the spur would result in a saving of \$200,000 annually in coal costs to the consumer. Every interested bureau and agency of the Interior Department which have been concerned with this matter are in agreement that the savings would be substantial and have so stated verbally and in writing.

In furtherance of the proposed construction of the railroad spur, General Manager of the Alaska Railroad Kalbaugh wrote to his superior, William C. Strand, Director, Office of Territories, on March 3, 1954, in part, as follows:<sup>29</sup>

"In accordance with your request, I am forwarding the following drawings and estimates covering the proposed extension of the Suntrana Branch from Suntrana mine (M. P. 4.2) to the Roth Coal Reserve:

1. Plan of location line between Suntrana (M. P. 4.2) and Usibelli mine (M. P. 6.6).
2. Plan of reconnaissance survey from end of location line at Usibelli mine (M. P. 6.6) to Roth Coal Reserve (M. P. 10.3).
3. Profile of location line between Suntrana mine (M. P. 4.2) to M. P. 6.6.
4. Estimated cost of located line between Suntrana mine (M. P. 4.2) and M. P. 6.6.

<sup>28</sup> A copy of this letter is appended hereto as exhibit X.

<sup>29</sup> A copy of the letter is appended hereto as exhibit Y.

5. Estimated cost based on reconnaissance survey between Cripple Creek mine (M. P. 8.8) to Coal Creek (Roth Coal Reserve), M. P. 10.3.

"The line between Suntrana mine (M. P. 4.2) and Usibelli mine (M. P. 6.6) has been located and staked. The remaining portion of the extension, M. P. 6.6 to the Roth Coal Reserve (Coal Creek), is based on a reconnaissance survey, and this line has not been staked. It is estimated that it would require approximately 2 months time with a single survey party to complete the reconnaissance survey and complete location.

"It will be noted that on the located line drawing between Suntrana mine (M. P. 4.2) and Usibelli mine (M. P. 6.6) we show our location passing over the Usibelli Mining Co.'s airstrip. This location was discussed with Mr. Usibelli, and he did not voice (sic) any objection other than that which could be normally expected under the circumstances. The line then passes through (according to information I have received) what is called G bed. *This location, Mr. Usibelli has objected to quite violently from time to time, inasmuch as he says he plans to mine these underground beds. However, from discussions with the Bureau of Mines representatives and the Geological Survey, they do not express as much concern about the potentials of these beds as Mr. Usibelli has.*

"We have filed with the Bureau of Land Management maps of both our located line and our reconnaissance lines, in order that we could obtain the necessary right-of-way. *These have been on file approximately 8 months and no objections, to my knowledge, have been made to our locations.*" [Emphasis supplied.]

Mr. Kalbaugh estimated the cost of constructing the entire spur from the rail's end at Suntrana to the Government coal reserves (Roth coal reserve) at \$1,928,251.50 if a wooden trestle could be utilized to cross Cripple Creek, and an additional \$425,000 if a steel bridge should be found necessary after a more complete study was made. At this point, therefore, as late as March 3, 1954, there was nothing that even gave the slightest inkling of any intention to abandon the construction of the railroad spur. On the contrary, Mr. Kalbaugh expressly stated in his letter of March 3, 1954, that the maps of right-of-way "have been on file approximately 8 months and no objections, to my knowledge, have been made to our locations."

But what happened? Out of a clear sky, without notice of any kind to Cripple Creek Coal Co. who for the last 5 years has urged and pleaded with the Department of the Interior for the extension of the railroad from Suntrana up the Healy River Valley, a message was dispatched by teletype under date of August 4, 1953, from Edward Woozley, then Administrator, Bureau of Land Management, to the regional administrator at Anchorage reading as follows: "

"Re our TT June 10 (MM:AHF) concerning Fairbanks 010449. Please advise railroad that permission to proceed with construction of line is suspended pending further notice from this office."

Peculiarly enough, Mr. Kalbaugh had made no mention at all in his letter of March 3, 1954, to Director Strand of having received the message dated August 4, 1953, from the Bureau of Land Management suspending "permission to proceed with construction of line." How is this explained? We respectfully request your committees to inquire into the circumstances and reasons that prompted Administrator Woozley to dispatch the teletype previously quoted to the regional administrator at Anchorage. It is strange indeed that suddenly, without notice to Cripple Creek Coal Co. or an opportunity to be heard, permission to proceed with the construction of the spur is suspended. We seriously question the legal authority of the Bureau of Land Management to suspend construction of an extension to the Alaska Railroad, a matter which is outside the jurisdiction of the Bureau of Land Management since the Alaska Railroad is administered by the Office of Territories of the Interior Department. Apart from this, the railroad right-of-way became automatically operative under the law upon its filing with the Bureau of Land Management and upon its being noted on the records and, consequently, the Bureau was wholly without jurisdiction over the proposed construction of the railroad spur. We believe that your committees are entitled to an explanation of the strange and irregular action taken by the Bureau of Land Management.

Fourteen months later, on October 11, 1954, F. E. Kalbaugh, general manager of the Alaska Railroad, wrote to regional administrator of the Bureau of Land Management, at Anchorage as follows: <sup>28</sup>

<sup>27</sup> A copy of this teletype is appended hereto as exhibit Z.

<sup>28</sup> A copy of this letter is appended hereto as exhibit AA.

"Will you please refer to our letter of April 29, 1953, wherein the Alaska Railroad made request upon your organization for the withdrawal of a railroad right-of-way 100 feet on each side of center line of track on our Suntrana branch from the present end of said branch line at Mile 4.2 to Mile 10.3.

"Initially this request for withdrawal of the proposed right-of-way was occasioned by the possibility of the extension of this branch line being essential to the national defense. Since my recent arrival in Washington, however, I have been informed that the Defense Department does not consider the extension of this branch line essential to the national defense and it would, therefore, be appreciated if you would withdraw the request as contained in our letter of April 29, 1953, on this matter."

Upon receipt in the Bureau of Land Management in Washington, D. C., of Mr. Kalbaugh's letter, a decision was promulgated under date of November 2, 1954, as follows:<sup>20</sup>

"By letter of April 29, 1953, the Alaska Railroad requested that notation of a right-of-way desired under the act of March 12, 1914 (38 Stat. 305; 48 U. S. C. sec. 301), for the extension of its Suntrana branch for a distance of 6.1 miles, be noted upon the records of the Bureau.

"The manager of the Fairbanks land office was instructed on May 5, 1954, by the then regional chief, division of adjudication, to note the right-of-way on his records under the instructions of January 13, 1916, (44 L. D. 513).

"By letter of October 11, 1954, the general manager of the Alaska Railroad withdrew the request for the right-of-way, explaining that initially the application was based on the possibility of national defense needs, but that now the extension is not needed for this purpose.

"The reason assigned for the withdrawal of the application is satisfactory. The withdrawal is accepted and the case closed."

We ask your committees to examine the letter dated April 29, 1953, from the acting general manager of the Alaska Railroad to the regional administrator, Bureau of Land Management, at Anchorage, which constituted the application for a railroad right-of-way. Is there anything in that letter which supports the statement made in Mr. Kalbaugh's letter of October 11, 1954, that "Initially this request for withdrawal of the proposed right-of-way was occasioned by the possibility of the extension of this branch line being essential to the national defense?" We submit there is nothing. The plain facts and justification for the extension of the railroad are recited in the Alaska Railroad's letter of April 29, 1953, applying for the right-of-way in the following words:<sup>21</sup>

"\* \* \* the railroad contemplates the extension of this line in order that the Usibelli Coal Co., the Cripple Creek Mining Co., and any future producers, may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. It is estimated that the construction of this line will result in the reduction of coal costs to the Territory of \$200,000 annually."

To repeat, two cogent reasons were advanced by the Alaska Railroad in applying for the railroad right-of-way: First, that Usibelli Coal Mine, Inc., Cripple Creek Coal Co., and any future producers may have access to the Alaska Railroad, thereby reducing the costs of operation which would be passed on to the Government and to private industry in reduced prices of coal, and second, that the construction of the line would result in the reduction of coal costs to the Territory of \$200,000 annually. It seems to us that these reasons in themselves amply justify the extension of the railroad. Aside from this, however, we think General Manager of the Alaska Railroad Kalbaugh should furnish your committees with the source of his information that the Defense Department does not consider the extension of this branch line essential to the national defense. This statement is completely at variance with the facts, as we shall soon establish.

On the basis of the foregoing, we can only conclude that there are other undisclosed reasons why the railroad right-of-way was withdrawn, which we hope that the committees will ascertain. Moreover, we respectfully request that your committees ascertain what occurred in the Department of the Interior during the 18-month period between April 29, 1953, when the railroad right-of-way application was submitted to the Bureau of Land Management, and October 11, 1954, when the application was withdrawn, to cause the Bureau of Land Management to suspend the construction of the railroad spur and the eventual withdrawal

<sup>20</sup> A copy of this letter is appended hereto as exhibit BB.

<sup>21</sup> A copy of this letter is appended hereto as exhibit X.

of the railroad right-of-way; what pressure was brought to bear on the Department of the Interior to stop the construction of the spur, by whom; and for what reasons.

At the same time, we wish your committees to know what the interested bureaus and agencies of the Department of the Interior and the Defense Department which are primarily concerned with providing adequate road and railroad access to the producing coal mines in the Healy River Valley were thinking during the same 18-month period. On April 30, 1953, a meeting of the coal subcommittee of the Alaska field committee of the Department of the Interior was held in the offices of the Alaska Railroad.<sup>21</sup> Present at that meeting were representatives of the Military Establishments, Bureau of Mines, Geological Survey, Bureau of Land Management, Territorial Department of Mines, Alaska Road Commission, and the Alaska Railroad. The purpose of the meeting was to discuss the extension of the Alaska Railroad up the Healy River Valley. Present in person were the following:

Maj. R. L. Gochenaur, Headquarters AAC, Elmendorf AFB  
 Mr. P. B. Miller, Headquarters AAC, Elmendorf AFB  
 Comdr. E. H. Willis, Headquarters, Alaskan Command, Elmendorf AFB  
 Mr. L. G. Anderson, United States Bureau of Mines, Anchorage  
 Mr. Phil Holdsworth, Territorial Department of Mines, Juneau  
 Mr. Wiley Robinson, Territorial Department of Mines, Anchorage  
 Mr. Lowell Puckett, regional administrator, Bureau of Land Management, Anchorage  
 Mr. L. H. Saarela, United States Geological Survey, Anchorage  
 Mr. A. Ben Shallit, Cripple Creek Coal Co., Fairbanks  
 Mr. E. J. White, Alaska Road Commission, Anchorage  
 Mr. Elroy F. Hinman, the Alaska Railroad, Anchorage  
 Mr. Irvin P. Cook, the Alaska Railroad, Anchorage

The transcript of the minutes of the meeting is annexed hereto as an exhibit and we urge the members of your committees to read it. For convenience, we shall quote the views expressed by the officials present bearing on the urgency of extending the railroad to the Usibelli and Cripple Creek coal properties and to the Government coal reserves. Mr. L. G. Anderson, Bureau of Mines, who was chairman, opened the meeting by reciting the difficulties which were being encountered in contracting for sufficient coal to supply military needs (tr. p. 1). Referring to his discussion with Shallit as to the tonnage he could produce for the military, Mr. Anderson said (tr. pp. 1 and 2):

"\* \* \* Mr. Shallit told me he was not interested in producing much over 60,000 to 100,000 tons this coming year, preferably around 60,000 or 65,000 tons. Until such time as he had an all-weather road up to Cripple Creek or the railroad built into his property, he did not want to obligate himself to tonnages that would be very doubtful as to whether he could produce under weather conditions as far as scheduling of deliveries according to contract.

"When Mr. Usibelli gave Lieutenant Fisher his proposals of 100,000 tons Lieutenant Fisher called Mr. Shallit and asked him for the maximum tonnage he could produce. Mr. Shallit told him 100,000 tons, but he would be willing to negotiate for 150,000 tons if the railroad or the highway would be built up to Cripple Creek before October of this year. On the strength of that and from the meetings we had prior to this meeting with the Navy on negotiating coal contracts this year, we thought it was almost certain that the Alaska Road Commission at least would be able to build a road into Cripple Creek or Roth property, which is just above the Cripple Creek property. Mr. Hinman, has it not been in your budget request to get funds for building this spur?

"HINMAN. It has been in our 6-year program for several years."

Again, Mr. Anderson said (tr. p. 3):

"\* \* \* Now the vital point under consideration is how are we going to get the money immediately to build a road up to Cripple Creek? I called George Rogers in Juneau, but he was unable to attend this meeting. He expects to go back to Washington and talk to the Secretary as to whether or not it would be possible to get funds for a railroad. Will this be possible, Mr. Hinman?

"HINMAN. I do not know."

Speaking of the impending shortage of coal to supply the military installations, the following discussion took place (tr. p. 3):

"GOCHENAUR. We are under now by about 12,000 tons of our requirements—figuring that Cripple Creek will take 150,000 tons.

<sup>21</sup> A transcript of the minutes of the meeting is appended hereto as exhibit CC.

"HINMAN. Cripple Creek does not know how they are going to deliver 150,000 tons unless they get an all-weather road or a railroad this summer.

"GOCHENAUR. That is why the military is here today. I compiled figures yesterday for our budget planning for the fiscal year 1955 for the Air Force. (I do not know the requirements of the Army). We will have at Eielson roughly 225,000 tons; at Ladd, 300,000 tons; and at Elmendorf, 140,000 tons. These are conservative figures. The main powerplant at Eielson at full capacity is capable of burning 50 or 60 tons an hour. Figures from the plant superintendent, based on full capacity, would be around 50 tons an hour. The average consumption during mild weather is 7,000 tons a month."

On pages 5, 6, and 7 of the transcript appears the following colloquy:

"SAARELA. Has this money for constructing the railroad to Cripple Creek and Roth ever been asked from Congress?

"HINMAN. We have programed it. In our budget estimates for fiscal year 1953 we included an amount of \$2,350,000 for improvements to and extension of the Suntrana branch. This was approved by the Interior Department, reduced to \$1 million by the Bureau of the Budget, and entirely deleted in Congress when final action was taken on the appropriation bill. Right now the Alaska Railroad is prepared to and will commit itself to furnish and install the rail and fastenings in a very short period, probably 1 month, if the grade is provided. No appropriation would be necessary to install the railroad if the grade is provided. It would be necessary that a grade be ready not later than the middle of August.

"SAARELA. Why couldn't the military take the stand that this railroad is essential or necessary? A couple of years ago I wrote to the commanding general and tried to get it ironed out so there would be some statement from the military as to the essentiality of the road or railroad, but I got a refusal. I think the situation has come to pass now that we are not going to meet the demand and it is mainly a problem of transportation. Therefore, I think it would seem reasonable that as it is a military problem and that a statement could be made by the military as to the essentiality of the railroad, so that the Alaska Railroad could go ahead and make the request. The hauling of 140,000 tons 3 miles by Mr. Usibelli and 150,000 tons 6 miles by Mr. Shallit will cost the Government approximately \$300,000 this year.

\* \* \* \* \*

"SAARELA. If it is necessary to take the Roth property out of the reserve and split these contracts up, some additional leasing of acreage will be necessary, but I believe at the present time the survey feels there is enough production facilities in the Healy field. In view of this constant bottleneck of getting coal out because of the lack of transportation it may be necessary to release additional acreages to get other small operators. Two years ago we received a letter from the commanding general stating that the military did not think the road was essential. I think the situation has changed drastically. The whole coal supply depends upon the solution of this problem. The military is not going to countenance this continual harassment. One of these days the military is going to throw up its hands and put in a pipeline.

"HINMAN. On the transportation part of it the railroad does not have the funds to build the extension.

"ANDERSON. The essentiality of the access road into that mining area should be set up on the budget and be backed by the military.

"GOCHENAUR. What was the conversation, Mr. Anderson, you had with Mr. Flake when you went back to Washington? It was my understanding that the Department of the Interior was back of that road. After the conversation I had with you, Lieutenant Fisher said he laid it in the hands of the Interior Department and they would put it through."

Continuing the discussion, Mr. Anderson said (tr. p. 7):

"I concur with Mr. Saarela's statement, and I wish to state further that I have held the same line of reasoning for the past 10 years in regard to coal production from this area. From a military security standpoint, I recommended in 1946 to Charles Kurtz, consulting coal-mining engineer from the Quartermaster General's Office, Washington, D. C., that the Roth property be put in a reserve.

"At present, the only sound, economical plan is to build a railroad from the Healy River mine to the Roth property as the quality of coal in this property is far superior to any other coals reasonably accessible to transportation. Production from the Roth property, due to geological formations, and from a mining standpoint, would make it possible to produce considerable tonnage in a short time in case of emergency."

Responding to an inquiry as to whether the Alaska Road Commission had requested funds to build a road, Mr. Hinman stated (tr. p. 8) :

"You ask if ARC had ever asked for funds to build a road. I am sure they have not. There is no reason to build a road when it should be a railroad. If you are going to ask for money, ask for funds to construct a railroad."

Subsequently Mr. Anderson made the following statement (tr. p. 10) :

"This suggestion comes from Joe Flakne. I am asking you to think about it as a possible solution. Joe Flakne and I spent about three-fourths of an hour in Assistant Secretary Lewis' office and gave him the whole picture, stressing the importance of this railroad up there; consequently, he is familiar with the immediate necessity of the construction of this project. I do not know what can be done; however, George Rogers will take this information to Washington and perhaps talk it over with the governor—point out that it is a military necessity."

Later, the following discussion took place (tr. pp. 11, 12, and 13) :

"ANDERSON. Lieutenant Fisher and I certainly stressed the importance of having this railroad built.

"SAARELA. Correspondence from Rogers would indicate that everything was squared away.

"WILLIS. It becomes essential that we get coal out. Yet at the same time we now have no request for money in either for a road or a railroad. This seems to me that it is about 2 years late or 2 years early, as far as essentiality. I think it is late at this particular time, but we are going to have to move. In the first place we are going to have to get a request in for money properly substantiated.

"SAARELA. In my files I still have my correspondence with the commanding general. At that time (1951) they were reluctant, but this is 1953 and the problem is entirely different now.

"MILLER. In 1951 there were no anticipated coal demands or steam production.

"SAARELA. If you are going to continue to burn coal the demand will be firm and will increase until probably 1956 when construction is complete.

"ROBINSON. Right now, unless we get a railroad to Cripple Creek mine to take care of 150,000 tons, the military is going to be at least 50,000 tons short. If the military is going to use coal, it will be shipped in from the States.

"GOCHENAUER. We will just burn oil.

"MILLER. That is 50,000 tons this year; next year it may be closer to 150,000 tons; two from now it will increase in direct proportion to 1955.

\* \* \* \* \*

"Cook. As far as the railroad ever making a request for funds, we are operating under a directive as to the method to proceed, which calls for the location of a feasible line, and then that is to be forwarded to Washington for further action. That was completed last fall. I believe the intent from then on was whether it was feasible to build a railroad up there, or a highway depending on tonnage. But as the necessity for coal has developed by leaps and bounds the outlook now is that the railroad would be more desirable."

Toward the close of the meeting, Mr. Saarela said (tr., p. 15) :

"I would like to make a motion that the same motion made in the previous coal committee meeting in January in regard to construction of a railroad spur be again brought to the attention of the various Interior officials through Mr. Rogers of the Alaska field committee and copies of letters from various Interior agencies requesting this construction be made part of the record with the motion."

Subsequently the following resolutions were unanimously passed by the Alaska field committee, subcommittee on coal:

1. That Mr. George Rogers, chairman of the Alaska field committee inquire into the status of the request of Ben Shallit for a permit for a highway right-of-way which has been granted, but which, it is understood, is on appeal to the Washington office of the Bureau of Land Management or to the Secretary's Office, by Emil Usibelli of the Usibelli Coal Co. It is the suggestion of the subcommittee that Mr. Rogers urge that action be taken to resolve the problem if it is still undecided in Washington.
2. That steps be taken at once to finance the construction of an extension of the railroad from the Healy River mine to the Cripple Creek and Roth properties. This spur to be completed or partially so before October 1, 1953.
3. That the extension of the Healy River spur to the Roth property is vital to the security of military installations this coming fiscal year of 1954, and in the

future, and to the development and prosperity of the coal industry as a whole in Alaska.

4. That the extension of the Healy River spur to the Roth property would mean a substantial savings to the Government in the price of coal and this savings to the Government should amortize the cost of construction within 3 or 4 years.

5. That shipment of coal by rail transportation is the only logical solution to the presently existing critical situation.

The resolutions speak for themselves. They completely demolish the specious reasons advanced by the Alaska Railroad in its letter of October 11, 1954, withdrawing the railroad right-of-way. They establish that every bureau of the Department of the Interior and the Department of Defense represented on the Alaska coal subcommittee unanimously agreed that extension of the Alaska Railroad to the Government coal reserves (Roth property) is vital to the security of the military installations in the fiscal year 1954 and in the future, and to the development and prosperity of the coal industry in Alaska as a whole; that construction of the spur would mean substantial savings to the Government and that these savings would pay the cost of construction within 3 or 4 years.

About this same time in 1953, the Secretary of the Interior ordered an investigation to be made of the coal resources of Alaska. A committee was appointed headed by Charles W. Connor, formerly Administrator of Defense Solid Fuels Administration, to conduct the investigation on the ground in Alaska and to submit a report and recommendations to the Secretary. The committee arrived in Alaska in July 1953 and departed in September 1953. It inspected the various coal mines in the Territory and held a number of meetings with the mine operators and with the representatives of the Interior Department and Defense Department concerned with the development of coal in the Healy River Valley. When the committee returned to Washington, D. C., it prepared its report and recommendations to the Secretary of the Interior. This report has never been made public but, no doubt, copies will be made available to your committees upon request.

We have never read the Connor Committee report but on the basis of newspaper items and discussions with the committee in Alaska we believe that the report strongly recommends the construction of a railroad spur from Suntrana to the Government coal reserves.<sup>22</sup> We believe, too, that the report strongly recommends that development of the coal properties of Usibelli, Cripple Creek, and the Government coal reserves be conducted in such a manner that strip mining and underground mining should be carried on concurrently.

Reference to the work of the Connor Committee is made in the annual reports of the Secretary of the Interior to the President for the fiscal years ending June 30, 1953, and June 30, 1954. In the earlier report, the Secretary said (at p. 354):

"The mining of coal has become a major Alaskan industry in which the Federal Government, through its ownership of territorial coal lands, is in partnership with private enterprise. In order to improve the quality of its assistance to the industry, the Department, in the late summer of 1953, planned a field survey of supply and demand factors that affect the production and marketing of coal. *The survey will include studies of military and civilian requirements; existing mine capacity; need for new mines; transportation, manpower, and financing problems; and a review of Government leasing regulations and conservation practices. The study has been prompted by the fact that the rate of expansion of Alaska coal production during the past fiscal year was not great enough to meet estimated requirements.*" [Emphasis supplied.]

In the 1954 report, the Secretary said (at pp. 371-372):

"*The growth of the Military Establishment in Alaska following the Korean outbreak greatly increased the demand for coal mined in the area served by the Alaska Railroad.* There are two major coalfields in this area, the Healy River field about 75 miles southwest of Fairbanks, and the Matanuska field about 60 miles northeast of Anchorage. In response to rapidly mounting demand, coal companies in these fields nearly doubled their production in the 3 years following 1950 and produced an estimated 900,000 tons in the calendar year 1953.

"*In order to construct realistic production goals, in view of the wide range of military estimates as to consumption requirements,* the Secretary of the Interior appointed a survey team to undertake an investigation. This study covered

<sup>22</sup> Jessen's Weekly of October 22, 1953, carried the story that Charles W. Connor "recommended construction of a railroad spur to the two coal mines now operating in the Healy River field." The news item is appended hereto as exhibit DD.

military and civilian requirements, existing mine capacity, need for new mines, problems of transportation, manpower, and financing, as well as a review of Government leasing regulations and conservation practices. The survey will provide guidance in the development of programs by the Department of the Interior to increase coal output in the Territory in response to essential needs." [Emphasis supplied.]

The foregoing reports of the Secretary spell out in a few well-chosen words the critical situation which had developed in Alaska in meeting military requirements for coal. In the 1953 annual report the Secretary declared that "the rate of expansion of Alaska coal production during the past fiscal year was not great enough to meet the estimated requirements" and in the 1954 annual report he advised the President that he had appointed a survey team to undertake an investigation "In order to construct realistic production goals, in view of the wide range of military estimates as to consumption requirements \* \* \*."

But notwithstanding the urgency and seriousness of the problem which had been spelled out in the annual reports of the Secretary of the Interior to the President, which had prompted the unanimous resolutions of the Alaska Subcommittee on Coal, and which had resulted in the strong recommendations of the Secretary's own appointed Connor Committee, railroad access has still not been provided to the producing coal properties in the Healy River Valley. To add insult to injury, General Manager of the Alaska Railroad Kalbaugh's withdrawal of the railroad right-of-way on October 11, 1954, repudiates the Secretary's declarations of policy to the President with respect to the impelling need for developing and expanding coal production in Alaska to supply military and civilian demand, and overrules the urgent recommendations both of the Alaska Subcommittee on Coal and the Connor Committee.

And, incidentally, it should be recalled that representatives of the Alaska Railroad had voted unanimously with the other members of the Alaska Subcommittee on Coal in favor of the resolutions urging the construction of the railroad spur.

We respectfully request your committee to invite the members of the Alaska Subcommittee on Coal and other representatives of the Department to testify with regard to all of the foregoing matters and to ascertain the real reasons why the Alaska Railroad suddenly discontinued the survey of the railroad line and why the railroad right-of-way was withdrawn. In this connection, we invite the attention of your committees to the exchange of memoranda between Assistant Secretary of the Interior Orme Lewis and the Director of the Bureau of Land Management Edward Woosley. On October 1, 1954, the Assistant Secretary sent the following memorandum to Director Woosley: "

"There is at present in the Office of the Solicitor an appeal by the Usibelli Coal Mine, Inc., and Emil Usibelli from the Bureau of Land Management decision in connection with the right-of-way application of A. Ben Shallit, Fairbanks 08832. This dispute was investigated in Alaska by the Alaskan coal survey group which submitted a report on November 12, 1953. A copy was sent to the Associate Director of the Bureau of Land Management. The group suggested that the opposing parties might reach an amicable solution. Following this suggestion, representatives of Mr. Shallit and of the Usibelli interest have been consulting with each other in an attempt to reach such a solution. Meantime, of course, action on the appeal has been suspended.

"In a letter of September 3, Mr. Northcutt Ely, attorney for the Usibelli interest, points out that there is still pending an application by the Alaska Railroad to cross the Usibella leasehold for the purpose of reaching the Shallit mine and possibly other deposits in the area. Mr. Ely points out that the railroad right-of-way would cover a different route than the right-of-way applied for by Mr. Shallit, and he contends that the railroad right-of-way would seriously damage the Usibelli operations. He states that the Usibelli interests are reluctant to conclude an amicable agreement with Shallit for one right-of-way while the railroad right-of-way is still pending.

"Without passing on the merits of this contention, I do think that the Bureau of Land Management and the Alaska Railroad should examine the situation promptly. If possible, an amicable agreement with Mr. Usibelli regarding this line, if it is still to be built, should be reached. Since the Bureau of Land Management has the railroad's application before it, I expect the Bureau to take the initiative in this matter. Copies of the correspondence are being sent to the Alaska Railroad. The Manager of the Alaska Railroad will be in Washington until October 19, 1954, and is, therefore, available for consultation on this problem."

\* A copy of this memorandum is appended hereto as exhibit EE.

On October 14, 1954, Director Wozzley replied to Assistant Secretary Lewis as follows: <sup>54</sup>

"Reference is made to your memorandum dated October 1, 1954, relating to the application, Fairbanks 010449, of the Alaska Railroad for right-of-way for an extension of its Suntrana Branch for a distance of 6.1 miles with a view to reaching the A. Ben Shallit coal mine and possibly other deposits. This extension would go through the camp area of the Usibelli Coal Mine, Inc., operated by Emil Usibelli in connection with mining his coal lease area in the vicinity.

"Mr. Shallit has pending a truck road right-of-way application, Fairbanks 08832. This truck road right-of-way also crosses the Usibelli interests. This application is in the Solicitor's Office on appeal by Usibelli.

"I held a meeting yesterday at 2 p. m. at which your solicitor was represented. Mr. Kalbaugh, the general manager of the Alaska Railroad was present also. Mr. McCarthy [sic] representing Usibelli was at the meeting. Mr. Barash, Shallit's attorney, was absent.

"Mr. Kalbaugh filed with the record a copy of his withdrawal dated October 11, 1954, of the right-of-way application, Fairbanks 010449 of the Alaska Railroad. The withdrawal itself was forwarded to our area administrator, area 4. It will be accepted very shortly. So, the Alaska Railroad right-of-way application no longer presents a problem.

"At the meeting Mr. McCarthy [sic] stated that the relations between his client and Mr. Shallit were better, that Mr. Barash and he were engaged in preparing a form for a stipulation and agreement between Usibelli and Shallit which would provide for the mutual operation of one truck road only through the Usibelli interests, instead of the present 2 roads. 1 Usibelli's and the other Shallit's. As soon as this agreement is signed and filed with the record of the appeal, Fairbanks 08832, your solicitor expects to dispose of the appeal and thus close the entire case."

Of particular importance to which we invite the attention of your committees is the statement in Director Wozzley's memorandum of October 14, 1954, that Mr. McCarty (representing Usibelli Coal Mine, Inc.) had stated that he and Mr. Barash (representing Cripple Creek Coal Co.) were preparing a form of stipulation and agreement "between Usibelli and Shallit which would provide for the mutual operation of 1 truck road only through the Usibelli interests, instead of the present 2 roads, 1 Usibelli's and the other Shallit's." The latter statement, attributed to Mr. McCarty, is completely erroneous. The form of stipulation and agreement therein referred to did not provide for mutual operation by Usibelli and Shallit of 1 truck road only across the Usibelli lease. It merely contained the conditions upon which it was finally agreed that Shallit would be permitted to use not the Usibelli road on high ground but the Cripple Creek Coal Co. temporary makeshift road in the bed of the Healy River which is constantly subject to destruction by flash floods, spring thaws, and the elements. And even this concession on the part of Usibelli came only after more than 3 years of vigorous opposition to the grant of any right-of-way easement to Cripple Creek Coal Co.

Equally significant is the statement in Director Wozzley's memorandum of October 14, 1954, that "Mr. Barash, Shallit's attorney, was absent" from the meeting which is referred to therein. This would presuppose that Mr. Barash was invited to the meeting held in Mr. Wozzley's office on October 13, 1954. No such invitation was extended to Mr. Barash, however, and he did not actually learn that such a meeting took place until almost a month later. On December 23, 1954, Mr. Barash wrote the following letter to Director Wozzley: <sup>55</sup>

"Early in November I received a copy of your decision of November 2, 1954, accepting a withdrawal filed by the Alaska Railroad of its application Fairbanks C10449 for right-of-way.

"Recently I had occasion to examine the record of Fairbanks 010449 in connection with a presentation I am preparing which will urge the Department of the Interior to extend the Suntrana branch of the Alaska Railroad to coal lease Fairbanks 07350 of my client, A. Ben Shallit, Cripple Creek Coal Co. In that record is a memorandum dated October 14, 1954, from you to the Assistant Secretary, Public Land Management, calling attention to a meeting which was held in your office at 2 p. m. on October 13, at which were present representatives of the solicitor's office, Mr. Kalbaugh, general manager of the Alaska Railroad and Mr. McCarty, of the office of Northcutt Ely, Esq., representing Usibelli Coal

<sup>54</sup> A copy of this memorandum is appended hereto as exhibit FF.

<sup>55</sup> A copy of this letter is appended hereto as exhibit GG.

Mine, Inc. 'The same memorandum contains the statement, 'Mr. Barash, Shallit's attorney, was absent.'

"I don't know that my presence at the meeting in your office on October 13 would have contributed in any way to the discussion that took place, but it seems appropriate to point out that my absence from that meeting was due solely to the fact that I was not invited and actually knew nothing thereof until my examination of the record of Fairbanks 010449. I shall appreciate very much this letter being made part of the record of Fairbanks 010449 so that there may be no misunderstanding in the future as to the reasons for my absence from the meeting of October 13, 1954."

What the real reasons were for withdrawing the railroad right-of-way will never be known unless your committees investigate and conduct public hearings to fix responsibility for this action as well as for the failure to construct the railroad spur. It is unthinkable that in the light of all that has transpired over the last 5 years in the struggle to obtain railroad access to the producing coal mines in the Healy River Valley, the unanimous conclusion of the Alaska Subcommittee on Coal that construction of the spur is vital to the security of the military installations and to the development of the coal industry as a whole in Alaska, and the strong recommendations of the Connor committee, the railroad right-of-way should now be withdrawn and abandoned.

In the meantime, Cripple Creek Coal Co. was having a terrible time in 1954 with the temporary makeshift road in the bed of the Healy River. On three separate occasions the road was destroyed by flash floods requiring time-consuming and costly rebuilding. On October 19, 1954, Shallit wrote to Mr. A. F. Ghiglione, commissioner of roads for Alaska, as follows: "

"Since you are probably already making your estimates on next year's requirements, I believe that it is appropriate at this time to again request that some consideration be given construction of a road between Suntrana and Cripple Creek.

"Since you are entirely familiar with our problem, there is no point in repeating the factors involved. *I would like to point out that the road that we are now using and for which we have a tentative right-of-way, was destroyed three times this year, requiring rebuilding at a cost in excess of \$40,000.*

*"Our present road is considerably better than any we had previously built, but the section through the Usibelli lease is still subject to destruction during every period of high water.*

*"I would appreciate your giving consideration to the possibility of the road commission obtaining a right-of-way at least through that section since we have not been able to make any progress in obtaining a right-of-way on which we can construct a permanent road.*

"This is the same problem we have been fighting for the last 5 years, and I believe it will not be solved until your Department takes some direct-action. \* \* \* [Emphasis supplied.]

By letter of October 29, 1954, Mr. Ghiglione responded as follows: "

"Reference is made to your letter of October 19, 1954, requesting information regarding the status of the access road between Suntrana and Cripple Creek, and requesting assistance in its construction and maintenance. I am sorry to advise that the Alaska Road Commission has been unable to initiate action toward assuming this responsibility and the status of the project remains unchanged since the policy decisions were made by the Department of the Interior over a year ago.

*"As you know, the Department has decided that proper access to the Healy River coalfields may best be provided by the railroad spur extension. As a result of this decision, the railroad has proceeded to obtain the necessary right-of-way and has filed necessary maps and instruments with the Bureau of Land Management for this purpose.*

*"When the decision was finally made to encourage railroad access to the Healy River coal properties, the Alaska Road Commission was precluded from sponsoring further road projects for this purpose. As you will recall, a subsequent attempt was made to obtain funds for construction along the Alaska Railroad right-of-way in an effort to provide temporary relief for your problem. This attempt met with failure, again because the project was considered one for the Alaska Railroad and therefore any request for funds to implement the project should be initiated by that agency.*

\* \* \* \* \*

\* A copy of this letter is appended hereto as exhibit HH.

\* A copy of this letter is appended hereto as exhibit II.

"\* \* \* I can only suggest that you contact the Alaska Railroad in an effort to expedite their development of the railroad spur farther up the Healy River." [Emphasis supplied.]

Mr. Shallit hastened to reply to Mr. Ghiglione on November 4, 1954, in pertinent part, as follows: <sup>20</sup>

"Thank you for your letter of October 29 advising us that the Alaska Road Commission was unable to initiate action in providing an access road to the Healy River coalfields because of a decision by the Department of the Interior to provide such access by the extension of the Alaska Railroad spur.

"For your information, this situation was recently discussed with officials of the Alaska Railroad, and *we were advised that they had no immediate plans for the construction of such a spur.* Under the circumstances, we believe that unless an actual directive was issued to you, precluding the construction of a road, it would still be in order for you to consider this project. If, however, you have been officially advised that the Alaska Railroad alone is to be responsible for the construction of this spur, we will appreciate a copy of this directive so that we may act accordingly." [Emphasis supplied.]

Mr. Ghiglione responded on November 8, 1954, as follows: <sup>21</sup>

"This will acknowledge receipt of your letter of November 4, 1954, which further discusses the possibilities of the Alaska Railroad Commission's participation on the Healy River road to serve your coal properties. In spite of the many factors outlined in your letter which tend to justify this project as a public necessity, I am still unable to offer assistance since no funds are presently available to the Alaska Road Commission for this work.

\* \* \* \* \*

"The situation along Healy River, insofar as *access by railroad in preference to highway has been determined as policy by the Interior Department*, has not been resolved in the form of a directive to the Alaska Road Commission. However, since all requests for funds must be processed through the Interior Department before reaching the Bureau of the Budget and Congress, *it is obvious that the policies of the Department must be adhered to.*" [Emphasis supplied.]

During this same period Mr. Shallit wrote to General Manager of the Alaska Railroad Kalbaugh by letter of October 21, 1954, in pertinent part, as follows: <sup>22</sup>

"During my last visit to Washington I discussed with Mr. Strand the advisability of including a request for an appropriation in the next budget to build a spur line from Suntrana to Cripple Creek.

"As you know, our efforts on behalf of accomplishing this purpose through the Healy River Spur, Inc., was nonproductive. Although the coal requirements for the next fiscal year will probably not be much larger than those requested this year, we have been advised that future requirements may be a great deal larger. Under the circumstances, it would appear that it would be in order to request an appropriation at the next budget hearings, in order that the spur could be completed in time to meet the increased demand.

"Sections of our road were destroyed three times this year, pointing to the necessity of obtaining less vulnerable right-of-way on which a permanent road can be constructed. Assistance from an appropriate agency of Government, who can obtain a right-of-way through their powers of eminent domain, appears to be the only way in which such a road can be built through the intervening leases.

"*It is therefore, again, respectfully requested that consideration be given to the extension of the existing spur to Cripple Creek*, and that if it is not believed advisable to construct a spur at this time, to at least survey and obtain a right-of-way for such a spur, and allow the Cripple Creek Coal Co. and the general public the right to use this right-of-way until such time as a spur is constructed." [Emphasis supplied.]

To this letter Mr. Kalbaugh responded under date of November 5, 1954, as follows: <sup>23</sup>

"On my return to Anchorage received your letter of October 21, 1954, concerning the Alaska Railroad requesting an appropriation for the extension of our Suntrana branch.

"As we discussed in our several conversations on this matter, the Alaska Railroad is required to be self-sustaining and any such large expenditures as

<sup>20</sup> A copy of this letter is appended hereto as exhibit J.J.

<sup>21</sup> A copy of this letter is appended hereto as exhibit K.K.

<sup>22</sup> A copy of this letter is appended hereto as exhibit L.L.

<sup>23</sup> A copy of this letter is appended hereto as exhibit M.M.

you have proposed by the Railroad would have to be economically justified and, as we also discussed, such economic justification cannot be made by the Railroad in support of this track extension.

"Inasmuch as the Defense Department has indicated that they cannot lend support to your proposed track extension, it appears to us that your next best bet would be to endeavor to procure an all-year road from your property to the present railhead at Suntrana, and of course such a road would not be under the jurisdiction of the Alaska Railroad. Therefore, you may wish to consider the possibility of having the Alaska Road Commission undertake such action as would be necessary for such a roadbuilding program.

"I regret very much our inability to be of more concrete assistance to you, and am looking forward to seeing you in the not too far distant future."

On December 15, 1954, Mr. Shallit again wrote the Alaska Road Commission and by letter of December 21, 1954, he received the following reply from Mr. Ghiglione:

"Reference is made to your letter of December 15 regarding the possibility of obtaining funds for construction of an all-year road from Suntrana to Cripple Creek. *I am surprised at Mr. Kalbaugh's statement regarding the appropriation of funds for this project, since all previous departmental policy has been in support of extension of the railroad spur in preference to the highway, and obviously no funds will be appropriated by Congress without the support of the Interior Department.*

"In reviewing our previous estimates for this project, I find that several factors enter into the cost of the road and, therefore, any estimate must be qualified. Our last estimate, made in April 1953, for construction of the road from Suntrana to Cripple Creek, totaled \$420,000. This estimate was based upon the alignment following the present Alaska Railroad line within their right-of-way, *since at that time Mr. Usibelli had refused consideration of a road easement either over his road or through his property, excepting on the Railroad line.* His refusal was always based on the contention that any such easements would conflict with future development of his property \* \* \*." [Emphasis supplied.]

In analyzing the exchange of correspondence between Cripple Creek Coal Co. on one hand and the Alaska Road Commission and the Alaska Railroad on the other, it is important for your committees to understand that both the Alaska Road Commission and the Alaska Railroad are arms of the Office of Territories of the Interior Department and under its administrative jurisdiction. Yet we find the Alaska Road Commission still unaware as late as December 1954 that the Alaska Railroad had withdrawn the railroad right-of-way and still insisting, properly we submit, that all previous departmental policy has been in support of extension of the railroad spur in preference to the highway for providing access to the coal deposits in the Healy River Valley. At the same time, we find General Manager of the Alaska Railroad Kalbaugh saying nothing in his letter of November 5, 1954, to Shallit of the withdrawal of the railroad right-of-way or of any change in the policy of the Department with respect to the extension of the Alaska Railroad. Incidentally, the first information we received of the withdrawal of the railroad right-of-way was the decision of the Bureau of Land Management of November 2, 1954, which was received several days thereafter. We believe that it is entirely fitting and proper that your committees ascertain why Cripple Creek Coal Co. received the brushoff it did in Mr. Kalbaugh's letter of November 5, 1954.

Moreover, we ask that Mr. Kalbaugh be called upon to explain the statement in his letter of November 5, 1954, that "economic justification cannot be made by the Railroad in support of the track extension." Is the unanimous resolution of the Alaska Subcommittee on Coal that the "savings to the Government should amortize the cost of construction within 3 or 4 years" untrue? Is the statement of Acting General Manager of the Alaska Railroad Manley that "construction of this line will result in the reduction of coal costs to the Territory of \$200,000" untrue? Is the statement of Mr. Saarela, mining supervisor of the Geological Survey in charge of coal-mining operations for Alaska, that "hauling of 140,000 tons 3 miles by Mr. Usibelli and 150,000 tons 6 miles by Mr. Shallit will cost the Government approximately \$300,000 this year" (1953) untrue? We ask your committees to call upon these officials, among others, to ascertain whether their statements are true or false.

• A copy of this letter is appended hereto as exhibit NN.

Despite the lack of railroad access to Cripple Creek Coal Co. coal lease over the last several years, Cripple Creek Coal Co. has nevertheless proceeded with the development of the property in the earnest belief that the recommendations and promises of officials of the Department of the Interior that a spur would be constructed would be fulfilled, thus providing year-round transportation. In that spirit Cripple Creek Coal Co. made application on March 10, 1951, for a Government loan in the amount of \$400,000 pursuant to section 302 of the Defense Production Act of 1950. The purpose of the loan was stated in the application as follows:

"A loan is requested in order to expand the capacity of applicant's present strip coal mine and to develop a modern underground mine capable of supplying the increasing demand for coal in Alaska essential to the military and domestic market. Funds are required for the purchase of equipment and supplies, building improvements, mine development, and working capital." [Emphasis supplied.]

For the information of your committees, it should be said that the coal measures in the Nenana field occur in pitching synclines with all of the operating properties in the Healy River area confined to workings on the north dipping flank. The workable beds vary in thickness from 10 to 60 feet with a relatively consistent dip of about 30 degrees. As a result, depending upon the local topography, it is usually more efficient to mine the thicker beds above natural-drainage level, by strip-mining methods, than through underground workings. The thinner underground beds can be mined at comparable unit costs only after the more expensive underground development work has been completed. As a result, in the interest of conservation and good mining practice and to assure an equitable distribution of costs which would be passed on to the consumer in lower average prices, underground coal-mining operations in the Nenana field should be carried on concurrently with open-pit operations. The Cripple Creek Coal Co. has, therefore, consistently taken the long-range view that strip-pit mining and underground development should be done concurrently.

To illustrate what has been said previously, Cripple Creek Coal Co. estimates its probable strippable reserves at 8 million tons of coal. On the other hand, it estimates its probable underground reserves at 260 million tons of coal. It is obviously easier and cheaper to mine the strippable coal first and leave the underground coal, which is more expensive mining, for later development. To do so, however, would mean that after the strippable reserves were exhausted, both the military and civilian consumer in Alaska would be compelled to pay substantially higher prices for their coal. On the other hand, concurrent development of the strippable coal and the underground coal would be a leveling factor in determining the price of coal to the consumer. It should be recalled, too, that the Connor report strongly recommended that strip mining and underground mining should be conducted concurrently.

That Cripple Creek Coal Co. intended in good faith to develop an underground mine in the interests of concurrent development of the strippable coal and the underground coal in order to provide, for the foreseeable future, sufficient reserves to assure an adequate supply of coal for military and civilian consumption at the lowest possible prices is further evidenced, aside from the application for a defense loan, in the generalized operating plan which Cripple Creek Coal Co. submitted on January 15, 1953, to the regional mining supervisor of the Geological Survey in charge of coal mining operations on Federal coal leases in Alaska.<sup>42</sup> That operating plan contains a history of Cripple Creek Coal Co.'s operations, its reserves at that time, and its long-range plans for strip mining and underground mining. Referring to the latter, Mr. Shallit said in part:

"Under favorable conditions, we plan to increase our annual production from less than 50,000 tons, at present, to 100,000 tons during the fiscal year 1953-54; 150,000 tons in 1954-55; and 200,000 tons thereafter.

"Eighty thousand tons of the 1953-54 production is to come from surface operations and 20,000 from underground. One hundred thousand tons of the 1954-55 production is to come from the surface and 50,000 from underground. Half of the 1955-56 production will be from the surface and half from underground. By 1958 all tonnage will be produced from underground operations.

"By 1958 it is planned to have at least three fully equipped underground mines, each independent of the other operations. Under very competitive market

<sup>42</sup> A copy of the generalized operating plan is appended hereto as exhibit OO.

conditions it is conceivable that only the most efficient unit would be operated. Under increased demands production could be stepped up from all units, and additional beds developed."

In concluding the operating plan for mining coal on the Cripple Creek leasehold, Shallit made the following prophetic observation:

*"The most important single factor that would prevent our increasing production in 1953 would be the failure of the Alaska Railroad to extend their spur as now planned, from present rails' end at Suntrana. Under present hauling conditions, we would not plan to mine more than 60,000 tons during any year, and would be forced to confine our deliveries to the winter months only."* [Italic supplied.]

On March 9, 1953, the Reconstruction Finance Corporation approved the application for a Government loan in the amount of \$413,500 which had been applied for March 10, 1951. This loan was approved as a defense loan pursuant to section 302 of the Defense Production Act and a certificate of necessity was granted to Cripple Creek Coal Co. by the Defense Production Administration. Of the total loan granted 109,700 was specifically set aside for the purchase of underground equipment. \$161,800 was authorized for surface improvements to both underground and strip-pit facilities. Following granting of the loan, rails, electric conduit, timber, and similar materials were purchased for specific underground use. Surface facilities were constructed and a mine portal started on the No. 6 bed. Meanwhile, it became apparent that the Secretary of the Interior was not following through on the recommendations of his subordinate bureaus and that year-round transportation facilities would not become available to Cripple Creek Coal Co. during the development stage of its underground mine. It became very questionable whether such facilities would even be available after the underground mine was fully developed. This in spite of the fact that a defense loan was made to Cripple Creek Coal Co. to develop an underground mine upon the recommendation and with the strong support of the Defense Solid Fuels Administration of the Department of the Interior. Positive measures were, therefore, necessary if the underground mining program was to be carried out.

In addition, the physical properties of the Nenana coal beds are such that underground workings are susceptible to spontaneous combustion unless adequately ventilated. Once started, these fires are difficult to control as, for example, the fires in the Suntrana (Healy River) mine which have been burning continuously for about 30 years and have destroyed enormous quantities of coal. Control of spontaneous combustion in an operating underground mine in the Nenana field does not present any unusual problems, but the suspension of operations for even a few days at a time requires positive and expensive action to prevent the coal from firing. Consequently, unless transportation facilities are such that mining operations can be conducted throughout the year it is economically impractical and conservationally unsafe to develop an underground mine in the Nenana field. The cost of maintaining entries and providing adequate ventilation necessary to prevent the coal from firing would be prohibitive during any prolonged shutdown period. On complete abandonment, unmined reserves can be protected by sealing and backfilling but this, of course, is not economically feasible where the opening and closing of such mines would occur for lack of year-round transportation.

In a last desperate effort to salvage the underground program and to carry out its long-range planning for a balanced underground-surface operation which would be in the best interest of the development of the Territory of Alaska as well as the Government coal resources leased to Cripple Creek Coal Co., a corporation called Healy River Spur, Inc., was organized on March 12, 1954, with Cripple Creek Coal Co. as the moving spirit. The purpose of that corporation was set forth in the certificate of incorporation as follows:

"To conduct and carry on the work of the corporation, not for profit but exclusively for the purpose of borrowing money from the United States Government in order to build a spur railroad from the present rail's end at Suntrana in the Territory of Alaska, and to build and operate such spur and manage the same until such time as the entire loan is repaid and thereupon to dissolve the corporation and transfer and convey title to all the assets of the corporation, including the railroad spur, to the appropriate agency of the United States Government which operates and maintains the Alaska Railroad, for its exclusive use and benefit to be operated and maintained as part of the Alaska Railroad."

As explained in the certificate of incorporation, Healy River Spur, Inc., was organized as a nonprofit corporation. Money was to be borrowed from the

Government to build the railroad spur and upon repayment of the loan the corporation was to be dissolved and title to the spur and all the assets of the corporation were to be conveyed to the United States to be operated and maintained as part of the Alaska Railroad. The motivation for Healy River Spur, Inc., was purely and simply the construction of a railroad spur which the Department of the Interior had inexcusably and without justification failed to do itself. That Cripple Creek Coal Co. was to have no interest, financial or otherwise, in Healy River Spur, Inc., was made crystal clear. Under Nature of Business and Description of Project, as described in the application to the Reconstruction Finance Corporation for a loan, it was stated:

"Applicant is a private, limited, nonprofit corporation, formed for the sole purpose of constructing a railroad spur from present rail's end at Suntrana to the known operating and reserve coal properties in the Healy field. The corporation was formed as the only practical means of obtaining funds for that purpose. All other means investigated were found impractical.

"The officers of the corporation will serve without remuneration. All income after actual expenses will be used to retire the corporation's indebtedness. As soon as free of debt, the corporation will turn the spur over to the Alaska Railroad, without cost to the Alaska Railroad, and the corporation will dissolve.

"Prior to the disbursement of any funds, a new board of directors will be appointed by majority decision of responsible Government officials. A managing director will be appointed to serve without pay and shall be directly responsible to the board for the construction and operation of the spur."

The idea of forming Healy River Spur, Inc., was actually born out of the combined efforts of interested officials of the Department of the Interior and the Department of Defense to bring to fruition the extension of the Alaska Railroad. The corporation was to be a quasi-Government agency, and it had the tacit blessing of officials of both Departments, as evidenced by the assistance and cooperation they gave in the formation of the corporation and in the preparation of its loan application to the Reconstruction Finance Corporation. Several conferences were held in the Office of the Under Secretary of the Interior Ralph Tudor which were attended by representatives of the Interior Department, Defense Department, Office of Defense Mobilization, and the Reconstruction Finance Corporation. There was unanimous agreement among the conferees that construction of the railroad spur was in the public interest and in the interest of national defense to assure an uninterrupted supply of coal to meet military and civilian demand in Alaska for the years ahead. Representing the Defense Department at those meetings were Colonel Vissering, Chief of Transportation, Office of Assistant Secretary of Defense; George A. Grimm, utilities and fuel adviser to the Assistant Secretary of Defense for Supply and Logistics; and Commander Webster, Lieutenant Fogel, and Mr. Bedwell, of the Navy Fuel Supply Office. The only discordant note heard at those meetings was from the representatives of the Reconstruction Finance Corporation and the Office of Defense Mobilization who expressed concern that Healy River Spur, Inc., might be construed by Congress as an attempt to circumvent the legislative appropriation processes. Later, by letter of August 16, 1954, the Reconstruction Finance Corporation advised Healy River Spur, Inc., as follows:

"As you have previously been advised, your application for a loan of \$1,754,839.50 under section 302 of the Defense Production Act was submitted on March 16, 1954, to the Office of Defense Mobilization for determination regarding the issuance of a certificate of essentiality as required by Executive Order No. 10281.

"In this connection, there is enclosed for your information copy of a letter we have received from the Office of Defense Mobilization.

"For reason that no certificate of essentiality will be issued further consideration of the application is precluded. The files on this matter are, therefore, being closed."

With its letter of August 16, 1954, the RFC enclosed a copy of a letter dated August 11, 1954, it had received from the Office of Defense Mobilization, reading as follows:

"This refers to your letter of March 16, 1954, requesting that we make a determination of essentiality to the national defense of the section 302 application of the Healy River Spur, Inc., for a loan of \$1,754,840.

"The proceeds of this loan will be used to build a spur track connecting with the Alaska Railroad at Suntrana, Alaska.

"The Department of Defense has advised it does not feel the proposed addition to the existing spur track is essential to the national defense.

<sup>44</sup> A copy of this letter is appended hereto as exhibit PP.

<sup>45</sup> A copy of this letter is appended hereto as exhibit QQ.

"In view of the above, this Office will not issue a certificate of essentiality for this application at this time."

Here was another bombshell. Despite the unanimity that prevailed at the meetings in Under Secretary of the Interior Tudor's office at which the representatives of the Defense Department agreed with the others that construction of the railroad spur was in the interest of national defense, the letter of August 11, 1954, from the Office of Defense Mobilization nevertheless reported that "the Department of Defense has advised that it does not feel the proposed addition to the existing spur track is essential to the national defense."

How can this be rationalized in the light of the views expressed by the representatives of the Defense Department present at the meetings in Under Secretary of the Interior Tudor's office only a few short weeks previously and in the light of the views expressed by the representatives of the Military Establishments in Alaska who participated in the meetings of the Alaska Subcommittee on Coal in 1953? Perhaps the explanation may be letters of protest in behalf of Usibelli Coal Mine, Inc., which were forwarded under date of May 19, 1954, to the Secretary of Defense and under date of May 26, 1954, to Assistant Secretary of Defense Thomas P. Pike against granting a loan to Healy River Spur, Inc., for the purpose of constructing the railroad spur.

Copies of these protests were not furnished to Healy River Spur, Inc., but we have learned informally that the grounds for the protests were that the spur was not economically justified; that it was not a military necessity; and that Usibelli Coal Mine, Inc., would not use the spur because the cost of moving its tippie from its present site would be prohibitive. The short answer to these objections is that they are completely devoid of merit. The economic justification of and military necessity for the railroad spur is fully supported and documented by what has been said in this petition and by the exhibits annexed hereto. The inconvenience and expense involved in moving the tippie will be more than compensated by savings resulting from substantial avoidance of hauling coal by truck. What then is the real motivation for the filing of the protests against the granting of a loan to Healy River Spur, Inc.? The answer would seem to be that Usibelli Coal Mine, Inc., dreads the competition for military and civilian markets which would result if permanent year-round railroad access were provided by the construction of a spur to the Cripple Creek Coal Co. lease and to the Government coal reserves in the Healy River Valley.

Thus, despite the time, effort, and expense which went into the organization of Healy River Spur, Inc., with the tacit blessing of officials of the Department of the Interior and the Department of Defense, it was doomed to failure because the Office of Defense Mobilization refused to issue a certificate of essentiality on the basis of a report from the Department of Defense which stated in writing the exact reverse of what its representatives stated orally at open meetings. What caused the reversal is a matter which we respectfully request that your committees should inquire into and ascertain. When the Alaska Railroad shortly thereafter filed a withdrawal with the Bureau of Land Management of its railroad right-of-way under the peculiar circumstances previously related, there was nothing left to do but to dissolve Healy River Spur, Inc., which was done on December 23, 1954.

In the interim, since one of the principal purposes for which the Cripple Creek Coal Co. had obtained a Government loan was no longer capable of being carried out effectively in the foreseeable future, Reconstruction Finance Corporation requested cancellation of that part of the loan pertaining to the development of an underground mine. Approximately \$184,000 in unused funds was relinquished and all immediate plans for the development of an underground mine at Cripple Creek were indefinitely deferred. What the resultant loss to the Territory of Alaska will be by virtue of Cripple Creek Coal Co.'s inability to proceed with the orderly development of its underground coal reserves is difficult to estimate, but that it will operate to the great disadvantage of the military and civilian consumer in Alaska and that the failure to construct the spur will seriously retard the development of the coal resources of the Healy River Valley there can be little doubt.

We have previously shown that the Alaska Subcommittee on Coal representing the Department of the Interior and the Defense Department unanimously held that the construction of the railroad spur "would mean a substantial savings to the Government in the price of coal and that this savings should amortize the cost of construction within 3 or 4 years" (see exhibit CC). The officials on this subcommittee are physically located in Alaska and their views are based upon personal knowledge of the problems involved in the production of coal for military and civilian consumption. The conclusion of the Subcommittee on Coal

confirms the views expressed by Acting General Manager of the Alaska Railroad Manley that construction of the spur would result in the reduction of coal costs to the Territory of \$200,000 annually (see exhibit X) and by the mining supervisor of the Geological Survey Saarela that the "hauling of 140,000 tons 8 miles by Mr. Usibelli and 150,000 tons 6 miles by Mr. Shallit will cost the Government approximately \$300,000 this year" (see exhibit CC). Similar views have been expressed orally many times by other officials of the Interior Department and Defense Department in Alaska.

Cripple Creek Coal Co. has a truck haulage route of 6 miles from its pit to the railroad siding at Suntrana. Usibelli Coal Mine, Inc. has a truck haulage route of from 2 to 3 miles from its pits to the Suntrana railroad siding. Although Usibelli Coal Mine, Inc. has the shorter truck-haulage distance, the comparative truck-haulage costs of the two companies are about the same. This is due to the fact that the Usibelli mine hauls coal over the entire 12 months of the year, including the rainy summer season. Maintenance of road and haulage equipment over the entire year is in itself an expensive proposition and in the rainy summer season it is even more so. Upon the construction of a spur through the lands under lease to Usibelli and Cripple Creek, it would eliminate all direct haulage costs from the Usibelli operations on the north side of the Healy River and would limit its haulage costs from the south side of the river to approximately 1 mile. With respect to Cripple Creek Coal Co., construction of a spur would eliminate all except 1 mile of truck-haulage costs. In addition to the savings of direct-haulage costs, the Government would benefit by substantial savings of demurrage charges paid by the Government because lack of a railroad spur prevents proper scheduling of coal deliveries.

Had the railroad spur been constructed and in existence from Suntrana to the Cripple Creek lease property since 1950 when Cripple Creek Coal Co. received its first contract to supply 50,000 tons of coal to the military installations, it is estimated that the total savings to the United States over the 5-year period would be in the neighborhood of \$1,200,000. This is predicated on a total production from the Usibelli and Cripple Creek coal mines for the years 1950 to the present date of 1,207,429 tons of coal, of which the Government has been the principal consumer, at an average savings of about \$1 per ton, if railroad access had been provided.<sup>46</sup> The production figures broken down between the two companies for the years 1950 to the present are as follows:

	Tons
Usibelli Coal Mine, Inc.-----	943, 815
Cripple Creek Coal Co.-----	263, 614
Total-----	1, 207, 429

Until such time as the railroad spur is constructed, the additional costs to the Government resulting from truck haulage and demurrage charges will continue without compensatory benefit to the United States or to the military and civilian consumers of coal. In the last 5 years the Government has already paid out in additional coal costs the entire cost of constructing the railroad spur. Should there be a substantial increase in military or civilian demand for coal in Alaska, it is doubtful that the demand could be met without proper railroad access. Leaving that aside, a railroad spur would serve as an important defense measure by assuring accessibility to the Government coal reserves in time of emergency and in permitting increased production from the producing coal mines in the Healy River field.

In failing to construct a railroad spur from the present rail's end at Suntrana to the operating coal mines and to the Government coal reserves in the Healy River Valley, we submit that the Secretary of the Interior has failed to carry out a specific mandate of Congress. In providing for the establishment of a railroad in the Territory of Alaska (48 U. S. C., 1952 edition, secs. 301 et seq.), Congress declared as its policy that the line or lines of railroad—

"\* \* \* be so located as to connect one or more of the Pacific Ocean harbors on the southern coast of Alaska \* \* \* with a coalfield or fields so as best to aid in the development of the \* \* \* mineral or other resources of Alaska, \* \* \* and so as to provide transportation of coal for the Army and Navy \* \* \*."

To accomplish these objectives, the President is empowered, authorized, and directed—

<sup>46</sup> An analysis of the truck haulage costs is appended hereto as exhibit RR (prepared by A. Ben Shallit, January 1955).

"\* \* \* to construct and build a railroad or railroads along such route or routes as he may so designate and locate, with the necessary branch lines, feeders, sidings, switches, and spurs \* \* \*."

Actual construction on the Alaska Railroad began in 1915, with the starting point at Seward proceeding northward. In order to relieve the fuel situation at the city of Fairbanks and to more quickly develop the Territory along the route of the railroad construction began in 1916 at Fairbanks proceeding southward. The fuel situation, even at that early date, was of supreme importance. The annual report of the Alaskan Engineering Commission "for the year 1916, as contained in Senate Documents (vol. 8, 64th Cong. 2d sess., at pp. 22-23), succinctly points out the problem.

"The development of Fairbanks and the adjacent country has been largely retarded by the extremely high cost of fuel. \* \* \* Along the line of the Government railroad as it follows the Nenana River are large deposits of lignite coal. To reach these from Fairbanks requires the construction of 110 miles of railroad \* \* \*."

The precedents have long been established for the construction of spur lines extending the Alaska Railroad directly to coal mines to provide an incentive for private operation, to relieve the fuel situation, and for development of the Territory. All of these spurs were constructed by the Alaska Railroad "to provide railroad access to operating mines. Most of the construction was accomplished under the general appropriations for the construction of the railroad rather than specific separate appropriations for spur line construction, and at least one spur was constructed by the railroad under contract with the corporation operating a coal mine." With respect thereto, the statement of Col. James G. Steese, Chairman of the Alaskan Engineering Commission (now the Alaska Railroad) as contained in the House and Senate Hearings, Interior Department appropriation bill, fiscal year 1925, 68th Congress, 1st session, on pages 738-739, is illuminating. Referring to outstanding accomplishments during the fiscal year 1923 he lists them, in part, as follows:

"A coal spur extending 4.6 miles up the Healy River from mile 359 to large beds of subbituminous coal.

"Closing down of the Esko Coal Mine [a Government mine] and the abandonment of the Chickaloon mine in order to encourage private investment.

"Construction of a 4½-mile narrow-gage spur connecting newly developed coal mines in Moose Creek with the Chickaloon branch at mile 19."

Thus, even as early as 1923, it was recognized that construction of spurs to coal mines was an effective means, in the long run, of saving money for the Alaska Railroad and the taxpayer. On page 760 of the House and Senate hearings, supra, the following colloquy occurs between Colonel Steese and Chairman Cramton:

"Colonel STEESE. \* \* \* The Moose Creek spur was never estimated for, but was actually built out of a lump-sum appropriation. It was built after the matter had been referred to the President. *One of the objects specified in the railroad act was to reach the coalfields, as a means of development. The statement shows that the construction of the Moose Creek spur would save its cost to the railroad in 2 years in the lower price of coal.*

"Mr. CRAMTON. Would save it?

"Colonel STEESE. It has already begun to save it. As fast as we are buying coal, it is saving it.

"Mr. CRAMTON. When was that spur constructed?

<sup>47</sup> In the fall of 1922 the Government railway project in Alaska was given the official designation the Alaska Railroad and on August 15, 1923, the designation the Alaskan Engineering Commission was dropped.

<sup>48</sup> Some examples of these spurs, although there are probably others, are as follows:

(a) The Matanuska coal field branch from Matanuska Junction to Kings River, a distance of 37.8 miles—the track was laid in 1915 and the branch completed in 1916. (See progress reports of the Alaskan Engineering Commission, letter dated August 9, 1915, from William C. Edes, Chairman to Secretary of Interior.)

(b) Completion of branch line from Matanuska to Chickaloon, 38 miles. Completion of branch line to Esko coal mines, 2½ miles. (See progress report dated Dec. 1, 1917.)

(c) Telegram from Colonel Steese to Secretary of the Interior dated August 26, 1923: "Laying steel Moosecreek spur begins next week." (See correspondence files on Alaska Railroad Construction—Archives.)

<sup>49</sup> The Healy River Coal Co. (now Suntrana Mining Co.) spur was constructed by the railroad. The facts with respect thereto are discussed later in this petition.

"Colonel STEESE. It was constructed from May to September.

"Mr. CRAMTON. This year?

"Colonel STEESE. Yes, sir. We are already getting advantage in our last coal contract of the reduction in cost of coal and in 2 years, assuming that we buy that much coal, which we will have to do, that will be paid for." [Emphasis supplied.]

And at page 740 of the hearings, supra, Colonel Steese, speaking of the need for constant improvement and extension of the Alaska Railroad as it continues to grow, said:

"While the formal completion of the railroad was announced last summer, as stated above, and standard-gage trains are operating between the coast at Seward and the inner terminal at Fairbanks, a great deal of additional work is still required to bring the entire line up to standard. *Furthermore, the Alaska Railroad as a growing concern will never be complete in the sense that capital investment may cease. As revenues increase and more business is presented additional sums will be required for extensions and betterment.*" [Emphasis supplied.]

The Healy River spur was constructed by the Alaskan Engineering Commission under contract dated June 28, 1922, between the Commission and the Healy River Coal Corp. Under the terms of this contract, the corporation was to pay \$10,000 cash, and \$20,000 was to be paid by the delivery of 6,666 $\frac{2}{3}$  tons of coal. Title to the spur remained in the Government. This contract was entered into after receipt of a telegram from the Secretary of the Interior to the Chairman of the Alaskan Engineering Commission dated June 12, 1922, as follows:

"You are authorized to construct Healy spur as per your recommendation and that of Director of Bureau of Mines."

On October 26, 1922, the Chairman of the Alaskan Engineering Commission wired the Secretary of the Interior as follows:

"Reference my letter September 23 the standard-gage spur to Healy Coal Mine was completed October 24. Please advise Dr. Bain."

Although the contract calls for payment by the corporation of \$30,000, the following excerpts from the hearing before the subcommittee of the House Committee on Appropriations, Interior Department appropriation bill, fiscal year 1924, 67th Congress, 4th session, at pages 770-771, show that this spur cost \$200,000 and that it was constructed for the specific purpose of providing railroad access to the coal deposits.

"Colonel MEARS.<sup>50</sup> \* \* \* and we saw the necessity of getting track connection with those big coal deposits of lignite coal which lie on the east side of the Nenana River, opposite mile 356.

"Mr. CRAMTON. Is that the coal deposit which we discussed considerably a year ago, the Government coal deposits?

"Colonel MEARS. No, sir. You probably discussed the Chickaloon deposits.

"Mr. CRAMTON. And you have connected up with this deposit?

"Colonel MEARS. Although no item appeared in the estimate for the construction of spur lines into those coal deposits a distance of 4 miles, we saw that we were going to make some saving in the estimated cost of constructing the bridge over the Tanana River, and Dr. Bain, the Director of the Bureau of Mines, was on the ground, and I took up with him the question of getting a standard-gage track connection with the Healy coal deposits, and we wired the Secretary and got his authority to build that line during the past summer; we spent on that a matter of \$200,000 and have connected up with the coal which you see there in the picture [indicating]."

In the light of the foregoing history of the Alaska Railroad and the construction of various spurs in prior years to aid in the development of the coal resources of the Territory, it becomes extremely difficult to find the slightest justification for the failure of the Secretary of the Interior to construct a railroad spur from the present rail's end at Suntrana to the operating coal mines and to the Government coal reserves in the Healy River Valley. What more is necessary to justify the construction of a spur when the Secretary's own Alaska Subcommittee on Coal unanimously concluded that "savings to the Government should amortize the cost of construction within 3 or 4 years" and when the Acting General Manager of the Alaska Railroad stated unequivocally that "it is estimated that the construction of this line will result in the reduction of coal costs to the Territory of \$200,000 annually."

<sup>50</sup> Lt. Col. Frederick Mears, Corps of Engineers, United States Army, then Chairman and Chief Engineer of the Alaskan Engineering Commission.

It is significant that the construction of the railroad spur to the Healy River Coal Co. mine, a distance of 4 miles, was accomplished without any item in the appropriation for the Alaska Railroad being specifically earmarked therefor. As the head of the railroad at that time said in his testimony, previously quoted, "we saw the necessity of getting track connection with those big coal deposits of lignite coal" and "we wired the Secretary and got his authority to build that line during the past summer."

Why, therefore, did the Bureau of Land Management instruct its field representative in Alaska to advise the Alaska Railroad that permission to proceed with construction of the spur is suspended pending further notice? Why did the Alaska Railroad file with the Bureau of Land Management a withdrawal of its railroad right-of-way after it had partially completed the work of locating and staking a claim of location line along the route of the proposed extension of the railroad?

This petition has taken many more pages than should normally be necessary to present the facts to your committees. But this is a most unusual and abnormal situation. Here we have the Alaska Railroad which is under a statutory mandate to provide railroad access to the operating mines in the coalfields of Alaska. Every bureau of the Department of the Interior which has been concerned with the development of the coal resources of Alaska has strongly recommended the extension of the Alaska Railroad up the Healy River Valley. In the last 5 years the Government and the taxpayers have paid over \$1 million in additional costs of purchasing coal for use by the military installations in Alaska because of the lack of railroad access. The Secretary's own Alaska Subcommittee on Coal has unanimously recommended the extension of the railroad and has pointed out that the cost of construction would be returned in 3 or 4 years. The Secretary's special committee to investigate the coal resources of Alaska, headed by Charles W. Connor, formerly head of the Defense Solid Fuels Administration of the Department of the Interior, strongly recommended the extension of the Alaska Railroad up the Healy River Valley.

Yet no extension of the railroad has been constructed and the railroad right-of-way has now been withdrawn. Why? We can conclude only that powerful pressures have been brought to bear on the Secretary of the Interior to keep development of the coal resources in the Healy River Valley locked up. It is in the public interest, in the interest of national defense, and in the interest of the development of the Territory of Alaska that your committee conduct an investigation, hold public hearings, and determine whether the Secretary of the Interior is faithfully carrying out the statutory mandate of Congress.

We respectfully request that a day certain be fixed for holding public hearings and that we be advised of the date thereof at your earliest convenience.

Respectfully submitted.

A. BEN SHALLIT,  
*Cripple Creek Coal Co.*

FAIRBANKS, ALASKA.

MAX BARASH,  
*Attorney at Law.*

WASHINGTON 5, D. C.

#### EXHIBIT A

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
*Juneau, Alaska, March 2, 1950.*

MR. A. BEN SHALLIT,  
*Spokane, Wash.*

DEAR MR. SHALLIT: Reference is made to your letter of February 15 requesting that an extension of the Healy River-Suntrana Road be undertaken to serve your property. The desirability of such a road is recognized. However, the Alaska Road Commission is not at present in a position to undertake this work since it has not been our policy to construct roads into undeveloped mining prospects.

Should the actual development and production be instigated on the property, it is very probable that some cooperative assistance could be worked out whereby the road could be constructed with a portion of the expense shared by you as offered in your letter.

Since you indicate that you will be in Juneau in the near future, it is suggested that you visit our office, at which time more detailed information can be given you.

Very truly yours,

A. F. GHIGLIONE, *Chief Engineer.*

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
Juneau, Alaska, December 20, 1950.

Mr. A. BEN SHALLIT,  
*Cripple Creek Coal Co., Fairbanks, Alaska.*

DEAR MR. SHALLIT: Reference is made to your letter of November 4 which was held for my return as you have previously been advised by Mr. Niemi of this office.

The need for access to your coal properties is recognized and the Alaska Road Commission is interested in seeing that such access is provided.

Mr. Saarela, Territorial mining engineer, has been contacted concerning the area served by your present road and the various mines and developments that would also be served if the road were improved as you have recommended. Mr. Saarela is of the opinion that the district merits development and he has taken the initiative by writing to the Alaska Railroad in order to ascertain whether an extension of the present railroad spur could not be undertaken. It appears that an extension of the railroad would be much more desirable than the road improvement, since the railroad service would eliminate your shorthaul trucking and rehandling of the coal.

If it transpires that the Alaska Railroad will not undertake extension of their line, Alaska Road Commission will program the road improvement, providing the anticipated farm and industrial road funds are appropriated by Congress.

It is not considered necessary for you to visit Juneau at this stage of these studies. However, if you should be passing through, we would appreciate your visiting our office.

Very truly yours,

A. F. CHIGLIONE, *Chief Engineer.*

EXHIBIT C

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
Juneau, Alaska, April 3, 1951.

Mr. JAMES P. DAVIS,  
*Director, Office of Territories,  
Department of the Interior, Washington, D. C.*

DEAR MR. DAVIS: The development of the coal deposits of the Healy River Valley up to the present time has been dependent upon the Alaska Railroad for transportation. The Healy River Coal Corp. mine is served directly by the railroad. Several properties further up the valley, including the Usibelli and Cripple Creek mining properties, have been served by the railroad through short access roads of a low standard extending from the properties to the end of the railroad.

Appeals has now been made to the Alaska Road Commission to construct a standard all-weather road up the Healy River Valley from the end of the railroad to the further coal properties. This would involve about 8 miles of road.

The development of the coal resources of the region on any adequate scale is dependent upon railroad transportation. For this reason the matter was referred to the Alaska Railroad through the Alaska Field Committee. A copy of a letter recently received from Col. J. P. Johnson, General Manager of the Alaska Railroad, to Mr. A. Ben Shallit of the Cripple Creek Coal Co., indicates that funds are not available for this new railroad construction.

Road funds are not available either; but in view of the fact that the project was first proposed as a road project, it is desired to urge that the Alaska Railroad provide whatever facilities are required in the Healy River Valley rather than to attempt an unsatisfactory, halfway solution by means of a road. It is my opinion, concurred in by the Territorial Commissioner of Mines, that the area is definitely worthy of development at this time. Unless directed by the Office of Territories, we will leave this matter entirely to the Alaska Railroad. At the same time I wish to emphasize that I think the project is a worthy one for railroad development.

Sincerely yours,

JOHN R. NOYES,  
*Commissioner of Roads for Alaska.*

## EXHIBIT D

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
*Juncau, Alaska, May 9, 1951.*

Mr. A. BEN SHALLIT,  
*Cripple Creek Coal Co.,  
Fairbanks, Alaska.*

DEAR MR. SHALLIT: This letter is written to inform you that it will not be possible for the Alaska Road Commission to undertake any road construction to assist in providing access to your property on Healy River. This decision has been necessary since the Interior Department considers the development should be accomplished by the Alaska Railroad and that no highway funds can therefore be involved.

I am sorry that our previous correspondence may have mislead you and may have caused you to plan on having assistance this season. I hope we will be in a position to work with you at some future date.

Very truly yours,

A. F. GHIGLIONE, *Chief Engineer.*

EXHIBIT E

UNITED STATES DEPARTMENT OF THE INTERIOR

BUREAU OF LAND MANAGEMENT

Washington 25, D. C., April 5, 1951

Fairbanks 07350

## DECISION

A. BEN SHALLIT  
EMIL USIBELLI

## PROTEST DISMISSED—EVIDENCE REQUIRED

On July 22, 1949, coal prospecting permit Fairbanks 07350 was granted to A. Ben Shallit for a period of 4 years. The permit embraces all of section 15, N $\frac{1}{2}$ , SE $\frac{1}{4}$  sec. 16, T. 12 S., R. 6 W., F. M., Alaska, containing 1,120 acres.

By decision of August 29, 1949, a protest by Emil Usibelli against the granting of the permit was dismissed for the reason that Usibelli failed to submit valid grounds for protest.

On July 5, 1950, Shallit filed an application for a preference right coal lease embracing all of the permit land. He claims to have geologically prospected, developed, and mapped sufficient coal resources in the area to warrant mining operations by open-cut and underground methods.

On November 9, 1950, Emil Usibelli, through his local attorney, filed a protest against the issuance of a preference right coal lease of the land to Shallit on the ground that Shallit has not complied with the terms of the permit, did not perform any prospecting work prior to the date he filed the lease application, and only after he was awarded an Army contract for 50,000 tons of coal; that Shallit has now moved equipment on the permit land and has been shipping coal in fulfillment of the Army contract. It is further represented in the protest that the land should be offered for coal lease competitively in order that Usibelli may have an opportunity to submit a bid for the privilege of leasing the land.

Usibelli is the lessee under coal lease Fairbanks 06561, which embraces 1,120 acres of land adjacent to the above-described land. While Usibelli was the high bidder at a sale of the lands embraced in his lease, the lease is, in fact, the outgrowth of Army license operations by him during World War II. The notice of the lease offer contained a provision that "The successful bidder, if one other than Emil Usibelli, must reimburse Usibelli before a lease will be issued for the reasonable value (as appraised by the Department of the Interior) of all permanent improvements necessary for the successful and continued operation of the

property, including the reimbursement for the reasonable cost of stripping operations for coal readily available for mining from which he has not benefited, the airfield, and the tippie, which value shall not exceed \$508,007."

In connection with the protest by Usibelli against the issuance of a preference right lease to Shallit and Shallit's lease application, a field report received in this office on March 26, 1951, shows that Shallit informed the district mining supervisor at Juneau, Alaska, that he has made large expenditures for transportation, prospecting supplies, and engineering equipment, and that prior to July 5, 1950, he expended \$4,675.83 on field geology and pick and shovel operations to determine the extent of the coal reserves in the land and the feasibility of their development. With further reference to expenditures and work, the report reads in part as follows:

"The district mining supervisor confirms that the work was done and the expenditures were made by Shallit prior to July 5 for the development of the property. He further confirms that studies were made prior to July 5 as to the feasibility of constructing roads, financing the operation, and marketing the output, including entering into a contract with the Army for delivery of 50,000 tons of coal.

"The district mining supervisor has visited the property and inspected 19 trenches of various sizes and depths dug by Shallit or his representative to determine the presence of coal reserves in addition to those originally examined. Between July 5 and September 20 the applicant has expended \$71,225 and has made commitments in connection with the exploration and mining of coal in excess of \$264,000. As of September 20, in excess of \$150,000 has been directly committed with the \$71,225 actually expended. Camp structures have been erected and more than 6 miles of road has been constructed from the property to the Alaska Railroad."

As of this date, the records indicate that Shallit has expended approximately \$112,000 in connection with operations upon the land embraced in his permit, which land constitutes a leasing block.

Section 3 of the act of October 20, 1914 (38 Stat. 742), as amended March 4, 1921 (41 Stat. 1363, 48 U. S. C. 444), contains a provision to the effect that if, within the time specified in a coal permit issued pursuant to the act, a permittee shows that the land embraced in his permit contains coal in commercial quantities, he shall be entitled to a coal lease under the act for all or any part of the permit land.

One of the conditions of the permit is that the permittee is to remove from the premises only such coal or other materials as may be necessary to prospecting work, keep a record of all coal mined and disposed of and pay royalty on the coal mined at the rate of 10 cents per ton of 2,000 pounds to the District Land Office not later than during the calendar month succeeding that during which the coal was disposed of.

No express provision is made in the regulations with respect to mining or to the rate of royalty after the filing of a lease application. In that connection attention is directed to the findings of the Secretary of the Interior in the case of preference right coal-lease application Seattle 04758, now Spokane 015591, that " \* \* it was not contemplated that after a permittee had established the existence of coal in commercial quantities and had filed an application for a lease he should be required to cease all mining operations, \* \* \*. Until the lease is actually executed the applicant must of course continue to deposit the amount \* \* \*, as provided in the permit."

In view of the foregoing, the protest is without merit and is dismissed subject to Usibelli's right of appeal to the Secretary of the Interior within 30 days from service of notice hereof.

The records fail to disclose that Usibelli or his attorney served a copy of the protest on Shallit, but since no valid ground for protest has been shown, it will not be necessary for copy of same to be served on him. However, a copy of this decision which contains substantially all of the allegations made in the protest will be served on Shallit through his local attorney.

Furthermore, in view of the findings as a result of a field investigation, it is the opinion of this office and the Geological Survey that Shallit has earned the right to a coal lease of the land embraced in his permit subject to a royalty of 15 cents a ton, mine run, a minimum investment of \$112,000 recognized as having already been expended, a bond in the sum of \$5,000 and the other provisions set out in the standard coal lease form 4-031a.

Before action can be taken with respect to the issuance of a coal lease of the land to Shallit, it will be necessary for him to comply with the following requirements:

(a) Execute and file the five attached coal-lease forms 4-031a, after he has placed his initials in the margin opposite section 1, article IV at the bottom of page 1, and opposite the provisions relative to fair employment practices and reasonable materials at the top of page 3.

(b) Execute and file a \$5,000 bond with approved corporate surety on the form attached or his personal bond of \$5,000 accompanied by a deposit of negotiable Federal securities in a sum equal at their par value to the amount of the personal bond with proper conveyance to the Secretary of the Interior of full authority to sell such securities in case of default under the lease terms.

(c) Pay the first year's rental, amounting to \$280. Remittance of that amount should be sent to the manager, land office, Fairbanks, Alaska. If payment is made by certified check or money order, it should be drawn to the order of the Treasurer of the United States.

(d) Submit a showing that he paid the rental specified.

Shallit is allowed 30 days from service of notice to comply with the requirements of this decision or to appeal to the Secretary of the Interior, failing in which his lease application will be finally rejected and such action taken as the facts may then warrant.

In the event an appeal from this decision is taken by Usibelli such an appeal must be accompanied by a showing that a copy thereof has been served on Shallit.

All evidence in response hereto should be filed in this office and refer to the serial number listed above.

ROSCOE BELL,  
*Associate Director.*

A-26277

EMIL USIBELLI.

A. BEN SHALLIT.

Fairbanks 07350.

Protest against issuance of coal lease  
dismissed.

Affirmed.

### APPEAL FROM THE BUREAU OF LAND MANAGEMENT

On July 22, 1949, a coal prospecting permit on all of section 15 and the N $\frac{1}{2}$  and the SE $\frac{1}{4}$  of section 16, T. 12 S., R. 6 W., F. M., Alaska, covering 1,120 acres of land was issued to A. Ben Shallit pursuant to section 3 of the act of October 20, 1914, as amended by the act of March 4, 1921 (41 Stat. 1363; 48 U. S. C., 1946 ed., sec. 444). On July 5, 1950, Mr. Shallit applied for a preference-right coal lease on the lands included in his prospecting permit, in accordance with section 3 of the act of October 20, 1914, as amended.

In a decision dated April 5, 1951, the Associate Director of the Bureau of Land Management dismissed a protest filed by Emil Usibelli against the issuance of a preference-right coal lease to Mr. Shallit. The decision of April 5 held also that Mr. Shallit was entitled to the lease applied for subject to the execution and filing of a satisfactory bond, the payment of the first year's rental, and the execution and filing of the coal lease forms.

On May 21, 1951, a further protest against the issuance of the lease to Mr. Shallit was filed on behalf of Mr. Usibelli. Counsel for Mr. Shallit submitted an answer to the protest, and a reply brief was filed by Mr. Usibelli. Mr. Usibelli's protest is regarded as an appeal to the head of the Department from the Associate Director's decision of April 5.

It appears that Mr. Shallit has complied with the requirements of the Associate Director's decision and that the issuance of a lease to him is dependent on the outcome of the appeal.

In protesting against the issuance of a lease to Mr. Shallit, Mr. Usibelli contends that the Department lacks statutory authority to issue a prospecting permit or a preference-right lease covering the lands included in Mr. Shallit's prospecting permit because the lands are known to contain coal and are subject to leasing only through competitive bidding. This contention cannot be sustained.

Section 3 of the Alaskan Coal Leasing Act (act of October 20, 1914, 38 Stat. 741, 742; 48 U. S. C., 1946 ed., sec. 434) was amended by the act of March 4, 1921, *supra*, which added the following provision:

"\* \* \* That where prospecting or exploratory work is necessary to determine the existence or workability of coal deposits in any unclaimed, undeveloped area in Alaska, the Secretary of the Interior may issue prospecting permits for a term of not to exceed 4 years, under such rules and regulations and conditions as to development as he may prescribe, to applicants qualified under this act, for not to exceed 2,560 acres, and if within the time specified in said permit the permittee shows to the Secretary of the Interior that the land contains coal in commercial quantities, the permittee shall be entitled to a lease under this act for all or any part of the land in his permit."

Neither the words of the statute nor its legislative history provide a valid basis for the protestant's assertion that the statute authorizes the issuance of prospecting permits only on lands which are not known to contain coal deposits. It seems clear that the phrase "determine the existence or workability of coal deposits in any unclaimed, undeveloped area in Alaska" brings within the purview of the act of the authority to issue a prospecting permit in order to determine the workability of existing coal deposits. This interpretation was adopted by the Secretary of the Interior in discussing the effect of the proposed amendment before it was enacted.<sup>1</sup> Likewise, this has been the administrative interpretation of the act as is indicated by regulations issued pursuant to the act which require, *inter alia*, that the application for the permit include information concerning the condition of coal occurrences, so far as determined, and the description of workings and outcrops of coal beds, if any (43 C. F. R. 70, 5 (d); and see 43 C. F. R. 70.1).

Accordingly, it is concluded that the act of March 4, 1921, authorizes the issuance of prospecting permits on lands known to contain coal deposits where it is necessary to determine the workability of the deposits by prospecting or exploratory work.

The meaning of the term "workability" as it is used in connection with coal deposits involves several considerations which have been summarized in Geological Survey Bulletin No. 537<sup>2</sup> as follows:

"The workability of any coal will ultimately be determined by two offsetting factors—(1) its character and heat-giving quality, whence comes its value; and (2) its accessibility, quantity, thickness, depth, and other conditions that affect the cost of its extraction. It must be considered a workable coal if its value, as determined by its character and heat-giving quality, exceeds the cost of extraction, either as judged by actual experience at the point where it is found or as judged by actual experience on similar coals similarly situated elsewhere. There are no absolute limits to any of the factors. The mining of 1 inch of coal that may involve the mining of 3 feet of rock is physically possible but would not pay. Most unworkable coal beds lack 1 or more of 3 things: Quality, thickness, accessibility—that is, they are too poor, too thin, or too deep."

With reference to the lands included in Mr. Shallit's application for a prospecting permit, the Geological Survey reported that prospecting was necessary to determine the presence of coal in workable quantity and quality. Although there were known outcrops of coal on the land,<sup>3</sup> there is nothing in the reports cited by the protestant or in the records of the Department which invalidate a conclusion that the workability of the coal in this land was not established at the time when the permit was issued to Mr. Shallit.

As the report by the Geological Survey with respect to Mr. Shallit's permit application indicated that the workability of coal in the lands applied for was undetermined, the issuance of the prospecting permit was within the authority granted by the act of March 4, 1921.

<sup>1</sup> H. Rept. No. 1266, 66th Cong., 3d sess. (1921), letters dated January 28 and 14, 1921, from the Secretary of the Interior to the chairman of the Committee on Public Lands.

<sup>2</sup> George Otis Smith and others, *The Classification of the Public Lands* (1913), pp. 67, 68. See also pp. 66–79.

<sup>3</sup> Bureau of Mines, *Report of Investigations* 3951 (November 1946), tables 3 and 4, p. 14.

Mr. Usibelli asserts also that in September 1946, he was informed that the Department considered that the lands involved here were available for leasing only by competitive bidding, and that the issuance of a prospecting permit, which is not subject to competitive bidding, to Mr. Shallit was unfair.

The records of the Department indicate that in 1946 Mr. Usibelli's lease application Fairbanks 05490, filed pursuant to section 3 of the act of October 20, 1914, as amended (48 U. S. C., 1946 ed., sec. 434), for lands other than those here involved was under consideration by the Department. Mr. Usibelli had appealed to the head of the Department from a decision by the Commissioner of the General Land Office<sup>4</sup> which rejected the application because the lands applied for were temporarily reserved for the use of the Army. On the basis of a report by the Geological Survey, a tentative proposal was made suggesting that Mr. Usibelli consider applying for a lease of two other tracts which were available for leasing. Part of one of the proposed tracts (SW $\frac{1}{4}$  sec. 15, E $\frac{1}{2}$  sec. 16, T. 12 S., R. 6 W.) is land which is now included in Mr. Shallit's prospecting permit.

The regulations issued pursuant to 48 United States Code, 1946 edition, section 434, indicate that all applications for leases filed under that statutory provision are subject to publication and competitive bidding (43 C. F. R. 70.13, 70.14). As required by those regulations, it was contemplated at the time when Mr. Usibelli's application was being considered that any lease issued to Mr. Usibelli would be subject to competitive bidding. There is no evidence that Mr. Usibelli desired anything other than a lease issued under 48 United States Code, 1946 edition, section 434, on the lands for which he applied.

According to a letter dated October 7, 1946, addressed to the head of the Department from Mr. Usibelli's attorney, Mr. Usibelli refused to apply for a lease of the tract which included parts of sections 15 and 16, as he considered that it was impossible to work the tract because of its inaccessibility for mining. It was stated further in the letter of October 7 that opening up the land in sections 15 and 16 would require driving 320 feet of railroad tunnels which would cost between 50 and 75 thousand dollars, and the construction of railroad yards and bunkers which would cost approximately the same amount.

Thus, in 1946, Mr. Usibelli refused to consider mining part of the lands now in Mr. Shallit's permit, substantially because he believed that they were unworkable within the meaning of that term as it is used by the Geological Survey.

There is nothing in the record of Mr. Usibelli's lease application (Fairbanks 05490) indicating that Mr. Usibelli ever applied for and was denied a prospecting permit on the lands now included in Mr. Shallit's permit. Likewise, there is no evidence that the Geological Survey gave consideration to the question whether the lands in sections 15 and 16 were available for a prospecting permit in 1946. As no further action was taken by Mr. Usibelli with respect to the proposal to include parts of sections 15 and 16 in his lease application, and as he did not apply for a prospecting permit under the act of March 4, 1921, there is no factual basis for the inference that sections 15 and 16 were not available to him for prospecting in 1946. Until Mr. Shallit's application for a prospecting permit was filed in 1949, there was no occasion for an administrative determination as to the availability of the lands in sections 15 and 16 for prospecting.

In the protest against the issuance of a preference-right lease, Mr. Usibelli asserts further that no prospecting on the land involved here was done before Mr. Shallit filed his application for a lease. Mr. Usibelli submitted affidavits by three other persons indicating that none of them found evidence of coal prospecting when they examined the accessible portions of the land late in July 1950.

The prospecting permit which was issued to Mr. Shallit provides that the permittee shall begin prospecting work within 90 days from the day of the permit and shall diligently continue prospecting by the best known methods.

The regulation (43 C. F. R. 70.7) relating to applications for a preference-right lease by a permittee who shows that the land contains coal in commercial quantities provides in part as follows:

"An application for lease under this action should \* \* \* set forth fully and in detail the extent and mode of occurrence of the coal deposits as disclosed by the prospecting work performed under the permit \* \* \*."

Mr. Shallit's application for a lease, and the report of the district mining supervisor concerning the extent of the prospecting work done on the land substantiate the ruling in the Associate Director's decision that Mr. Shallit has

<sup>4</sup> Effective July 16, 1946, the General Land Office was abolished and its functions were transferred to the Bureau of Land Management by sec. 403 of Reorganization Plan No. 3 of 1946 (11 F. R. 7875, 7876, 7776).

earned the right to a preference-right lease on the lands included in his prospecting permit. The evidence in the record sustains the conclusion that Mr. Shallit has shown that the land contains coal in commercial quantities, and that he has complied with the terms of his permit and the applicable regulations. In these circumstances, Mr. Shallit is entitled to a preference-right lease in accordance with the act of March 4, 1921.

For the above-mentioned reasons, I conclude that the protest against the issuance of the preference-right lease to Mr. Shallit does not state a valid basis for a refusal by the Department to issue the lease, and that the decision dismissing the protest was proper.

Therefore, pursuant to the authority delegated to the Solicitor by the Secretary of the Interior (sec. 23, Order No. 2509; 14 F. R. 307), the decision by the Associate Director of the Bureau of Land Management is affirmed.

W. H. FLANERY, *Acting Solicitor*.

EMIL USIBELLI

A. BEN SHALLIT

Fairbanks 07350

Petition for reconsideration of departmental decision.

Petition denied.

#### SUPPLEMENTAL DECISION

On October 24, 1951, Emil Usibelli filed a petition requesting, in effect, reconsideration of a departmental decision (A-26277) dated October 2, 1951, which dismissed Mr. Usibelli's protest against favorable action being taken on an application from A. Ben Shallit for a preference-right coal lease on 1,120 acres of land described as sec. 15 and the N $\frac{1}{2}$  and the SE $\frac{1}{4}$  of sec. 16, T. 12 S., R. 6 W., Fairbanks meridian, Alaska. This land is situated within the area commonly known as the Nenana coal field.

A brief in opposition to the petition was filed on behalf of Mr. Shallit. On October 31, 1951, counsel for both parties presented oral argument on the petition.

A coal-prospecting permit on the land involved in this controversy was issued to Mr. Shallit under date of July 22, 1949. The issuance of the permit was based, and the request for the issuance to Mr. Shallit of a preference-right lease on the same land is based, upon the statutory provision which is codified in 48 United States Code, 1946 edition, section 444, and which reads in pertinent part as follows:

"Where prospecting or exploratory work is necessary to determine the existence or workability of coal deposits in any unclaimed, undeveloped area in Alaska, the Secretary of the Interior may issue prospecting permits for a term of not to exceed 4 years, under such rules and regulations and conditions as to development as he may prescribe, \* \* \* for not to exceed 2,560 acres, and if within the time specified in said permit the permittee shows to the Secretary of the Interior that the land contains coal in commercial quantities, the permittee shall be entitled to a lease \* \* \* for all or any part of the land in his permit."

1. In the first place, the petitioner contends that, as a matter of law, coal prospecting permits cannot be issued under section 444 of title 48, United States Code, on any land within the area commonly known as the Nenana coalfield, and, therefore, that the document which was issued to Mr. Shallit in 1949 was only a purported prospecting permit which was ineffective to confer any rights upon him respecting the land covered by the document.

It is asserted by the petitioner, in connection with this point, that none of the land within the limits of the Nenana coalfield comes within the category of an "undeveloped area," as that term is used in section 444 of title 48, United States Code. In support of this view, the petitioner refers to the portions of sections 1 and 3 of the act of October 20, 1914 (38 Stat. 741, 742; 48 U. S. C., 1946 edition, secs. 432, 434) which provide, respectively, as follows:

"That the Secretary of the Interior be, and hereby is, authorized and directed to survey the lands of the United States in the Territory of Alaska known to be valuable for their deposits of coal, preference to be given first in favor of surveying lands within those areas commonly known as the Bering River, Matanuska, and Nenana coalfields, and thereafter to such areas or coalfields as lie tributary to established settlements or existing or proposed rail or water transportation lines \* \* \* " (sec. 1).

"That the unreserved coal lands and coal deposits shall be divided by the Secretary of the Interior into leasing blocks or tracts of 40 acres each, or multiples thereof, and in such form as in the opinion of the Secretary will permit the most economical mining of the coal in such blocks, but in no case exceeding 2,500 acres in any one leasing block or tract; and thereafter, the Secretary shall offer such blocks or tracts and the coal, lignite, and associated minerals therein for leasing, and may award leases thereof through advertisement, competitive bidding, or such other methods as he may by general regulations adopt, to any person above the age of 21 years who is a citizen of the United States, or to any association of such persons, or to any corporation or municipality organized under the laws of the United States or of any State or Territory thereof \* \* \* " (sec. 3).

The petitioner reads the provision of section 1 set out above as constituting a declaration by the Congress that the entire area within limits of the Nenana coalfield is known to be valuable for coal, and he believes that this takes the whole area outside any concept of an "undeveloped area" as that term is used in section 444 of title 48, United States Code. The petitioner then proceeds to the conclusion that land within this area can be made available for coal development only pursuant to leases issued under the quoted portion of section 3. Thus, it is the petitioner's view that the whole of the area within the limits of the Nenana coalfield is, in effect, withdrawn by Congress from the scope of the provisions of section 444 of title 48, United States Code, authorizing the issuance of coal prospecting permits on any "undeveloped areas" in Alaska.

This Department's past administrative construction of the provisions of law mentioned in this supplemental decision has been contrary to the view urged by the petitioner. In its administration of these provisions of law, the Department has not regarded all land within the limits of the Nenana coalfield as necessarily outside the scope of section 444 of title 48, United States Code, and thus subject to coal development only under leases issued pursuant to section 3 of the 1914 act. Section 444 has been in existence since March 4, 1921 (41 Stat. 1363), and, since that date, a substantial number of coal prospecting permits under the provisions of this legislation have been issued by the Department on land within the area of the Nenana coalfield.<sup>1</sup> The earliest of these permits was issued on February 15, 1922.

The petitioner's argument does not convince me that the Department's long-standing interpretation of section 444 of title 48, United States Code, as authorizing the issuance, in proper cases, of coal prospecting permits on land within the area of the Nenana coalfield has been erroneous.

The legislation which is codified in section 444, title 48, United States Code, was originally enacted on March 4, 1921 (41 Stat. 1363) in the form of an

<sup>1</sup> The following coal prospecting permits on land within the Nenana coalfield have been issued by the Department:

Permittee	Permit No.	Date issued	Acreage

O. E. Maki, Nels Jackson.....	Fairbanks 06771	May 24, 1950	640.0

NOTE.—Fairbanks 01100 was amended Oct. 26, 1923, to include an aggregate of 2,080 acres.

amendment adding a proviso to section 3 of the act of October 20, 1914.<sup>2</sup> Thus, this authorization for the issuance of coal prospecting permits was actually made a part of and was superimposed upon section 3 of the 1914 act, and it provided a means whereby coal prospecting permits could be issued on any "undeveloped area" in Alaska which otherwise met the requirements of the amendment, including, of course, undeveloped areas which theretofore had been open to coal development only under the leasing procedure provided for in the original portion of section 3 enacted in 1914. I find nothing in the language of the 1921 amendment, or in its legislative history, which warrants the conclusion that Congress intended to except from its provisions all land within the limits of the Nenana coalfield, irrespective of whether particular tracts are or are not in fact undeveloped from the standpoint of coal production. Hence, I do not believe that the Department has acted improperly heretofore in taking the view that each application for a coal prospecting permit under the 1921 amendment, whether it relates to land situated within the limits of the Nenana coalfield or elsewhere, is to be considered on its merits, in relation to the facts of the particular case.

For the reasons indicated above, I regard as untenable the petitioner's primary contention that the whole of the area known as the Nenana coalfield is necessarily outside the scope of the provisions of section 444 of title 48, United States Code, authorizing the issuance of coal prospecting permits on undeveloped land in Alaska.

II. The petitioner's next contention is that, in any event, the coal prospecting permit involved in this controversy should not have been issued to Mr. Shallit in view of the fact that, according to petitioner, neither prospecting nor exploratory work was "necessary to determine the existence or workability of coal deposits" on the land covered by the permit.

With regard to this point, the petitioner refers to official reports by this Department which were outstanding at the time when the prospecting permit was issued to Mr. Shallit and which showed the presence of substantial quantities of coal on the land covered by the Shallit prospecting permit, and he also refers to the fact that, at the time of the issuance of the prospecting permit to Mr. Shallit, successful coal-mining operations were being conducted on land contiguous to that covered by the Shallit prospecting permit.

There appears to be no doubt that "the existence \* \* \* of coal deposits" on the land covered by the Shallit prospecting permit was known at the time of the issuance of the permit. This did not, however, necessarily require the disapproval of Mr. Shallit's application for a coal prospecting permit. It will be noted that the use of the disjunctive "or" in the statutory standard, "the existence or workability of coal deposits," made it necessary for the official who passed upon Mr. Shallit's application for a coal prospecting permit to consider—even though the existence of coal deposits on the land applied for was known—the question whether prospecting or exploratory work was "necessary to determine the \* \* \* workability" of the coal deposits on the land.

The record indicates that the prospecting permit was issued because of the belief of the Associate Director of the Bureau of Land Management, who issued the permit under a delegation of secretarial authority, that prospecting was necessary in order to determine the workability of the coal deposits on the land, from the standpoint of quantity and quality. The making of this determination involved an exercise of judgment upon the part of the Associate Director. He was aided in this respect by advice which had been received from the Geological Survey in a report dated January 14, 1949.

If the petitioner believed that the Associate Director was mistaken in deciding that prospecting was necessary in order to determine the workability of the coal deposits on the land applied for by Mr. Shallit, the petitioner should have taken advantage of his right to secure a timely review of the matter by the head of the Department. It appears that the petitioner was cognizant of the pendency of Mr. Shallit's application for a coal prospecting permit, and that he filed a protest against the approval of the application. This protest was dismissed by the Acting Director of the Bureau of Land Management in a decision dated August 29, 1949.<sup>3</sup> Formal notice of this action was received by the petitioner on

<sup>2</sup> The amendatory statute erroneously referred to the basic legislation as the act approved October "24," 1914.

<sup>3</sup> The protest should have been acted upon, of course, before any prospecting permit was issued to Mr. Shallit. In this connection, the record indicates that the prospecting permit, although dated July 22, 1949, was not transmitted to Mr. Shallit until October 6, 1949, which was after the dismissal of Mr. Usibelli's protest.

September 20, 1949. The petitioner then had a right to appeal to the head of the Department respecting the dismissal of his protest, but he failed to do so. Upon the expiration of the period allowed for the taking of such an appeal, the determinations made in the Bureau of Land Management regarding the issuance of the coal prospecting permit to Mr. Shallit and the dismissal of the petitioner's protest became final.

Thus, a legal relationship between the Government and Mr. Shallit, under which he obtained as to the land involved in this controversy the rights provided for in section 444, title 48, United States Code, was created upon the issuance of the coal prospecting permit to him and the expiration of the period that was available to the petitioner under the Department's rules of practice for the taking of an appeal to the head of the Department with respect to the handling of the matter in the Bureau of Land Management. Obviously, the Shallit prospecting permit could not be invalidated at this late date on a dilatory showing by the petitioner that the officials of the Bureau of Land Management were mistaken in concluding that prospecting was necessary in order to determine the workability of the coal deposits on the land applied for by Mr. Shallit. An utterly chaotic condition in administration would result if legal rights, established as the result of the bona fide exercise of judgment by Bureau officials in the performance of delegated secretarial functions, were subject to cancellation upon the basis of the sort of belated review by the head of the Department requested by the petitioner.

III. The petitioner adverts to what he regards as the unfairness of issuing a coal prospecting permit to Mr. Shallit, in view of the fact that, when the petitioner discussed with representatives of the Department in 1946 his desire to obtain land in the Nenana coalfield for coal development, the Department's representatives did not mention the possibility of his obtaining a coal prospecting permit, but, instead, only discussed the possibility of his obtaining a coal lease through competitive bidding.

As stated in the departmental decision of October 2, 1951, the records of the Department indicate that the 1946 contacts with the petitioner revolved around his desire to obtain a coal lease on land within the Nenana coalfield, and that the petitioner did not at that time reveal any interest in obtaining a coal prospecting permit.

Moreover, any objection of this sort that the petitioner may have had to the issuance of a coal prospecting permit to Mr. Shallit should have been brought to the attention of the head of the Department at an appropriate time through the utilization of the appeal procedure provided for that purpose. (See the discussion in part II above.) As the Associate Director of the Bureau of Land Management had lawful authority to issue a coal prospecting permit to Mr. Shallit on the land involved in this controversy, it is now too late for the petitioner to seek to invalidate the permit upon the ground that the Bureau official, in the exercise of his discretion, ought not to have issued the permit.

IV. A further argument is made by the petitioner to the effect that Mr. Shallit has not complied with certain of the conditions prescribed in his coal prospecting permit, and, therefore, that the permit is subject to cancellation and cannot form a proper predicate for the issuance of a preference-right lease pursuant to section 444, title 48, United States Code, on the land covered by the permit.

The petitioner, in this connection refers to the fact that the coal prospecting permit was issued to Mr. Shallit on the condition that he would "remove from said premises only such coal \* \* \* as may be necessary to prospecting work," and on the condition that he would "begin prospecting work within 90 days from date hereof and \* \* \* diligently prosecute the same during the period of such permit in accordance with the \* \* \* best-known methods." The petitioner asserts that Mr. Shallit has failed to comply with these conditions.

A. With regard to the petitioner's contention that Mr. Shallit has failed to comply with the condition in his coal prospecting permit to the effect that he would "remove from said premises only such coal \* \* \* as may be necessary to prospecting work," the record shows that Mr. Shallit has mined 50,249.15 tons of coal from the land covered by his coal prospecting permit.

In connection with this point, it appears that the mining of the substantial tonnage of coal mentioned in the preceding paragraph was begun in November 1950, several months after Mr. Shallit made application on July 5, 1950, for a preference-right coal lease on the land covered by his coal prospecting permit.

In the administration of coal lands on the public domain, it has been the policy of the Department for many years to allow the holder of a coal prospecting permit to begin the mining of coal in commercial quantities from the land upon the filing of an application for a preference-right coal lease on the same land. This goes

back to a departmental decision dated November 11, 1922, in the case of the Elk Coal Co. (A-3333),<sup>4</sup> which involved a situation where a company holding a coal prospecting permit had mined more than 25,000 tons of coal after the filing of an application for a preference-right coal lease on the same land and prior to the issuance of a lease to the company. The prospecting permit held by the company in that case, like the prospecting permit held by Mr. Shallit in the present case, contained a condition to the effect that the permittee would "remove from the premises only such coal \* \* \* as may be necessary to prospecting work." In the departmental decision, First Assistant Secretary Finney stated:

"No express provision is made in the regulations with respect to mining or to the rate of royalty after the filing of a leasing application, but it was not contemplated that after a permittee had established the existence of coal in commercial quantities and had filed his application for a lease he should be required to cease all mining operation, and in general, in the absence of some special reason for contrary action in a particular case, it is believed that the rate of royalty as fixed in the lease should be considered applicable from the date of the application therefor. \* \* \*"

The policy mentioned above was incorporated in departmental instructions issued on May 23, 1924 (50 L. D. 501), the following language being used (p. 503):

"Where a permittee has discovered coal and has applied for a lease, such application supersedes the permit, and when lease is granted it relates back to the time of application. There can be no interval, for the permittee must account for the coal in accordance with the terms of his permit until lease is applied for, and thereafter in accordance with the terms of the lease. \* \* \*"

The rule that an application for a preference-right coal lease supersedes the coal-prospecting permit on which it is based was reaffirmed as recently as June 12, 1951, in the case of Leonard E. Hinkley and Stevens T. Harris, A-26187.

Although the precedents cited above respecting the point now under consideration related to coal-prospecting permits issued on lands in the continental United States, they would be equally applicable to coal-prospecting permits issued on lands in Alaska. Except for the length of time for which coal-prospecting permits may be issued, the statutory provisions governing the issuance of coal-prospecting permits on lands in Alaska are the same as the statutory provisions governing such permits on lands in the United States. (See 48 U. S. C., 1946 edition, sec. 444, and 30 U. S. C., 1946 edition, supp. IV, sec. 201 (b).) Likewise, the provisions of the departmental regulation (43 CFR 70.4) defining the rights of permittees under coal-prospecting permits on Alaskan lands are the same as the provisions of the departmental regulation (43 CFR 193.20, 16 F. R. 2892) defining the rights of permittees under coal prospecting permits issued on lands in the continental United States; and the same language respecting the point now under consideration is used in coal prospecting permits on Alaskan lands and in coal prospecting permits on lands in the continental United States.

Inasmuch as the mining of coal in commercial quantities by Mr. Shallit from the land covered by his coal prospecting permit did not occur until after the filing on July 5, 1950, of his application for a preference-right coal lease on the same land, his action in proceeding with the development of the property on a commercial basis was in accordance with the long-established departmental policy of regarding such development as permissible after the filing by a permittee of an application for a preference-right coal lease. Hence, the Department would not be justified in departing from its previous policy, extending over a period of many years, by attempting in this case to cancel Mr. Shallit's coal-prospecting permit upon the ground that, prior to the actual receipt of a coal lease, he removed coal in commercial quantities from the land covered by his coal-prospecting permit.

B. We turn now to the petitioner's contention that Mr. Shallit has failed to comply with the condition in his prospecting permit to the effect that he would "begin prospecting work within 90 days from date hereof and \* \* \* diligently prosecute the same during the period of such permit in accordance with the \* \* \* best known methods."

The record indicates that, although Mr. Shallit's prospecting permit was issued under the date of July 22, 1949, the permit actually was not transmitted to Mr. Shallit until October 6, 1949. At Mr. Shallit's request, the manager of the district land office at Fairbanks thereafter granted to him an extension until June 1, 1950, of the time for the beginning of prospecting work under the permit. This action appears to have been proper under the circumstances, and it is rati-

<sup>4</sup> Seattle 04758, now Spokane 015591.

fied. In this connection, it should be noted that, at the time of the receipt of the prospecting permit by Mr. Shallit, the 90-day period mentioned in the permit for the beginning of the prospecting work was about to expire, and, in addition, that the onset of severe winter weather was imminent. Compliance with the 90-day requirement in the permit with regard to the beginning of prospecting work was infeasible because of the delay in delivering the prospecting permit to Mr. Shallit.

The record contains copies of reports submitted by Mr. Shallit to the district mining supervisor in Juneau for each month from March 1950 through September 1951. These reports, which were sworn to by Mr. Shallit, indicate the extent of the prospecting and exploratory work performed each month upon the area covered by the prospecting permit, prior to the beginning of the commercial mining of coal from the area.

According to Mr. Shallit's monthly reports for March and April 1950, Mr. Shallit made engineering and economic studies regarding the area covered by the permit and the preparation and transportation of coal, and he also made a reconnaissance study of the geology of the area. Corroborating evidence is provided by a report from the district mining supervisor at Juneau, which states that in April 1950 Mr. Shallit conferred with the supervisor relative to prospecting and marketing studies which Mr. Shallit was making.

The monthly reports which Mr. Shallit submitted for May and June 1950 state that the prospecting and exploratory work completed during these months consisted of detailed mapping of surface exposures, tracing of outcrops, and the exposure of cross sections by surface trenching,<sup>4</sup> measurement of the thickness of exposures, geological interpretation of the continuation of beds, detailed study of transportation and loading site problems, and completion of engineering reports. On June 26, 1950, Mr. Shallit submitted to the district mining supervisor a proposed development and mining plan, called a status report, which dealt with various technical problems involved in mining the area covered by the permit. Eight detailed maps were enclosed with the report.

Mr. Shallit's monthly reports for the period from July 1950 through October 1950 show that trenching and stripping operations within the permit area were carried on, and that a road, camp buildings, a loading site, and at least six bridges were built. A corroborating report from the district mining supervisor indicates that Mr. Shallit's prospecting operations during this period uncovered a bed of coal approximately 350 feet long in the footwall of bed No. 1; that experimental stripping was performed on beds Nos. 2, 3, and 6; that the coal in bed No. 2 was frozen; and that bed No. 3 had been trenched with a bulldozer.

Mr. Shallit's subsequent monthly reports indicate that the commercial mining of coal (under his application for a preference-right coal lease) began in November 1950.

Controverting evidence has been submitted by the petitioner in the form of affidavits from himself and three other persons stating, in substance, that on or about August 1, 1950, they examined parts of the area covered by Mr. Shallit's prospecting permit and found no evidence to indicate that any prospecting had been done by Mr. Shallit within the area. In addition, the petitioner's affidavit stated that he had examined the permit area from the air and had found no evidence that prospecting work had been done by Mr. Shallit.

Upon considering the whole record, it is concluded that the preponderance of the evidence supports the finding that, during the period between June 1, 1950 (when Mr. Shallit was required to begin his prospecting operations under the permit, as modified), and the beginning of the commercial mining of coal from the permit area in November 1950 pursuant to Mr. Shallit's application for a preference-right coal lease, Mr. Shallit complied with the condition in his prospecting permit to the effect that he would diligently prosecute prospecting work on the permit area in accordance with the best known methods, and that, as a result of Mr. Shallit's operations, it was demonstrated that the land contains coal in commercial quantities. That being so, Mr. Shallit is entitled, under the provisions of 48 United States Code, 1946 edition, section 444, to a lease on the land covered by his coal prospecting permit.

<sup>4</sup> The nature of the trenching was subsequently explained by Mr. Shallit in a deposition, a copy of which was furnished to the Department by the petitioner. According to Mr. Shallit, it consisted in the digging of holes which varied in size from 6 inches to 8½ feet deep and from 2 feet wide to 8 or 10 feet wide. Mr. Shallit described at least 18 different locations within the permit area where he had dug these holes. A report in the record indicates that the district mining supervisor and the Territorial mining inspector inspected the permit area in September 1950 and noted a series of 19 pits and trenches which had been dug in order to check the geological structures and expose coal within the permit area.

## V

For the reasons indicated above, it is concluded that no error was made in the departmental decision dated October 2, 1951.

Therefore, pursuant to the authority delegated to the Solicitor by the Secretary of the Interior (sec. 23, order No. 2509; 14 F. R. 307), the petition for reconsideration of the departmental decision (A-26277), dated October 2, 1951, is denied.

MASTIN G. WHITE, *Solicitor*.

## EXHIBIT H

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
*Juneau, Alaska, February 25, 1952.*

Mr. A. BEN SHALLIT,  
*Cripple Creek Coal Co.,  
Fairbanks, Alaska.*

DEAR MR. SHALLIT: Reference is made to your letter of February 20, 1952, concerning the recent plans for providing an all-weather approach road up the Healy River to the Roth property. The statement received from your Washington attorney is correct insofar as the plans of the Alaska Road Commission are concerned. However, to date no funds are available for the initiation of this work.

As you will recall, our previous efforts to construct a road up the Healy River were stopped when the possibility of the extension of the Alaska Railroad spur entered the picture. At a recent meeting in Washington, D. C., it was decided that the construction of a road by the Alaska Road Commission would most quickly provide the needed access to the coal reserves. As a result of this meeting the Alaska Road Commission was instructed to make surveys and prepare estimates for the project in anticipation of funds for the construction.

No funds for this work are included in our budget estimates now before Congress, and unless an emergency appropriation is received there can be no work undertaken this coming season. Since I have no information regarding possible emergency funds for this work, I am not able to give you any assurance upon which to base your judgment in submitting bids to the military for a coal contract.

Sincerely yours,

A. F. GHIGLIONE,  
*Commissioner of Roads for Alaska.*

## DECISION

A. BEN SHALLIT  
Right-of-Way Application  
Act of January 21, 1895  
(28 Stat. 635; 43 U. S. C. sec. 956).

SEPTEMBER 10, 1952.

## PROTESTS DISMISSED

## RIGHT-OF-WAY GRANTED CONDITIONALLY

On June 14, 1951, A. Ben Shallit filed his application, Fairbanks 08832, for a tramroad right-of-way from a point in sec. 16, T. 12 S., R. 6 W., Fairbanks meridian, called "Cripple Creek Camp" within his coal prospecting permit, Fairbanks 07350, to a point in the NE $\frac{1}{4}$  of sec. 23, T. 12 S., R. 7 W., Fairbanks meridian, designated on the map of said right-of-way as "R. R. car loading dock."

On August 10, 1951, the manager of the land office at Fairbanks, Alaska, granted Shallit a permit to construct the right-of-way in advance of its approval. That permit was at Shallit's risk and subject to such requirements as might later be attached to the grant of a right-of-way.

The map of the proposed right-of-way was found insufficient under the regulations and Shallit was called upon to file a proper map. This he did on July 31, 1952.

Because of a protest filed by the Usibelli Coal Co. across whose leased lands (Fairbanks 06561) a substantial portion of the proposed right-of-way extends, 2 field investigations have been made; 1 at the instance of this office and 1 at the direction of the Department. With respect to the former, a representative of the Usibelli Co., who according to his statement was in charge of the leased premises, was on the Usibelli lease premises and was contacted by the investigator who discussed the matter of alleged interference of the right-of-way with the Usibelli mining and associated operations. The Usibelli Co., claims that the proposed right-of-way would interfere with its operations, especially in the furnishing of an adequate water supply for the domestic use of the employees on its lease who reside at a camp within the lease boundaries. The report negatives this claim and shows that there is more than ample underground seepage to furnish a sufficient supply of domestic water. The report also shows that a rifle range has been set up with the gun pits on 1 side of the proposed Shallit right-of-way and the targets on the other. Local counsel for Usibelli has asked that no right-of-way be granted until an oral hearing has been held. A protest by the Healy River Coal Co. apparently has been disposed of since the objection was to the location of the right-of-way near that company's camp and Shallit has been using the road, previously authorized to be constructed without any objection to such use by the Healy River Coal Co. Its protest is accordingly dismissed.

Both field reports recommend that a right-of-way be granted and one of them even suggests that it would be preferable to move the road, the subject of the application, out of the river bed and onto the adjacent high land. However, it seems probable a substantial part of the right-of-way will only be required temporarily. It is understood that the Alaska Railroad is now surveying a route for an extension of its line, now terminated at the Healy River Coal Co.'s mine, to a point at or near the Shallit lease, which will obviate the need for most of the rights-of-way. It is possible that the railroad will follow, if not use a part of the proposed Shallit right-of-way. The proposed right-of-way is usable in winter and can be used during the coming season after certain repairs are made.

A new right-of-way would apparently involve extensive new construction which Shallit has not indicated that he desires to undertake. In fact, Shallit on his map outlines the same general route as that he first applied for. In view of these facts, it seems unnecessary to consider the suggestion that the right-of-way be relocated on higher ground.

Although the matter has not been called to the attention of this office by either Shallit or Usibelli, the field report made at the request of this office recites that the surface works of the Healy River Coal Co. were destroyed by fire on August 29, and that in consequence it will be some time before that company can resume full active mining operations. The report states that the Healy River Co. carried the major portion of the burden of supplying coal to the rail belt portion of Alaska. In such an emergency, it seems obvious that both Usibelli and Shallit will need to meet more of this burden than they have in the past and it is apparent from the whole record that the right-of-way is necessary to Shallit's operations and that it does not unreasonably burden the Usibelli operation.

This matter has been thoroughly considered. The facts have been meticulously assembled by three agencies of the Department whose representatives have examined the land and discussed the proposed right-of-way with the parties concerned, including the Usibelli Co. That company has filed a substantial body of argument in support of its protest, all of which has been considered. We are unable to perceive in what way oral argument would supplement the showing already made or establish what has not been established that the granting of the right-of-way seriously affects Usibelli's interests as a lessee. On the contrary, it appears that no adverse effect would result but that the Usibelli Co. could accommodate its operations to the situation with little or no additional expense. To accede to the protest would result in placing a heavy burden on Shallit who is also a lessee which is not justified in the circumstances. Accordingly, the application for an oral hearing and the protest as well are dismissed.

Since the rifle range across the right-of-way is neither a necessary nor proper activity under the lease and since it is a hazard to the free use of the right-of-way, the Usibelli Co. is required to dismantle it and to discontinue its use; 30 days from receipt of a copy of this decision by that company are allowed within which to show compliance herewith in the absence of which further appropriate action will be taken.

The right-of-way as applied for is hereby granted subject to the following conditions:

(1) This right-of-way easement is a license only (56 I. D. 549), and shall continue in effect as to any part of the right-of-way only until such time as that particular portion shall be required by the Alaska Railroad for use as a railroad right-of-way at which time the grant shall cease to be effective as to any or all such portion.

(2) The right-of-way is subject to all of the applicable provisions of 43 CFR 244.9, (a) to (m), inclusive, and acceptance of the grant by the grantee will signify his acceptance of all of the terms and conditions contained in those subsections and his agreement to comply with all of the applicable provisions thereof.

(3) There is hereby reserved for the use of the United States pursuant to the provisions of the act of August 1, 1946 (60 Stat. 755; 42 U. S. C., sec. 1801, et seq.), all uranium, thorium, or other materials which have been or may hereafter be determined by the Atomic Energy Commission to be peculiarly essential to the production of fissionable materials contained in whatever concentration in the lands covered by the right-of-way, together with the right of the United States through its authorized agents or representatives at any time to enter upon the land and prospect for and mine the same, making just compensation for any damage or injury occasioned thereby.

(4) The payment within 30 days of demand, by the manager, Land Office, Fairbanks, Alaska, of all rentals due and unpaid at the rate of \$5 per mile or fraction thereof for each calendar year or fraction thereof from and after August 10, 1951.

The right of appeal is allowed.

WILLIAM ZIMMERMAN, Jr., *Acting Director.*

## EXHIBIT M

## UNITED STATES DEPARTMENT OF THE INTERIOR

## OFFICE OF THE SECRETARY

Washington 25, D. C., November 5, 1954

A-26673

A. BEN SHALLIT

EMIL USIBELLI

USIBELLI COAL MINE, INC.

Fairbanks 08832.

Protest against application for a right-of-way over leased lands dismissed.

Set aside and right-of-way application allowed.

## APPEAL FROM THE BUREAU OF LAND MANAGEMENT

On June 14, 1951, A. Ben Shallit filed an application (Fairbanks 08832) for a right-of-way under the act of January 21, 1895 (43 U. S. C., 1952 ed., sec. 956), across public lands in Ts. 12 S., Rs. 6 and 7 W., Fairbanks Meridian, Alaska. The right-of-way applied for measures approximately 5.34 miles and runs from within the land covered by a coal lease issued to Mr. Shallit (Fairbanks 08350), across the land covered by a coal lease issued to Emil Usibelli (Fairbanks 06561), to a terminal of the Alaska Railroad located within the area covered by a coal lease issued to the Healy River Coal Corp. (Fairbanks 01068).

On August 17, 1951, Usibelli Coal Mine, Inc., and Emil Usibelli protested the granting of the right-of-way.

On September 10, 1952, the Acting Director of the Bureau of Land Management issued a decision dismissing the protest and granting Mr. Shallit the right-of-way he had applied for subject to certain conditions. Emil Usibelli and Usibelli Coal Mine, Inc., have appealed from that decision to the Secretary of the Interior.

However, the appellants and the appellee have now notified the Solicitor that upon the incorporation in the right-of-way grant of certain conditions upon which they have reached agreement, regulating the use of the right-of-way by Shallit, the appellants will withdraw their appeal.

Thus, the issues which occasioned this appeal have been resolved, it remains only to state the terms and condition upon which the right-of-way shall be allowed.

The act of January 21, 1895 (*supra*), authorizes the Secretary of the Interior under regulations issued by him to permit any citizen engaged in mining to use a right-of-way for a tramroad through the public lands to the extent of 50 feet on each side of the center line of the tramroad. The pertinent regulations are found in 43 CFR, 1953 supp., 244.1-244.21 and 244.52-244.53.

Therefore, pursuant to the authority vested in the Secretary of the Interior by the act of January 21, 1895, Shallit is given permission to use the right-of-way he applied for on June 14, 1951, as delineated on the map of the survey of the proposed right-of-way filed on July 31, 1952. Since the act of January 21, 1895, does not provide otherwise, the right-of-way granted is a permit revocable at the discretion of the regional administrator. 43 CFR, 1953 Supp., 244.7.

The right-of-way is also subject to the applicable general terms and conditions imposed by the pertinent regulation. 43 CFR, 1953 Supp., 244.9, as amended on August 11, 1954 (Circ. 1876, 19 F. R. 5178).

In addition, the parties having agreed to them, the right-of-way is made subject to the following specific provisions:

1. The road which has been constructed by Shallit in advance of the allowance of his application for a right-of-way shall be resurveyed with an engineer from both mines in attendance.<sup>1</sup>

2. As between the parties it is recognized that the development of the Usibelli lease is the dominant use so that Usibelli can cut the road built by Shallit within the right-of-way within the limits of the Usibelli lease from time to time as may be reasonably necessary to his operations; provided, however, that when such cuts are made Usibelli will construct temporary bypasses or permit temporary use by Shallit of Usibelli roads in order to assure Shallit uninterrupted transit by road over the Usibelli lease.

3. Prior to the initiation of any new-road construction, except for normal maintenance, Shallit shall consult with Usibelli so that Usibelli may provide for

<sup>1</sup> If the road does not lie within the limits of the right-of-way herein allowed, it will be necessary for Shallit to comply with the provisions of 43 CFR, 1953 Supp., 244.15 (a).

the incorporation of culverts and other similar structures, as may be necessary for the operation of the Usibelli lease.

4. Shallit shall take no tailings, gravel, or other material as borrow, which has been accumulated by Usibelli, in the construction and maintenance of his road, without express authorization from Usibelli.

5. Shallit shall construct, operate, and maintain the road in the well area opposite the Usibelli camp so as to constitute no interference with the water supply to said camp.

6. The elevation of the road at the point near the Usibelli camp where Usibelli has constructed a washer shall be definitely fixed and determined in the course of the survey provided for in item 1 above. So as to insure that traffic on the road will not interfere with the flume, which must pass over the road, such elevation shall remain constant, unless otherwise agreed to by Usibelli.

7. The right-of-way at such points on the Usibelli lease where it passes any building (including the tippie and washing plant), pump ponds, and roads intersections is limited to the average width of the road, but in no event is the right-of-way in such areas to exceed 25 feet.

The decision of the Acting Director of the Bureau of Land Management is set aside, and the right-of-way is allowed subject to the terms and conditions herein stated.

ORME LEWIS,

*Assistant Secretary of the Interior.*

#### EXHIBIT N

UNITED STATES DEPARTMENT OF THE INTERIOR,

OFFICE OF THE SECRETARY,

*Washington 25, D. C.*

Hon. ERNEST GRUENING,

*Governor of Alaska, Juneau, Alaska.*

MY DEAR GOVERNOR GRUENING: This responds to your letter of October 30, 1952, concerning the coal-supply situation in Alaska, in which you state that you understand that applications for Government loans by Usibelli Coal Mines, Inc., and Cripple Creek Coal Co. have been held up, and suggest "that prompt action at the appropriate level in the Department of the Interior is called for."

This Department has been endeavoring for some time to promote an increase of coal-producing facilities in the Territory to meet the increase in demand, which the best information available indicates will arise in the near future.

The present tight situation, due in a large measure to the fire at the Healy River mine which curtailed production, and the loss of production at the Usibelli mine during the labor difficulties, indicates the necessity for an increase in productive capacity. It appears clear that the present mining facilities cannot produce sufficient additional coal to meet the requirements of the proposed new facilities which will be erected by the Department of Defense, and the needs of the increasing population.

In order that you may be fully informed concerning the status of the Usibelli and Cripple Creek loans, the following summary is submitted:

On February 11, 1952, Usibelli Coal Mines, Inc., filed with the Defense Production Administration an application for a loan of \$600,000, of which \$350,000 was to be used for the expansion of productive facilities for underground mining and \$250,000 for working capital. On February 28, 1952, DPA requested a report and recommendation from DSFA.

After an investigation and survey, which included a number of conferences here in Washington between Mr. Usibelli, his counsel, and representatives of DSFA and the Bureau of Mines, Alaska Division of the Office of Territories, Geological Survey, and the Reconstruction Finance Corporation, the DSFA incorporated available information in its report and made a favorable recommendation to me on May 14, 1952. In the interim, the Usibelli mine became involved in labor difficulties, and the question of the ability of Mr. Usibelli to obtain sufficient skilled miners to develop and operate an underground mine was raised. I requested a report on this phase of the situation and withheld my approval of DSFA's recommendation pending the receipt of such report. In September, I received information that the Usibelli labor difficulties had been solved. I then approved the affirmative recommendation of DSFA for the loan and transmitted it to DPA, which agency issued a certificate of essentiality to the Reconstruction Finance Corporation on September 25, 1952.

On July 3, 1952, the RFC authorized the working capital portion of the loan which, under existing regulations, could be made without a certificate of essentiality from DPA. In light of the fact that that part of the loan which concerned working capital had already been granted, and that the report from its Seattle agency concerning the \$600,000 application had been submitted on March 3, 1952, the RFC requested a supplemental report from its Seattle agency. Reports now indicate that Mr. Usibelli has requested that action by RFC be deferred on his loan application until he has completed a study of his future mining plans. It is possible that the application may be amended.

The application of the Cripple Creek Coal Co. still faces some hurdles. This application was originally filed in March 1951, and the report of the Bureau of Mines to DSFA in July 1951 recommended that the loan be denied. On January 3, 1952, the Cripple Creek Coal Co., through its Washington counsel, requested that action be delayed pending a further study, which request was granted.

Following conferences between representatives of Cripple Creek, DSFA, Bureau of Mines, Alaska Division of the Office of Territories, Geological Survey, and Reconstruction Finance Corporation, which were held in Washington in May 1952, DSFA submitted its report and made a favorable recommendation to me, which I approved and transmitted to DPA. In July 1952, DPA issued a certificate of essentiality for this loan to RFC, which agency determined it could not approve the loan because there was no reasonable assurance of repayment.

A supplementary study of the coal situation in Alaska is now being conducted by this Department for the purpose of establishing the facts as they exist today. If the report of this study justifies such action, Interior will recommend to DPA that the Office of Defense Mobilization issue a directive to the RFC to make the loan on the grounds that the production is essential to the national defense.

Three coal mining companies in Alaska have applied for Government loans. The application of the Buffalo Coal Mining Co. was approved and I am informed that approximately \$92,000 has been disbursed as of October 31, 1952, and the balance is available as construction and acquisition proceeds.

Usibelli's application was approved insofar as the \$250,000 working capital funds are concerned. It is reported, however, that as of September 30, 1952, Mr. Usibelli had not used any of the \$250,000 made available to him through the RFC for working capital. It is impossible, at this time, to predict what action will be taken on the Cripple Creek loan.

Sincerely yours,

JOEL D. WOLFSOHN,  
*Acting Secretary of the Interior.*

CRIPPLE CREEK COAL CO.,  
*Fairbanks, Alaska, January 12, 1953.*

Re Suntrana spur.

Col. J. P. JOHNSON,  
*Manager, Alaskan Railroad, Anchorage, Alaska.*

DEAR COLONEL JOHNSON: We have been advised that the survey of the proposed Healy-Suntrana spur extension has been completed as far as the Usibelli airstrip, and that a preliminary line has been run on the right limit of the Healy River as far as Coal Creek.

Any extension of the present spur would be of advantage to Cripple Creek, as well as the other operators in the Healy district. We have already gone on record as willing to assume our share of the cost of this construction, provided the financing can be arranged on a tonnage basis or by any other equitable means within our capacity.

Considerable benefit will accrue to us if the spur is extended as far as the mouth of Cripple Creek. Maximum advantage for full-scale production would require a river crossing to the left limit of the Healy River near Cripple Creek.

In our long-range planning we are contemplating increasing our production to 200,000 tons per year by 1955. We believe that best operating costs will be obtained if the spur is brought over to the left limit of Healy River near the mouth of Cripple Creek.

It would be appreciated if during the coming season your engineering department would look into the feasibility of building such a spur, in order that we may have benefits of your estimates in arriving at our future operating decisions.

Very truly yours,

A. BEN SHALLIT.

## EXHIBIT P

UNITED STATES DEPARTMENT OF THE INTERIOR,  
THE ALASKA RAILROAD,  
Anchorage, Alaska, January 28, 1953.

Subject: Suntrana spur.

Mr. A. BEN SHALLIT,  
*Cripple Creek Coal Co., Fairbanks, Alaska.*

DEAR MR. SHALLIT: This will acknowledge your letter of January 12, 1953, in reference to extension of the Healy River spur from the Healy River mine to your operations at Cripple Creek.

As you are undoubtedly aware, we have surveyed a location as far as the Usibelli mine and proceeded with preliminary location thence on to your mine at Cripple Creek. The construction of this extension from Healy River is thoroughly contingent on the financing, and it is very gratifying to hear that you have funds to contribute to the building.

In order that we can better consolidate the thinking of various people concerned, we would appreciate it if, the next time you are in Anchorage, you would contact Mr. Irvin P. Cook, our chief engineer, and discuss the problem with him in reference to our preliminary location, as well as finance.

Very truly yours,

JOHN E. MANLEY,  
*Acting General Manager.*

## EXHIBIT Q

CRIPPLE CREEK COAL CO.,  
*Fairbanks, Alaska, February 2, 1953.*

Re Suntrana Spur.

ALASKA RAILROAD,  
*Anchorage, Alaska.*

(Attention Mr. Irvin P. Cook, Chief Engineer.)

GENTLEMEN: We have just received a letter from Mr. John E. Manley, acting general manager, in which he requests that we call on you at Anchorage to discuss the problems with reference to the preliminary location of the Suntrana Spur.

At the present time Mr. Shallit is in the States on a business trip and for medical attention. It is quite possible that he will be unable to return to Anchorage for at least a month.

We believe that the preliminary location as surveyed by you is entirely satisfactory for our needs and we would be pleased if actual construction during 1953 proceeded as far as the Usibelli mine. If this were done, we would expect that we would be given track area and a small site for loading at that point.

We are willing to contribute to the cost of this construction on a tonnage basis, assuming that other users will make a like contribution. We assume that payments would be made to reimburse the railroad after the spur was completed. The foregoing represents our thinking in regard to this matter, but if there are any other questions we shall appreciate hearing from you as soon as possible.

The United States Bureau of Mines has recently released figures indicating the requirements for coal along the rail belt during the next few years and from these figures it should be apparent that uninterrupted production on a year-round basis would be required to fill these needs. The present haulage road of the Cripple Creek Coal Co. is subject to unforeseen washouts and is often made impossible because of glaciering of the Healy River. In order to insure year-round coal deliveries, it is imperative that this spur track be extended without delay.

Your efforts to work toward this end are anticipated and will be sincerely appreciated.

Very truly yours,

L. ORSINI.

Re Suntrana Spur.

The ALASKA RAILROAD,  
*Anchorage, Alaska.*  
*Anchorage, Alaska.*

GENTLEMEN: Thank you for your letter of January 28 inviting us to call on Mr. Irvin P. Cook, your chief engineer at Anchorage, to further discuss the extension of the Suntrana Spur.

As mentioned in our letter of January 12, we are willing to assume our share of the cost of this construction, provided the financing can be arranged on a tonnage basis or by any other equitable means within our capacity. We wish to make it clear that at the present time we do not have funds to contribute to the building of the railroad, but it is assumed that we would be permitted to reimburse the railroad on a tonnage basis for an equitable share of the cost.

We understand that the railroad has requested funds for this construction in the current budget.

Very truly yours,

L. ORSINI.

## EXHIBIT S

MARCH 1, 1953.

MAX BARASH,  
*Washington 5, D. C.:*

Appreciate your letter 27th. Suggest you advise Mr. Ghiglione that entire camp facilities of Cripple Creek mine will be at his disposal and that we will, without charge, provide meals, lodging, gasoline, diesel fuel, lubricants, explosives, lumber, welding supplies, and use of shop and repair facilities. Letter follows.

MARCH 3, 1953.

Mr. JOS. T. FLAKNE,  
*Chief, Alaska Division, Office of Territories,*  
*Department of the Interior, Washington 25, D. C.*

DEAR JOE: Enclosed herewith is a copy of a telegram which I received yesterday morning from Cripple Creek Coal Co., which is self-explanatory.

The copy of the telegram is for your information and files.

With best wishes, I am

Sincerely yours,

MAX BARASH.

## EXHIBIT U

UNITED STATES DEPARTMENT OF THE INTERIOR,  
OFFICE OF TERRITORIES,  
*Washington 25, D. C., March 11, 1953.*

Mr. BEN SHALLIT,  
*Cripple Creek Coal Co.,*  
*Fairbanks, Alaska,*

MY DEAR MR. SHALLIT: Your offer to cooperate in the construction of a road up the Healy River from the Alaska Railroad spur has been transmitted to the Office of Territories by Mr. Barash. This offer by which you agreed to furnish all housing and feeding of road crews in addition to supplying fuel and explosives needed in the construction will greatly assist in accomplishing this needed project. The Alaska Road Commission now plans to initiate the construction as soon as possible this spring and will draw upon your cooperative assistance as detailed above.

It is the intent of the Alaska Road Commission to provide and maintain the road from the railroad spur to the entrance to your properties. In accomplishing this it will also be essential that the cooperation of Mr. Usibelli be obtained. It is anticipated that Mr. Usibelli will not oppose this project since he will benefit by the Alaska Road Commission assumption of maintenance and responsibility. The road alignment will follow as much as possible the existing roads up the Healy River and also conform to the proposed alignment for the railroad extension where such conformance does not result in excessive cost. Since it is essential that this work be started this spring, I will contact you further regarding arrangements for your cooperative assistance.

Sincerely yours,

A. F. GHIGLIONE,

*Commissioner of Roads for Alaska, Alaska Road Commission.*

EXHIBIT V

DEPARTMENT OF THE INTERIOR,

ALASKA ROAD COMMISSION,

*Juneau, Alaska, April 22, 1953.*

MR. JOSEPH T. FLAENE,

*Chief, Alaska Division, Office of Territories,*

*Department of the Interior, Washington 25, D. C.*

DEAR JOE: Confirming our telephone conversation of this date the following is a résumé of the present status of the Healy River coal transportation problem.

After preliminary meetings with the Healy River Coal Corp., Usibelli Coal Mine, Inc., and A. Ben Shallit's attorney in Fairbanks, a trip was made on April 18 into the Healy River area for the purpose of working out the details of providing low-cost road access. These details were to conform with the plan of construction outlined to me in Mr. Davis' letter of March 9, 1953.

The following people were present at the site on April 18: Mr. Emil Usibelli, president, Usibelli Coal Mine, Inc.; Mr. Pete Nielsen, superintendent of Healy River mine; Mr. Pat Cook, chief engineer of the Alaska Railroad; Mr. Ed Hart, locating engineer, the Alaska Railroad; Mr. Bruce Cannon, engineer, the Alaska Railroad; Mr. B. D. Stewart, Jr., Chief, Operations Division, Alaska Road Commission; Mr. E. J. White, district engineer of the Anchorage district, Alaska Road Commission; and myself. Mr. Ludlow Anderson had been expected to attend but was called to Washington at the last minute.

It was not possible to obtain Mr. Usibelli's permission to utilize his road or to traverse his area as was planned for the low-cost road project. Mr. Usibelli claims that the traversing of his mine area by the road through to Mr. Shallit's property would seriously handicap his operations, in addition to preventing access to large quantities of coal which his approved development plans have contemplated mining. In addition, the increased liability to Mr. Usibelli's operations from through traffic using his road is considered by him to far offset any advantages he might receive through the Alaska Road Commission's assumption of maintenance responsibility. In view of the above factors Mr. Usibelli refuses public use of his road and further advised that he would be forced to take legal action to restrain the Alaska Road Commission if we should attempt to take over. Mr. Usibelli is extremely anxious to obtain railroad access to his property and made the firm offer to our group of a \$50,000 contribution toward this end.

As a result of the stand of Mr. Usibelli, the only construction possible at this time would be along the Alaska Railroad right-of-way and it is obvious that insufficient funds are available for this heavy work involving river changes, bridges, and rock riprap bank protection. This previous suggestion of Mr. Usibelli that the line be located south of Healy River is not practical both from a road and railroad construction standpoint, and he now agrees to accept a through line south of his camp area on the north side of the river.

The above situation again forces the Shallit mine into the position of having only temporary access which is not usable for at least 6 months of the

year. I do not consider it reasonable for the Alaska Road Commission to undertake any work on this temporary line since the work would be lost in subsequent seasonal floods. This, of course, forces the Shallit mine to consider contracts for supplying coal only during the fall and winter months.

As discussed in our telephone conversation, it will be necessary to obtain considerable funds before any improvement of the road-access problem may be attempted. If supplemental funds could be obtained through support of the military, it is possible that some relief could be afforded the Shallit mine this season. In my opinion such action is not too probable, and I have so advised Mr. Shallit. The desirability of providing the railroad extension rather than a temporary road is again apparent, and I urge that further effort be toward this end. Our estimates for preparing the railroad grade from the Healy River mine to Cripple Creek by force account work, exclusive of railroad ballast, rail, and structures, is \$420,000.

The Alaska Road Commission is unable to proceed further with this project under the conditions outlined above.

Sincerely yours,

A. F. GHIGLIONE,  
*Commissioner of Roads for Alaska.*

---

EXHIBIT W

DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
Juneau, Alaska, June 30, 1953.

Mr. JOSEPH T. FLAKNE,  
*Chief, Alaska Division, Office of Territories,  
Department of the Interior, Washington 25, D. C.*

DEAR JOE: Reference is made to our telephone conversation of June 29 and previous correspondence on the subject of transportation access to the Healy River coalfields. Specifically answering the questions posed, it is necessary to restate that the Alaska Road Commission does not have sufficient funds to initiate construction of an access road beyond the present railroad spur. This situation was explained in detail in my letter of April 22, 1953, which submitted an estimate of \$420,000 as being necessary for providing year-round highway access to the Usibelli and Cripple Creek mines along the Alaska Railroad right-of-way.

Provision of a dependable low-cost road through to the Cripple Creek mine as planned earlier this season on the basis of utilizing all existing roads of the Usibelli and Cripple Creek Coal Cos. is not possible as further stated in my letter of April 22.

The Alaska Road Commission has not filed formal right-of-way plat with the Bureau of Land Management for road access through this area. The regional administrator, BLM, has advised such filing is unnecessary since the Alaska Railroad filing will cover either road or railroad construction. A copy of Mr. Puckett's letter of June 24 is enclosed.

In summing up the situation, I see no way in which the Alaska Road Commission can provide dependable access to the Cripple Creek property with funds presently available. I have again so advised Mr. Leo Saarela and Mr. Orsini. As stated in my letter of April 22, I similarly advised Mr. Shallit in early April. The heavy construction that would be necessary through the present Usibelli tippie area and on up the Healy River with channel changes, bridges, and large amounts of heavy riprap protection would require funds greatly in excess of any which might be diverted from our meager farm road allotments. The co-operation offered by the Cripple Creek mine, while of considerable value, would still be insufficient to offset the large cost involved in this project.

Sincerely yours,

A. F. GHIGLIONE,  
*Commissioner of Roads for Alaska.*

## EXHIBIT X

APRIL 29, 1953.

(Received in Fairbanks May 6.)

Mr. LOWELL M. PUCKETT,  
Regional Administrator, Bureau of Land Management,  
Anchorage, Alaska.

DEAR MR. PUCKETT: The Alaska Railroad contemplates constructing at an early date an extension of its rail line from mile 4.2 on the Suntrana branch to mile 6.6, adjacent to the Usibelli mine camp. Also, from mile 6.6 to mile 10.3, adjacent to the Roth coal reserve.

It is requested that there be noted under the act of March 12, 1915 (38 Stat. 305; 48 U. S. C. 301-308) a right-of-way for this line to the extent of 100 feet on each side of the centerline of the track. Accordingly, we are attaching three copies each of part 1, Suntrana Branch extension, Suntrana to Usibelli, and part 2, Suntrana Branch extension, Usibelli to Roth Reserve.

You will note in our letter of June 23, 1952, that the railroad contemplates the extension of this line in order that the Usibelli Coal Co., the Cripple Creek Mining Co. and any future producers, may have access to the Alaska Railroad, thereby reducing the costs of operation which in turn are passed to the Government in reduction of bid prices for the furnishing of coal, as well as to private industry. It is estimated that the construction of this line will result in the reduction of coal costs to the Territory of \$200,000 annually.

Should additional information be required, please let me know and we will endeavor to arrange to secure it.

Very truly yours,

JOHN E. MANLEY,  
Acting General Manager.

## EXHIBIT Y

DEPARTMENT OF THE INTERIOR,  
THE ALASKA RAILROAD,  
Anchorage, Alaska, March 3, 1954.

Mr. WILLIAM C. STRAND,  
Director, Office of Territories,  
Department of the Interior, Washington 25, D. C.

DEAR MR. STRAND: In accordance with your request, I am forwarding the following drawings and estimates covering the proposed extension of the Suntrana branch from Suntrana mine (mile 4.2) to the Roth coal reserve:

1. Plan of location line between Suntrana (mile 4.2) and Usibelli mine (mile 6.6).
2. Plan of reconnaissance survey from end of location line at Usibelli mine (mile 6.6) to Roth coal reserve (mile 10.3).
3. Profile of location line between Suntrana mine (mile 4.2) to mile 6.6.
4. Estimated cost of located line between Suntrana mine (mile 4.2) and mile 6.6.
5. Estimated cost based on reconnaissance survey between Cripple Creek mine (mile 8.8) to Coal Creek (Roth coal reserve), mile 10.3.

The line between Suntrana mine (mile 4.2) and Usibelli mine (mile 6.6) has been located and staked. The remaining portion of the extension, mile 6.6 to the Roth coal reserve (Coal Creek), is based on a reconnaissance survey, and this line has not been staked. It is estimated that it would require approximately 2 months' time with a single survey party to complete the reconnaissance survey and complete location.

It will be noted that on the located line drawing between Suntrana mine (mile 4.2) and Usibelli mine (mile 6.6) we show our location passing over the Usibelli Mining Co.'s airstrip. This location was discussed with Mr. Usibelli, and he did not voice any objection other than that which could be normally expected under the circumstances. The line then passes through (according to information I have received) what is called G bed. This location, Mr. Usibelli has objected to quite violently from time to time, inasmuch as he says he plans to mine these underground beds. However, from discussions with the Bureau of Mines representatives and the Geological Survey, they do not express as much concern about the potentials of these beds as Mr. Usibelli has.

There is one alternate location past the Usibelli mine, and that would be skirting his camp to the right. This, of course, would bring us up against the stream and would require a considerable amount of bank protection. He originally objected to this location, but, after further consideration on his part, I believe he felt he would receive protection from stream erosion which affects his camp during runoff periods and cloudbursts. This location is not as desirable from our standpoint because of the curvature and the cost of construction.

The line from the Usibelli mine on up to Cripple Creek mine and the Roth reserve could vary considerably from the reconnaissance survey we have made, depending on the nature of the mining operations. Should it be desired to serve only the Cripple Creek mine, a location on the right-hand side of the river would undoubtedly be more feasible. However, if we pass on to the Roth reserve, the location which we have shown tentative on the plans would be the most desirable. This issue, I believe, should be settled prior to any great expense being incurred to establish a located and staked line.

We have filed with the Bureau of Land Management maps of both our located line and our reconnaissance lines, in order that we could obtain the necessary right-of-way. These have been on file approximately 8 months and no objections, to my knowledge, have been made to our locations.

The ruling grade on the line from the Suntrana mine to the Roth coal property would be 2.5 percent. The rest of the line is approximately the same grade as Healy River, down whose channel the line would pass, that being 1 percent and one-half percent.

In general, the greatest cost of this line would be the diversion of the streams adjacent to Suntrana mine. The reason for diverting the stream is to save the construction cost of expensive steel bridges. After we pass Usibelli mine undoubtedly a considerable amount of riprap would be required, inasmuch as the reconnaissance has led us to believe thus far that the most feasible location would be in the stream channel. My reason for believing this is that both the north and south banks of the stream are underlaid with permafrost and considerable glaciation is evident, which would lead to expensive maintenance costs.

Our estimates are based on what we believe would be a fair contract cost. It is also contemplated to use our relay 70-pound rail for this line.

Should you require any more information, please let me know and I will see that it is immediately forthcoming.

Sincerely yours,

F. E. KALBAUGH,  
General Manager.

<b>Total</b>					<b>512,615.50</b>

## ALASKA COAL LANDS

## MILE 6.6 TO MILE 8.8 (USIBELLI MINE TO CRIPPLE CREEK MINE)

[Based on 1952 reconnaissance]

Item	Work and/or material	Quantity	Unit	Price	Amount
6	Excavation for roadbed.....	100,000	Cubic yards.	\$1.50	\$150,000
8	Furnish and install 36-inch corrugated iron culvert.	120	Linear feet..	20.00	2,400
10	Furnish and install 48-inch corrugated iron culvert.	40	do.....	30.00	1,200
11	Construct trestle (42 linear feet).....	1	Lump sum..	6,000.00	6,000
12	Furnish and place riprap.....	4,000	Cubic yards.	7.50	30,000
13	Furnish and install main line track (complete).....	11,616	Linear feet..	8.00	92,928
14	Furnish and install sidetrack (complete).....	2,336	do.....	8.00	18,688
15	Furnish and install No. 9 turnouts (complete).....	2	Each.....	1,500.00	3,000
16	Bridge (location of bridge to be determined by mining operations) <sup>1</sup> .	500	Linear feet..	1,000.00	500,000
	Total.....				804,216

<sup>1</sup> Inasmuch as this data is based only on reconnaissance, the figure of 500 feet of steel bridge to cross Cripple Creek is based on a unit cost estimate of \$1,000 per lineal foot. After a more complete study is made, perhaps a wooden trestle could be utilized rather than a steel bridge, and the cost of such construction would be approximately \$150 per lineal foot, or \$75,000, which would reduce the total cost to \$379,216.

Administrator.

## EXHIBIT AA

OCTOBER 11, 1954.

Mr. LOWELL M. PUCKETT,  
Area Administrator, Bureau of Land Management,  
Anchorage, Alaska.

DEAR MR. PUCKETT: Will you please refer to our letter of April 29, 1953, wherein the Alaska Railroad made request upon your organization for the withdrawal of a railroad right-of-way 100 feet on each side of center line of track on our Suntrana Branch from the present end of said branch line at mile 4.2 to mile 10.3.

Initially this request for withdrawal of the proposed right-of-way was occasioned by the possibility of the extension of this branch line being essential to the national defense. Since my recent arrival in Washington, however, I have been informed that the Defense Department does not consider the extension of this branch line essential to the national defense, and it would therefore be appreciated if you would withdraw the request as contained in our letter of April 29, 1953, on this matter.

Sincerely yours,

F. E. KALBAUGH, *General Manager.*

#### UNITED STATES DEPARTMENT OF THE INTERIOR

#### BUREAU OF LAND MANAGEMENT

WASHINGTON, D. C., NOVEMBER 2, 1954

### DECISION

#### THE ALASKA RAILROAD

#### Railroad Right-of-Way Application.

#### WITHDRAWAL ACCEPTED. CASE CLOSED

By letter of April 29, 1953, the Alaska Railroad requested that notation of a right-of-way desired under the act of March 12, 1914 (38 Stat. 305; 48 U. S. C. sec. 301), for the extension of its Suntrana branch for a distance of 6.1 miles, be noted upon the records of the Bureau.

The manager of the Fairbanks land office was instructed on May 5, 1954, by the then Regional Chief, Division of Adjudication, to note the right-of-way on his records under the instructions of January 13, 1916 (44 L. D. 513).

By letter of October 11, 1954, the general manager of the Alaska Railroad withdrew the request for the right-of-way, explaining that initially the application was based on the possibility of national defense needs, but that now the extension is not needed for this purpose.

The reason assigned for the withdrawal of the application is satisfactory. The withdrawal is accepted and the case closed.

EDWARD WOOLEY, *Director.*

### EXHIBIT CC

#### MEETING OF THE ALASKA FIELD COMMITTEE'S COAL SUBCOMMITTEE, APRIL 30, 1953

A meeting of the Coal Subcommittee was held April 30, 1953, at 9 a. m., in room 305 of the General Office Building of the Alaska Railroad. Those attending were:

Maj. R. L. Gochenaur, Headquarters, AAC, Elmendorf AFB  
 Mr. P. B. Miller, Headquarters, AAC, Elmendorf AFB  
 Comdr. E. H. Willis, Headquarters, Alaskan Command, Elmendorf AFB  
 Mr. L. G. Anderson, United States Bureau of Mines, Anchorage  
 Mr. Phil Holdsworth, Territorial Department of Mines, Juneau  
 Mr. Wiley Robinson, Territorial Department of Mines, Anchorage  
 Mr. Lowell Puckett, Regional Administrator, Bureau of Land Management, Anchorage  
 Mr. L. H. Saarela, United States Geological Survey, Anchorage  
 Mr. A. Ben Shallit, Cripple Creek Coal Co., Fairbanks  
 Mr. E. J. White, Alaska Road Commission, Anchorage  
 Mr. Elroy F. Hinman, the Alaska Railroad, Anchorage  
 Mr. Irvin P. Cook, the Alaska Railroad, Anchorage

The purpose of the meeting was to discuss the possibility of extending the roadbed up into the Usibelli and Cripple Creek coal properties, with a better access for moving coal.

Mr. L. G. Anderson, chairman, opened the meeting as follows:

MR. ANDERSON. Most of you gentlemen have heard the way the contracts were negotiated this year for military coal procurement; however, I do not believe Mr. Puckett or Mr. Holdsworth are familiar with it, so I will repeat that Mr. Usibelli went to Seattle the week of April 6, accompanied by Mr. Clasby, his attorney.

They informed Lieutenant Fisher of the Coal Procurement Office that Mr. Usibelli would only be able to furnish 100,000 tons of coal to the military for the coming fiscal year. I discussed this with Mr. Usibelli and he informed me that he had made the statement that he could not increase this tonnage unless his RFC loan was approved. However, there were no written statements to this effect, this was all verbal in Seattle.

We had planned approximately 250,000 tons from the Usibelli mine. Prior to the meeting I discussed with the operators of the Healy River district, the tonnages they expected to produce for military. Mr. Shallit told me he was not interested in producing much over 60,000 to 100,000 tons this coming year, preferably around 60,000 or 65,000 tons. Until such time as he had an all-weather road up to Cripple Creek or the railroad built into his property, he did not want to obligate himself to tonnages that would be very doubtful as to whether he could produce under weather conditions as far as scheduling of deliveries according to contract.

When Mr. Usibelli gave Lieutenant Fisher his proposals of 100,000 tons Lieutenant Fisher called Mr. Shallit and asked him for the maximum tonnage he could produce. Mr. Shallit told him 100,000 tons, but he would be willing to negotiate for 150,000 tons if the railroad or the highway would be built up to Cripple Creek before October of this year. On the strength of that and from the meetings we had prior to this meeting with the Navy on negotiating coal contracts this year, we thought it was almost certain that the Alaska Road Commission at least would be able to build a road into Cripple Creek or Roth property, which is just above the Cripple Creek property. Mr. Hinman, has it not been in your budget request to get funds for building this spur?

Mr. HINMAN. It has been in our 6-year program for several years.

Mr. ANDERSON. We were under the impression that the funds would be made available this year. Mr. Shallit said if the program goes through on the road he would be glad to furnish 150,000 tons. The following day after this conference with Mr. Shallit, Mr. Usibelli came in and made two propositions: (1) 140,500 tons at \$8.90; (2) 257,500 tons at \$9.50 (based on getting his loan through).

We asked him the reason for this increase in price with an increase in tonnage, and he explained he would have to increase his facilities, such as bunkhousing, cookhouse, shops, new equipment, and starting an underground operation, et cetera. He suggested that Lieutenant Fisher take proposition No. 1, and Lieutenant Fisher said he would, as it was Usibelli's low bid. Mr. Usibelli also requested a change in the specifications to 26 percent moisture which made him second low on B. t. u. per penny delivered. Therefore, Mr. Shallit was low bidder on 150,000 tons with the stipulation that the road goes through this summer; Usibelli was second, and Healy River third. Therefore, we had to portion the tonnages out as follows: 150,000 tons from Shallit; 140,500 tons from Usibelli; 117,000 tons from Healy River.

Major GOCKENAU. It was also found during the process of negotiating that Mr. Usibelli's proposition to the F. E. Co. and the city of Fairbanks was 50 cents a ton lower than to the military.

Mr. ROBINSON. What was the quantity involved?

Mr. ANDERSON. Between 50,000 and 60,000 tons. We asked him why the higher cost to the Government and he said it cost them more money to do business with the Government because of rejects, et cetera. He said he could cut his price down some if we would put an inspector at the mine to make visual inspection before shipping. I informed him that this was not a government responsibility and that he had agreed to contract specifications and that was the reason for the penalty clause. We are not obligated to put inspectors up at the mines. He had several objections to other parts of the Navy contract. I do not know his reasons. Now the vital point under consideration is how are we going to get the money immediately to build a road up to Cripple Creek? I called George Rogers in Juneau but he was unable to attend this meeting. He expects to go back to Washington and talk to the Secretary as to whether or not it would be possible to get funds for a railroad.

Will this be possible, Mr. Hinman?

Mr. HINMAN. I do not know.

Mr. ANDERSON. I have also discussed this road allocation with Mr. Flakne.

Commander WILLIS. What is the difference between the amount of coal without the road.

Mr. SHALLIT. 50,000 tons.

Commander WILLIS. How important is this extra?

Major GOCKENAU. We are under now by about 12,000 tons of our requirements—figuring that Cripple Creek will take 150,000 tons.

Mr. HINMAN. Cripple Creek does not know how they are going to deliver 150,000 tons unless they get an all-weather road or a railroad this summer.

Major GOCHENAUB. That is why the military is here today. I compiled figures yesterday for our budget planning for the fiscal year 1955 for the Air Force (I do not know the requirements of the Army). We will have at Eielson roughly 225,000 tons; at Ladd, 300,000 tons, and at Elmendorf, 140,000 tons. These are conservative figures. The main power plant at Eielson at full capacity is capable of burning 50 or 60 tons an hour. Figures from the plant superintendent, based on full capacity, would be around 50 tons an hour. An average consumption during mild weather is 7,000 tons a month.

Mr. MILLER. Approximately that. They have had some operational problems, but that will be ironed out soon.

Mr. PUCKETT. Mr. Shallit, was your bid based upon the construction of the road by someone else?

Mr. SHALLIT. Yes, it was.

Mr. HINMAN. I believe Mr. Shallit did say he had some funds.

Mr. SHALLIT. I had \$30,000 set aside for road construction this year.

Mr. ANDERSON. Is there some legal way that the Government can overcome road right-of-way protests by Mr. Usibelli?

Mr. PUCKETT. The issuance of a permit presumable gives the person the right to go ahead. The decision was made, I believe, over a protest of Mr. Usibelli. In that case he has right of appeal. Maybe that is the status of it now.

Mr. SAARELA. That is right, and it is being appealed.

Mr. PUCKETT. If Mr. Usibelli's protest is turned down, of course, Mr. Shallit could start to build the road. Whether or not Mr. Usibelli would try to get an injunction on him and the Government, I don't know.

Mr. SHALLIT. The road right-of-way which has been granted is not a road right-of-way I could use 12 months out of the year; it is only suitable for summer hauling.

Mr. HINMAN. With that road you could not produce 150,000 tons?

Mr. SHALLIT. No, sir, but it might be possible for me to reschedule deliveries during the winter. This poses a problem for the railroad and the military to handle coal during extreme cold weather in the Fairbanks area, during which time costs of handling are materially higher to the Government. Also the combination of snow and coal in alternate layers makes it subject to spontaneous combustion. Therefore, during the summer it would be cheaper and safer to stockpile and during the extreme cold weather schedule deliveries according to actual consumption of the power plants.

Mr. ANDERSON. Another very important point insofar as the military is concerned is the scheduling of the production so that it can be handled economically at the various bases with their unloading facilities. In the Fairbanks area, during the cold months of December, January, and February, the coal has to be dumped into the boiler room from the car. They cannot clamshell coal in extreme cold weather. If the coal producers fail to comply with scheduled deliveries as per their Navy contracts and overship to their bases causing delays in handling at the bases the cost of demurrage enters into the picture, which in the past has been absorbed by the military, and when added to the price of coal it is unbelievably high.

Mr. SAARELA. You might say prohibitive.

Major GOCHENAUB. It was about \$14,000 at one time. In fact our figures show now that the cost of our coal into Ladd alone, figuring transportation, demurrage and all, is more than it would be for oil.

Mr. ANDERSON. That is correct and if we wish to develop the coal industry we must work together to keep the price and quality of coal competitive with oil.

Mr. HINMAN. So far as the demurrage is concerned, we could not possibly haul the coal unless we could get the cars unloaded without undue delays.

Mr. ANDERSON. That is right, but I am trying to bring out the importance of scheduling production with the unloading facilities at the military bases taking weather into consideration—to get away from demurrage and tying up of cars. We all realize there are a limited number of cars on the railroad and if properly used and handled there will be no great shortage but otherwise it will work a hardship on both the railroad and the military, as well as the producer.

Major GOCHENAUB. In contracts written this year we have stipulated one clause which specifies that the using agency would notify the railroad and the mines by the 20th of the preceding month of the type of cars and the amount of tonnage required the following month. This was not done previously. There was such a clause but it did not make it mandatory. The tonnage being so irregular

we need gondolas one month and other months we need hopper types. By doing that it gives the railroad and also the mining company a chance to do some planning.

Mr. SAARELA. Has this money for constructing the railroad to Cripple Creek and Roth ever been asked from Congress?

Mr. HINMAN. We have programed it. In our budget estimates for fiscal year 1953 we included an amount of \$2,350,000 for improvements to and extension of the Suntrana branch. This was approved by the Interior Department reduced to \$1 million by the Bureau of the Budget, and entirely deleted in Congress when final action was taken on the appropriation bill. Right now the Alaska Railroad is prepared to and will commit itself to furnish and install the rail and fastenings in a very short period, probably 1 month, if the grade is provided. No appropriation would be necessary to install the railroad if the grade is provided. It would be necessary that a grade be ready not later than the middle of August.

Mr. SAARELA. Why couldn't the military take the stand that this railroad is essential or necessary? A couple of years ago I wrote to the commanding general and tried to get it ironed out so there would be some statement from the military as to the essentiality of the road or railroad, but I got a refusal. I think the situation has come to pass now that we are not going to meet the demand and it is mainly a problem of transportation. Therefore, I think it would seem reasonable that as it is a military problem and that a statement could be made by the military as to the essentiality of the railroad, so that the Alaska Railroad could go ahead and make the request. The hauling of 140,000 tons 3 miles by Mr. Usibelli and 150,000 tons 6 miles by Mr. Shallit will cost the Government approximately \$300,000 this year.

Mr. HINMAN. More than they would pay if there was a railroad extension.

Mr. SAARELA. That is what hauling the coal to the present rail head is going to cost. The spur has been estimated at approximately \$500,000. This situation is going on year after year. Mr. Shallit has hauled out 100,000 tons. I do not know how much that has cost the Government, but certainly it has cost them directly.

Mr. SHALLIT. Last year I figured it \$1.24 per ton.

Mr. COOK. Mr. Saarela, the cost of building the rail spur up to the Cripple Creek property would be closer to a million dollars. The grade would be about \$500,000.

Mr. ROBINSON. Would this include the bridge?

Mr. COOK. No, because we do not know what access would be necessary for the Cripple Creek property.

Mr. SAARELA. If it is necessary to take the Roth property out of the reserve and split these contracts up, some additional leasing of acreage will be necessary, but I believe at the present time the survey feels there is enough production facilities in the Healy field. In view of this constant bottleneck of getting coal out because of the lack of transportation it may be necessary to release additional acreages to get other small operators. Two years ago we received a letter from the commanding general stating that the military did not think the road was essential. I think the situation has changed drastically. The whole coal supply depends upon the the solution of this problem. The military is not going to countenance this continual harassment. One of these days the military is going to throw up its hands and put in a pipeline.

Mr. HINMAN. On the transportation part of it the railroad does not have the funds to build the extension.

Mr. ANDERSON. The essentiality of the access road into that mining area should be set up in the budget, and be backed by the military.

Major Gochenaur. What was the conversation, Mr. Anderson, you had with Mr. Flake when you went back to Washington? It was my understanding that the Department of the Interior was back of that road. After the conversation I had with you, Lieutenant Fisher said he laid it in the hands of the Interior Department and they would put it through.

Commander WILLIS. I would also like to ask the question if the Alaska Road Commission has ever set this up in the budget?

Mr. WHITE. No; it has never been itemized as such.

Mr. SAARELA. There has been a good deal of pressure to open up Lignite Creek and I would like to point out that we have a transportation problem to Lignite Creek also, and I think Mr. Cook will bear this out. A conservative estimate for this would be at least \$2 million. We have the problem of crossing the Nenana River and also going up Lignite Creek. I think ARC did do some engineering work as to the feasibility of opening Lignite Creek, but I think we

should develop and open up one area first before going into another area. The cost of opening up Lignite Creek is going to be at least \$2 million, plus the problem of mining, which is an unknown factor over in the Lignite Creek area.

Mr. PUCKETT. Cost to whom?

Mr. SAARELA. The cost to build a railroad including a bridge across the Nenana River.

Mr. ANDERSON. I concur with Mr. Saarela's statement, and I wish to state further that I have held the same line of reasoning for the past 10 years in regard to coal production from this area. From a military-security standpoint, I recommended in 1946 to Charles Kurtz, consulting coal-mining engineer from the Quartermaster General's office, Washington, D. C., that the Roth property be put in a reserve. At present, the only sound, economical plan is to build a railroad from the Healy River mine to the Roth property as the quality of coal in this property is far superior to any other coals reasonably accessible to transportation. Production from the Roth property, due to geological formations, and from a mining standpoint, would make it possible to produce considerable tinnage in a short time in case of an emergency.

Mr. HINMAN. You ask if ARC had ever asked for funds to build a road. I am sure they have not. There is no reason to build a road when it should be a railroad. If you are going to ask for money, ask for funds to construct a railroad.

Major GOCHENAUR. I do not think the price of coal would go down if a railroad is put in there. The highest price was received from Healy, who has the railroad at their back door.

Mr. SAARELA. Healy River is conducting an underground operation which is a higher-cost operation than a strip operation.

Major GOCHENAUR. How much is coming out of strip?

Mr. SAARELA. Very little.

Major GOCHENAUR. That has changed since I was up there.

Mr. SAARELA. Stripping never produced more than twenty or twenty-five thousand tons a year.

Mr. ANDERSON. Their strip operation at Healy have been very small compared to underground operations.

Mr. SHALLIT. With that type of operation for Cripple Creek, we believe that in a balanced operation our costs will be considerably less with a combination of underground and surface. We have a peculiar advantage in developing underground mines. Actually we can do a great deal of our operations on a tax-free basis.

Mr. ANDERSON. At lot of Healy River Coal Co.'s additional costs are due to mine fires. By properly planned development and effective ventilation, the hazards of mine fires in this particular area could be practically eliminated.

Mr. ROBINSON. Speaking of cost, Ludlow made a statement in opening the meeting of getting competition into the Territory in coal mining. I think that is one point that would mean more to the production cost than any other one point, plus the railroad—and you have to get transportation. Mines are working 6 days a week and some in emergencies work 7 days. Your miner's wages (this is a penalty on cost)—the 6th day he makes \$45. If he works Sunday he makes \$60; that is \$105 for 1 man's wages for 2 days. If he works 5 days on straight time without penalty he makes \$150 a week. If he works Saturday and Sunday, \$255 a week. If your mining operations supplied the demand your contract would call for 5 days a week with no penalty. So I cannot see where you are meeting the demand in the Territory as long as you are paying a penalty for operating it a 6th or 7th day, or 10 or 12 hours a day. It looks to me like your cost rests a lot on your shortage of production.

Mr. ANDERSON. I think, by the scheduling that the Navy has in their new contracts, it should be possible for each operator to plan his operation so as to avoid working the 6th or 7th day.

Major GOCHENAUR. I am giving you the figures that face the military and when you see the price this year and realize it was necessary for me to go back and ask for an additional \$753,000 to meet the increased costs of coal over our original budget it placed me in an embarrassing predicament.

Mr. ANDERSON. If we ask for an appropriation for this particular construction we must show Interior or Bureau of the Budget that it is an economical expenditure as well as a military necessity.

Mr. HOLDSWORTH. At a previous meeting I think it was agreed for expediency that a road be put in first and a railroad would follow.

Mr. MILLER. This year would have to settle for a road, but it would be a road-bed for a railroad.

Mr. SHALLIT. My costs this year were based on hauling 5 miles over an all-weather road. When I get underground I think the cost would be reduced. The price of coal has been going up but it is merely a coincidence that our costs are about the same this year. This year we had a big raise in miners' rates. Now all the mines in the Territory are on the same contract. I do not see how wages can be forced up any more. I feel the price I bid was high for 150,000 tons but in order to put that out it is necessary for me to get a large loan from RFC and I have to pay that back at a certain rate. In the future I do believe that the price of coal will have to go down to compete with oil.

Mr. ANDERSON. Phil, to get back to you, if the Governor calls a special session, what could the Territory do in regard to building a road up to Cripple Creek—possibly not right up to grade, but on a railroad survey?

Mr. HOLDSWORTH. It is a possibility, but there are no territorial road funds now available. It would require a special session and appropriation of funds for a road.

Mr. SAARELA. I do not see how you could justify the Territory spending money on an Interior project. It is public land administered by the Interior Department.

Mr. ANDERSON. This suggestion comes from Joe Flakne. I am asking you to think about it as a possible solution. Joe Flakne and I spent about three-quarters of an hour in Assistant Secretary Lewis' office and gave him the whole picture, stressing the importance of this railroad up there, consequently, he is familiar with the immediate necessity of the construction of this project. I do not know what can be done; however, George Rogers will take this information to Washington and perhaps talk it over with the Governor, point out that it is a military necessity.

Mr. ROBINSON. Is it going to accomplish your aim if Ben gets the highway in there and not the railroad—can you load 150,000 tons?

Mr. SHALLIT. If it will hold up during the summer, I can. It will be much more expensive, of course, but I have added that in. If 150,000 tons is required by the Air Force, it would be physically possible for me to load out that coal. If the railroad and the services can cooperate so that they will supply me with as many cars as I need and the Army can unload it, I will try to get it out during the winter.

Commander WILLIS. This extra tonnage talked about being essential—don't you think the military could give on the schedule. You are working out a fine schedule now which is best for the railroad, the operators, and the military. If there is a stepped-up production—have you thought about that?

Major GOCHENAUR. We have thought about that.

Mr. HOLDSWORTH. We thought it was all cleared up in January and the correspondence came back indicating the matter was going to be taken care of, but it looks to me as though no specific requests have been made for funds by either agency. Until that is done and justified by the military, I do not see how we can get the money.

Mr. SAARELA. What about the letter from Mr. Ghiglione to Mr. Flakne? Mr. White, you were at the meeting?

Mr. WHITE. It looks now that the biggest trouble of the whole project is the fact that Mr. Usibelli is reluctant to have traffic through his property.

Mr. SAARELA. He said he would contribute \$50,000 for a railroad. That shows his desire.

Mr. COOK. I might point out that some of the greatest expenditure required to build a grade up to the Usibelli property is in the first half mile, where two channel changes in the Healy River are necessary. When those are started it is going to be very difficult to keep from blocking Cripple Creek on their haul road.

Mr. SHALLIT. Our schedule does not require delivery until the 1st of September.

Mr. COOK. If we could start in immediately it would be easy to complete the grade by that time. Another physical problem is in July when the water starts rising and you get flash floods, which makes construction quite difficult. Right now would be a very desirable time to be in there making channel changes and developing the roadbed. We have filed now with the Bureau of Land Management for 100 feet on each side of centerline on that entire survey we projected. Our projection through Usibelli property passes through G bed. I think it probably could be solved by some statement from the military.

Commander WILLIS. I am charged with the job of transportation and coal. If I would recommend something to the general along that line I would have to know more about it than I do now.

Mr. PUCKETT. It would have to be done in a hurry.

**Major GOCHENAUR.** There is one factor—we are merely sitting in as representatives of the Alaskan Command and Air Command. The authority and push should come from the procuring agency. That push you ask for could very well be assured upon the necessary papers going to that Department in Seattle. They are conscious of this. They are the central procuring agency for the coal procurement for Alaska.

**Mr. SAARELA.** At the last meeting I think we discussed getting it at as high a level as possible. I made the suggestion myself that it be taken up as high an echelon as possible. Everyone knows what the problem is. The recommendation is in the field committee minutes with an underline as to its importance. I think at the last January meeting we went over the situation and it was decided that it would be taken up and recommended to the Secretary's Office through the Alaska field committee. That is where it stands today.

**Mr. ANDERSON.** Lieutenant Fisher and I certainly stressed the importance of having this railroad built.

**Mr. SAARELA.** Correspondence from Rogers would indicate that everything was squared away.

**Commander WILLIS.** It becomes essential that we get coal out. Yet at the same time we now have no request for money in either for a road or a railroad. It seems to me that it is about 2 years late or 2 years early, as far as essentiality. I think it is late at this particular time, but we are going to have to move. In the first place we are going to have to get a request in for money properly substantiated.

**Mr. SAARELA.** In my files I still have my correspondence with the commanding general. At that time (1951) they were reluctant, but this is 1953 and the problem is entirely different now.

**Mr. MILLER.** In 1951 there were no anticipated coal demands or steam production.

**Mr. SAARELA.** If you are going to continue to burn coal the demand will be firm and will increase until probably 1956 when construction is complete.

**Mr. ROBINSON.** Right now, unless we get a railroad to Cripple Creek mine to take care of 150,000 tons, the military is going to be at least 50,000 tons short. If the military is going to use coal, it will be shipped in from the States?

**Major GOCHENAUR.** We will just burn oil.

**Mr. MILLER.** That is 50,000 tons this year; next year it may be closer to 150,000 tons; two from now it will increase in direct proportion to 1955.

**Mr. SHALLIT.** It became sort of a personal problem for Cripple Creek. Unless a decision is made to get a railroad in the near future, I do not think we are warranted in the expansion program we are setting up. With the possibility of converting to oil, it would be better to hold off. I think everyone here will agree that Cripple Creek has possibilities of putting out production.

**Mr. HOLDSWORTH.** Should we ask for the railroad to request funds only, or should the ARC request funds?

**Mr. ANDERSON.** It was our thought previously that the ARC ask for funds to build a road up to Cripple Creek as near as feasible on railroad survey, but the request was not made. Is that correct?

**Mr. WHITE.** That is correct.

**Mr. COOK.** As far as the railroad ever making a request for funds, we are operating under a directive as to the method to proceed, which calls for the location of a feasible line, and then that is to be forwarded to Washington for further action. That was completed last fall. I believe the intent from then on was whether it was feasible to build a railroad up there, or a highway, depending on tonnage. But as the necessity for coal has developed by leaps and bounds the outlook now is that the railroad would be more desirable.

**Mr. ROBINSON.** The railroad is the only thing.

**Mr. COOK.** As soon as the Department of the Interior is persuaded that the railroad is the mode of transportation that should be used, then a request will be made.

**Mr. SAARELA.** What division of the Department?

**Mr. COOK.** The survey is all made and now it is just the money.

**Major GOCHENAUR.** If it takes that long for action, there is not going to be a road in. Mr. Shallit is about to sign a contract, which I presume he will not sign based on the prediction that the road will not go in.

**Mr. SHALLIT.** I will accept 100,000 tons, if they will schedule during the winter.

**Major GOCHENAUR.** We are at capacity to take the balance during that period.

Mr. ROBINSON. What would this make us ship under present setup without either road?

Major GOCHENAUR. Between fifty and seventy thousand tons—sixty-two thousand to be accurate.

Mr. SHALLIT. It is not so much this year, but it will be the same next year.

Major GOCHENAUR. We are going to have to do that to get by this year. The time element is now.

Mr. SHALLIT. What I would like to do is sign for the minimum with the possibility of adding if the road could go through.

Commander WILLIS. I think you could probably do that, as far as the Navy is concerned with the one exception of this undetermined factor of the road, which would require us to start looking around for another source of supply.

Major GOCHENAUR. We could probably get by without that 62,000 tons but we would go into our stockpile and we cannot afford not to have a stockpile. There are too many acts of God in Alaska that you have to be prepared for.

Mr. SHALLIT. The Roth property up there—I believe the survey has set up about a half million tons of strippable coal. In one season you could have it ready to go.

Major GOCHENAUR. It is no good in a stockpile at the mine, Mr. Shallit.

Mr. ROBINSON. When you talk about increasing tonnage from Roth or any other you are speaking of strip coal, Ben?

Mr. SHALLIT. Yes.

Mr. PUCKETT. Is this matter of right-of-way one of the most unimportant things?

Mr. SHALLIT. Yes; that is right. I am not being interfered with now. We have never been held up. The railroad has their own application for right-of-way and it is tentatively understood that I will use the right-of-way until the rails are laid. Is that right?

Mr. COOK. The railroad has no objection.

Mr. SAARELA. There has been no action on the last request with underline. I think there should be another approach, if anybody has any ideas.

Mr. ANDERSON. We have done all that is humanly possible to expedite matters from this level.

Mr. SHALLIT. Would it be possible to start some work that would be of benefit next year without any appropriation?

Mr. COOK. You would have to go in there with rooters and draglines and get a camp set up. The setting up would probably run as much as you have to put into it.

Mr. SHALLIT. Would the ARC be able to get anything done in this?

Mr. WHITE. We would be in the same position—not enough money to move in on the job. We are faced with another problem now. The AGC has placed another rider on our bill limiting us to 12½ percent of actual work which might necessitate doing all this by contract.

Mr. COOK. As far as the railroad is concerned it would have to be done by contract. We do not have equipment available at this time.

Major GOCHENAUR. I think the recommendation as it stands should go to Mr. Rogers, but am not on the committee.

Commander WILLIS. Perhaps there is money in Interior that could be diverted instead of going through Congress.

Mr. SAARELA. I would like to make a motion that the same motion made in the previous coal committee meeting in January in regard to construction of a railroad spur be again brought to the attention of the various Interior officials through Mr. Rogers of the Alaska Field Committee and copies of letters from various Interior agencies requesting this construction be made part of the record with the motion.

The following resolutions were unanimously passed by the Alaska Field Committee, Subcommittee on Coal:

1. That Mr. George Rogers (Chairman of the Alaska Field Committee, inquire into the status of the request of Ben Shallit for a permit for a highway right-of-way which has been granted, but which, it is understood, is on appeal to the Washington office of the Bureau of Land Management or to the Secretary's Office, by Emil Usibelli of the Usibelli Coal Co. It is the suggestion of the subcommittee that Mr. Rogers urge that action be taken to resolve the problem if it is still undecided in Washington.

2. That steps be taken at once to finance the construction of an extension of the Railroad from the Healy River mine to the Cripple Creek and Roth properties. This spur to be completed or partially so before October 1, 1953.

3. That the extension of the Healy River spur to the Roth property is vital to the security of military installations this coming fiscal year of 1954, and in the future, and to the development and prosperity of the coal industry as a whole in Alaska.

4. That by the extension of the Healy River spur to the Roth property would mean a substantial savings to the government in the price of coal and this savings to the government should amortize the cost of construction within 3 or 4 years.

5. That shipment of coal by rail transportation is the only logical solution to the presently existing critical situation.

Meeting adjourned at 11:15 a. m.

EXHIBIT DD

[From Jessen's Weekly, October 22, 1953]

TO REQUEST RELEASE OF ESKA COAL RESERVE

A request to release the Esko coal reserve in the Matanuska coal fields near Anchorage will be made by Gov. B. Frank Heintzleman in Washington, D. C.

Charles W. Connor, who headed a three-man coal-survey team in Alaska last summer, said that coal-mine operators in the Territory will be able to supply all anticipated needs for the next several years and that proposed oil pipeline from Haines will probably not handle grades of oil that will compete with coal.

He recommended construction of a railroad spur to the two coal mines now operating in the Healy River field.

MEMORANDUM

OCTOBER 1, 1954.

To: Director, Bureau of Land Management.

From: Assistant Secretary, Public Land Management.

Subject: Right-of-way application by Alaska Railroad.

There is at present in the office of the Solicitor an appeal by the Usibelli Coal Mine, Inc. and Emil Usibelli from the Bureau of Land Management decision in connection with the right-of-way application of A. Ben Shallit, Fairbanks 08832. This dispute was investigated in Alaska by the Alaskan Coal Survey Group, which submitted a report on November 12, 1953. A copy was sent to the Associate Director of the Bureau of Land Management. The group suggested that the opposing parties might reach an amicable solution. Following this suggestion, representatives of Mr. Shallit and of the Usibelli interest have been consulting with each other in an attempt to reach such a solution. Meantime, of course, action on the appeal has been suspended.

In a letter of September 3, Mr. Northcutt Ely, attorney for the Usibelli interest, of the Solicitor's Office, Mr. Kalbaugh, General Manager of the Alaska Railroad, to cross the Usibelli leasehold for the purpose of reaching the Shallit mine and possibly other deposits in the area. Mr. Ely points out that the railroad right-of-way would cover a different route than the right-of-way applied for by Mr. Shallit, and he contends that the railroad right-of-way would seriously damage the Usibelli operations. He states that the Usibelli interests are reluctant to conclude an amicable agreement with Shallit for one right-of-way, while the railroad right-of-way is still pending.

Without passing on the merits of this contention, I do think that the Bureau of Land Management and the Alaska Railroad should examine the situation promptly. If possible, an amicable agreement with Mr. Usibelli regarding this line, if it is still to be built, should be reached. Since the Bureau of Land Management has the railroad's application before it, I expect the Bureau to take the initiative in this matter. Copies of the correspondence are being sent to the Alaska Railroad. The Manager of the Alaska Railroad will be in Washington until October 19, 1954, and is, therefore, available for consultation on this problem.

ORME LEWIS, Assistant Secretary.

## EXHIBIT FF

## MEMORANDUM

OCTOBER 14, 1954.

To: Assistant Secretary, Public Land Management  
 From: Director, Bureau of Land Management  
 Subject: Right-of-way application, Alaska Railroad.

Reference is made to your memorandum dated October 1, 1954, relating to the application, Fairbanks 010449, of the Alaska Railroad for right-of-way for an extension of its Suntrana branch for a distance of 6.1 miles with a view to reaching the A. Ben Shallit coal mine and possibly other deposits. This extension would go through the camp area of the Usibelli Coal Mine, Inc., operated by Emil Usibelli in connection with mining his coal lease area in the vicinity.

Mr. Shallit has pending a truck road right-of-way application Fairbanks 08832. This truck road right-of-way also crosses the Usibelli interests. This application is in the Solicitor's office on appeal by Usibelli.

I held a meeting yesterday at 2 p. m. at which your Solicitor was represented. Mr. Kalbaugh, the General Manager of the Alaska Railroad, was present also. Mr. McCarty representing Usibelli was at the meeting. Mr. Barash, Shallit's attorney, was absent.

Mr. Kalbaugh filed with the record a copy of his withdrawal dated October 11, 1954, of the right-of-way application, Fairbanks 010449, of the Alaska Railroad. The withdrawal itself was forwarded to our area administrator, area 4. It will be accepted very shortly. So, the Alaska Railroad right-of-way application no longer presents a problem.

At the meeting Mr. McCarty stated that the relations between his client and Mr. Shallit were better, that Mr. Barash and he were engaged in preparing a form for a stipulation and agreement between Usibelli and Shallit which would provide for the mutual operation of one truck road only through the Usibelli interests, instead of the present 2 roads, 1 Usibelli's and the other Shallit's. As soon as this agreement is signed and filed with the record of the appeal, Fairbanks 08832, your Solicitor expects to dispose of the appeal and thus close the entire case.

EDWARD WOOLEY, *Director.*

## EXHIBIT GG

DECEMBER 23, 1954.

Re Alaska Railroad right-of-way application Fairbanks 010449.

Hon. EDWARD WOOLEY,  
*Director, Bureau of Land Management,  
 Department of the Interior, Washington, D. C.*

DEAR MR. WOOLEY: Early in November I received a copy of your decision of November 2, 1954, accepting a withdrawal filed by the Alaska Railroad of its application Fairbanks 010449 for right-of-way.

Recently I had occasion to examine the record of Fairbanks 010449 in connection with a presentation I am preparing which will urge the Department of the Interior to extend the Suntrana branch of the Alaska Railroad to coal lease Fairbanks 07350 of my client, A. Ben Shallit, Cripple Creek Coal Co. In that record is a memorandum dated October 14, 1954, from you to the Assistant Secretary, Public Land Management, calling attention to a meeting which was held in your office at 2 p. m., on October 13, at which were present representatives of the Solicitor's Office, Mr. Kalbaugh, General Manager of the Alaska Railroad, and Mr. McCarty of the office of the Northcutt Ely, Esq., representing Usibelli Coal Mine, Inc. The same memorandum contains the statement, "Mr. Barash, Shallit's attorney was absent."

I don't know that my presence at the meeting in your office on October 13 would have contributed in any way to the discussion that took place, but it seems appropriate to point out that my absence from that meeting was due solely to the fact that I was not invited and actually knew nothing thereof until my examination of the record of Fairbanks 010449. I shall appreciate very much this letter being made part of the record of Fairbanks 010449 so that there may be no misunderstanding in the future as to the reasons for my absence from the meeting of October 13, 1954.

Sincerely yours,

MAX BARASH.

## EXHIBIT HH

CRIPPLE CREEK COAL CO.,  
Fairbanks, Alaska, October 19, 1954.

Mr. A. F. GHIGLIONE,  
Commissioner of Roads for Alaska,  
Alaska Road Commission, Juneau, Alaska.

DEAR GHIG: Since you are probably already making your estimates on next year's requirements, I believe that it is appropriate at this time to again request that some consideration be given construction of a road between Suntrana and Cripple Creek.

Since you are entirely familiar with our problem, there is no point in repeating the factors involved. I would like to point out that the road that we are now using and for which we have a tentative right-of-way, was destroyed three times this year, requiring rebuilding at a cost in excess of \$40,000.

Our present road is considerably better than any we had previously built, but the section through the Usibelli lease is still subject to destruction during every period of high water.

I would appreciate your giving consideration to the possibility of the Road Commission obtaining a right-of-way at least through that section since we have not been able to make any progress in obtaining a right-of-way on which we can construct a permanent road.

This is the same problem we have been fighting for the last 5 years, and I believe it will not be solved until your Department takes some direct action. The road is used by all 3 mine companies, 2 companies cutting timber, hunters, tourists, and a considerable portion of the people living around Suntrana and Healy. The road is beginning to take on most of the aspects of a public highway, and we believe that, as such, you should accept some responsibility for it.

I would appreciate an opportunity to discuss this with you during your next trip to Fairbanks, or in Juneau if you believe that anything can be accomplished by my meeting with you there.

With best personal wishes,

Sincerely yours,

A. BEN SHALLIT.

## EXHIBIT II

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
Juneau, Alaska, October 29, 1954.

Mr. A. BEN SHALLIT,  
Cripple Creek Coal Co., Fairbanks, Alaska.

DEAR MR. SHALLIT: Reference is made to your letter of October 19, 1954, requesting information regarding the status of the access road between Suntrana and Cripple Creek, and requesting assistance in its construction and maintenance. I am sorry to advise that the Alaska Road Commission has been unable to initiate action toward assuming this responsibility and the status of the project remains unchanged since the policy decisions were made by the Department of the Interior over a year ago.

As you know, the Department has decided that proper access to the Healy River coal fields may best be provided by the railroad spur extension. As a result of this decision, the Railroad has proceeded to obtain the necessary right-of-way and has filed necessary maps and instruments with the Bureau of Land Management for this purpose.

When the decision was finally made to encourage railroad access to the Healy River coal properties, the Alaska Road Commission was precluded from sponsoring further road projects for this purpose. As you will recall, a subsequent attempt was made to obtain funds for construction along the Alaska Railroad right-of-way in an effort to provide temporary relief for your problem. This attempt met with failure, again because the project was considered one for the Alaska Railroad and therefore any request for funds to implement the project should be initiated by that agency.

You are also aware that our forces are now completing a short tote road between the Nenana River crossing and Suntrana, which project has been accomplished in cooperation with the Healy River Coal Corp. It is presumed that this road extension will somewhat assist in relieving your problems.

I recognize that this information is of little value to you and may be discouraging, however, I can only suggest that you contact the Alaska Railroad in an effort to expedite their development of the railroad spur further up the Healy River.

Sincerely yours,

A. F. GHIGLIONE,  
*Commissioner of Roads for Alaska.*

# EXHIBIT JJ

CRIPPLE CREEK COAL CO.,  
*Fairbanks, Alaska, November 4, 1954.*

Mr. A. F. GHIGLIONE,  
*Commissioner of Roads for Alaska,  
United States Department of the Interior,  
Alaska Road Commission, Juneau, Alaska.*

DEAR MR. GHIGLIONE: Thank you for your letter of October 29 advising us that the Alaska Road Commission was unable to initiate action in providing an access road to the Healy River coalfields because of a decision by the Department of the Interior to provide such access by the extension of the Alaska Railroad spur.

For your information, this situation was recently discussed with officials of the Alaska Railroad, and we were advised that they had no immediate plans for the construction of such a spur. Under the circumstances, we believe that unless an actual directive was issued to you, precluding the construction of a road, it would still be in order for you to consider this project. If, however, you have been officially advised that the Alaska Railroad alone is to be responsible for the construction of this spur, we will appreciate a copy of this directive so that we may act accordingly.

In your letter of October 29, you will also note that a road has been completed between the Nenana River crossing and Suntrana, which was built in cooperation with the Healy River Coal Corp. You "presume that this road extension will somewhat assist in relieving our problems." It is conceivable that this road may be of assistance to the Healy River Coal Corp., the Suntrana Mining Co., and probably the Usibelli Coal Mines, Inc., but it is difficult to see where it is of any value to the Cripple Creek Co.

On the other hand, construction of your road will allow the people living at Healy to drive to Suntrana, and from there on it is presumed that they will continue on to Cripple Creek via our private road, thus further increasing the public nature of our road which is already used by the two other coal companies and the people living at Suntrana.

It is also noted in a recent newspaper release that you have just completed a new all-weather gravel road from Palmer to the Houston coal mine. Since the Houston coal mine has a very questionable future as compared with that of the Cripple Creek Coal Co., it is difficult to understand why that construction was completed without giving more consideration to our problems.

Please accept my personal apologies for continuing to bother you with this problem, but as you know, we have been attempting to resolve this matter for 5 years and have now decided to bring it to a head.

With best personal regards,

A. BEN SHALLIT.

# EXHIBIT KK

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
*Juneau, Alaska, November 8, 1954.*

Mr. A. BEN SHALLIT,  
*Cripple Creek Coal Co., Fairbanks, Alaska.*

DEAR MR. SHALLIT: This will acknowledge receipt of your letter of November 4, 1954, which further discusses the possibilities of the Alaska Road Commission's participation on the Healy River Road to serve your coal properties. In spite of the many factors outlined in your letter which tend to justify this project as a public necessity, I am still unable to offer assistance since no funds are presently available to the Alaska Road Commission for this work.

The road to serve the Houston coal mine, which you have noted in your letter, was built with Territorial funds at the request of the Territorial board of road commissioners. This was not a Federal project. By the same reasoning, it is possible that you could obtain assistance from the Territorial board, and it is suggested that you contact Mr. Irving Reed, Territorial highway engineer.

The situation along Healy River, insofar as access by railroad in preference to highway has been determined as policy by the Interior Department; has not been resolved in the form of a directive to the Alaska Road Commission. However, since all requests for funds must be processed through the Interior Department before reaching the Bureau of the Budget and Congress, it is obvious that the policies of the Department must be adhered to.

Sincerely yours,

A. F. GHIGLIONE,  
*Commissioner of Roads for Alaska.*

---

EXHIBIT LL

CRIPPLE CREEK COAL CO.,  
*Fairbanks, Alaska, October 21, 1954.*

Mr. FRANK KALBAUGH,  
*General Manager, The Alaska Railroad,  
Anchorage, Alaska.*

DEAR MR. KALBAUGH: During my last visit to Washington, I discussed with Mr. Strand the advisability of including a request for an appropriation in the next budget to build a spur line from Suntrana to Cripple Creek.

As you know, our efforts on behalf of accomplishing this purpose through the Healy River Spur, Inc., was nonproductive. Although the coal requirements for the next fiscal year will probably not be much larger than those requested this year, we have been advised that future requirements may be a great deal larger. Under the circumstances, it would appear that it would be in order to request an appropriation at the next budget hearings, in order that the spur could be completed in time to meet the increased demand.

Sections of our road were destroyed three times this year, pointing to the necessity of obtaining less vulnerable right-of-way on which a permanent road can be constructed. Assistance from an appropriate agency of Government, who can obtain a right-of-way through their powers of eminent domain appears to be the only way in which such a road can be built through the intervening leases.

It is therefore, again, respectfully requested that consideration be given to the extension of the existing spur to Cripple Creek, and that if it is not believed advisable to construct a spur at this time, to at least survey and obtain a right-of-way for such a spur, and allow the Cripple Creek Coal Co. and the general public the right to use this right-of-way, until such time as a spur is constructed.

Although we have gone over this problem many times, I would appreciate an opportunity to meet with you again to consider any possibilities that might have been overlooked since I plan to be in Washington again prior to the budget hearings.

Any suggestions that you could make that would assist us in solving our problem would be very much appreciated.

Very truly yours,

A. BEN SHALLIT.

---

EXHIBIT MM

UNITED STATES DEPARTMENT OF THE INTERIOR,  
THE ALASKA RAILROAD,  
*Anchorage, Alaska, November 5, 1954.*

Mr. A. BEN SHALLIT,  
*Cripple Creek Coal Co., Fairbanks, Alaska.*

DEAR MR. SHALLIT: On my return to Anchorage received your letter of October 21, 1954, concerning the Alaska Railroad requesting an appropriation for the extension of our Suntrana Branch.

As we discussed in our several conversations on this matter, the Alaska Railroad is required to be self-sustaining, and any such large expenditures as you have proposed by the railroad would have to be economically justified and, as we also discussed, such economic justification cannot be made by the railroad in support of this track extension.

Inasmuch as the Defense Department has indicated that they cannot lend support to your proposed track extension, it appears to us that your next best bet would be to endeavor to procure an all-year road from your property to the present railhead at Suntrana, and, of course, such a road would not be under the jurisdiction of the Alaska Railroad. Therefore, you may wish to consider the possibility of having the Alaska Road Commission undertake such action as would be necessary for such a roadbuilding program.

I regret very much our inability to be of more concrete assistance to you, and am looking forward to seeing you in the not-to-far-distant future.

Sincerely yours,

F. E. KALBAUGH,  
General Manager.

---

EXHIBIT NN

UNITED STATES DEPARTMENT OF THE INTERIOR,  
ALASKA ROAD COMMISSION,  
Juneau, Alaska, December 21, 1954.

Mr. A. BEN SHALLIT,  
Fairbanks, Alaska.

DEAR MR. SHALLIT: Reference is made to your letter of December 15 regarding the possibility of obtaining funds for construction of an all-year road from Suntrana to Cripple Creek. I am surprised at Mr. Kalbaugh's statement regarding the appropriation of funds for this project, since all previous departmental policy has been in support of extension of the railroad spur in preference to the highway, and obviously no funds will be appropriated by Congress without the support of the Interior Department.

In reviewing our previous estimates for this project, I find that several factors enter into the cost of the road, and, therefore, any estimate must be qualified. Our last estimate, made in April 1953, for construction of the road from Suntrana to Cripple Creek, totaled \$420,000. This estimate was based upon the alignment following the present Alaska Railroad line within their right-of-way, since at that time Mr. Usibelli had refused consideration of a road easement either over his road or through his property, excepting on the railroad line. His refusal was always based on the contention that any such easements would conflict with future development of his property. The \$420,000 estimate was also based upon the assumption that the road would be constructed by Alaska Road Commission forces and equipment. Recent departmental policy requiring such work to be handled by contract will, in our thinking, increase the cost of the job. Therefore, a round estimate of \$500,000 would be a safer figure to use in your negotiations.

The Bureau of Land Management has advised that the Alaska Road Commission could construct along the present Alaska Railroad right-of-way, however, if you consider it necessary to leave this right-of-way in order to reduce the project cost, it would be necessary that new easements be obtained from property owners. Such action might result in a stalemate, since most of the line would be on Usibelli property.

I would be pleased to furnish any additional information or more details if you so desire, and I will look forward to meeting with you in Washington in the latter part of January.

Sincerely yours,

A. F. GHIGLIONE,  
Commissioner of Roads for Alaska.

---

CRIPPLE CREEK COAL CO.,  
Fairbanks, Alaska, January 15, 1953.

Re Fairbanks 07350.

Mr. LEO H. SAARELA,  
Regional Mining Supervisor, United States Geological Survey,  
Anchorage, Alaska.

DEAR SIR: Pursuant to your request, we are submitting for your consideration, a status report and generalized operating plan for mining coal on our leasehold.

*Location*

The leasehold contains approximately 1,120 acres in the Nenana Coal Field, Territory of Alaska, described as follows: T. 12 S. R. 6W Fairbanks meridian, Alaska; sec. 15, all; sec. 16, N $\frac{1}{2}$ , SE $\frac{1}{4}$ .

*Lease*

Preference right mining lease of coal lands in Alaska, effective as of July 5, 1950, between the United States of America, lessor, and A. Ben Shallit, Fairbanks, Alaska, lessee, for a period of 50 years.

*History of operation*

Permanent camp construction and development work was started in August 1950, following an extensive prospecting program carried out under our coal prospecting permit.

Production was started in November 1950, from our strip pit on the No. 1 bed, left limit of Cripple Creek. Subsequent production was from strip pits on the No. 1 and No. 3 beds. All development work was done during the summer months. All coal was mined during the winter when truck haulage conditions were favorable. During the summer of 1952 a portal site was established for the No. 6 bed, right limit of Cripple Creek, preparatory to development of that bed by underground methods.

Present camp facilities consist of a combination garage and powerhouse, a 15-man bunkhouse, mess hall, storehouse, office, wanigan, and several smaller buildings. A semiportable loading grizzly at the pit site, 6 miles of main haulage road, 4 bridges, loading ramp, and an air strip have also been constructed. A crushing plant tippie powered by a 50-kilowatt diesel unit was constructed at the mouth of Cripple Creek in the fall of 1951, but not used during the winter of 1952.

*Production by months since the start of operations*

	<i>Tons</i>
November 1950-----	1,784.0
December 1950-----	7,992.45
<b>Total 1950-----</b>	<b>9,776.45</b>
January 1951-----	11,575.25
February 1951-----	8,827.05
March 1951-----	9,699.20
April 1951-----	9,500.05
May 1951-----	871.15
November 1951-----	2,873.9
December 1951-----	5,421.15
<b>Total 1951-----L-----</b>	<b>48,767.75</b>
January 1952-----	3,277.0
February 1952-----	5,285.16
October 1952-----	7,756.3
November 1952-----	16,560.5
December 1952-----	8,750.0
<b>Total 1952-----</b>	<b>41,628.96</b>
<b>Total to date-----</b>	<b>100,173.16</b>

*Reserves*

Over 5 million tons of "probable" coal are partially blocked out above Cripple Creek drainage level. Of this amount, about 500,000 tons can be mined by open-pit methods. These reserves do not take into account probable reserves of underground coal on the left limit of Cripple Creek, or any of the reserves below Cripple Creek drainage level. Reserves below the Cripple Creek drainage, but within the present economic limits of mining probably exceed 50 million tons.

*Long-range planning*

Our future mining plans presuppose a continuation of present market conditions for 5 years, an extension of the Alaska Railroad spur to at least the mouth of Cripple Creek, and our ability to obtain adequate financing. Any deviation from these basic factors will result in a modification of our planning.

Under favorable conditions, we plan to increase our annual production from less than 50,000 tons at present, to 100,000 tons during the fiscal year 1953-54; 150,000 tons in 1954-55; and 200,000 tons thereafter.

Eighty thousand tons of the 1953-54 production is to come from surface operations and 20,000 from underground. One hundred thousand tons of the 1954-55 production is to come from the surface and 50,000 from underground. Half of the 1955-56 production will be from the surface and half from underground. By 1958 all tonnage will be produced from underground operations.

By 1958 it is planned to have at least three fully equipped underground mines, each independent of the other operations. Under very competitive market conditions it is conceivable that only the most efficient unit would be operated. Under increased demands production could be stepped up from all units, and additional beds developed.

It is planned to expand surface facilities only as rapidly as other conditions justify. Preference in expenditures will be given to underground development work as soon as 100,000 tons of surface coal has been developed. Future surface development including a coal treatment plant, but most especially employee housing and recreational facilities, will be deferred until justified by developed reserves and market conditions.

#### *Sequence of mining*

Reference is made to the leasehold map for the planned mining schedule beginning April 1953. The year shown on the map is the year during which the coal is to be mined. Most blocks will be developed during the previous year.

#### *Schedule—beginning April 1953*

1953:

	<i>Tons</i>
Complete stripping (left limit No. 1, surface)-----	60,000
Complete stripping (left limit No. 2, surface)-----	20,000
Complete gangway and counter (No. 6, underground)-----	20,000
<b>Mine</b> -----	<b>100,000</b>
Prestrip (left limit No. 1, surface)-----	30,000
Right limit No. 1 (surface)-----	50,000
No. 6 Healy River (surface)-----	20,000
Possible (No. 1 high bench, surface)-----	50,000

1954:

Complete 1953 prestrip program-----	100,000-150,000
Complete No. 6 gangway, etc.—Develop east end block on retreat (underground)-----	40,000
Start No. 1 gangway (underground)-----	10,000
<b>Mine</b> -----	<b>150,000</b>
Prestrip (No. 1 high bench)-----	100,000

1955:

Complete 1954 prestrip (surface)-----	100,000
Drive No. 3 gangway and counter (underground)-----	30,000
Drive No. 1 gangway and raise (underground)-----	20,000
Develop block No. 6 on retreat (underground)-----	50,000
<b>Mine</b> -----	<b>200,000</b>
Prestrip (No. 1 high bench)-----	100,000

1956:

Complete 1955 prestrip (surface)-----	100,000
Develop No. 6 on retreat (underground)-----	50,000
Develop east end block on retreat No. 3 (underground)-----	30,000
Complete development gangway No. 1 mine (underground)-----	20,000
<b>Total</b> -----	<b>200,000</b>
Prestrip (No. 1 high bench)-----	100,000

1957:

	<i>Tons</i>
Complete 1956 prestrip (surface)-----	100,000
Develop No. 6 on retreat (underground)-----	50,000
Develop No. 3 on retreat (underground)-----	50,000
Total-----	200,000

Preliminary development No. 2 upper and lower beds.

1958: Complete tonnage to be mined from underground.

*Summary schedule (tons)*

	Strip Mine	Underground
1953-----	80,000	20,000
1954-----	100,000	50,000
1955-----	100,000	100,000
1956-----	100,000	100,000
1957-----	100,000	100,000
1958-----		200,000

*Strip mining method*

Strip mining will be continued as at present, using a combination of bulldozer and hydraulics to remove overburden. The fine material is washed down the creek and carried away by Healy River. The coarser alluvium is stacked sufficiently beyond the limits of the bed so that it is not rehandled. So far it has not been necessary to drill or blast the overburden. Advantage is taken of natural agencies for thawing and disintegration of the gravels. This may require preliminary work as much as 3 years in advance of complete development.

Most of the strip coal will be mined by standard open pit methods using electric auger drills for blasting, and bulldozer and ramp, or shovel, for loading. Coal will be transported by truck to the railroad for direct loading as pit run, or processed through our tippie if sizing is required.

The 300,000 tons of strip coal being developed on the No. 1 bed on the high bench, right limit of Cripple Creek, will be stripped by bulldozer. After breaking, the coal will be bulldozed into a chute to be driven in the No. 1 bed from a haulage level on Cripple Creek. The coal will be transferred on the haulage level from the chute to cars or a conveyor belt, and then directly to trucks for railroad loading.

*Underground mining*

Plans for actual underground mining are still in the formative stage. A comparison is being made of the cross-pitch system now being tried at the Evan-Jones mine, and a modification of the Healy River mine system. A study will also be made of the methods now being tried in pitching beds in the States. No firm decision as to the method of mining or the type of equipment to be used will be made until after the preliminary development work has been completed.

It is planned to furnish all coal for our markets from our surface pits during the development of the underground mines, except for such coal as is produced from the development headings.

A gangway and counter with connecting raises for ventilation will be driven by conventional methods on the No. 6 bed right limit of Cripple Creek at our present portal site. It is planned to drive these headings to our eastern boundary and mine in retreat, pulling all pillars to the counter level. It is planned to save the gangway for the development of the bed below drainage level if such an operation appears feasible at that time. The actual method of pulling the blocks above the counter, in retreat, will be submitted for your consideration and approval prior to any actual mining. Some experimental work may be done in developing the No. 6 bed in order to work out the most efficient system for the developing and mining of other beds.

Financing, markets, and the availability of equipment may influence our mining system, but our basic plan calls for a cautious development of the underground workings, so that by the time our easier surface coal has been exhausted, we will have sufficient fully developed underground reserves to meet all competition.

*Conclusion*

The mining plan as herewith submitted is obviously too generalized to warrant your serious consideration. It is being presented, however, in order to keep you informed as to our long-range planning.

The most important single factor that would prevent our increasing production in 1953 would be the failure of the Alaska Railroad to extend their spur as now planned, from present rails' end at Suntrana. Under present hauling conditions, we would not plan to mine more than 60,000 tons during any year, and would be forced to confine our deliveries to the winter months only.

Respectfully submitted.

A. BEN SHALLIT.

EXHIBIT PP

RECONSTRUCTION FINANCE CORPORATION,  
Washington 25, D. C., August 16, 1954.

Mr. A. BEN SHALLIT.

*President, Healy River Spur, Inc.,  
Fairbanks, Alaska.*

DEAR MR. SHALLIT: As you have previously been advised your application for a loan of \$1,754,839.50 under section 302 of the Defense Production Act was submitted on March 16, 1954, to the Office of Defense Mobilization for determination regarding the issuance of a certificate of essentiality as required by Executive Order No. 10281.

In this connection, there is enclosed for your information copy of a letter we have received from the Office of Defense Mobilization.

For reason that no certificate of essentiality will be issued further consideration of the application is precluded. The files on this matter are, therefore, being closed.

Very truly yours,

M. W. KNARR, *Secretary.*

EXECUTIVE OFFICE OF THE PRESIDENT,  
OFFICE OF DEFENSE MOBILIZATION,  
Washington 25, D. C., August 11, 1954.

Re Healy River Spur, Inc., Fairbanks, Alaska, loan applied for, \$1,754,840,  
DPC-930

Mr. G. W. BRODIE.

*Chief, Business Loans Division, Office of Loans,  
Reconstruction Finance Corporation, Washington, D. C.*

DEAR MR. BRODIE: This refers to your letter of March 16, 1954, requesting that we make a determination of essentiality to the national defense of the section 302 application of the Healy River Spur, Inc., for a loan of \$1,754,840.

The proceeds of this loan will be used to build a spur track connecting with the Alaska Railroad at Suntrana, Alaska.

The Department of Defense has advised it does not feel the proposed addition to the existing spur track is essential to the national defense.

In view of the above, this Office will not issue a certificate of essentiality for this application at this time.

Very truly yours,

F. L. PARNELL,  
*Chief, Finance Division, Production Area.*

## ANALYSIS OF TRUCK HAULAGE COSTS

The savings to the coal mine operator by direct railroad versus short haul trucking to the railroad has been generally estimated at about \$1 per ton of coal hauled (exhibits W and AA). In a competitive market this savings would be passed on to the consumer in lower coal prices. Since the Government buys about 80 percent of the coal produced in Alaska the taxpayer would be the principal beneficiary.

The Cripple Creek Coal Co. has produced 263,614 tons of coal from 1950, when it was organized, through 1954. During the same period the Usibelli Coal Mine, Inc. has produced 943,815 tons. The total production of these 2 mines alone was 1,207,429 tons, which at a savings of \$1 per ton would have already paid for the construction of the spur. Every future ton of coal to be hauled from pit to present railhead will continue to be an additional unwarranted expense to the consumer.

Cripple Creek Coal Co.'s own experience substantiates the estimated savings of \$1 per ton on the basis of its present approximate costs as follows:

Basic contract price per ton-----	\$0. 80
Gas, oil, lubricants, antifreeze, shop-----	. 10
R/T freight on trucks-----	. 04
Board loss-----	. 02
Road maintenance-----	. 08
Annual road and bridge repair-----	. 50

Total, per ton----- 1. 54

Use of company-owned trucks would reduce costs by \$0.12 per ton, and by eliminating the freight charge on trucks and effecting other savings, an additional \$0.08. This would leave the presently estimated cost of truck haulage at \$1.34 per ton.

In 1953, the Usibelli Coal Mine, Inc. proposed to haul coal for the Cripple Creek Coal Co. on a contract basis. Their proposal, when submitted, was so much higher than Cripple Creek's costs, even after the addition of 15 percent for contractor's profit, that it was refused. In explaining their higher costs, Usibelli's accountant showed where their average cost was increased by their summer haul over unfrozen roads. This resulted in expensive maintenance to roads and excessive maintenance and wear on trucks. Under these circumstances, it is believed reasonable to assume comparable costs per ton between coal companies hauling by truck on a year-round basis and those hauling a greater distance, but only over winter roads.

Although most of the \$1.34 haulage cost would be eliminated by direct loading into railroad cars from underground operations, and particularly favorable pit locations, much of the future tonnage from the field will require short haul truck or conveyor loading. An estimate of the cost of short haul truck loading a maximum of 1 mile from pit to railroad tippie site over a standard year-round road follows:

Direct hauling—labor, repairs, etc-----	\$0. 17
Indirect—interest, depreciation, etc-----	. 07
Gas, oil, lubricants, etc-----	. 03
Road maintenance-----	. 05
Miscellaneous and contingencies-----	. 03

Total, per ton----- . 35

Thus, the estimated overall savings in the haulage cost would be about \$1 per ton.
